As connected with the request of the committee, though not comprehended in it, I would respectfully suggest the propriety of making some change in the law in relation to the effects of deceased non-commissioned officers and soldiers. They are now by law placed in charge of the officer commanding the troop or company, in whose custody they remain until claimed by the representative of the deceased. In many instances the representative never appears, and in others not until after a long interval of time, when, by the change of the officers, or their neglect, the effects cannot be accounted for. I would respectfully suggest to the committee the propriety of so amending the 95th of the rules and articles of war, that if the representative of the deceased non-commissioned officer or soldier should not appear within six months after his decease, his effects should be sold, under rules to be established by the Department, and the proceeds, together with the money which he may have left at his decease, should be paid over to the Treasury, to be accounted for to his legal representative.

I have the honor to be, very respectfully, sir, your obedient servant,

J. C. CALHOUN.

Hon. THOS. MONTGOMERY,
Chairman of the Committee on Public Expenditures, House of Representatives, U. S.

17th Congress.] No. 214. [1st Session.

FORTIFICATIONS FOR THE PROTECTION OF MOBILE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1822.

Mr. EUSTIS made the following report:

The Committee on Military Affairs, to which was referred so much of the memorial of the Legislature of the State of Alabama, and of certain citizens thereof, as relates to fortifications, have considered those memorials with the attention due to the respectable authority from whence they have proceeded, and report:

That they have received from the War Department a chart of the entrance of Mobile bay; from the Committee of Ways and Means a chart of the coast, including the Mississippi and the bay of Pensacola, furnished by the Commis-

sioners of the Navy Board; and a chart, by Curtis Lewis, of Alabama, describing the entrance into Mobile bay, with directions for shipmasters to enter the bay, and pursue their course to the cities of Mobile and Blakely, taken in 1820, apparently with great accuracy.

From these charts, taken collectively, it appears that there is a sand bar, at the distance of about four miles from Mobile Point, on which the depth of water is sixteen feet; after passing the bar, the water deepens to eighteen, thirty, and forty-two feet. After passing the Point, it shoals again to eighteen feet, where a ship that can pass the bar may lie in perfect safety, being beyond gunshot of the fort. From thence, pursuing the ship channel, the water shoals gradually to ten feet; from thence, to the city of Mobile, distant about six miles in a direct course, the water shoals to seven feet. The ship channel pursues a circuitous route to the city, in deep water; another channel, equally deep, but more direct, leads to Blakely: from whence it follows that no ship of war larger than a sloop can pass the bar, or approach the city of Mobile nearer than twenty-five miles. The distance from Mobile Point to the city is about thirty-four miles.

The distance from Mobile Point to Dauphin Island is about three and a quarter miles. The ship channel runs near to Mobile Point, within the range of shot from the fort now building; this channel appears to be at least two and a half miles distant from the fort on Dauphin Island; of course beyond gunshot of that island.

The report of the engineers in 1820, herewith submitted, states that a fort is erecting on Mobile Point, to contain 108 guns, 54 of which are intended to defend against an attack by water, and 54 against an attack by land; that on Dauphin Island another fort is intended to be erected, to contain an equal number of guns.

These forts, when completed and garrisoned, cannot be considered (as the engineer states) a sufficient protection against an enemy entering the bay, without the aid of a floating force; in which opinion your committee perfectly coincide; the ship channel being one mile wide, the course direct, and the water deep after passing the bar, so that vessels which can pass the bar might pass in the night without fear of injury from either fort, proceed on, and come to anchor in eighteen feet water, out of the reach of gunshot, and act either against Mobile or Blakely, as might be most convenient to his force.

The committee feel no small degree of diffidence in offering an opinion on a subject which has been considered by men of science in their professional character; at the same time a sense of duty compels them to state their ideas on this subject, as it is considered important by a respectable State, and involves the nation in a heavy expense.

The committee are agreed that a strong fort on Mobile Point is necessary. An attack by ships of war is not, in the opinion of the committee, to be apprehended; for, as they have already stated, no vessel of war larger than a sloop can pass the bar, and sloops of war are not considered competent to lie before a fort. A battery containing a small number of guns would be a sufficient force against any number of vessels of that description. It is true a sloop of war did imprudently fire on the small fort on the Point in the last war, and it is as true she was silenced and taken. The fort may be taken by land, and may be incommoded by gun-brigs brought within the bar, and out of gunshot of the fort, throwing shells into it, while an army is making its regular approaches.

The fort on Mobile Point is placed at the extremity of a narrow strip of land, three or four miles long, and from half a mile to a mile wide. The sea near it is sufficiently deep for the largest vessels. The enemy landed there from the ships, and took the small fort on the Point. Instead of the large work which has been projected, to contain 108 guns, the committee conceive that a smaller work, with a steam frigate and gun-boats, would constitute a better defence. A floating force would be peculiarly useful against an attack by land, as their guns would sweep the peninsula, and prevent bomb vessels from annoying the fort while engaged with an attacking army. The guns for such a steam frigate, and the gun-boats, with the steam apparatus, might be deposited at the city of Mobile, or in the fort at the Point, ready to be mounted, and the frigate and boats constructed when occasion should require it. In the event of the fort being taken, the floating force would retreat into shoal water, and prevent an attack on Mobile or Blakely, as the attack must be made by barges; no vessels drawing more than seven feet water being able to go in a direct course to the city, and in the circuitous route none drawing more than ten feet water.

The report of the engineers states that the object of forts on Mobile Point, and on the eastern point of Dauphin Island, is to prevent the enemy from occupying them as places of refuge, to prevent the mouths of the river from being blockaded, to secure the communication between New Orleans and Mobile bay.

The fort on Dauphin Island is intended to defend the western channel, which they state to be one mile distant, and having a depth of water of ten feet according to their chart, and seven feet according to Lewis, through which vessels constructed for the purpose, and drawing from eight to nine feet water, and mounting twelve or fifteen guns, might enter the bay. It will also, they add, deprive the enemy's vessels of the anchorage under Pelican Island, which anchorage they state to be fit for vessels drawing seventeen or eighteen feet water—that is to say, sloops of war. It will also, as they say, prevent an enemy from establishing himself on Dauphin Island, by cutting a communication between Lake Pontchartrain and Mobile bay, while the fort will serve as a depot for naval stores, and for the stores and armament necessary for the protection of the coasting trade.

The committee have given these subjects due consideration, and have also considered Dauphin Island in all its bearings and relations, and cannot believe them of sufficient importance to justify an expenditure of a million of dollars, which the work on Dauphin Island, with its ordnance and necessary fixtures, will probably require, without taking into view the subsequent expenses incident thereto.

Would a fort on Dauphin Island effect the object contemplated by the engineers? The committee conceive that it could not. It is too far distant from the ship channel to aid in preventing a blockade; nor can the fort on Mobile Point, although near to the channel, entirely effect it. A single sloop of war lying at anchor within the bar, three miles distant from the fort, or in the bay, out of gunshot of the fort, would effectually blockade the bay without being exposed to danger from either fort.

Will a fort on Dauphin Island protect the coasting trade from New Orleans? Certainly it cannot. The channel for coasting vessels has from four to five feet water, and is at least four miles distant from the site of the fort on Dauphin Island. The coasting trade cannot, of course, receive protection from any force placed there.

Would a fort on Dauphin Island be able to deprive an enemy of anchorage under Pelican Island? A sloop of war might anchor under that island, if the engineers' chart be correct, and might remain there. She would then be thirty-five miles distant from Mobile, and could approach no nearer; for the western channel has only ten feet water according to the engineers' chart, and but seven according to Lewis's. The chart last mentioned, and that from the Navy Office, give only eleven and twelve feet water to the entrance; to the anchorage under Pelican Island, of course, not even a sloop of war can enter, if these charts be correct. It is alleged that vessels drawing eight or nine feet water, and mounting ten or twelve guns, may pass through the western channel. If Lewis's chart be correct, they cannot; if that of the engineers be correct, they may. Such vessels may, however, pass more conveniently in the night, in the ship channel, in deep water, and make their arrangements at their leisure for an attack on the city of Mobile or Blakely in the bay, and out of gunshot of the fort.

The engineers say "that the western channel being one mile from the site of the fort on Dauphin Island, such vessels would pass with very little annoyance from the shot of the fort, and that they can be prevented in no way

but by a floating force;" from whence it follows that the immense fortification contemplated on this island could not have the effect of preventing such vessels from entering the bay. The anchorage under Pelican Island may be entered, agreeably to the engineers' chart, by vessels drawing 17 or 18 feet water; but according to the chart of the Navy Commissioners, and that of Lewis taken in 1820, there are only 11 or 12 feet of water; and if these be correct, even sloops of war cannot enter. Vessels drawing only 8 or 9 feet water, and mounting 12 or15 guns, must, as your committee apprehend, be built for the occasion. The steam frigate and gun-boats herein recommended would, in the opinion of the committee, prove a more effectual security against an enemy entering the bay than the 108 guns proposed to be mounted on the land.

The objection to the occupation of Dauphin Island by an enemy, and to his making an establishment there, from whence to cut off the coasting trade between New Orleans and Mobile, consists in this: the water is not sufficiently deep for him to be protected by his fleet, while his object may be much better accomplished by taking possession of Cat Island, thirty miles distant from Lake Pontchartrain, and about fifty miles from the east end of Dauphin Island, where large ships of war may lie in safety, and from whence he may completely intercept their trade. A single sloop of war stationed at Cat or Ship Island would destroy their trade, without risk, unless prevented by a superior naval force.

The fort on Dauphin Island cannot be made use of as a depot of naval stores, or armament for defence of the coasting trade, because the depth of water for nearly a mile distant from the shore will not admit our smallest vessels. Should such a place of deposite be deemed necessary, Mobile Point is in every respect preferable. The harbor near the Point is good, and the water sufficiently deep for vessels to anchor near it, and to discharge their cargoes with facility.

From the best view which the committee have been able to take of the subject, it appears to them that the fortification on Dauphin Island, calculated to contain 108 guns, ought to be discontinued; that an enclosed work on Mobile Point, calculated to mount fifty or sixty pieces of heavy ordnance, with an adequate floating force, and twenty or thirty pieces (say twelve, eighteen, and twenty-four pounders) mounted and deposited in an arsenal to be erected for that purpose at Mobile or Blakely, from whence they may be detached, as occasion might require, to the points of land by which the boats or barges of an enemy must necessarily pass in his approach to either of those places, and to cover the floating force in case of retreat, would constitute a suitable defence for the bay of Mobile.

All which is respectfully submitted.

Statement of distances.—Dauphin Island.

Distance from Dauphin Island to Mobile Point,	
On the large map,	3 miles.
On engineers' chart,	3⅛

COLONEL: WASHINGTON, *April* 8, 1820.

I have the honor of submitting to you, as you require, the motives which determined the board to propose occupying the eastern point of Dauphin Island by a fort of the same importance and dimensions as that which has been projected at Mobile Point.

In the report presented by the board (1818) on the defence of the frontier of the Union, on the Gulf of Mexico, the following considerations are those which determined us to defend the entrance of Mobile bay: 1st, To prevent the enemy from occupying it as a port of refuge, from whence he might act against the other parts of the frontier; (a consideration which would become of still greater importance, if, in consequence of the acquisition of Florida, Pensacola became a naval depot and harbor of rendezvous.) 2d, To prevent the mouths of the navigable rivers which fall into this bay from being blockaded, which in time of war would cut off the State of Alabama (and all the new States to be formed hereafter on that frontier) from all communication with the ocean; and, when on this subject, we shall observe that the communication between the Tennessee and the ocean will hereafter take place through Mobile bay by artificial canals. 3d, To secure the communication between New Orleans and Mobile bay by Lake Pontchartrain, and the little interior sea comprised between the main and the chain of islands bounded by Cat Island to the west, and Dauphin Island to the east.

Upon these principles we must conclude that it is not sufficient to close the entrance into Mobile bay, but that we must prevent it from being blockaded, as well as localities will allow.

The entrance into the bay between Dauphin Island and Mobile Point is from three to three and a half miles wide, and has two channels of entry. The eastern and principal channel is one mile wide opposite Mobile Point, and is crossed, three miles below, and to the south of it, by a bar which has only from seventeen to eighteen feet of water at full tide. The western channel passes at one thousand two hundred yards' distance from the eastern point of Dauphin Island; its breadth is about three hundred yards, and it is about ten feet deep; the eastern or further side of this channel is thus at the same distance (one mile) from Dauphin Island as the western or further side of the main channel is from Mobile Point. This breadth (one mile) is rather too great to be very effectually or strongly defended by land batteries above; the board have, therefore, recommended, in time of war, to defend these channels by a division of gun-boats acting in concert with the forts supported by and supporting them.

The first object of the fort projected on the eastern point of Dauphin Island is thus to batter the western channel, where vessels constructed for that purpose, drawing from eight to nine feet of water, and carrying from twelve to fifteen guns, might penetrate into the bay. But it also satisfies to many other important conditions. 1st. It will deprive the enemy of the anchorage north of Pelican Island, and three hundred yards south of Dauphin Island, and secure it to the navy of the Union. This anchorage is fit for ships drawing from seventeen to eighteen feet, and if it were in the enemy's possession, it would afford him every facility for blockading the bay, or penetrating into the western channel. The fort will protect this anchorage, partly by its own fire, and partly by the fire of batteries erected in time of war under its protection. 2d. Occupying the eastern point of Dauphin Island, this fort forms a kind of *tête du pont*, by which troops may at all times be thrown into the island, to prevent an enemy from establishing himself in it, and cutting off the communications, mentioned above, between Lake Pontchartrain and Mobile bay. 3d. This fort, to the east point of Dauphin Island, will serve as a depot of all the means and stores of armament, ammunitions, and provisions, necessary to act with the navy; and defend, by temporary batteries, the several passes between the islands above mentioned, which cover the interior channel of navigation, uniting New Orleans, by Lake Pontchartrain, with Mobile bay.

As to the dimensions of the fort to be established on the eastern point of Dauphin Island, if we consider that it will have a passage to defend of the same breadth as the passage defended by the fort on Mobile Point; that it must, moreover, bear fires upon the anchorage south of the island; that it lies more distant from succors than Mobile Point; and that, in time of war, it must serve as a depot for the stores and armament necessary for the protection of the coasting trade and navigation to the west of the bay, we must conclude that its strength and dimensions cannot be made inferior to those of the fort projected at Mobile Point.

I have the honor to remain, colonel, very respectfully, your most obedient humble servant,

BERNARD, *Brig. Gen.*

To Colonel W. K. ARMISTEAD, *Chief Engineer.* ENGINEER DEPARTMENT.

A true copy.

J. L. SMITH, *Lieutenant Engineers.*

COLONEL: WASHINGTON, *April* 10, 1820.

I have the honor of transmitting to you the motives for which, in my opinion, the fort projected by the board to occupy Mobile Point cannot be reduced in its dimensions, without interfering with its objects.

You will find, in the report presented by the board, (1818,) that fifty-four pieces of the armament of the fort were destined to batter on the sea side, and an equal number on the land side. But fifty-four pieces are not too many to defend a channel of nearly one mile in breadth, and of depth sufficient to admit vessels drawing fifteen feet; and that number of guns, as well as the dimensions of the fort, would have been augmented, if the board had not taken into consideration that it was purposed to strengthen the defence of the channel by gun-boats acting in co-operation with the forts.

By land, the fort is exposed to a regular attack on every side. It was, therefore, necessary to give it sufficient means of defence, to allow time for succors to arrive before it could be taken. If we consider that on this frontier the population is widely scattered, we must conclude that a longer time will be necessary to assemble the militia

there than on other points, and that the fort must be constructed with sufficient strength to resist an invading enemy, until it can be relieved.

I shall only add one consideration to those which I have exposed before. If, in consequence of the acquisition of the Floridas, Pensacola become a naval depot and a harbor of rendezvous, Mobile bay would be a most favorable place of arms for an enemy to operate from thence upon the naval establishments of Pensacola.

These motives, joined to those which I have had the honor of addressing to you on the 8th instant, have brought complete conviction (at least to my mind) that the forts projected by the board at Dauphin Island and Mobile Point cannot be diminished in their dimensions without exposing that important position to be insufficiently defended.

I have the honor, &c.

BERNARD, *Brig. Gen.*

To Colonel W. K. ARMISTEAD, *Chief Engineer.*

17th CONGRESS.] No. 215. [1st SESSION.

INVENTION FOR BORING GUN BARRELS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, ON THE 2D OF MARCH, 1822.

Mr. WALWORTH, from the Committee on Military Affairs, to whom was referred the petition of James Greer, reported:

That the petitioner states that, in 1797, he discovered and invented a method of boring gun barrels for muskets, rifles, &c., calculated to facilitate the manufacture of arms, and to render the caliber more uniform and true; that he is willing to trasnfer the invention to the United States, to be used in their public armories; and he asks payment for the same.

It appears that, about twenty years after the alleged discovery, and after the instrument or invention had been in general use in the armories of the United States for nearly the same length of time, the petitioner applied at the proper office and took out a patent for the "nut boring bit, &c., for boring musket, rifle, and pistol barrels," &c. The only evidence produced by the petitioner, to show the invention to be his, is the deposition of Thomas Humes, who states that in 1798 James Greer made a boring bit, which was used in boring gun barrels, &c.; but the description given by the deponent is so variant from the schedule annexed to the patent, that it is very doubtful whether it is the same invention therein described.

From a report of Decius Wadsworth, late colonel of ordnance, to the Secretary of War, made the 18th of March, 1820, there is strong reason for believing the petitioner was never entitled to the invention. Mr. Greer states that he invented the instrument in November, 1797; his witness, Thomas Humes, states it to have been in November, 1798, when Greer and himself commenced boring gun barrels; and that the invention or discovery took place some time thereafter. The colonel of ordnance, in his report, states that he is fully convinced, and believes there exists conclusive evidence to prove, that a description of this very tool or instrument was published to the world, in print, prior to the year 1796. If so, Mr. Greer's claim to the invention altogether fails.

The committee recommend the adoption of the following resolution:

Resolved, That the petitioner have leave to withdraw his petition.

SIR: ORDNANCE OFFICE, *March* 18, 1820.

Pursuant to your suggestion in relation to the petition of James Greer, I addressed a letter to him on the 6th instant, and have received an answer from Mr. Enoch C. Breeding, styling himself the attorney of James Greer, by which I have been referred to the Patent Office to obtain a knowledge of the invention of Mr. Greer relative to the boring of musket barrels.

Mr. Greer claims to have been the inventor of the nut auger, used in boring musket barrels, for a great many years back. This invention, he pretends, originated with him in November, 1797, at Philadelphia.

I am fully convinced, and I believe there exists conclusive evidence to prove, that a description of this very tool or instrument was published to the world, in print, prior to the year 1796. If so, Mr. Greer's pretended claim to the invention altogether fails. This being my view of the case, I would recommend that he be left to seek such remedy, if any, as the courts of law may afford him under his patent.

I have the honor to be, very respectfully, sir, your obedient servant,

DECIUS WADSWORTH, *Colonel of Ordnance.*

The Hon. J. C. CALHOUN.

17th CONGRESS.] No. 216. [1st SESSION.

MILITARY ACADEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 4, 1822.

Mr. EUSTIS made the following report:

The Committee on Military Affairs, having made the necessary inquiries relative to the Military Academy and the corps of cadets, submit the following statement from the War Department, with the annexed report:

Statement showing the number of admissions, resignations, dismissals, issues, and promotions of cadets at the Military Academy at West Point, annually, from the year 1817 *to* 1821, *inclusive; together with the whole number in each year on the* 31*st of December.*

In what years.	Number admitted.	Whole number.	Resigned.	Discharged or dismissed.	Issued after completing their education.	Promoted or commissioned.
		Dec. 31, say				
1817	37	220	40	3	22	22
1818	113	231	49	14	25	25
1819	48	244	40	2	29	29
1820	67	232	40	8	30	30
1821	98	238	35	17	24	24
	363		204	44	130	130

Taking the number two hundred and thirty as the average number present at the academy in each of the five years, and twenty-six the average number of those who have been commissioned in each year, it follows that the latter are to the former as one to nine, with a small fraction.

The time of the resignations and dismissals stated in the report, not having been required, and not being specified, the committee have reason to believe them to have taken place generally before the students had entered upon those branches which were necessary to qualify them for the several departments of service, as those of engineers, artillery, &c., in which it was the design of the institution to instruct them; as it is well known that many young men have been sent to the academy for the purpose of receiving a general education, without the intention of engaging in military service. To prevent this practice in future, which is considered a perversion of the great object of the institution, it appears to be indispensable that each cadet, with his parent or guardian, should be required to sign, on his admission, an engagement to serve the United States five years, unless sooner discharged, as provided in the act of April 29, 1812.

The omission of this condition appears to the committee to have been among the principal causes to which may be ascribed the great proportion (amounting to nearly two-thirds of the whole number admitted) of resignations and dismissals reported in the return. There have, however, been other causes, among which may be reckoned the deranged state of the affairs of the academy for several years preceding, and for some time subsequent to, the statement herein contained. Within the last two years improvements have been made in every branch of instruction and discipline, affording the fairest prospects, and promising, under the continued patronage of Government, to fulfil the public expectation, and to accomplish the important objects of the institution.

An idea has prevailed that, in addition to the officers furnished to the army, the academy has been the means of distributing throughout the States young men of military education and talents, to be engrafted on the militia. This opinion appears to the committee not to be well founded; nor can it be, so long as the greater part of those who are permitted to resign retire to private life before they have been instructed in the application of the preliminary sciences to any one arm or branch of service, excepting the drill and field duty.

The expense of maintaining and educating the cadets has also engaged the attention of the committee. Not relying on the result to be derived from the annual appropriations for the last two or three years, they have estimated the pay, subsistence, the expense of professors, teachers, &c., and find that, taking the average number (two hundred and thirty) present at the academy, the amount for each cadet exceeds $500 annually, without including the interest of the money expended on the public buildings, the principal of which has exceeded $300,000.

It has been before stated that one in nine of those reported present at the academy have entered the army; but when it is considered that one-half of the whole number have not remained there above two years, it is required to multiply the expense by four and a half or by four; whence it would follow, that the expense of one cadet entering the army on his own account, amounting to $2,000 for four years, multiplied by four amounts to $8,000.

Whether, and how far, it may be expedient to reduce the number and the compensation of the cadets, the committee submit to the judgment of the House, and for that purpose report a bill.

17th Congress.] **No. 217.** [1st Session.

EXPENSES OF THE ARMY AND MILITARY ACADEMY FOR THE YEARS 1818, 1819, 1820, 1821, AND ESTIMATES FOR 1822.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 5, 1822.

Sir: Department of War, *March* 1, 1822.

Pursuant to a resolution of the House of Representatives of the 7th ultimo, I have now the honor of submitting "a comparative view of the expenses of the army proper, and Military Academy, for the years 1818, 1819, 1820, 1821, and estimates for 1822, arranged under the various heads of expenditures, according to the present and former organization of the Department of War." The military disbursements for the years 1816 and 1817, as explained by the letter from the Second Auditor, accompanying this report, are so blended with the arrearages of prior years, pay and subsistence of the militia, and claims of certain States and individuals, arising out of the late war, as to preclude the possibility of ascertaining the expenses of the army for those years, and so as to put it out of my power to embrace them in the comparative view called for; though it is believed, if it could be embraced in the comparison, the result would not vary materially from that founded on the expenditure of the year 1818, in

which year a separation was made for the first time between the current expenses of the army and the arrearages growing out of the expenditures of the late war.

Table A, accompanying this report, is the statement of the Second Auditor, and exhibits a view of the expenditures of the army proper, including the Military Academy, from the year 1818 to 1821, inclusive; from which it appears that the expenditures, after deducting for the increased expense on account of the Seminole war in 1818, were, respectively, for those years, $3,702,495 04, $3,374,731 95, $2,816,414 11, and $2,180,093 53; adding to the expenditure of the last year the arrearages of the Quartermaster's department, and subtracting the expenditure incident to the reducing the military establishment in June last, the estimate for the expenditure of the year 1822, including the balances of such of the appropriations of the last year as are required for the service of this, amounts to $1,800,424 85.

Table B is an abstract of the general returns of the army for the years 1818, 1819, 1820, and 1821, showing the number of officers and enlisted men, as reported by the last returns received at the Adjutant General's office, together with the academic staff and military school at West Point; to which is added the number of the military establishment, by the present organization, for the year 1822. From the exhibit in the table it appears that the average strength of the army, including officers and cadets, for the year 1818, was 8,199; for 1819, 8,428; for 1820, 9,693; for 1821, 8,109; and that, from the organization of the present military establishment, if the rank and file be kept full, the strength for 1822 will amount to 6,442.

It also appears from the same table that the commissioned officers were in proportion to the cadets and rank and file of the army, in service for those years, thus:

In 1818, as 1 to 11.75.	In 1821, as 1 to 12.18.
In 1819, as 1 to 12.11.	In 1822, as 1 to 10.25.
In 1820, as 1 to 13.57.	

Table C exhibits the result of the comparative view of the expenditures of the army for the years 1818, 1819, 1820, 1821, and estimates of expenditures for 1822. To illustrate distinctly the operations of the present system in controlling the disbursements of the army, through the instrumentality of a proper organized staff, the items composing the expenditures of the army have been classed under two divisions, viz:

First. Those which are fixed by law, and which cannot be materially affected by administration; such as pay to the officers and men, subsistence to the former, and the allowance to them for servants, forage, transportation of baggage, &c.

Secondly. Those items which are embraced under the general character of supplies for the army, and which may be reduced by correct administration; such as subsistence to soldiers, clothing, quartermasters' and medical stores. As most of the articles embraced under the above denomination are exposed to fluctuate in price, and a considerable reduction took place in the medical, subsistence, and clothing supplies, within the periods compared, proper allowances have been made on that account, amounting, in the price of provisions, from forty to thirty-nine and a half per centum, and in that of clothing and medical stores from seven to eight and a half per centum. The contracts made by the different departments, and the prices current for those years in the principal cities, have been the guides in fixing on those allowances. To the quartermaster's disbursements no additions have been made, as any reduction which may have taken place in the price of supplies furnished by that department has been more than balanced by the increased expenditures to which it has been subject from the extension and multiplication of the frontier posts.

From table C it appears that the expenditures of the army, additions being made as above stated for the reduction in prices of stores and supplies in the years subsequent to 1818, so as to raise the prices of those years to the standard of those of that year, would amount to,

In 1818,	$3,702,495 04
In 1819,	3,663,735 16
In 1820,	3,061,884 00
In 1821,	2,327,552 13
And by estimates for 1822,	1,929,179 91

From the above data and average strength of each year, conformably to an abstract of the general returns of the army, (table B,) it results, as exhibited in table C, that the average cost of the army, for each individual, taking the aggregate of the officers, professors of the Military Academy, cadets, and enlisted men, in the service of the United States, for 1818, was:

In expenditures not materially affected by administration, on an average, each,	$151 93
In expenditures which may be affected by administration, on an average, each,	299 64
Total average cost for officers and enlisted men, &c., each, for 1818,	$451 57
For the year 1819—	
In expenditures of the 1st class, each,	$158 72
In expenditures of the 2d class, each,	275 98
Total average cost, each,	$434 70
For the year 1820—	
In expenditures of the 1st class, each,	$140 45
In expenditures of the 2d class, each,	175 43
Total average cost, each,	$315 88
For the year 1821—	
In expenditures of the 1st class, each,	$136 62
In expenditures of the 2d class, each,	150 40
	$287 02
For the year 1822—	
Conformably to estimates, of the 1st class, each,	$155 30
Conformably to estimates, of the 2d class, each,	144 16
	$299 46

From the above, it appears that there has been an actual annual reduction in the average expense of each officer and soldier in the service—

In the year 1819, of - - - - -	$16 87 each;
In the year 1820, of - - - - -	135 69 each;
In the year 1821, of - - - - -	164 55 each;
And by estimates for 1822, of - - - - -	153 11 each.

The act of Congress for organizing the general staff, agreeably to its present formation, was not approved until the 14th of April, 1818; and the change in the system for controlling the disbursements of the army, under the superintendence of the chiefs of each Department located at Washington, could not be sufficiently matured before the close of the year 1819; which, with the additional expense to which the quartermaster's department was unavoidably subjected in the year 1819, from occupying advanced military posts on the Missouri and Mississippi rivers, will account for the comparatively little reduction in expenditure in that year.

The expenditure for the year 1822, compared with the aggregate of individuals composing the military establishment, though favorable as contrasted with the expenses of 1818, 1819, and 1820, is not so with 1821. This difference is accounted for from the present organization of the military establishment, the officers being in larger proportion to the rank and file than under the former organization; but, if we should suppose the proportion to be the same, the comparison founded on the estimates for 1822 would be more favorable in its results than in the expenditures of the preceding year. From table C, it further appears that the army for the year 1818, being 8,199 strong, including general staff, professors of the military academy, cadets, and enlisted men, cost, for that year, $3,702,495 04; and that for the same numerical force, at the rate of the expenditures in 1818, would have cost—

For 1819, - - - - - -	$3,564,105 30
For 1820, - - - - - -	2,589,900 12
For 1821, - - - - - -	2,353,276 98
And on the estimates for the year 1822, - - - -	2,455,272 51

After making an allowance for the difference in prices of articles of supplies, as above stated, the results in favor of the latter years are, respectively, $138,389 74, $1,112,594 92, $1,349,218 06, and $1,247,222 50.

Such are the results, as founded on the statement of the Second Auditor of the Treasury Department, but which, for the reasons which he has assigned in his report, may not be strictly correct, as the accounts of the expenditure of each year are not kept separately. It is, however, confidently believed that any inaccuracy in the mode of ascertaining the amount of the expenditures of the several years cannot, in any considerable degree, vary the result. This great reduction in the expenditure has been effected by the present organization, principally by the more minute control which, through it, has been given both to the disbursements of public money and the preservation of public property. Its beneficial effects have been no less striking in the prompt rendition and settlement of the accounts of disbursing officers. All of the accounts for supplies and disbursements in the department of the commissary of subsistence, for the year ending the 1st June last, the period at which the contracts for supplying the army expired, are settled, except a few small ones, amounting, in the whole, to $5,405 46, though there were seventy-one contracts formed, and ninety-one disbursing officers attached to this department, during that year.

The settlements in the other subordinate branches of this department are not less prompt. It is believed that the system has attained nearly all the perfection of which it is susceptible, as, by reference to the table marked C, it will be seen that those expenditures liable to be affected by administration, and which are principally on account of the soldiers, will be but little reduced in this year, when compared with those of last year; and it is not doubted but that, if preserved, the system will hereafter prevent the accumulation of unsettled accounts, and of any considerable losses in the expenditure for the army. Taking every circumstance into consideration, the number and distance of the posts, the quantity and quality of the supplies, and the large proportion of officers and cadets, which, while it better fulfils the object of a peace establishment, renders the army more expensive, when compared with the aggregate of individuals, including officers, cadets, and privates, it is believed that at no period has the expense of the military establishment been, in proportion to its size, so small as under its present organization.

Table marked D contains a comparative statement of the expense of supplying the army, from the 1st of June, 1816, till the 31st of May, 1817, under the former system; and the same under the present from the 1st of June, 1820, till the 31st of May, 1821. The new system commenced its operation on the 1st of June, 1819, and, as some additional expenses were necessarily incurred in the first year, it was thought that the operation of the system would be more fairly tested by taking the subsequent year. The year from the 1st of June, 1816, was assumed, under the old system, in preference to the two subsequent years, under the belief that it presents the fairest test of the operation of the former system; the accounts of that year being more completely adjusted, and not involved in the increased expenditure on account of the Seminole war.

I have the honor to be, &c.

J. C. CALHOUN.

Hon. P. P. Barbour, *Speaker of the House of Reps. U. S.*

Sir: Treasury Department, Second Auditor's Office, *February* 14, 1822.

In obedience to the resolution of the House of Representatives, of the 7th instant, calling for "a comparative view of the expenses of the army proper, for the years 1816, 1817, 1818, 1819, 1820, and 1821, with the estimates of 1822, arranged under the various heads of expenditure, according to the present and former organization of the Department of War," I have the honor to transmit herewith a statement of the annual expenses of the army proper for the years 1818, 1819, 1820, and 1821, and beg leave respectfully to observe:

That the expenditures of the several years have been ascertained from the amount of warrants issued, adding to the same the amounts transferred on the settlement of accounts, and by deducting the various sums brought, in like manner, to the credit of the appropriation. The result may not exactly agree with the amount of the expenditures for each year, as part of the expenditure under the warrants of one year may run into the subsequent year. The amount of expenditure charged to the year may also be affected by the final settlement of such accounts as remain to be adjusted; but, it is believed, the amount of the expenditure of the several years would not vary, in any considerable degree, from the statement given.

In relation to the expenses of the army proper, for the years 1816 and 1817, I beg leave to state, that they are so interwoven with the arrearages of prior years, pay and subsistence of the militia, and claims of certain States, and various individuals, arising out of the war, (all of which have been carried to the different heads of appropriation without distinguishing the particular years of the expenditure,) that it is impracticable to separate the expenses of the several years.

I have the honor to be, &c,

WILLIAM LEE.

Hon. J. C. Calhoun, *Secretary of War.*

A.

A view of the expenditures of the army proper, for the years 1818, 1819, 1820, *and* 1821, *arranged under the various heads of expenditures, as follows:*

Heads of expenditure.	1818.	1819.	1820.	1821.
Pay of the army,	$979,483 66	$1,129,081 42	$1,074,199 79	
Pay of the army, and subsistence of the officers and servants,	-	-	-	$1,139,000 67
Subsistence of the army,	980,115 75	645,088 92	561,382 44	327,553 29
Subsistence of officers and servants,	250,681 61	189,634 11	258,676 10	
Forage,	15,543 14	19,053 07	28,545 01	28,922 86
Clothing,	742,629 29	401,480 16	261,518 17	206,565 35
Bounties and premiums,	68,785 63	75,856 56	*48,461 20	21,325 88
Contingencies,	110,159 95	80,466 94	41,003 61	36,533 42
Quartermaster's department,	540,911 05	760,793 40	461,011 56	359,240 23
Medical department,	†87,785 68	40,914 86	37,295 02	28,353 21
Military Academy,	26,399 28	32,362 51	44,321 21	16,698 62
	$3,802,495 04	$3,374,731 95	$2,816,414 11	$2,164,093 53

* In the year 1820, the amount refunded to bounties and premiums, out of the large advances made in previous years, amounted to - - - - - $67,619 63
Whilst the total amount expended was - - - - - 48,461 20

Leaving a balance in favor of that appropriation, of - - - - - $19,158 43

As will be seen by a statement rendered to Congress on the 1st of February, 1821.

† In this statement, a sum of $30,887 93 has been brought to the debit of the medical department in the year 1818, which has not been noticed in a previous view of the expenditures transmitted to the Secretary of War. This expenditure has been covered by a transfer made to that amount, by the President of the United States, on the 18th July, 1818, of several unexpended balances not required.

TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE, *February* 14, 1822.

WM. LEE, *Second Auditor.*

B.

Abstract of the general return of the army, showing the number of officers and enlisted men, as reported by the last returns received at this office, together with the academic staff and military school at West Point; also, the organization for 1822.

Returns.	ARMY.			MILITARY ACADEMY.		Grand total.	Average strength.	Remarks.
	Commissioned officers.	Enlisted men.	Total.	Staff not of the army.	Cadets.			
December, 1817,	640	7,581	8,221	8	253	8,482		
December, 1818,	644	7,032	7,676	9	232	7,917	8,199	
December, 1819,	641	8,047	8,688	9	244	8,941	8,428	
December, 1820,	687	9,507	10,194	9	232	10,435	9,693	
December, 1821,	541	4,983	5,524	9	241	5,774	8,109	
January, 1822,	541	5,642	6,183	9	250	6,442	6,442	Organization for 1822.

NOTE.—A division of the total for the close of the years 1817 and 1818 will give the average strength of the army, including the Military Academy, for the year 1818. By the same operation, the average strength of the army for the subsequent years 1819, 1820, 1821, and 1822, is ascertained.

The general order organizing the army, as reduced by the act of Congress of the 2d of March, 1821, was not promulgated until the 17th of May following, and many months subsequent to that period must have elapsed before the provisions of the order could take effect at the distant frontier posts. The military establishment of the year 1820 was, therefore, in service for more than six months of the year 1821; assuming, however, six months as the limit of its service, the mean between the grand total strength, as exhibited in the general return of the army in December, 1821, after the reduction, and the total at the close of the previous year, before reduction, must give the accurate average strength for the year 1821.

It appears, from the above general return, that the commissioned officers were in proportion to the cadets and rank and file in service, thus:

In the year 1818, as 1 to 11.75.
In the year 1819, as 1 to 12.11.
In the year 1820, as 1 to 13.57.
In the year 1821, as 1 to 12.18.
In the year 1822, as 1 to 10.27.

JAMES GADSDEN.
Colonel and Adjutant General, U. S. Army.

C.

Comparative statement of the army expenditures, under its various heads.

	1818.	1819.	1820.	1821.	1822.
Permanent expenditures, fixed by law, and not to be materially affected by administration, viz:					
Pay of the army,	979,483 66	1,129,081 49	1,074,199 79		
Subsistence of officers and servants,	250,681 61	189,634 11	258,676 10	1,139,000 67	
Forage for officers,	15,543 14	19,053 07	28,545 01	28,922 86	1,000,461 08
Total permanent expenditures for the years 1818, 1819, 1820, 1821, and estimates for 1822,	1,345,708 41	1,337,768 60	1,361,420 90	1,167,923 53	1,000,461 08
Deduct pay to disbanded officers,	- -	- -	- -	60,000 00	
				1,107,923 53	
Add to 1821, for arrearages which do not appear on the books of the Auditors,	- -	- -	- -	76,000 00	
Expenditures for supplies of the army, &c., which may be affected by administration, viz:					
Subsistence of the army,	980,115 75	645,088 92	561,382 44	327,553 29	295,657 00
Clothing,	742,629 29	401,480 16	261,518 17	206,565 35	128,522 55
Bounties and premiums,	68,785 63	75,856 56	48,461 20	21,325 88	
Contingencies,	110,159 95	80,466 94	41,003 61	36,533 42	20,000 00
Quartermaster's department,	540,911 05	760,793 40	461,011 56	359,240 23	306,817 13
Medical department,	87,785 68	40,914 86	37,292 02	28,253 21	34,988 00
Military Academy,	26,399 28	32,362 51	44,321 21	16,698 62	13,979 09
Total army expenditures for supplies, &c.,	2,556,786 63	2,036,963 35	1,454,993 21	1,072,170 00	799,963 77
Grand total expenditures of the army, permanent and contingent, for the years 1818, 1819, 1820, 1821, and the estimates for the year 1822,	3,802,495 04	3,374,731 95	2,816,414 11	2,180,093 53	1,800,424 85
Add to the division of expenditures for army supplies, which may be affected by administration: To the item for subsistence 40 per centum for the three years, 1819, 1820, and 1821, and 39½ per centum for the year 1822.	Subsistence 40 and 39½ per centum,	258,035 56	224,552 97	131,021 31	116,784 51
To the item for clothing 7 per centum for the same years; and to the item for medical department, 7 per centum for the years 1819, 1820, and 1821, and 8½ for 1822, being the estimated difference of prices for provisions, clothing, and hospital stores, between the year 1818 and the subsequent years,	Clothing 7 per centum,	28,103 61	18,306 27	14,459 57	8,996 57
	Medical department, 7 and 8½ per centum,	2,864 04	2,610 65	1,977 72	2,973 98
Expenditures of the army in subsistence, clothing, medical and quartermaster's supplies, and contingencies, on the basis of the expenditures of the year 1818,	2,556,786 63	2,325,966 56	1,700,463 10	1,219,628 60	928,918 83
Deduct, for the year 1818, for increased disbursements on account of the Seminole war,	100,000 00				
	2,456,786 63				
Grand total expenditure of the army, including pay, &c., fixed by law, on the basis of expenditures for the year 1818, Dollars,	3,702,495 04	3,663,735 16	3,061,884 00	2,327,552 13	1,929,179 91

C.—Continued.

From the abstract of the general returns of the army, exhibiting its average strength for the years 1818, 1819, 1820, 1821, *and the organization for* 1822; *and from the above exhibit of its expenditures for the same years, on the basis of the year* 1818, *it appears that the commissioned officers, academic staff, cadets, non-commissioned officers, and privates, cost the Government, on an average, for each:*

In the year 1818.	For expenditures not to be affected by administration,	151 93	on an average for each.	
	For expenditures which may be affected by correct administration,	299 64	on an average for each.	
	Total average cost for officers, cadets, non-commissioned officers, and privates, each	$451 57		
In the year 1819.	For expenditures under the first head,	158 72	Excess of expenditure over 1818, per officer and man,	6 79
	For expenditures under the second head,	275 98	Reduction from 1818, per officer and man,	23 66
	Average cost for each officer, soldier, &c.,	$434 70	Total reduction in year 1819, per officer and man,	$16 87
In the year 1820.	For expenditures under the first head,	140 45	Reduction from year 1818, per officer and man,	11 48
	For expenditures under the second head,	175 43	Reduction from year 1818, per officer and man,	124 21
	Average cost for each officer, soldier, &c.,	$315 88	Total reduction in year 1820, per officer and man,	$135 69
In the year 1821.	For expenditures under the first head,	136 62	Reduction from year 1818, per officer and man,	15 31
	For expenditures under the second head,	150 40	Reduction from year 1818, per officer and man,	149 24
	Average cost for each officer, soldier, &c.,	$287 02	Total reduction in year 1821, per officer and man,	$164 55
In the year 1822, agreeably to estimate.	For expenditures under the first head,	155 30	Excess of expenditures over 1818, per officer and man,	3 37
	For expenditures under the second head,	144 16	Reduction from year 1818, per officer and man,	155 48
	Estimated average cost for each officer, soldier, &c.,	$299 46	Total reduction from year 1818, per officer and man,	$152 11

It appears from the above statement that the army, in the year 1818, by the return, 8,199 average strength, including the Military Academy, cost:

In expenditures not to be affected by administration,	1,245,708 41
In expenditures which may be affected by correct administration,	2,456,786 63
Total,	$3,702,495 04

From the same statement it results that the same force, 8,199, would have cost, on the basis of expenditures of the subsequent years to 1818, thus:

On the basis for 1819.	In expenditures of the first class,	1,301,345 28	Excess over expenditure of 1818,	55,636 87
	In expenditures of the second class,	2,262,760 02	Reduction from expenditures of 1818,	194,026 61
	Total expense on the basis of 1819,	$3,564,105 30	Reduction in favor of 1819,	$138,389 74
On the basis for 1820.	In expenditures of the first class,	1,151,549 55	Reduction from expenditures of 1818,	94,158 86
	In expenditures of the second class,	1,438,350 57	Reduction from expenditures of 1818,	1,018,436 06
	Total expense on the basis of 1820,	$2,589,900 12	Reduction in favor of 1820,	$1,112,594 92
On the basis for 1821.	In expenditures of the first class,	1,120,147 38	Reduction from expenditures of 1818,	125,561 03
	In expenditures of the second class,	1,233,129 60	Reduction from expenditures of 1818,	1,223,657 03
	Total expense on the basis of 1821,	$2,353,276 98	Reduction in favor of 1821,	$1,349,218 06
On the basis for 1822.	In estimates for the first class,	1,273,304 70	Excess of expenditures over those of 1818,	27,596 29
	In estimates for the second class,	1,181,967 84	Reduction from expenditures of 1818,	1,274,818 79
	Total expense on the basis of estimates for 1822,	$2,455,272 54	Reduction in favor of 1822,	$1,247,222 50

RESULT.

From the abstract of returns of the army for five years, it appears that the greatest aggregate strength was in service in the year 1820; nine thousand six hundred and ninety-three officers, privates, &c., which cost, agreeably to the exhibit in the table, adding to the actual expenditure of 1820 the difference in the price of acticles exposed to fluctuate, between that year and 1818:

In expenditures not to be affected by administration,	1,361,420 90
In expenditures which may be affected by correct administration,	1,700,463 10
Total cost of 9,693 officers, cadets, and privates, in 1820,	$3,061,884 00
The same army would cost, on the basis of expenditures for the year 1818,	
In expenditures not to be affected by administration,	(*a*) 1,472,657 49
In expenditures which may be affected by correct administration,	(*b*) 2,904,410 52
	$4,377,068 01
(*a*) Reduction in consequence of improved organization,	111,236 59
(*b*) Reduction in consequence of improved organization,	1,203,947 42
	$1,315,184 01

REMARKS.

The estimates for the year 1822 are assumed as the probable expense of the army for that year, to be compared with the expenditures of the previous years. The result may prove erroneous as to some of the items estimated; but it is believed that the whole expenditure of the army will not exceed, but may fall short of, the aggregate amount estimated.

The estimate for the quartermaster's department for the year 1822, is		401,217 13
Deduct for arrearage of previous year, charged to 1821,	76,000 00	
Deduct for permanent barracks at Baton Rouge, $12,000, and $6,400 estimated expense of soldiers' labor, to be applied to permanent objects,	18,400 00	
		94,400 00
Amount charged on table against army expenditures proper for 1822,		$306,817 13

The occupying the advanced military posts on the Missouri and Mississippi rivers in the year 1819 occasioned the increased expenditure in the quartermaster's department, as exhibited in that year.

The excess of expenditures in the division of disbursements, not materially affected by administration in 1822 over that of 1818, is to be ascribed to the greater proportion the officers in service bear in the present organization to the rank and file than in the year 1818; but the grand result of the gross expenditures of the army for 1818, as compared with the estimates for 1822, making allowances for changes in the prices of supplies exposed to fluctuate, is in favor of the latter year $1,247,222 50.

The expenditures of the army for 1818, as exhibited in the table, exceed the expenditures for the same year as exhibited in the report for the reduction of the army, made by this Department in December, 1820. This difference arises principally from the expenses of the Military Academy, and some items for medical supplies, now embraced, that were omitted in the exhibit accompanying the report alluded to. The sums differing, the results, in comparing the expenditures of the year 1818 with 1820, must likewise differ, and are proportionably in favor of the latter year, from the above cause, as well as the fact that the average strength of the army for 1820, as exhibited by general returns, is actually greater than that assumed in the report, for the want, at the time, of the necessary returns in the adjutant general's office, from which to ascertain correctly the actual strength of the army.

D.

Cost of subsisting the troops of the United States for one year, commencing the 1st day of June, 1820, and ending on the 31st day of May, 1821.

Amount of subsistence stores remaining on hand 31st day of May, 1820, at the different posts,		$91,895 65
Amount paid to general contractors for the period embraced,		371,915 15
Amount paid to special contractors for complete rations furnished recruits at the different rendezvous,		6,394 81
Amount of purchases made by the assistants, acting assistants, and military storekeepers, of fresh beef, and hospital stores, not included in the contracts,	$137,681 61

FORTIFICATIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 7, 1822, BY THE CHAIRMAN OF THE COMMITTEE ON MILITARY AFFAIRS.

SIR: COMMITTEE ROOM, *February* 8, 1822.

The Committee on Military Affairs have instructed me to request the following information relative to the fortifications at Old Point Comfort and the Rip Rap Shoal, in Virginia, at Mobile Point and Dauphin Island, in Alabama, and at the Rigolets and Chef Menteur, in Louisiana, viz:

An estimate of the expense of completing the respective works for the reception of their armament and garrisons.

The amount of disbursements or advances on that account at each place, at what time, and to whom made.

What part or proportion of the several works may be considered as completed.

The number and caliber of guns and mortars intended to be mounted at each post, with the number of troops considered necessary for their defence.

I have the honor to be, &c.

WM. EUSTIS, *Chairman.*

The Hon. JOHN C. CALHOUN, *Secretary of War.*

SIR: DEPARTMENT OF WAR, *February* 18, 1822.

In reply to your letter of the 8th instant, I have the honor to transmit, herewith, a report of the chief engineer, which furnishes the information requested.

I have the honor to be, &c.

J. C. CALHOUN.

Hon. WM. EUSTIS,
Chairman Military Committee, House of Representatives.

FORTS REFERRED TO.	"Estimate of the expense of completing the respective works for the reception of their armament and garrisons."	"The amount of disbursements or advances on that account at each place, at what time, and to whom made."			"What part or proportion of the several works may be considered completed."	"The number and caliber of guns and mortars intended to be mounted at each post, with the number of troops considered necessary for their defence."						
		Up to 31st December, 1821.	At what time.	To whom made.		18 pounders.	24 pounders.	32 pounders.	Mortars.	Total of ordnance.	No. of troops during war.	No. of troops during peace.
Old Point Comfort, -	$816,814 96	$605,098 44	Progressively since 1817,	To Major J. Maurice until October 1821, and since to Colonel Gratiot, - - -	Three-fourths,	120	-	200	60	380	2,625	600
Rip Rap Shoal, - -	904,355 39	313,225 91	Progressively since 1818,		One-third,	54	54	108	-	216	1,130	200
Mobile Point, - -	693,292 77	158,067 11	Progressively since 1818,	To Capt. Gadsden until 30th April, 1821, and since to Captain De Russy, - - -	Nearly one-fourth,	54	-	54	10	118	900	100
Dauphin Island, - -	693,292 77	219,743 90	Progressively since 1818,		Four-thirteenths,	54	-	54	10	118	900	100

Chef Menteur, - -	264,516 32	-	- - -		- -	25	-	33	6	64	400	80

REMARKS.

The sums estimated for completing, and the statement of ordnance and troops, are derived from the reports of the Board of Engineers.

"The amounts of disbursements or advances" are made up of a statement on the subject from the Third Auditor, reported to Congress at the last session, with the superaddition of the sums appropriated to each of the works respectively for the service of 1821; all of which have been advanced. It is proper, however, to state, that the progress of the works on the Gulf of Mexico has not been proportionate to the sums expended, in consequence of unexpected difficulties that have been encountered in their prosecution, together with the improvident management of the contractors at the commencement thereof.

The proportion completed is established by that of the amount expended to the amount estimated for completing, and, with the exception of the works on the Gulf of Mexico, for the reasons just stated, is believed to be correct.

17th Congress.] No. 219. [1st Session.

BREVET RANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 7, 1822, BY THE CHAIRMAN OF THE COMMITTEE ON MILITARY AFFAIRS.

SIR: DEPARTMENT OF WAR, *January* 21, 1822.

Brevet Major Generals Scott and Gaines having presented their claims for brevet pay and emoluments, "as being on duty, and having commands according to their brevet rank," the case was submitted, by the direction of the President, for the decision of the Attorney General, a copy of whose official opinion I herewith transmit. His decision being favorable to the claim, under the existing laws and organization of the army, growing out of the late reduction, I have deemed it my duty to apprize the committee of the fact.

I have the honor to be your obedient servant,

J. C. CALHOUN.

Hon. WILLIAM EUSTIS, *Chairman Military Committee.*

SIR: OFFICE OF THE ATTORNEY GENERAL U. S., *December* 29, 1821.

I proceed, according to your request, to give you my opinion on the laws touching brevet pay, as they apply to the cases of Generals Scott and Gaines.

The act of Congress of 6th of July, 1812, "making further provision for the army of the United States, and for other purposes," authorizes the President to confer brevet pay, in certain cases, "provided that nothing herein contained shall be so construed as to entitle officers, so brevetted, to any additional pay or emoluments, except when commanding separate posts, districts, or detachments, when they shall be entitled to, and receive, the same pay and emoluments to which officers of the same grades are now, or hereafter may be, allowed by law."

This act was passed *flagrante bello*, and was manifestly intended as a stimulus to enterprise in a struggle which it was foreseen would require all our strength. It received a liberal construction during the war, as it was proper it should do.

On the return of peace, the act of the 3d of March, 1815, "fixing the military peace establishment of the United States," was passed. It provided, among other things, that there should be two major generals and four brigadiers; and, on the subject of pay, it expressly provides "that the compensation, subsistence, and clothing of the officers, &c. composing the military peace establishment, shall be the same as are prescribed by the act entitled 'An act fixing the military peace establishment of the United States,' passed 16th of March, 1802, and the act entitled 'An act to raise, for a limited time, an additional military force,' passed 12th of April, 1808; and that themajor generals shall be entitled to the same compensation as is provided by an act entitled 'An act to raise an additional military force,' passed 11th of January, 1812."

The three acts thus exclusively selected to give the rules and standard of compensation to the officers, &c. on the peace establishment recognise no such thing as *brevet rank*, or brevet *compensation*. The act of the 6th July, 1812, which alone recognised them, is not among the acts referred to as giving the rule of compensation. It is true it is not *expressly* repealed; but as to the matter of compensation, it was virtually repealed; it was at least rendered inoperative by its exclusion from the list of acts referred to as fixing the scale of compensation; for, in a case like this, "*expressio unius est exclusio alterius.*"

Such, however, was not the construction given to the act of the 3d March, 1815. The act of 6th July, 1812, was acted upon precisely in the same manner as if it had been among the acts referred to, as prescribing the compensation; separate posts and districts were created and multiplied, as if to open a wider theatre for its more extensive operation; and there were few, if any, brevets in the army which did not draw brevet pay. The practical effects of this construction may be illustrated by the single case of the generals. The law clearly contemplated that two officers only should receive the pay of *major general;* it expressly separates them from the other officers by referring specifically to the act of 11th January, 1812, as fixing *their* compensation; but, by engrafting the brevet law of the 6th July, 1812, on the act of 3d March, 1815, the distinction between the brigadier and major generals was broken up; and we had six major generals in pay, instead of two, as the law, it seems to me, clearly contemplated. The construction, I think, was erroneous, but it was an error in favor of those who have deserved most highly of their country, in her hour of greatest peril and necessity.

The brevet law of the 6th July, 1812, being thus continued in practical operation after the return of peace, exactly as it had been during the war, the act of 16th of April, 1818, "regulating the pay and emoluments of brevet officers," was passed; by which it was enacted "that the officers of the army, who have brevet commissions, shall be entitled to, and receive, the pay and emoluments of their brevet rank when on duty, and *having a command according to their brevet rank*, and at no other time."

This law raises the question what is a *command according to brevet rank?* Generals Gaines and Scott insist that the question can be answered only by a reference to the act of the 6th July, 1812, which alone designates what shall be considered as a brevet command, and declares it to consist in the *command of a separate post, district, or detachment.* But this was the construction already in practice, and, thus construed, the law was unnecessary. It is very manifest that the law was intended to alter something in the practice of the pay department, which Congress disapproved; but the construction for which these gentlemen contend would confirm the practice, and not alter it. It is true that, if we put aside the practice, and look at the laws by themselves, the construction for which these gentlemen contend has great force; for if the act of 1818 had been passed with reference only to the act of 1815, then, as the effect of the act of 1815 was, according to my construction, to destroy brevet rank and pay under the peace establishment, the act of 1818 must have been considered as designed to recognise and restore them, giving the pay whenever the rank existed, and referring for its exposition to the act of 1812, which was the sole creating and directing act upon the subject. Such, I acknowledge, was my own opinion while I considered, as from my situation I necessarily must, the laws as standing alone, and the act of 1818 as growing entirely and solely out of the act of 1815. Understanding, however, from your Department, that the practice was already precisely that which this construction would educe from the act of 1818, it becomes manifest that this latter act could not have grown out of the act of 1815, but out of the erroneous practice under that act which it was intended to correct and reform; and the act of 1818, thus construed with reference to the evil which it was intended to

remedy, has, I think, been correctly expounded by the order of the 8th May, 1818, page 125 of the printed rules and regulations of the War Department, of the edition of 1820, to wit: "Brevet officers shall receive the pay and emoluments of their brevet commissions when they exercise command *equal* to their brevet rank; for example, a brevet captain must command a company; a brevet major and a brevet lieutenant colonel, a battalion; a brevet colonel, a regiment; a brevet brigadier general, a brigade; a brevet major general, a division." Brevet Major Generals Gaines and Scott did not, I understand, command divisions, and therefore, according to this opinion, were not entitled to the brevet pay of a major general under the act of 1818.

These gentlemen further insist that if the act of the 6th July, 1812, is not to give the rule as to brevet rank and pay, and if we are to resort to the numerical force under the command of an officer to give his rank, still, by this criterion also, they were entitled to the rank, and, consequently, to the pay of their brevets, under the act of 1818; because, although their actual command was not equal to a full division, it was more than a brigade; that, in passing the limits of a brigade, it transcended their commission as brigadier generals, and called for a higher rank in the commander, which call could be satisfied only by their brevets of major general. This position, considered with critical and technical rigor, is, perhaps, correct; but, in construing an act of Congress, we are to look to the intention of the law-makers; and there is nothing in the policy or language of the act to induce the belief that Congress were looking to any minute subdivision of the cases before them. The mischief intended to be remedied was the prodigal waste of the public money in the profuse allowance of brevet pay. The remedy to be applied was to restrict this allowance, 1st. To such officers as were actually on duty; 2d. To such whose commands *accorded with their brevet rank.* If these latter words are susceptible of two constructions, that construction must be preferred which will best advance the remedy and repress the mischief; and if the construction which is to produce this effect be, moreover, the most obvious sense of the terms, on every principle of statutory construction it must be preferred.

Now, I apprehend, if any one at all acquainted with the organization of an army were asked "what is the command of a brigadier?" the obvious answer would be "a brigade;" and so, if asked "what is the command of a major general?" the obvious answer would be "a division." And this, I apprehend, was the meaning of Congress in the words "having a command according to their brevet rank." Hence, in this view of the subject also, I apprehend that the order of the War Department of the 8th May, 1818, before quoted, has correctly expounded the meaning of this act.

We come now to the act of the 2d March, 1821, "to reduce and fix the military peace establishment of the United States." This act provides that the peace establishment shall be composed of four regiments of artillery, and seven regiments of infantry, with such officers of engineers, of ordnance, and of the staff, as are thereinafter provided for. The act declares what officers belong to the peace establishment, and, among others, that there shall be one major general and two brigadier generals; and on the subject of pay, it is declared "that the officers, &c. shall have the same *rank, pay, and emoluments, as are provided in like cases by existing laws.*"

The President is required to arrange the officers and troops retained on the peace establishment, and he has made such an arrangement as has placed Generals Gaines and Scott at the head of more than four regiments each. By the same act Congress has adopted the System of General Regulations for the Army, compiled by Major General Scott; and by the 44th article, 2d paragraph (page 85) of these regulations, it is stated that two regiments shall constitute a brigade, and two brigades a division; so that, according to this arrangement, each of these gentlemen is now at the head of a corps exceeding the amount of a division. It is true that this section of the regulations is headed "Economy of an Army in Campaign," and the particular article under consideration contemplates the organization of troops in brigades, divisions, and army corps, *on their arrival at the place appointed for rendezvous.* Hence it may be said that this article furnishes no criterion of what constitutes a division in quarters. But I understand that, in this organization of troops into brigades and divisions, General Scott has proposed nothing new, but has merely proposed to give an authentic form to the pre-existing and well known distribution. That companies, regiments, brigades, and divisions constitute an arrangement known in time of peace as well as in war, is manifest from the order of the Department of War of the 8th of May, 1818, founded on the act of the 16th of April, of the same year; and the act itself, which was passed in time of peace, must be considered as recognising the same arrangement, because it has been already shown that such is the only rational construction of the terms "having a command according to their brevet rank."

With such authority before us, it will not do to affirm that "a division" is a term of distribution known only in war, and wholly unknown in peace. I consider it as having been clearly within the contemplation of Congress when they passed the act of the 16th of April, 1818, and the order of the 8th of May, as being only a more distinct declaration of the same fact. I understand, too, from the military officers in the department, that four regiments were clearly and always considered as composing a division, before the adoption of General Scott's regulations, and consequently independent of their authority. This, however, is a question which you are much better qualified to decide than myself.

Assuming it for the present that each of these gentlemen is now at the head of a division, the question is whether they are entitled to the pay of their brevet rank since they were placed in this situation. The question is extremely difficult. Looking at the act in a general view, it would seem to have been clearly the intention of Congress that the Government should be charged with the expense of one major general only, and of two brigadiers, and that no *permanent* arrangement which the President could make of the troops on the peace establishment should avail to defeat this purpose. This, however, is matter of inference from a general view of the policy of the law, which must yield to any express declaration of their purpose on the direct subject of pay; and on this subject they have expressly declared, as we have seen, that the rank and pay should be governed by the existing laws. Now, among the existing laws on the subject, is that of the 16th of April, 1818, which recognises the brevets of the officers composing this establishment, and declares that they shall draw the pay of their brevets whenever they have a command according to their brevet rank, that is to say, (according to the correct exposition of this Department,) that those who hold the brevet of major general shall draw the pay of that rank when they command divisions, which is the case here.

This conclusion seems to me to be forced upon us by this explicit provision on the subject of pay; and whether Congress foresaw this consequence or not, they seem to me to have rendered it impossible for us to avoid it by any fair process of reasoning. If, therefore, these gentlemen are in the command of divisions under the last arrangement, I think them entitled to the brevet pay of major generals from that period.

I have, &c.

WILLIAM WIRT.

Hon. JOHN C. CALHOUN, Secretary of War.

17th Congress.] No. 220. [1st Session.

THE MILITIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 9, 1822.

To the House of Representatives: WASHINGTON, *March* 9, 1822.

I transmit a report from the Secretary of War, together with the annual return of the militia of the United States, and an exhibit of the arms, accoutrements, and ammunition of the several States and Territories, prepared in conformity with the militia laws on that subject.

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *March* 5, 1822.

I have the honor to enclose an annual return of the militia of the United States, together with an exhibit of the arms, accoutrements, and ammunition of the several States and Territories, prepared by the adjutant general, conformably to the militia laws on that subject.

I have the honor to be your obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *February* 28, 1822.

I have the honor to lay before you an annual abstract of the general returns of the militia of the several States and Territories for the year 1821, together with an exhibit of the arms, accoutrements, and ammunition of each, agreeably to the last returns received at this office.

These abstracts have not been furnished within the period fixed by law, for the want of the necessary returns of militia, &c. of the different States for the year 1821. They are now prepared, partially, from the returns of previous years on file in this office; and the dates of the several returns, generally, will show how far the provisions of the act of Congress of the 2d March, 1803, have been regularly complied with by the adjutant generals of the different States.

I have the honor to be, sir, with perfect respect, your obedient servant,

JAMES GADSDEN, *Col. and Adj't General.*

The Hon. J. C. CALHOUN.

Abstract of the annual general returns of the militia of the United States, by States and Territories, taken from the last returns received at this office.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *February* 21, 1822.

17th Congress.] No. 221. [1st Session.

BREVET RANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 14, 1822.

SIR: DEPARTMENT OF WAR, *March* 13, 1822.

Pursuant to a resolution of the House of Representatives, directing the Secretary of War to state "the names and grade of the officers now in the army of the United States who hold brevet commissions; distinguishing those brevetted for gallant conduct in battle from those brevetted for other causes, stating the cause in each case," I have the honor to transmit, herewith, a report of the adjutant general, which contains the information required. I have the honor to be, your obedient servant,

J. C. CALHOUN.

The Hon. P. P. BARBOUR, *Speaker of the House of Representatives.*

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *March* 12, 1822.

I have now the honor of submitting to you a report of the brevet officers in service, conformably to the resolution of the House of Representatives of the 7th of March, 1822.

I have the honor to be, sir, with perfect respect, your obedient servant,

JAMES GADSDEN, *Col. and Adjutant General.*

The Hon. J. C. CALHOUN, *Secretary of War.*

A list of officers in the army of the United States who hold brevet commissions for gallant conduct in battle, and for other causes.

Names and grade.	Brevet commissions superior to those of the line and staff.	Remarks.
Edmund P. Gaines, brig. general,	Major general, August 15, 1814,	For gallant conduct at Fort Erie.
Winfield Scott, brig. general,	Major general, July 25, 1814,	For gallant conduct at Bridgewater.
Alexander Macomb, colonel,	Major general, Sept. 11, 1814,	For gallant conduct at Plattsburg.
Joseph G. Totten, major,	Lieut. col., Sept. 11, 1814,	For gallant conduct at Plattsburg.
Sylvanus Thayer, captain,	Major, February 20, 1815,	For services at Norfolk.
Moses Porter, colonel,	Brig. general, Sept. 10, 1813,	For distinguished services in the campaign of 1813.
John B. Walbach, major,	Lieut. colonel, May 17, 1815,	For uniform good conduct.
J. B. Crane, captain,	Major, November 13, 1813,	For services in the campaign of 1813.
Alexander S. Brooks, captain,	Major, September, 11, 1814,	For gallant conduct at Plattsburg.
James Dalliba, captain,	Major, February 9, 1815,	Late major of ordnance, razeed. Submitted to the Senate for confirmation.
William J. Worth, captain,	Captain, July 5, 1814, major, July 25, 1814,	For gallant conduct at Chippewa and Bridgewater.
David T. Welsh, 1st lieutenant,	Captain, June 20, 1814,	Late captain 37th infantry, razeed.
Reynold M. Kirby, 1st lieutenant,	1st. lieut., August 15, 1814, captain, Sept. 17, 1814,	For gallant conduct at Fort Erie and sortie.
Jacob Hindman, major,	Lieut. colonel, August 15, 1814, colonel, May 17, 1815,	For gallant conduct at Fort Erie and Niagara frontier.
A. C. W. Fanning, captain,	Major, August 15, 1814,	For gallant conduct at Fort Erie.
William Wilson, captain,	Major, May 3, 1814,	For ten years' faithful service.
Roger Jones, captain,	Major, July 5, 1814, lieut. colonel, September 17, 1814,	For gallant conduct at Chippewa and sortie at Fort Erie.
John A. Burd, captain,	Major, Oct. 31, 1814,	For gallant conduct near Annapolis.
Thomas Stockton, captain,	Major, April 15, 1814,	Late major 42d infantry, razeed.
William Laval, captain,	Major, Nov. 7, 1814,	For gallant conduct at Pensacola.
Samuel Spotts, 1st lieutenant,	Captain, January 8, 1815,	For gallant conduct at New Orleans.
Abraham Eustis, major,	Lieut. colonel, Sept. 10, 1813,	For uniform good conduct, &c.
E. Humphreys, captain,	Major, December 28, 1814,	For gallant conduct near New Orleans.
D. E. Twiggs, captain,	Major, September 21, 1814,	Late major 28th infantry, razeed.
John McNeal, Jun., lt. colonel,	Lieut. colonel, July 5, 1814, colonel, July 25, 1814,	For gallant conduct at Chippewa and Bridgewater.
Benj. Watson, captain,	Major, July 25, 1814,	For gallant conduct at Bridgewater.
George M. Brooke, lt. colonel,	Lt. col. and col., Sept. 17, 1814,	For gallant conduct at Fort Erie and sortie.
Charles Larrabee, captain,	Major, August 9, 1812,	For gallant conduct at Brownstown.
S. Burbank, captain,	Major, July 25, 1814,	For gallant conduct at Bridgewater.
M. Marston, captain,	Major, August 15, 1814,	For gallant conduct at Fort Erie.
Henry Atkinson, colonel,	Brig. general, May 13, 1820,	Late brig. general, razeed. Submitted to the Senate for confirmation.
Henry Leavenworth, lt. colonel,	Lieut. colonel, July 5, 1814, colonel, July 25, 1814,	For gallant conduct at Chippewa and Bridgewater.
Wm. S. Foster, captain,	Major, August 15, 1814,	For gallant conduct at Fort Erie.
D. Ketchum, captain,	Major, July 25, 1814,	For gallant conduct at Bridgewater.
Wm. Bradford, captain,	Major, August 20, 1814,	Late major 21st infantry, razeed.

NOTE.—The above officers holding brevets superior to their commissions in the line, the brevets taking effect under the regulations would involve a greater expense of pay and emoluments.

JAMES GADSDEN, *Col. and Adjutant General.*

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *March* 12, 1822.

Daniel Baker, major, -	Major, August 9, 1812, -	For gallant conduct at Brownstown.
William Browning, captain, -	Captain, October 31, 1814, -	Late captain 9th infantry, razeed.
Joseph S. Nelson, captain, -	Captain, April 30, 1813, -	Late captain 36th infantry, razeed.
James E. Dinkins, major, -	Major, May 15, 1814, -	Late major 36th infantry, razeed.
J. H. Vose, major, -	Major, August 4, 1814, -	Late major 21st infantry, razeed.
R. A. McCabe, 1st lieutenant, -	First lieutenant, May 1, 1814, -	Late 1st lieut. 1st infantry, razeed.

NOTE.—The brevets held by the above list of officers, being equal and inferior to their lineal commissions, may be considered as merged in the latter, as merely honorable testimonials of past acts, and cannot, under any circumstances, involve expense to Government.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *March* 12, 1822.

JAMES GADSDEN,
Colonel and Adjutant General.

17th CONGRESS.] No. 222. [1st SESSION.

RIFLES PROMISED TO A CORPS OF JUVENILE VOLUNTEERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 22, 1822.

SIR: HOUSE OF REPRESENTATIVES, *March* 2, 1822.

When the British army, under the command of Sir George Prevost, invaded the United States, about the 1st of September, 1814, a number of young gentlemen, of Plattsburg and its vicinity, volunteered their services for the defence of their country. This corps, consisting principally of those who were not yet liable to militia duty, were organized into a company under the command of Captain Martin J. Aikin, who, with the other officers, were brevetted by Major General Mooers, and were received into the service of the United States by General Macomb, then commanding the Champlain department.

This corps was eminently distinguished during the siege of Plattsburg, particularly in the battles of Beekmantown, and at the crossing of the Saranac. As a reward for their gallant and meritorious conduct, General Macomb gave directions that each of the corps should be presented with a rifle, which direction was sanctioned by the then Secretary of War.

I understand the rifles were made and ready for delivery soon after the close of the war; but, for some cause which I have been unable to learn, their distribution has not taken place.

Permit me, sir, to request that you will communicate to me such facts as may be within the knowledge of the Department in relation to this business, and also your opinion whether any legislative sanction is necessary to enable the Executive to confer on those young gentlemen an honorable testimony of their patriotic services, to which they are so justly entitled.

I am, sir, with respect, yours, &c.

REUBEN H. WALWORTH.

The Hon. JOHN C. CALHOUN, *Secretary of War.*

SIR: DEPARTMENT OF WAR, *March* 13, 1822.

Your letter of the 2d instant was duly received, and immediately referred to General Macomb, who reports in the most honorable terms the conduct of the young gentlemen in whose favor you apply. The report is enclosed.

On referring to the several laws on the subject of the militia and volunteers, it does not appear that this Department is authorized to dispose of the public arms in the manner promised by General Macomb; and therefore, however willing to confirm the promise of the general to the gallant youths who so nobly distinguished themselves under his command, it cannot be done without legislative provision.

I have the honor to be, sir, your most obedient servant,

J. C. CALHOUN.

The Hon. REUBEN H. WALWORTH,
Of the House of Representatives.

WASHINGTON, *March* 13, 1822.

The undersigned, to whom has been referred the letter of the Hon. Reuben H. Walworth, dated the 2d instant, has the honor to report:

That during the invasion of the northern frontier of the State of New York, in September, 1814, a number of young men of Plattsburg called on him and requested that they might be employed in defence of their town, which was then threatened with attack. Their gallant and patriotic offer was accepted without hesitation, and they were immediately armed and instructed how to act. They accompanied General Mooers to Beekmantown, upon the approach of the enemy, and were afterwards very active in assisting in the defence of the passage of the Saranac. Their conduct on this occasion corresponded with the laudable motives which led them to take up arms in defence of their country. The services they rendered were important, and in consideration thereof they were individually promised by the undersigned that endeavors would be made to obtain from Government a handsome rifle for each. This promise subsequently received the sanction of the then Secretary of War. After using his utmost endeavors to fulfil his promise as thus sanctioned, and after waiting until this time to see the arms delivered, it was with extreme mortification that the undersigned learned that, without a law authorizing the grant, his promise could not be accomplished.

It is with great satisfaction the undersigned beholds the Representative of that part of the State in which the gallantry of these young gentlemen was displayed making application in their behalf, especially as he so honorably partook of the events of that period, and was a witness of their conduct. It is to be hoped he will bring the matter before Congress, and that a resolution will be passed to reward such distinguished examples.

ALEXANDER MACOMB, *Major General.*

To the Hon. J. C. CALHOUN, *Secretary of War.*

List of names of a volunteer company of riflemen, who did duty in the service of the United States, on the invasion of Plattsburg by Sir George Prevost, in September, 1814.

Gustavus A. Bird,	Ira A. Wood,	James Trowbridge,
Hazen Mooers,	Henry K. Averill,	St. J. B. L. Skinner,
Frederick P. Allen,	Hiram Walworth,	Ethan Everist,
Amos Soper,	James Patten,	Bartemus Brooks,
Smith Bateman,	Melancthon W. Travis,	Flavel Williams.

I certify that the foregoing is an authentic list of names of a party of volunteer riflemen, who did duty in the United States' service, and under my command, as stated in the above caption.

M. J. AIKIN, *Captain.*
AZARIAH C. FLAGG, *Lieutenant.*

I, Benjamin Mooers, major general of militia in the State of New York, do certify that the list of names made by Captain M. J. Aikin and Lieutenant A. C. Flagg, may be relied on as correct, being personally acquainted with those officers, and the meritorious services rendered by those officers and their companions in arms at the time and place mentioned within.

BENJAMIN MOOERS.

I concur in the statement made by General Benjamin Mooers herewith, being also acquainted with most or all of the individuals named, and with the importance of their services on the occasion alluded to; Martin J. Aikin, who acted as captain, and Azariah C. Flagg, as lieutenant, under whose command the services were performed, ought, of course, to be included in the list.

From the 5th to the 12th of September, 1814, and in moments most doubtful, as to the event of the invasion; indeed, when a successful resistance to the overwhelming force of the enemy seemed impossible, without the intervention of a miracle, and when most of the inhabitants possessed of property thought only of removing it from his grasp, these youthful champions, many of whom were under sixteen years of age, stepped forward, self-organized and self-instructed, and reconnoitred and harassed the enemy day and night in his pickets and out-posts; marking and giving that information of his advances which was both difficult and important for the commanding general to obtain.

Their unwearied exertions in this important duty, as well as the daring intrepidity with which they met and opposed, with others, the more serious attacks of the enemy, were particularly conspicuous.

JOHN PALMER, *M. C.*

17th Congress.] No. 223. [1st Session.

RE-EXAMINATION OF THE POSITIONS ON DAUPHIN ISLAND AND MOBILE POINT FOR FORTIFICATIONS.

COMMUNICATED TO CONGRESS, MARCH 26, 1822.

To the Senate and House of Representatives of the United States: WASHINGTON, *March* 26, 1822.

Congress having suspended the appropriation at the last session for the fortification at Dauphin Island, in consequence of a doubt which was entertained of the propriety of that position, the further prosecution of the work was suspended, and an order given, as intimated in the message of the 3d of December, to the Board of Engineers and Naval Commissioners, to examine that part of the coast, and particularly that position, as also the position at Mobile Point, with which it is connected, and to report their opinion thereon, which has been done, and which report is herewith communicated.

By this report it appears to be still the opinion of the board that the construction of works at both these positions is of great importance to the defence of New Orleans, and of all that portion of our Union which is connected with and dependent on the Mississippi, and on the other waters which empty into the Gulf of Mexico, between that river and Cape Florida. That the subject may be fully before Congress, I transmit, also, a copy of the former report of the board, being that on which the work was undertaken, and has been, in part, executed. Approving, as I do, the opinion of the board, I consider it my duty to state the reasons on which I adopted the first report, especially as they were in part suggested by the occurrences of the late war.

The policy which induced Congress to decide on and provide for the defence of the coast immediately after the war, was founded on the marked events of that interesting epoch. The vast body of men which it was found necessary to call into the field, through the whole extent of our maritime frontier, and the number who perished by exposure, with the immense expenditure of money and waste of property which followed, were to be traced in an eminent degree to the defenceless condition of the coast. It was to mitigate these evils in future wars, and even for the higher purpose of preventing war itself, that the decision was formed to make the coast, so far as it might be practicable, impregnable; and that the measures necessary to that great object have been pursued with so much zeal since.

It is known that no part of our Union is more exposed to invasion, by the numerous avenues leading to it, or more defenceless, by the thinness of the neighboring population, or offers a greater temptation to invasion, either as a permanent acquisition, or as a prize to the cupidity of grasping invaders, from the immense amount of produce deposited there, than the city of New Orleans. It is known, also, that the seizure of no part of our Union could affect so deeply and vitally the immediate interests of so many States, and of so many of our fellow-citizens, comprising all that extensive territory, and numerous population, which are connected with and dependent on the Mississippi, as the seizure of that city. Strong works well posted were, therefore, deemed absolutely necessary for its protection.

It is not, however, by the Mississippi only, or the waters which communicate directly with, or approach nearest to, New Orleans, that the town is assailable. It will be recollected that, in the late war, the public solicitude was excited, not so much by the danger which menaced it in those directions, as by the apprehension that, while a feint might be made there, the main force, landing either in the bay of Mobile, or other waters between that bay and the Rigolets, would be thrown above the town, in the rear of the army which had been collected there for its defence. Full confidence was entertained that that gallant army, led by the gallant and able chief who commanded it, would repel any attack to which it might be exposed in front. But, had such a force been thrown above the town, and a position taken on the banks of the river, the disadvantage to which our troops would have been subjected, attacked in front and rear, as they might have been, may easily be conceived. As their supplies would have been cut off, they could not long have remained in the city, and, withdrawing from it, it must have fallen immediately into the hands of the force below. In ascending the river to attack the force above, the attack must have been made to great disadvantage, since it must have been on such ground, and at such time, as the enemy preferred. These considerations show that defences, other than such as are immediately connected with the city, are of great importance to its safety.

An attempt to seize New Orleans, and the lower part of the Mississippi, will be made only by a great Power, or a combination of several Powers, with a strong naval and land force, the latter of which must be brought in transports which may sail in shallow water. If the defences around New Orleans are well posted, and of sufficient strength to repel any attack which may be made on them, the city can be assailed only by a land force, which must pass in the direction above suggested, between the Rigolets and the bay of Mobile. It becomes, therefore, an object of high importance to present such an obstacle to such an attempt as would defeat it should it be made. Fortifications are useful for the defence of posts, to prevent the approach to cities, and the passage of rivers; but, as works, their effect cannot be felt beyond the reach of their cannon. They are formidable in other respects, by the body of men within them, who may be removed and applied to other purposes.

Between the Rigolets and the bay of Mobile there is a chain of islands, at the extremity of which is Dauphin Island, which forms, with Mobile Point, from which it is distant about three and a quarter miles, the entrance into the bay of Mobile, which leads through that part of the State of Alabama to the towns of Mobile and Blakely. The distance between Dauphin Island and the Rigolets is ninety miles. The principal islands between them are Massacre, Horn, Ship, and Cat islands, near to which there is anchorage for large ships of war. The first object is, to prevent the landing of any force, for the purposes above stated, between the Rigolets and the bay of Mobile; the second, to defeat that force in case it should be landed. When the distance from one point to the other is considered, it is believed that it would be impossible to establish works so near to each other as to prevent the landing of such a force. Its defeat, therefore, should be effectually provided for. If the arrangement should be such as to make that result evident, it ought to be fairly concluded that the attempt would not be made; and thus we should accomplish, in the best mode possible, and with the least expense, the complete security of this important part of our Union, the great object of our system of defence for the whole.

There are some other views of this subject, which, it is thought, will merit particular attention in deciding the point in question. Not being able to establish a chain of posts, at least for the present, along the whole coast, from the Rigolets to Dauphin Island, or on all the islands between them, at which point shall we begin? Should an attack on the city be anticipated, it cannot be doubted that an adequate force would immediately be ordered there for its defence. If the enemy should despair of making an impression on the works near the town, it may be presumed that they would promptly decide to make the attempt in the manner and in the line above suggested, between the Rigolets and the bay of Mobile. It will be obvious that the nearer the fortification is erected to the Rigolets, with a view to this object, should it be on Cat or Ship Island for example, the wider would the passage be left open between that work and the bay of Mobile, for such an enterprise. The main army, being drawn to New Orleans, would be ready to meet such an attempt near the Rigolets, or at any other point not distant from the city. It is probable, therefore, that the enemy, profiting of a fair wind, would make his attempt at the greatest distance compatible with his object from that point, and at the bay of Mobile, should there not be works there of sufficient strength to prevent it. Should, however, strong works be erected there, such as were sufficient not only for their own defence against any attack which might be made on them, but to hold a force connected with that, which might be drawn from the neighboring country, capable of co-operating with the force at the city, and which would doubtless be ordered to those works in the event of war, it would be dangerous for the invading force to land any where between the Rigolets and the bay of Mobile, and to pass towards the Mississippi above the city, lest such a body might be thrown in its rear as to cut off its retreat. These considerations show the great advantage of establishing at the mouth of the bay of Mobile very strong works, such as would be adequate to all the purposes suggested.

If fortifications were necessary only to protect our country and cities against the entry of large ships of war into our bays and rivers, they would be of little use for the defence of New Orleans, since that city cannot be approached so near, either by the Mississippi or in any other direction, by such vessels, for them to make an attack on it. In the Gulf, within our limits west of Florida, which had been acquired since these works were decided on and commenced, there is no bay or river into which large ships of war can enter. As a defence, therefore, against an attack from such vessels, extensive works would be altogether unnecessary, either at Mobile Point or at Dauphin Island, since sloops of war only can navigate the deepest channel. But it is not for that purpose alone that these works are intended. It is to provide also against a formidable invasion, both by land and sea, the object of which may be to shake the foundation of our system. Should such small works be erected, and such an invasion take place, they would be sure to fall at once into the hands of the invaders, and to be turned against us.

Whether the acquisition of Florida may be considered as affording an inducement to make any change in the position or strength of these works, is a circumstance which also merits attention. From the view which I have taken of the subject, I am of opinion that it should not. The defence of New Orleans, and of the river Mississippi, against a powerful invasion, being one of the great objects of such extensive works, that object would be essentially abandoned if they should be established eastward of the bay of Mobile, since the force to be collected in them would be placed at too great a distance to allow the co-operation necessary for those purposes between it and that at the city. In addition to which, it may be observed that, by carrying them to Pensacola, or further to the east, that bay would fall immediately, in case of such invasion, into the hands of the enemy, whereby such co-operation would be rendered utterly impossible, and the State of Alabama would also be left wholly unprotected.

With a view to such formidable invasion of which we should never lose sight, and of the great objects to which it would be directed, I think that very strong works at some point within the Gulf of Mexico will be found indispensable. I think, also, that those works ought to be established at the bay of Mobile, one at Mobile Point, and the other on Dauphin Island, whereby the enemy would be excluded, and the complete command of that bay, with all the advantages attending it, be secured to ourselves. In the case of such invasion it will, it is presumed, be deemed necessary to collect at some point, other than at New Orleans, a strong force capable of moving in any direction, and affording aid to any part which may be attacked; and, in my judgment, no position presents so many advantages, as a point of rendezvous for such force, as the mouth of that bay. The fortification at the Rigolets will defend the entrance by one passage into Lake Pontchartrain, and also into Pearl river, which empties into the Gulf at that point. Between the Rigolets and Mobile bay there are but two inlets which deserve the name, those of St. Louis and Pascagoula, the entrance into which is too shallow even for the smallest vessels; and from the Rigolets to Mobile bay, the whole coast is equally shallow, affording the depth of a few feet of water only. Cat Island, which is nearest the Rigolets, is about seven and a half miles distant from the coast, and thirty from the Rigolets. Ship Island is distant about ten miles from Cat Island, and twelve from the coast. Between these islands and the coast, the water is very shallow. As to the precise depth of water in approaching those islands from the Gulf, the report of the topographical engineers not having yet been received, it is impossible to speak with precision; but admitting it to be such as for frigates, and even ships of the line, to enter, the anchorage at both is unsafe, being much exposed to northwest winds. Along the coast, therefore, there is no motive for such strong works on our part; no town to guard; no inlet into the country to defend; and if placed on the islands, and the entrance to them is such as to admit large ships of war, distant as they are from the coast, it would be more easy for the enemy to assail them with effect.

The position, however, at Mobile bay is essentially different. That bay takes its name from the Mobile river, which is formed by the junction of the Alabama and Tombigbee, which extend each about three hundred miles into the interior, approaching, at their head waters, near the Tennessee river. If the enemy possessed its mouth, and fortified Mobile Point and Dauphin Island, being superior at sea, it would be very difficult for us to dispossess him of either, even of Mobile Point; and, holding that position, Pensacola would soon fall, as, without incurring great expense in the construction of works there, it would present but a feeble resistance to a strong force in its rear. If we had a work at Mobile Point only, the enemy might take Dauphin Island, which would afford him great aid in attacking the point, and enable him, even should we succeed in repelling the attack, to render us great

mischief there, and throughout the whole Gulf. In every view which can be taken of the subject, it appears indispensable for us to command the entrance into Mobile bay; and that decision being taken, I think the considerations which favor the occupation of Dauphin Island by a strong work are conclusive. It is proper to observe, that, after the repulse before New Orleans, in the late war, the British forces took possession of Dauphin Island, and held it till the peace. Under neither of the reports of the Board of Engineers and Naval Commissioners could any but sloops of war enter the bay, or the anchorage between Dauphin and Pelican islands. Both reports give to that anchorage eighteen feet at low water, and twenty and a half at high. The only difference between them consists in this: that, in the first, a bar, leading to the anchorage, reducing the depth of water to twelve feet at low tide, was omitted. In neither case could frigates enter, though sloops of war of larger size might. The whole scope, however, of this reasoning turns on a different principle—on the works necessary to defend that bay, and, by means thereof, New Orleans, the Mississippi, and all the surrounding country, against a powerful invasion both by land and sea, and not on the precise depth of water in any of the approaches to the bay or to the island.

The reasoning which is applicable to the works near New Orleans, and at the bay of Mobile, is equally so, in certain respects, to those which are to be erected for the defence of all the bays and rivers along the other parts of the coast. All those works are also erected on a greater scale than would be necessary for the sole purpose of preventing the passage of our inlets by large ships of war. They are, in most instances, formed for defence against a more powerful invasion, both by land and sea. There are, however, some differences between the works which are deemed necessary in the Gulf, and those in other parts of our Union, founded on the peculiar situation of that part of the coast. The vast extent of the Mississippi, the great outlet and channel of commerce for so many States, all of which may be affected by the seizure of that city, or of any part of the river, to a great extent above it, is one of those striking peculiarities which require particular provision. The thinness of the population near the city, making it necessary that the force requisite for its defence should be called from distant parts and States, is another. The danger which the army assembled at New Orleans would be exposed to, of being cut off in case the enemy should throw a force on the river above it, from the difficulty of ascending the river to attack it, and of making a retreat in any other direction, is a third. For an attack on the city of New Orleans, Mobile bay, or any part of the intermediate coast, ships of war would be necessary only as a convoy to protect the transports against a naval force on their passage, and on their approach to the shore, for the landing of the men, and on their return home, in case they should be repulsed.

On the important subject of our defences generally, I think proper to observe, that the system was adopted immediately after the late war, by Congress, on great consideration and a thorough knowledge of the effects of that war; by the enormous expense attending it; by the waste of life and property, and by the general distress of the country. The amount of debt incurred in that war, and due at its conclusion, without taking into the estimate other losses, having been heretofore communicated, need not now be repeated. The interest of the debt thus incurred is four times more than the sum necessary, by annual appropriations, for the completion of our whole system of defence, land and naval, to the extent provided for, and within the time specified. When that system shall be completed, the expense of construction will cease, and our expenditures be proportionally diminished. Should another war occur before it is completed, the experience of the last marks, in characters too strong to be mistaken, its inevitable consequences; and should such war occur, and find us unprepared for it, what will be our justification to the enlightened body whom we represent, for not having completed these defences? That this system should not have been adopted before the late war cannot be a cause of surprise to any one, because all might wish to avoid every expense, the necessity of which might be, in any degree, doubtful. But, with the experience of that war before us, it is thought there is no cause for hesitation. Will the completion of these works, and the augmentation of our navy, to the point contemplated by law, require the imposition of onerous burdens on our fellow-citizens, such as they cannot or will not bear? Have such or any burdens been imposed, to advance the system to its present state? It is known that no burdens whatever have been imposed; on the contrary, that all the direct or internal taxes have been long since repealed, and none paid but those which are indirect and voluntary, such as are imposed on articles imported from foreign countries, most of which are luxuries, and on the vessels employed in the transportation; taxes which some of our most enlightened citizens think ought to be imposed on many of the articles, for the encouragement of our manufactures, even if the revenue derived from them could be dispensed with. It is known, also, that in all other respects our condition as a nation is in the highest degree prosperous and flourishing, nearly half the debt incurred in the late war having already been discharged, and considerable progress having also been made in the completion of this system of defence, and in the construction of other works of great extent and utility, by the revenue derived from these sources, and from the sale of the public lands. I may add, also, that a very generous provision has been made, from the same sources, for the surviving officers and soldiers of our revolutionary army. These important facts show that this system has been so far executed, and may be completed, without any real inconvenience to the public. Were it, however, otherwise, I have full confidence that any burdens, which might be found necessary for the completion of this system, in both its branches, within the term contemplated, or much sooner, should any emergency require it, would be called for, rather than complained of, by our fellow-citizens.

From these views, applicable to the very important subject of our defences generally, as well as to the work at Dauphin Island, I think it my duty to recommend to Congress an appropriation for the latter. I considered the withholding it at the last session as the expression only of a doubt, by Congress, of the propriety of the position, and not as a definitive opinion. Supposing that that question would be decided at the present session, I caused the position, and such parts of the coast as are particularly connected with it, to be re-examined, that all the light, on which the decision as to the appropriation could depend, might be fully before you. In the first survey, the report of which was that on which the works, intended for the defence of New Orleans, the Mississippi, the bay of Mobile, and all the country dependent on those waters, were sanctioned by the Executive, the commissioners were industriously engaged about six months. I should have communicated that very able and interesting document then, but from a doubt how far the interest of our country would justify its publication; a circumstance which I now mention, that the attention of Congress may be drawn to it.

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *March* 26, 1822.

I transmit herewith a letter from the chief engineer, accompanying a report just received from the commission composed of the Board of Engineers and a naval officer, containing their opinions respecting the fortifications at Mobile bay.

I have the honor to be, with the greatest respect, your obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ENGINEER DEPARTMENT, WASHINGTON, *March*, 1822.

In pursuance of your orders, the Board of Engineers were instructed to visit Mobile bay, and to examine thoroughly the sites at Mobile Point and Dauphin Island, together with all localities which may have influenced their selection, with a view to ascertain whether either of them ought to be abandoned, and, if not, whether any, and, if any, what modifications ought to be made in the plan of the fortifications which have been commenced at each of those positions.

The Board of Engineers and the Navy Commissioner, in pursuance of those orders, visited Mobile Point and Dauphin Island, and made a careful examination of those places, the result of which is contained in their report, made through this department, to the Departments of War and Navy, which is herewith communicated, together with a separate report from General Bernard, connected with the same subject.

It may be proper to add that, in the year 1818, previously to the passage of the act prohibiting the forming of a contract, unless the actual appropriation was equal to its fulfilment, contracts were formed under the general appropriation for fortifications for completing the forts at Mobile Point and Dauphin Island; and as the operations depending on them were on a scale too large to be conducted advantageously with individual capital, considerable sums were advanced, on adequate security, to the aid of the contractors, of which there remain unliquidated, for Mobile Point, nearly one hundred thousand dollars; and for Dauphin Island, a sum considerably exceeding that amount. For more detailed information on this point, I would respectfully refer you to the reports from this department, made on the 15th March, 1820, and the 9th January, 1821; the former accompanied by copies of all contracts connected with fortifications which had been made since 1815 up to that period, with the exception of those made in 1819, which had been previously reported; and the latter exhibiting the sums advanced upon contracts up to the date thereof. A copy of the original report of the board in relation to the defence of the Gulf of Mexico is not yet completed, but it will be finished as soon as possible.

I have the honor to be, very respectfully, your most obedient servant,

ALEX. MACOMB, *M. G. C. Engineers.*

To the Hon. J. C. CALHOUN, *Secretary of War.*

The Navy Commissioner and the Board of Engineers, having received instructions to re-examine the positions on Dauphin Island and Mobile Point, which had been selected for the defence of Mobile bay; to review the grounds on which the original report recommended their defence; and to report, 1st, whether either of the works projected for these positions ought to be abandoned; and, 2dly, if not, whether any, and, if any, what modifications ought to be made, respectfully submit the following report:

Under the first division of the subject before the commission, to wit, whether either of the works projected for the defence of Mobile bay ought to be abandoned, it is proper, in the first place, to ascertain what degree of importance should be assigned to this bay, as a part of the Gulf frontier; or, in other words, whether the advantages resulting from its defence will be commensurate with the cost of the fortifications. The following advantages, it seems to us, will certainly result from its complete defence.

1st. By fortifying the entrance of the bay, an outlet would be secured, in time of war, for the produce of the Alabama and Tombigbee rivers. 2d. The flourishing towns upon the bay and its rivers, the accumulated produce of the country, and the merchant vessels, privateers, and vessels of war, collected within the bay, either in the course of trade to receive supplies, to refit by stress of weather, or by the pursuit of an enemy, would all receive protection. 3d. An enemy would be deprived of one of the very few harbors in the Gulf in which he might take shelter during tempestuous seasons; and would thereby be forced either to run his hazard in a boisterous sea, or, by occasionally intermitting his blockade, to permit the escape of the many vessels which would be in readiness to profit of the opportunity. 4th. An enemy would also be deprived of an anchorage, whence he might, with certainty, interrupt all water communication between New Orleans, Mobile bay, and Pensacola. 5th. The produce of more than one-half of the territory of the United States passes through New Orleans to the sea; and since, by the establishment of steamboats on the Mississippi and Ohio, freight along those rivers is reduced much below that across the Alleganies, that city is not only the grand emporium of the exterior commerce of more than half of our territory, but also of the interior commerce between that section of country and the Atlantic States; and when we consider the progress made, and daily making, in manufactures by the Middle and Eastern States, we think it may be safely asserted that New Orleans is destined to become as important in this last respect as in the former. Now, though it is easy to defend that city against the attack of an enemy, (as will be done by the works heretofore recommended by the commission for the Rigolets, Chef Menteur, bayou Bienvenue, Plaquemine Bend, and the east point of Grande Terre) yet, as the Mississippi is not defensible by batteries below Plaquemine Bend, and may therefore be commanded by an enemy, it becomes indispensable that something more than mere defence be afforded it, and that the only other practicable communication with the sea, to wit, that through Lake Pontchartrain, Pass Christian, and within the chain of islands to Mobile bay, should be well secured. The fortifications at Chef Menteur and Rigolets will protect the navigation of Lake Pontchartrain, whilst those of the Rigolets and the mouth of Mobile bay will protect the waters between that lake and Mobile bay, by insuring the means of supplying with men, arms, munition, &c. provisional and intermediate works, which would be erected in time of war for the protection of this interior navigation, and by affording assistance in the same way, and also certain points of support to such a floating force as it would be found expedient to add, for the more certain preservation of this important channel of commerce. 6th. The importance of Pensacola harbor, as a naval station of the second class, which it must be, even if Espiritu Santo bay (the only other man-of-war harbor in the Gulf of Mexico) should be found to have sufficient water to admit line-of-battle ships, will make the extension of this interior navigation, by the connexion of Bon Secours and Perdido bays, by a canal of about four miles, and Perdido bay and the great Lagoon (which runs into Pensacola bay) by a canal of about one mile, a matter of necessity: because in no other way could the naval establishment at Pensacola receive the abundant supplies of munitions of war, naval stores, and workmen, furnished by the Western country. It is needless to say how much the value of complete defences at the mouth of Mobile bay will be augmented by this extension of the interior navigation; and, indeed, considering the unproductiveness of the country about Pensacola, the value of those defences will be almost as much increased if Pensacola harbor become ultimately only a place of rendezvous, or of occasional resort for vessels of war, privateers, and merchantmen. 7th. Fortifications at the mouth of Mobile bay, in conjunction with a temporary work at the outlet of the Perdido, where there is but six feet water, will shelter Pensacola from all attacks on that side, which might, but for them, be conducted from a landing up Mobile or up Perdido bay; or, by pursuing the interior navigation, quite into Pensacola bay. The temptation to such an enterprise would be very strong, should this bay be selected, as it probably will, for a naval station. To these advantages, which are for the most part peculiar to the section of country in question, we will add some remarks relating in common to defence on every part of our coast.

The only species of force which can resist and repel the attacks to which a maritime frontier is exposed are, heavy guns and mortars in vessels, or heavy guns and mortars covered by proof epaulements on shore; with the first of these there might always be great uncertainty as to the issue, because of the many accidents to which such a force is liable, beyond the control of courage or skill, especially in narrow waters; and because an enemy may always choose that moment to attack when favorable circumstances are solely on his side. But the enormous expense of this kind of defence, when exclusive, has amongst all nations caused, and must ever cause, its rejection as a means of local security; to be sufficient, it must at least equal the threatening force at every point of the frontier to which he can have access; because where he is is not known, and where he will attack is uncertain; to leave a station in search of him might be leaving unprotected the very point he designs to attack. Besides the great excess of the defensive expenditures over the offensive, which such a system would require, the defences are, from their nature, perishable, and require frequent renewal. Situations occur sometimes, however, as where the track of the attacking force is necessarily out of the reach of gunshot from the shore, or when the great breadth of channel enables an enemy to avoid the land defences, or when, resigning nothing to an enemy, favorable moments of attack may be waited for and improved, to which a certain variety of this species of force may, and indeed must, be applied; but the only successful practice with this force has been to employ it where no other will avail, or at most only as an auxiliary. The only other kind of defence is by fortifications. All the nations experienced in war concur in one sentiment as regards their utility, at least in relation to a maritime frontier; and all nations having such a frontier rely upon them for their security. To allege that they have sometimes failed to afford protection proves nothing, because, as the confidence in them is still undiminished, and hundreds of cities and national establishments, which offer the strongest temptations to the cupidity of Governments and of individuals, have, notwithstanding, been unmolested, with these only to protect them; such failures in defence can be ascribed only to the *inadequacy of the particular works*, or to the want of courage or conduct in the use of them. One recommendation which fortifications have, and which is of infinite consequence, is, that besides affording a shelter for a navy, whether under injury from tempests or from an enemy, they unchain it from the shore, and set it free upon its proper element, there to assume the offensive; to conduct the commerce of distant regions in safety; to destroy that of the enemy; to scour his seas; to fall with united forces upon his establishments; to harass him with continued pursuits, and with continual preparations for defence; in short, to remove the war from its own shores, and wage it upon those of the enemy.

The commission now come to the particular question, "Whether either of the projected works for Mobile bay ought to be abandoned?" The commission regret that they have not been able to have the exact survey, now going on, completed in time to accompany this report; but the sketch herewith, though inaccurate in most respects, exhibits with all necessary precision all the facts essential to the solution of the problem. The distance from Mobile Point to the east point of Dauphin Island is about three miles; two channels enter Mobile bay through this opening; one, which is the principal, having eighteen feet water on the bar at low tide, passes close along Mobile Point; the other, within about half a mile of Dauphin Island Point; through this at least eight and a half feet can be carried at low tide. The first of these leads directly from sea; the other winds round the point of Dauphin Island, from an anchorage between that island and Pelican Island; at least twelve feet water can be carried over the shoal which connects these two islands, in coming from sea into this anchorage. The tide ebbs and flows only once in twenty-four hours, and rises from one and a half to two feet. At high water, therefore, ten feet can be carried into the bay by the western channel, at a minimum. Vessels with a greater draught than eight and a half feet cannot ascend to the town of Mobile without great difficulty; vessels bound thither have, therefore, the choice of the two passes; with any wind from east to west, round by the south, they may enter the eastern, and with any wind from N. N. W. to E. by S. round by the south, the western channel. If there are to be *any* fortifications at the mouth of this bay, it does not admit of contradiction that there must be one on Mobile Point, for Dauphin Island Point is too distant to offer any molestation to the navigation of this eastern channel, and Sandy Island is of so changeable a nature that no important work can ever be placed there. The eastern channel being nearly straight, and about a mile in width opposite Mobile Point, vessels might pass at night, or perhaps even by day, unless some collateral impediments be provided; these should be either floating *obstructions* or a floating *armament*. The first, being easily and speedily prepared, and much less expensive in all respects than the other, have been usually recommended by the commission in similar cases; as small vessels only can approach them, they need only be slight compared with those proposed for deeper channels. As to Dauphin Island, it must be remarked, first, that there is water enough both up to the anchorage and at high water, through the channel into the bay, for small vessels of war, such as brigs and schooners, to pass without danger; and that these vessels are quite adequate to the destruction of the commerce of the Gulf and the establishments on the shores of the bay, the capture of the vessels which may be within it, and the complete interruption of the interior navigation. Second, that an enemy occupying the anchorage near Pelican Island would have a good harbor in which he could continue the blockade during the whole year; and that, on the contrary, if he were excluded from it, the blockade of the bay, owing to the great danger in anchoring near this coast, or even lying off and on near it during a considerable portion of the year, would become comparatively unimportant. Third, that this being the only safe harbor, even for his small cruisers, on the whole of the northern shore of the Gulf, excepting such as must certainly be defended, an enemy would not fail to profit of its not being secured, and make a permanent establishment upon the island, with a view to fix himself in possession of the harbor as a place of refuge for his own vessels, and for the purpose of cutting off both our exterior and interior commerce. It is not easy to conceive how an enemy, once fortified there, on account of its inaccessibility, and the scattered population of the neighboring country, could be dispossessed without great exertions and a corresponding sacrifice of lives and money; nor, on the other hand, the disadvantages under which he would labor, and the hazard he would run, if deprived of the only safe harbor within reach of his cruising ground. Fourth, that a fort on the east point of Dauphin Island, with batteries under its protection, would, by shot and shells, effectually guard both the anchorage and the passage into the bay; the shoal of Pelican Island being within shell range, and the channel too narrow and crooked to be passed at night. Fifth, that vessels arriving off this bay may frequently be unable to enter by the other channel, and must wait in this harbor (where, without fortifications, they would be entirely exposed to an enemy) for an opportunity to pass through the western, or for favorable winds for the eastern channel. Sixth, that under the protection of fortifications on Dauphin Island, our small vessels of war, privateers, and merchant vessels, would wait in security in this harbor for a favorable moment to elude an enemy's cruisers. Seventh, that the fort on Dauphin Island, considering the superiority of its harbor over that on the inside of Mobile Point, would be of considerable importance as a depot for the supply of the flotilla defending the inner passage from New Orleans, and also for the supply of the immediate wants of privateers and cruisers arriving from sea.

The commission now enter upon the consideration of the second division of the subject, to wit: "Whether any, and, if any, what modifications ought to be made in the works projected for Dauphin Island and Mobile Point?"

These two forts are alike in their relief, trace, and details; they are pentagonal bastioned works, of one hundred and thirty yards of exterior side. This length of front is the least, within a few yards, which can be adopted, while preserving for the flanks the power of battering with effect the breach in the face of the bastions; since, on

account of the elevation of the flanks above the ditch, the guns cannot, on a less front than one hundred and twenty yards, receive a sufficient depression to see the foot of the face of the bastion. This dimension of one hundred and thirty yards is indeed very weak; for, according to the principles of the art, a front of two hundred yards will hardly satisfy the essential conditions of the bastioned system, and it is only an extent of three hundred or four hundred yards that gives to a front the great advantages which belong to the system. The works projected for Mobile Point and Dauphin Island must rather be considered as redoubts than forts. As to the number of sides, the localities require a front to fire upon vessels which approach, one against those passing, and a third against such as may have passed; besides, it is indispensable that the fire of two collateral sides should cross upon their capital, as there would otherwise be a space there without defence. These considerations, added to the necessity of providing ample room within for quarters and stores, have produced the pentagonal form. The quarters have been so contrived as to become a defensive work, prolonging the resistance even after the enemy has mastered the exterior work. This means of protracted resistance may be regarded as a compensation, in some sort, for the weakness of the narrow fronts.

Each of the water fronts will receive twenty-seven guns; so that twenty-seven guns will be directed against vessels which approach, twenty-seven against those passing, and twenty-seven towards the interior of the bay. As to the land fronts, they will receive the number of guns necessary for the defence, varying according to the nature and progress of the attack. The three fronts facing the water have each a separate object, or rather have to throw their fire in different directions; and if the time which a vessel, with a good wind, would be under the fire of each be calculated, the twenty-seven guns to which she would be exposed can hardly be considered too great a number.

If the necessary armament, as well as the principles of the art, had not in a measure decided as to the dimensions of the two forts in question, the necessity of preparing them against a short attack by land would alone have dictated that they must be sufficiently strong to compel an enemy to a regular attack, and to resist him until the arrival of succor. In this respect it must be remarked that, as far as localities would permit, the commission have always, in the choice of positions, given a preference to those where the nature of the soil would prevent the opening of trenches, and, consequently, render attack by land impracticable; thus, where marshes or rocks presented themselves, the commission have chosen those points before all others; and, as the works would be inattackable by land, a great saving would be made in the expense of the land side fronts. The forts, for example, for the defence of New Orleans, have in general, for these reasons, received the smallest dimensions, and an organization on the land side requiring but little expense. At Mobile Point and Dauphin Island no such peculiarities of site present themselves, and the projected works are not only attackable by land, but they are also very far removed from succors; that on the west side of the bay, being upon an island on which an enemy might permanently fix himself, would, in that event, be beyond the reach of all help, except such as could be afforded with a co-operating naval force; and this would require so long a time, that a fort of inconsiderable strength would be carried before its arrival. According to strict theory, therefore, the Dauphin Island fort should be stronger than that at Mobile Point; the greater facility of approaching this last work, however, nearly restores the equilibrium.

As to the expense of the erection of the works, it is certainly great; but it does not furnish a just measure of their magnitude. It is necessary to take into consideration the high price of materials in that section of country, compared with the other parts of the United States. If forts like these were to be constructed in the Eastern States, for example, they would cost barely one-third of the amount which must be paid for these at Mobile. The construction of these works will be expensive, not because they are of a high degree of strength, but because of the dearness of materials and labor.

Finally, war amongst European nations is now conducted upon too great a scale to justify us in reposing upon feeble and precarious means as security against their aggressions; and every system of defence which, instead of being upon the level of the means of attack, is dictated by considerations of economy alone, exposes the nation to the danger of having involved itself in expenses solely to provide trophies for its enemies.

The commission conclude by recommending that the works begun on Mobile Point and Dauphin Island be both completed according to the original project.

All which is respectfully submitted.

BERNARD, *Brigadier General.*
JOS. G. TOTTEN, *Major Eng. Brevet Lt. Col.*
J. D. ELLIOTT, *Captain U. S. Navy.*

To the Hon. Secretaries of War and Navy Departments.

Washington, *March* 26, 1822.

The Naval Commissioner and the Board of Engineers, in their last report on the defence of Mobile bay, (dated 15th March, 1822,) confined themselves to a general outline in comparing a system of permanent fortifications to one of naval defence. But as the principle on which floating forces would be preferred to permanent batteries for the defence of Mobile bay is equally applicable to all the bays, roads, and rivers of the Union, it becomes necessary to enter into particulars, and prove, by a clear and precise demonstration, that floating forces, employed in the defence of important points on a maritime frontier, are less efficacious in their result, and more expensive, than permanent fortifications.

To keep to the present case—that of Mobile bay: we must observe, in the first place, that the necessity of defending it is admitted on all sides, and that the nature of the defences to be employed for that purpose is the only point of contention. There are two channels which lead up to this bay, as stated in the report; the eastern channel, about one mile broad, and running directly under Mobile Point; and the western, about half a mile broad, running half a mile from the eastern point of Dauphin Island. In either of these channels, therefore, vessels running into the bay would follow a track which would keep them at about three-fourths of a mile, or 1,320 yards, from one or other of the projected forts; for, although the eastern channel runs directly under Mobile Point, an enemy, to keep as far as possible out of the fire of the fort, would avoid that part of the channel which runs nearest to it; and though the western channel is only practicable at half a mile's distance from the projected work at Dauphin Island, he could not keep at more than 1,320 yards from the fort, without running on the shoals which lie between the two channels.

In either case, the projected forts would defend the two channels with exactly the same effect; and as the necessity of defending the eastern pass by a fort at Mobile Point, and some floating forces, is granted on all sides, it might be naturally supposed that no objection could be made to a similar system of defence for the western pass, as a natural and necessary consequence of the adoption of the first. But to answer all objections which can be made to defending the western pass by permanent works like the eastern, we shall compare the expense of defending this pass by floating defences with that by these works.

1st. When the defence of a pass is exclusively confided to floating forces first, it becomes uncertain: tempests, hurricanes, fire-ships, can, in a few hours, destroy or disperse all its means of defence; and in the Gulf of Mexico, where hurricanes are so frequent, this objection may be considered as conclusive. 2d. The enemy, choosing his own time, and knowing the obstacles which he may expect, can prepare his means beforehand, so as to secure numerical superiority, and every other chance of success. 3d. One single action may decide its fate, and reduce its resistance to a few hours. 4th. The naval forces thus employed on a defensive system, when they run the chance of losing every thing, and have no chance of injuring the enemy, during all the time they are thus stationed, would be much more advantageously employed on an offensive system, to intercept the commerce and navigation of that enemy at sea, or on the coasts of his colonies. 5th. Floating forces are of a perishable nature, and must be renewed at least every ten years. Either they are created in a time of peace, and run the chance of being unfit for service when war is declared, or they are organized at the declaration of war, and then cost much dearer to create. Considering the immense extra expenses of all kinds which must then be incurred, it is to be feared that these forces will not, in such a case, be fit for action, until the enemy has already executed all the depredations and done all the mischief which they are to guard against.

This observation is more especially applicable to the coasts of the Union on the Gulf of Mexico than to any section of its Atlantic frontier. The Union has few sailors, and, at present, no naval depot on the coast of the Gulf; nor can it be repeated too often that, if Mobile bay be not properly defended, Pensacola cannot be fitted for this purpose. This frontier must, therefore, depend for its defence on the maritime means sent to it by the Atlantic States. But if, at the opening of a war, the communication between these States and the Gulf of Mexico is interrupted by a superior naval force of the enemy, how will the coasts of this Gulf be defended, unless by permanent fortifications, prepared beforehand? To rely on the navy alone for defending the important positions of this frontier, would be to lay at the mercy of very precarious and uncertain chances the interests of one-half of the territory of the Union.

When the defence of a pass is intrusted to permanent forces, or fortifications properly organized, it is no longer subject to sudden accidents and unforeseen chances.

1st. Tempests and hurricanes turn rather to its advantage than to its loss, as these convulsions of nature fall only on the vessels of the enemy, especially if you have taken means to deprive him of an asylum in an enclosed or secure bay.

2d. You are then prepared to receive the enemy on all points; you only have to throw your troops in time in the forts which are menaced by his approach, so as to complete their garrisons, and give them the means of standing a siege. These forces may even be withdrawn from every other point, as soon as the enemy has determined his point of attack, and that you are certain of the point on which he is directing it; the garrison remaining complete on that point alone.

3d. To fulfil his purpose, the enemy must land his forces, and proceed to a regular attack against your forts. The length of the resistance which these are calculated to make affords time to the militia of the country to come to their aid; and, if these forts be not assailable by land, if the enemy have no secure and enclosed anchorage for his fleet in the neighborhood, every chance is against him.

4th. The defence of the frontier being all secured by permanent fortifications, all the means of the navy may be turned to the offensive. While these forts, shutting to an enemy all entrance into our bays, roads, and rivers, give to the militia the advantage of selecting lines of operations, which an enemy cannot cut, and which cut and intercept, on the contrary, any line of operations on which he may attempt to move against the interior, the enemy is, by these means, deprived of the great and important advantage of fighting within reach of his supplies and means of retreat, and with one foot on the land which he invades, and one foot on the fleet which conveyed him.

5th. Permanent defences, by means of fortifications, are prepared in time of peace, when the resources of the people are greatest, and the expenses least. These defences, once erected, last forever; and if in some rare circumstances they require the co-operation of floating forces, simple floating obstructions, under the fire of the forts, may generally be substituted for them, which delay the passage of an enemy at these points, and keep him during all that time under the fire of the permanent batteries.

We believe it is useless to pursue any further this comparison between the powers of defence provided to guard a pass by means of permanent fortifications, and those which are given by mere floating forces. The few considerations to which we have confined this argument suffice to show the superiority of the former.

The only remaining point is, to determine when these advantages are not purchased at too dear a rate; and we shall compare for this purpose the expense of both these systems, and take the fort at Dauphin Island for our point of illustration.

The fort projected on the eastern point of that island will cost - - -	$694,000 00
Its armament, at 118 guns, (each gun $650,) - - - -	76,700 00
Total, - -	$770,700 00

This armament comprises the guns employed to arm the temporary batteries raised under protection of the fort, to defend the anchorage between Pelican and Dauphin islands. As long as the fort would neither be menaced nor attacked in time of war, a garrison of three hundred men would be sufficient to serve sixty guns bearing on the pass. These three hundred men, at $150 a man, for six months, would cost during that time $45,000, and during three years $270,000. This sum of $150 per man for six months is taken from the aggregate cost of the army for each individual, according to the report of the Secretary of War, 5th March, 1822; but in this case it is much overrated, as the aggregate expenses of the army comprise those of the staff, Military Academy, transportation expenses, &c., which are not applicable to a permanent garrison. This sum is, therefore, stated very unfavorably to the system of permanent defences.

Recapitulation of the expense of a system of permanent fortifications to defend the pass during three years.

Fort and armament, - - - - - -	$770,700 00
Garrison during three years, - - - - -	270,000 00
Total, - -	$1,040,700 00

We do not include in this calculation the expense of a garrison calculated to sustain a siege, as the service of such a garrison and the length of such a siege would be trifling objects in three years of war.

Now, suppose these sixty guns, served by three hundred men, mounted on ramparts, and thus possessing all the following advantages: precision and accuracy of fire; solidity and permanency of the masses which cover them,

and which are proof against the enemy's artillery; the power of ricoching against ships, and of not being ricoched in return; and the safety and comfort of the garrison; suppose them replaced by only sixty guns, mounted on vessels, without any of the foregoing advantages, (a supposition favorable to the system of floating forces, for it would require a much greater number of these to possess nearly the same power of resistance;) these sixty guns will require, to bear them, 1st, one steam frigate, carrying thirty 32 pounders; 2d, thirty gun-boats, carrying each one 32 pounder.

But, as the steam frigate draws from eight and a half to nine and a half feet of water, and the gun-boats seven feet, they cannot run over the middle ground between the eastern and western channels; they will, therefore, be obliged to remain stationed in one of these channels, or in the interior of the bay; and, in either case, if the enemy attack them with a force of the same nature and strength, it will be a drawn battle; and if he bring, (which will be much more probable) a superior force, our whole defensive means will necessarily be taken or sunk at once.

A steam frigate of this kind, built at the present moment, which is most favorable for constructing it at the lowest price, would cost, by the estimates of the Navy Department, - - -	$200,000 00
And thirty gun-boats, at $5,000 each, - - - - -	150,000 00
Total, - -	$350,000 00
The steam frigate requires a crew of three hundred and fifty men, viz: twenty-six officers, (midshipmen, sailingmaster, surgeons, gunners,) and three hundred and twenty-four sailors, whose pay and rations alone would cost, one bearing another, $115 per man, for six months;* three hundred and fifty men, for six months, - - - -	$40,250 00
The 30 gun-boats, at 35 men for each gun-boat, will require 1,050 men, which, one bearing another, will cost for six months, at $115 per man, - - - -	120,750 00
Total for 1,400 men, at $115 for six months, - - - -	$161,000 00
And in the course of three years of war, 161,000×6, - - - -	$966,000 00
To which add the expense of constructing the frigate and gun-boats, - - -	350,000 00
Total expense to defend the pass by floating forces alone, for three years, - -	$1,316,000 00
The whole expense, both of the permanent material, which would never require to be renewed, added to that of the personal, or troops sufficient to guard it during three years of war, would thus only amount, by means of the system of permanent fortifications, to - -	$1,040,700 00
But the expense of the material of perishable objects, which would require to be constructed for the purpose, added to that of the personal, or troops to defend it by means of floating forces, would cost during three years of war, - - - - -	1,316,000 00
Difference in favor of the former system at the end of three years, - - -	$275,300 00

If the war were to last longer, this difference would become more and more sensible, and at its close all the expenses made for the material of floating forces would be lost, except those of the armament and engine of the steam frigate; the only articles of that material which, being not composed of perishable materials, might be laid up for another war.

In this comparison we have not computed the expense of a garrison for this fort in time of peace; but neither have we considered the repairs and standing costs of the floating forces, the accidents to which they would be frequently liable at the mouth of an open harbor at Mobile bay, and the total destruction which might overwhelm them, and require their entire renewal, by one of those hurricanes too frequent in the Gulf of Mexico.

We shall not pursue this comparison any further; this short abstract, in which every supposition has been made in favor of the system of floating forces, shows sufficiently that, employed to defend a pass, they cost more, in a very short time, than permanent fortifications.

We shall conclude this report by offering some considerations on the degree of importance which belongs to the anchorages of Cat and Ship islands. The first can only admit vessels drawing less than 14 feet, and the second, vessels drawing less than 18 feet of water; one pass between the two islands leads into both anchorages. They are both quite open and unsheltered against gales from the north.

If an enemy were to occupy them, it could only be with one or both of the following views: 1st. To land from thence on the main. 2dly. To intercept the coasting navigation between Lake Pontchartrain and Mobile bay.

In the first case, his object could not be to ravage and plunder the coast, which is entirely uninhabited, and consists of a sandy pine barren. If the entrances of Mobile bay were not defended, he might, indeed, march from thence round Lake Pontchartrain, upon Baton Rouge, and occupy the head of the delta of the Mississippi. But the harbor of Mobile and the entrance into the lake being closed against him, he will never venture on such a desperate march, through such a desert, barren, and intersected country, where his communication with his vessels would certainly be cut off by the Alabama militia from Mobile on the one side, and the Louisiana on the other, a part of which would cross the lake at the Rigolets, under protection of the fort, and fall on his flanks and rear.

As to the use which an enemy occupying these anchorages might make of them to intercept the coasting navigation between Lake Pontchartrain and Mobile bay, it is evident that having no other refuge than these open and defenceless roads in the Gulf, whilst the Union would possess directly opposite to them the closed and well-defended harbors of Mobile and Pensacola, he could not maintain such a station for any length of time. By acting thus, he would shut himself in a kind of enclosure without means of retreat, where he might be blockaded by superior forces from Pensacola. In short, the neighborhood of these anchorages to the naval establishments of the Union on the Gulf of Mexico, and their distance from the nearest fortified harbors and establishments of an enemy, would render it impossible for him to occupy them for any length of time with impunity, and it is much more likely that he would not occupy them at all.

All which is respectfully submitted.

BERNARD, *Brigadier General of the Board of Engineers.*

To the Hon. the SECRETARY OF WAR.

* The $115 which every sailor costs, during six months, to the Government, are calculated on the present expenses of the naval establishment in time of peace. It is needless to observe that they would cost much more in time of war.

17th Congress.] No. 224. [1st Session.

CLAIM TO THE LAND ON WHICH FORT DELAWARE IS ERECTED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 29, 1822.

To the House of Representatives: WASHINGTON, *March* 27, 1822.

In compliance with a resolution of the House of Representatives of the 1st instant, requesting "the President to communicate such information as he may possess relative to any private claim against the piece of land in the Delaware river, known by the name of the Pea Patch, and to state if any, and what, process has been instituted in behalf of such claim," I herewith transmit a report from the Secretary of War furnishing the information required.

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *March* 18, 1822.

The Secretary of War, to whom has been referred the resolution of the House of Representatives of the 1st instant, requesting "the President to communicate such information as he may possess relative to any private claim against the piece of land in the Delaware river known by the name of the Pea Patch, and to state if any, and what, process has been instituted in behalf of such claim," has the honor to report that a claim to the Pea Patch has been set up by Doctor Henry Gale, of Bordentown, New Jersey, and that a civil action in relation to it is now pending in Salem county, New Jersey.

I transmit herewith a copy of a statement of the case made by Messrs. Rodney and Read, two of the counsel employed, and beg leave to refer to it as containing all other information on the subject in the possession of this Department.

All which is respectfully submitted.

JOHN C. CALHOUN.

To the PRESIDENT OF THE UNITED STATES.

CASE OF THE PEA PATCH.

The island called the Pea Patch is situate in the river Delaware, about six miles below Newcastle, and lies nearly equidistant from both shores. Its origin it is difficult to trace with certainty at this date.

Colonel McLane says he has known the place ever since the year 1756, when it was a shoal, only visible at low water. According to tradition, it arose from the accidental sinking of a shallop loaded with stone, and some peas, perhaps, in this spot, and thus forming the *nucleus* of a bar or bank, which has since reared its head above the tides, and increased to a considerable island.

Its situation and extent rendering it a most important position for the defence of the Delaware, the attention of a provident Government was drawn to this eligible spot. A title was procured for the United States from the State of Delaware, within whose known and acknowledged limits it was supposed to lie. Efficient and permanent works are erecting for defence in time of war. Large sums of public money have been judiciously expended, without the slightest notice of an adversary claim. The island has been completely secured by embankment from the highest tides, and the foundations laid of permanent fortifications, on a scale commensurate with the great object of repelling an invading foe, however formidable in numbers or force.

The island, having been thus rendered very valuable to the public, has excited the attention of private individuals, and is now claimed by Dr. Gale, who sets up a title to it by virtue of an alleged purchase from the heirs or representatives of Edward Hall and Clement Hall, who derived their right from the board or council of proprietors in New Jersey, and not from the State itself.

It may be necessary, in illustration of the subject, to take a brief retrospect of the settlements, conquests, and grants or charters of New York, New Jersey, and Delaware.

Passing rapidly by the discovery of Hudson, the early emigration of the Dutch or Swedes to the North river and the Delaware, with their lodgments in New York, New Jersey, and Delaware, and the disputes that arose between them in the latter quarters, where the Dutch finally prevailed, we will proceed to the original charter of Charles II. to his brother, the Duke of York, afterwards James II., and the conquest of all these countries, under his auspices, by the royal orders.

This grant bears date the 20th March, A. D. 1664, and is in the following terms: "Unto James, Duke of York, his heirs and assigns, all that part of the main land of New England, beginning at a certain place called or known by the name of St. Croix, near adjoining to New Scotland in America; and from thence extending along the sea-coast, unto a certain place called Pemaquie or Pemaquia, and so up the rivers thereof to the furthest head of the same as it tendeth northward; and extending from thence to the river Kimbequin, and so upwards by the shortest course to the river Canada northwards; and also all that island or islands commonly called by the several name or names of Matowack's or Long Island, situate and being towards the west of Cape Cod and the narrow Higansetts, abutting on the land between the two rivers, there called or known by the several names of Connecticut and Hudson's rivers; *together also with the said river called Hudson's river*, and all the *land* from the *west side* of Connecticut river to the *east side* of Delaware bay, together with the rivers, harbors, mines, minerals, quarries, woods, marshes, waters, lakes, fishings, hawkings, hunting and fowling, and all other royalties, profits, commodities, and hereditaments, to the said several islands, lands, and premises *belonging or appertaining*."

It was made in consequence of a determination by the British Government to expel the Dutch from this part of North America, of which they had taken possession.

England was aware of the consequences of permitting a Dutch colony to remain in the undisturbed occupation of territories so important to her, when considered in connexion with her other possessions in this quarter of the continent. She also claimed the right to them, because Hudson, who discovered them, was an English subject.

With this pretext, and these views of interest and policy, a fleet and army were despatched in the same year the patent was granted, to put the Duke of York in possession of the country, (under Sir Robert Carre and Colonel Richard Nichols,) before any formal declaration of war was made. They arrived in the North river the latter end of the year, and, taking the Dutch by surprise, New York fell an easy prey. The different posts and settlements on the

North river and the Delaware were soon conquered. Newcastle, with its territories, it must be particularly noticed, surrendered on the 1st of October, 1664, to the British forces embarked on board a squadron, detached from the fleet at New York; and thus complete possession was acquired of the country granted to the Duke of York, with its appurtenances or dependencies.

All these conquests were formally ceded to England by the treaty of peace concluded with Holland, at Breda, on the 10th July, 1667.

The Duke of York had, however, on the 23d and 24th days of June, 1664, by his deeds of lease and release, previously granted to Lord Berkely and Sir George Carteret, and their heirs and assigns, New Jersey, which was described in the said instrument in the following terms: "All that tract of land adjacent to New England, and lying and being to the westward of Long Island, and Manhatta's Island, and bounded on the east part by the main sea and part by Hudson's river, and hath upon *the west Delaware bay or river*, and extendeth southward to the main ocean as far as Cape May, at the mouth of Delaware bay; and then to the northward as far as the northernmost branch of the said bay or river Delaware, which is in 41° 40′ of latitude, and crosseth over thence in a straight line to Hudson's river in 41° of latitude; which said tract of land is hereafter to be called Nova Cesaria, or New Jersey."

War breaking out again between England and Holland, after numerous emigrants had settled in New Jersey under the Duke of York's title, all the country granted to him was once more subjected to Holland, and retroceded to England, by the treaty of peace between the two nations, signed at Westminster, on the 9th of February, 1674.

To prevent all disputes about the title of the first purchasers, in consequence of the reconquest of the Dutch, Charles II., on the 29th of June, 1674, by letters patent, regranted to the Duke of York all the countries included in his first patent; and the Duke of York the same year reconveyed New Jersey, then divided into East and West New Jersey, to the respective proprietors claiming under his former deeds.

It is unnecessary to detail the various subordinate divisions that subsequently occurred of the territory contained within the limits of New Jersey. But it is important to add, that, in the year 1702, in consequence of frequent disputes between the Crown and the proprietors, the latter executed a deed of surrender of all the powers of government to the former, which was accepted by Queen Anne.

In this deed the boundaries of New Jersey are recited according to the original grant, and confined to the "*east side* of Delaware bay."

Whatever portion of governmental authority or royal prerogative had been claimed by the proprietors was, by this instrument, relinquished and restored to the Crown, and became thenceforth an undisputed part of the *jus regium*, in these dominions, equally with any other portion of the British realms.

We make these remarks now to impress them on your mind, because of their application in the sequel.

The title of the lessor of the plaintiff is founded on an alleged survey, made under the authority of the board of proprietors, and not of the State of New Jersey, as we have before stated. Whether all the necessary requisites and usual forms for incepting and completing a title to lands belonging to them have been complied with, we cannot say; or whether any possession was ever taken of the premises claimed, we cannot, upon the facts before us, undertake to determine. Nor do we know whether, if possession were at any time had, the grantors were in the actual possession of the island when they made the conveyance to the present claimant. These matters may present important topics of discussion on the trial; but it appears to us, that, on his own showing, the claimant can have no title to the premises, and that this may be made the foundation of a new suit, after he has gone through his evidence and closed his testimony.

Every plaintiff in ejectment must exhibit a good and sufficient title, as he must recover by the strength of his own title, and not by the weakness of his adversary's, who, being in possession, has a title against all the world but the rightful owner. When a plaintiff fails in this respect, it furnishes a legal reason in a court of justice for a nonsuit. So when the defendant shows the title to be in a third person, the plaintiff will be non-suited.

A motion for this purpose, we apprehend, may be sustained on the following grounds, upon each of which the opinion of the court may be distinctly taken in this mode.

1st. That the proprietors of New Jersey, under whom the plaintiff claims, are, by the express and positive terms of the grant to them by the Duke of York, limited and confined to the *east side* of the Delaware bay or river, which they cannot exceed. And it is the peculiar province of the court to construe written instruments. The proprietors possess none but private rights; the State of New Jersey has succeeded to the sovereign rights surrendered to the Crown.

2d. Admitting, at this stage, that the right to "*all islands in the river Delaware, and the said rivers and soil thereof*," did not pass to William Penn, by the deeds of feoffment of the Duke of York, to him, of the three lower counties of New Castle, Kent, and Sussex, yet the title to this island, after the revolution, by the treaty of peace with England, became vested, according to principle and authority, either in the United States, or the individual States of Delaware or New Jersey, as the riparious possessors; New Jersey claiming as successor of the rights surrendered by the proprietors to the Crown.

The Delaware being a navigable water, all the islands formed in it belonged, previously to the revolution, to the Crown of England, unless it had granted away the bed of the river. This is the rule of the common law, which says, the right to the soil of all navigable rivers is in the King.

We have, fortunately, the opinions of the Attorney General, Robert Raymond, afterwards Lord Raymond, and of the Solicitor General, Sir Philip Yorke, afterwards Lord Hardwicke, on this very point, with respect to this same grant of New Jersey, and this identical river. In their opinion they declare, upon consideration of the charters of New Jersey, that "no part of Delaware river, or the islands lying therein, is comprised *within the granting words* of the said letters patent." But "they conceived the right to the same still remained in the Crown." This opinion was given to the Lords Commissioners of Trade and Plantations in 1721, and is to be found in Chalmers's Collection, vol. 1, 59.

Agreeably to this sound doctrine, either the United States, or the State of Delaware, or New Jersey, on the recognition of their independence, succeeded to the rights of the former sovereign, and the title of the King to this island vested in one of them. It is no matter which of them; for it would equally destroy the plaintiff's claim, and defeat his suit.

But, if the cause should be permitted to proceed, and the United States be required to show their right, we consider they can produce a perfectly valid title, when called on to disclose their testimony.

With such strong grounds of defence as we possess; we will not stop to discuss, in this paper, the question whether this ejectment be not a suit against the United States as much as if it were brought to recover possession of the Capitol in which Congress sit, or the house in which the President resides, at Washington; nor whether this suit, involving a question of boundary between independent States, materially affecting not only their territorial, but political rights, be proper for the determination of a court of justice. We merely glance at them now, because the points may be found to present serious objections to the exercise of the jurisdiction claimed; and the question of

jurisdiction is always open, at every stage of a cause. They may, therefore, with some others, be futurely dilated on, should the occasion require it. At present, we hasten to the principal ground of defence.

At this period of time, after the lapse of more than a century since the deeds of feoffment to William Penn, of the three lower counties of Newcastle, Kent, and Sussex, the right of the Duke of York to make such grants would seem to us not to admit of dispute. Within the fair construction of the terms of the extensive charter of Charles II. to him, conveying not only all the lands lying within the limits described, but "all the royalties and *hereditaments to the said lands and premises belonging and appertaining*," the possessions of the British in this quarter, simultaneously acquired by conquest, may be included. That they were in fact embraced, is well attested by all the acts and conduct of the Crown and its officers, as well as of the officers of the Duke of York; by the conquest and surrender of the territory; by the regulations for the government of it; and by the numerous grants of land within it; for these were obtained from the Governors of the Duke of York, at the capital, New York, until the deeds of feoffment and delivery of possession to William Penn. All these things are now matters of record or of history; and they abundantly prove that the Duke of York had the same title to the three lower counties as he had to his other possessions; that they formed one government; to use the language of the civilians, *unam constituunt civitatem.* This State, it may here be remarked, incidentally, has always exercised jurisdiction over the river Delaware, as the proprietary Government had also done previously to the revolution.

Whether any other charter was granted by Charles II. to the Duke of York, for the three lower counties, *eo nomine*, is perhaps scarcely worthy of minute investigation.

The late Chief Justice McKean, who was familiar with such affairs, in his "Calm Appeal" to the people of Delaware, written in 1791, on the subject of the proprietary claims, asserts that there was a patent issued specifically for the three lower counties.

In an opinion given in 1717, upon an application by the Earl of Sutherland for a charter for the three lower counties, it appears that a patent did pass the privy seal, but did not receive the great seal in consequence of the Duke of York having succeeded to the throne by the death of his brother Charles II. This opinion concludes that a charter for the territory could not legally be granted by the Crown, unless the King's title were previously established, in a formal manner, in the court of chancery, by due course of equity; which was never attempted. The report, of course, was unfavorable to the prayer of the Earl of Sutherland on this point; and it was drawn up by the Attorney General, Edward Nathey, and the Solicitor General, William Thompson. This document is to be also found in Chalmers's Opinions, vol. 1, 39.

That part of their report which says that they see no objection to the Crown's granting to the Earl of Sutherland its share of the rents which William Penn was to pay, according to the conditions of one of the deeds of feoffment to him by the Duke of York, is equally confirmatory of his title under them to the three lower counties.

But it ought to be remarked that any further patent for this territory could only have been intended *ex abundante cautelâ*, and by no means as necessary to complete the original transfer, or to give validity to the deeds of feoffment.

The great principle upon which Lord Hardwicke decided that the title of William Penn to Delaware was sufficient, under the deeds of feoffment by the Duke of York, appears to us to be conclusive of all dispute on this subject. This principle was determined and settled in the year 1750, in the celebrated case which arose between Kent and Baltimore, relative to the specific execution of certain articles of agreement for establishing a boundary or division line between Delaware and Maryland.

Lord Hardwicke on that occasion considered that whether another patent had or had not issued from Charles II. to the Duke of York for the three lower counties was immaterial, because, as the Duke of York had actually conveyed the same to William Penn by his deeds of feoffment, and had afterwards ascended the throne, when he became unquestionably entitled to the legal estate in them, he was to be deemed, when King, a royal trustee for William Penn, to whom he had previously granted the premises.

It is remarkable, that when this case first came before the court it was directed to stand over, in order that the Attorney General might be made a party to the bill to defend the rights and interests of the Crown. This was accordingly done; and at the hearing he interposed no difficulty on the part of the King. A specific execution was decreed by the court, and a permanent boundary established.

A report of this important case, on its first appearance, may be found in Hard. Ca. (by Ridgeway,) 332, *et seq.;* and on its final hearing, in 1 Ves. Rep. 444, *et seq.;* Bell's Supp't to Vesey's Reports, 194.

On either of these grounds it may be safely assumed, at this day, that the deeds of feoffment to William Penn conveyed a valid title to every thing contained within their limits, according to their plain and express terms.

If this position be correct, it is only necessary to recur for a moment, in reference to the ground in dispute, to the Duke of York's deed of feoffment, in 1682, to William Penn, of Newcastle and a twelve miles' circle, which expressly includes this island, in direct and explicit terms.

The language is, "All that town of Newcastle, otherwise called Delaware, and all that tract of land lying within the compass or circle of twelve miles about the same, situate, lying, and being on the river Delaware, in America, and all islands in the said river Delaware, and *the said river and soil thereof*, lying north of the southernmost part of the said circle of twelve miles about the said town."

No comment can be necessary on this text.

The title of William Penn, as royal proprietary, to all lands within the limits of Delaware, not granted to individuals, nor appropriated to the private use of the proprietary, became vested in this State by the revolution and acknowledgment of our independence.

This island was neither granted nor appropriated by the proprietary; and though a warrant was taken out, as it is understood by a respectable individual, under the State, yet that warrant was never executed. The Land Office has long since been closed, and the door shut. The title, then, to this island, in the year 1813, remained in the State; and the Legislature, by an act of Assembly passed in that year, vested it in the United States. They have been ever since in the actual possession of the island, and thus have acquired the "*juris et seisinæ conjunctio*," the union of which constitutes a complete and perfect title at law and in equity.

It becomes unnecessary to speak more particularly of the other deed of feoffment from the Duke of York to William Penn, for the territory lying south of that conveyed by the deed we have recited.

We had thought of considering whether any, and what, papers ought to be procured from England to be produced or given in evidence on the trial of the cause. But this subject, we agreed, on further reflection, it would be more safe and more delicate to leave in the able hands of our learned colleagues in New Jersey, who are conversant with the principles and rules of testimony in their own courts. In Delaware, the public documents we possess would be admitted in evidence by our courts.

C. A. RODNEY,
GEORGE READ, Jun.

17th Congress.] No. 225. [1st Session.

REDUCTION OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 2, 1822.

Mr. Walworth, from the Committee on Military Affairs, which was instructed by a resolution of the 23d of December last to inquire and report "whether the army had been reduced according to the provisions of the act entitled 'An act to reduce and fix the military peace establishment of the United States,' passed the 2d of March, 1821," reported:

The particular cases to which the attention of the committee has been directed, in which it is alleged there has been a violation of the act of the last session, are the following: The transfer of officers to a different corps from that to which they belonged previous to the reduction; the appointment of the Paymaster General Towson, and of Lieutenant Colonel Fenwick, of the light artillery, as colonels of artillery; and the dismissal of Colonels Bissel and Smith, of the infantry, as supernumeraries; the provisional appointment of General Atkinson as adjutant general, and the subsequent appointment of Colonel Gadsden to the same office, in August last; the appointment of General Atkinson to be colonel, and Majors Bradford and Vose to be captains of infantry; and the dismissal of officers who were made supernumerary by such appointments.

In the reduction of the army under the law of the last session, the President appears to have been governed by the construction which had been given to the act of the 16th of March, 1802, under which the provisional army was disbanded, and to the act of the 3d of March, 1815, by which the army was reduced at the close of the late war. The 9th section of the act of 1802, the 5th section of the act of 1815, and the 12th section of the act of 1821, prescribe the manner of reducing the respective armies. Their provisions are substantially the same, and these several sections are nearly in the same words. By that construction given to the act of 1815, many valuable officers were disbanded, and many others were reduced from their former rank; yet your committee have not found that the correctness of that construction was ever doubted previous to the late organization of the army. The Army Register of 1815 was before Congress during the session which commenced in December of the same year, and a law was passed for organizing the staff therein provisionally retained, and which had not been provided for in the former law.

The manner in which the law of 1815 had been executed must have been known to most of the members of both Houses in the last Congress. It is, therefore, fairly to be presumed that the framers of the act of March last, when they copied into the same the 5th section of the law of 1815, expected that it would receive the same construction as it had formerly obtained.

Independently of arguments drawn from the practice under former laws, your committee are of opinion that the construction given by the President to the act of 1821 is the only reasonable one of which it is susceptible. The 12th section directs the President of the United States to cause to be arranged the officers, non-commissioned officers, artificers, musicians, and privates, of the several corps in the service of the United States, in such manner as to complete out of the same the force authorized by the act. The fair construction of this section is to authorize the President to organize the military peace establishment, designated in the act, from all the various materials of which the army was composed, and for this purpose to transfer from one corps to another. The corps of light artillery, and the rifle corps, are not, like the ordnance department, merged in a different corps, but are both abolished.

If the President were to fill the various offices in the several corps authorized by the act only from those who previously belonged to the same corps, all of those who belonged to the light artillery or rifle regiment would have been left out, and the country deprived of the services of many of its most valuable officers. The various general and staff officers of the former army, including the paymaster general, must also be considered a part of the several corps mentioned in the 12th section, out of which the new army was to be formed, and might, like the officers of the light artillery or rifle regiment, be transferred to or appointed in a different corps; and, in like manner, the staff officers authorized by the act might be filled by transfers from any other corps of the old army.

If the general and staff officers of the late army are not a corps within the meaning of the 12th section, it necessarily results that all the general and staff officers of the new establishment should have been taken from such as did belong to some corps of the former army. Such could never have been the intention of Congress.

The offices of colonel of artillery, to which Colonels Towson and Fenwick were appointed, and of adjutant general, to which General Atkinson was provisionally appointed, were new offices, created by the act of March last. Previous to that time the artillery was not organized into regiments, and had no grade of office therein higher than a lieutenant colonelcy. In the staff of the army there was an adjutant and inspector general residing at the seat of Government, and an adjutant general to each division. The adjutant general of the army authorized by the act of 1821 was intended to perform part of the duties which had been executed by the three others, but more particularly those which had been previously executed by the adjutant and inspector general. It has been objected that the paymaster general was not a member of the general staff of the army; that he was merely a civil officer, and, as such, was not embraced within the provisions of the law of the last session.

The office of paymaster was created under the act of the 8th of May, 1792, under which he received $60 per month, and the rations and forage of a major. By the act of 1802, fixing the military peace establishment, the paymaster of the army was to be taken from the line of commissioned officers, and subjected to the rules and articles of war. In 1814, a salary was substituted for the monthly pay, &c. By the act of the 24th of April, 1816, for organizing the general staff, the paymaster general is recognised as part of the general staff of the army, and subjected to martial law; and by the law of the last session a paymaster general is also provided for as one of the officers of the military peace establishment.

Your committee can, therefore, see no reasonable grounds for the opinion that the paymaster general did not belong to the army of United States.

The offices of colonel of artillery and adjutant general being original vacancies, it could not have been the intention of Congress to deprive the President of his constitutional right to fill those offices in such manner as he should think fit, subject to ratification or rejection by the Senate. Colonel Gadsden was appointed to the office of adjutant general long after the time prescribed for the reduction of the army, and when the office was vacant, in consequence of the non-acceptance of the same by General Atkinson. The committee, therefore, cannot believe there was any violation of law either in that appointment, or in filling the office of inspector general, made vacant thereby. The dismissal of the supernumerary officers was a matter of necessity, and expressly directed by the act. Whether

the President has discreetly exercised the power vested in him by the constitution, in making the selections for these or other offices in the army, is a subject belonging exclusively to the Senate.

It is but justice to the individuals selected to say your committee have heard no objection to the character or competency of either of the gentlemen whose right to the appointment has been questioned. They were all highly esteemed and meritorious officers; Colonels Fenwick and Towson had been brevetted for most distinguished services during the late war.

While the committee pay this just respect to officers retained in service, they wish not to detract from the merits of the many valuable officers who have been left out of the army, or reduced in rank.

The only inquiry to which the attention of the committee has been directed is, whether there has been a violation of law. Your committee are of opinion that the President had the constitutional right to leave out of service any officer of the army, and appoint another in his place. This construction of the constitution was distinctly adopted by the House of Representatives at the first session in 1789, by a very decisive vote, being in the proportion of five to three, and after a long and able discussion, in which Mr. Madison took a distinguished part. The late President Washington carried this construction into practical effect in the last year of his administration, by removing a distinguished individual from the office of minister to France, and the appointment of a successor during the recess of the Senate. Although this removal produced considerable excitement in the public mind, your committee have not been able to learn that its legality was ever doubted, or that the constitutional right of the President to remove from office has been questioned, since the discussion and decision above mentioned. This forms a conclusive answer to the objections to the appointments called razees, and the dismissal of officers of the grade to which others were reduced.

By the construction of the act given to it by the President, and which your committee believe correct, the intention of Congress is carried into effect, and the constitutional rights of the Executive and of the individuals concerned are left unimpaired.

Your committee are, therefore, of opinion that the army has been reduced according to the provisions of the act entitled "An act to reduce and fix the military peace establishment of the United States," passed the 2d day of March, 1821.

17th Congress.] No. 226. [1st Session.

MILITARY ACADEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 4, 1822, BY THE CHAIRMAN OF THE COMMITTEE ON MILITARY AFFAIRS.

SIR: DEPARTMENT OF WAR, *April* 2, 1822.

I present herewith a report of the chief engineer, furnishing the information required by a resolution of the House of Representatives of the 19th of February last, communicated with your letter of the 21st of the same month; and have the honor to be,

With great respect and consideration, sir, your obedient servant,

J. C. CALHOUN.

The Hon. W. EUSTIS, *Chairman of the Military Committee, H. R.*

SIR: ENGINEER DEPARTMENT, *March* 30, 1822.

In obedience to your instructions, I have the honor to submit the following statement, in answer to the several queries contained in the resolution of the House of Representatives, of the 19th ultimo, communicated by the honorable chairman of the Military Committee.

Before answering the inquiries of the resolution, I would respectfully beg leave to offer, by way of introduction, a short sketch of the history of the Military Academy, and of the corps of engineers, with which that institution is so intimately connected.

The Military Academy was established by the act of the 16th of March, 1802. Previously to that period an attempt was made to create a military school at West Point for the regiment of artillerists and engineers. A number of officers and men were collected from that regiment, and some endeavors were made to open a school of practice, but the want of a preparatory induction into the arts and sciences which form the basis of such an establishment rendered it difficult for the officers to impart the necessary instruction, and, consequently, the school progressed slowly, and with little success.

It was also soon discovered that the regiment of artillerists and engineers could not combine with effect the two duties assigned to its members; and the act which constituted the Military Academy separated them into two distinct corps.

The officers of the corps of engineers, in the first instance, constituted the Military Academy. The captains acted as professors of the several branches of the arts and sciences necessary to be taught, and instructed the lieutenants and cadets of the artillery and engineers. By the act of the 28th of February, 1803, one teacher of the French language and one teacher of drawing were added to the institution; also, one artificer and eighteen men, to aid in making practical experiments. The number of cadets then authorized was ten for the engineers, and forty for the artillery; but this number was seldom complete. The whole establishment was under the immediate superintendence of the commandant of the corps of engineers, or, in his absence, the next in rank in that corps.

The law which created the Military Academy authorized the President to make such promotions in the corps of engineers, when he should deem it proper, with a view to particular merit, and without regard to rank, as not to exceed one colonel, one lieutenant colonel, two majors, four captains, four first and four second lieutenants, and so that the whole number of the corps should at no time exceed twenty officers and cadets.

The act of the 12th of April, 1808, for raising, for a limited time, an additional military force, authorized the appointment of twenty cadets for the light artillery, one hundred for the infantry, sixteen for the cavalry, and twenty

for the riflemen; but very few, if any, of the cadets thus authorized were appointed. To send them to their regiments without instruction was deemed useless; and to order them to West Point could not have been done with propriety, without making suitable provision for the reception and instruction of so great a number.

About this period the officers of engineers were engaged in the construction of works for the defence of the seaboard. A proper military education being considered a matter of the utmost importance, and the only sure means of laying the foundation of a competent and well informed corps of officers, the National Legislature passed an act making further provision for the corps of engineers and the Military Academy, the 29th of April, 1812, by which act the corps of engineers was augmented two captains, two first and two second lieutenants, four sergeants, four corporals, one teacher of music, four musicians, nineteen artificers, and sixty-two men; which non-commissioned officers, musicians, artificers, and men, together with the one artificer and eighteen men previously authorized, were formed into a company, and styled the company of bombardiers, sappers, and miners, and commanded by the officers of engineers.

The following professorships were added to the Military Academy by the same law, viz: one professor of natural and experimental philosophy, with one assistant; one professor of mathematics, with one assistant; one professor of the art of engineering, with one assistant. The assistant professors were to be taken from the most prominent characters of the officers and cadets. The same law provides that the cadets previously appointed, whether of artillery, cavalry, infantry, or riflemen, or that might be appointed in future, should at no time exceed two hundred and fifty; that they might be attached, at the discretion of the President of the United States, as students to the Military Academy, and be subject to the established regulations thereof; that they should be formed into companies for military instruction; and that the said corps of cadets should be trained and taught all the duties of a private, non-commissioned officer, and officer; be encamped at least three months of each year, and taught all the duties incident to a regular camp; that the candidates for cadets be not under the age of fourteen, nor above the age of twenty-one years; that each cadet, previously to his appointment by the President of the United States, should be versed in reading, writing, and arithmetic, and that he shall sign articles, with the consent of his parent or guardian, by which he shall engage to serve five years, unless sooner discharged; that when any cadet shall receive a regular degree from the academic staff, after going through all the classes, he shall be considered as among the candidates for a commission in any corps, according to the duties he may be adjudged competent to perform; and in case there shall not at the time be a vacancy in such corps, he may be attached thereto, at the discretion of the President of the United States, by brevet of the lowest grade, as a supernumerary officer, until a vacancy shall happen, provided there shall not be more than one supernumerary officer to any one company at the same time.

The Military Academy may be considered as having been in its infancy until about the close of 1817, or beginning of 1818, prior to which there was but little system or regularity. Cadets were admitted without examination, and without the least regard to their age or qualifications, as required by the law of 1812. Hence the institution was filled with students who were more or less unfit for their situations. It is not surprising, therefore, that a large portion of them have been under the necessity of leaving the academy without completing their education. In support of these statements it may be observed, that in 1817, at which time the present superintendent took charge of the academy, there were 213 cadets, of whom 103 have resigned or been discharged, whose names will be found on the list marked A; of the 179 on that list, 122 left the academy in consequence of being deficient in their studies, and nine were dismissed or compelled to resign in consequence of bad conduct. None of the others can be considered as a loss to the academy, or to the public service.

The institution being now in successful operation, the most favorable results may in future be anticipated from it. Of the number of cadets now at the academy, it is probable that two-thirds will be graduated and become candidates for commissions. The average number of cadets to be admitted hereafter may be estimated at seventy-five per annum, of whom about twenty will be rejected at the first semi-annual examination ensuing their admission on trial, and fifteen others will resign, or be otherwise separated from the academy, prior to the graduation of their class; so that the number of cadets who will be graduated each year may be estimated at forty. Hence the proportion of graduates to the whole number of cadets admitted upon trial may be estimated hereafter as 8 to 15, or as 1 to $1\frac{7}{8}$.

These results are derived from calculations made by the superintendent, and are founded upon the most certain data which can be obtained under the present operation of the system of education at West Point, and may be relied on as substantially correct. It may be proper to observe, that, of the whole number to be appointed to any one class, the principal diminution will take place at the end of the first six months; that, under the present regulations, those who are selected receive a conditional appointment only, which is confirmed on their passage of the probationary examination in January, the term commencing on the 1st of July preceding; and that one object of this regulation is, to procure an early decision on the qualifications of the persons appointed, both in respect to intellect and character, and that those only shall be educated who afford the promise of completing their education with success; so that the public, as far as possible, may avoid all unnecessary expense on those who might prove unworthy of the institution. Assuming, as a basis, the calculation of the superintendent above referred to of the number of those admitted on the probationary examination in January who would complete their education, the proportion of those graduated and joining the army to those passing that probationary examination would be as 8 to 11, or as 1 to $1\frac{3}{8}$.

I will now proceed to answer the inquiries in the order in which they stand, dissecting the resolution into several parts, with a view to present as distinctly and fully as practicable the information required on each point.

Query 1st. "A statement of the number of cadets educated at the Military Academy, who remained in the service of the United States five years?"

Answer. The number is two hundred and sixty-five.

Query 2d. "The number who have received commissions, and resigned, or been discharged from service before the expiration of five years?"

Answer. The number is sixteen.

Query 3d. "The number that have left the Military Academy without commissions, and the amount of money that has been paid each?"

Answer. The number that have left the Military Academy (between the year 1802 and the 1st of July, 1821,) is two hundred and eighty-two; and the amount paid to each since the 1st of September, 1817, will be seen by reference to the table marked A. The amount paid previously to that time cannot be ascertained. See answer to 4th query.

Query 4th. "The amount paid to cadets between the time of their appointment and that of their being mustered at the academy, and the time of leaving the academy and the time of receiving commissions and entering the service of the United States?"

Answer. No cadet, since 1816, has received pay between the time of his appointment and the time of joining the academy, or between the time of his leaving the academy and the time of receiving his commission. The pay-

rolls of an earlier date not having been preserved at the academy, no precise statements can be made prior to that time. I have also made inquiry at the accounting offices, but it is considered impracticable to furnish such a statement. It may be observed, however, that, before 1816, cadets, in some particular cases, received pay before joining the Military Academy; but, as before said, the amount cannot be ascertained. There is no record to show that cadets received pay "between the time of leaving the academy and the time of receiving commissions." While serving in regiments as cadets, they received the pay to which they were entitled by law.

Query 5th. "The number educated at the academy, who were in the service during the late war?"

Answer. The paper marked B exhibits the number, (106,) the names, the rank during the war, their present rank, and also the names of those who have died in the service, or been killed during the late war.

Query 6th. "The expense of maintaining the officers and instructors of the academy, each year since 1802?"

Answer. Is shown in the statement marked C.

Query 7. "The expense of ammunition which has been furnished for the use of the academy?"

Answer. The quantity of ammunition furnished for the use of the Military Academy cannot be precisely ascertained; it may, however, be estimated at four barrels of powder per year, and a few shot; the greater part of which had been condemned as unfit for service.

Query 8. "The soldiers who have been stationed at the academy for the assistance of the officers and cadets since its establishment?"

Answer. By an act of 16th March, 1802, eighteen men and one artificer were attached to the corps of engineers, and were stationed at West Point, until they were incorporated with the company of bombardiers, sappers, and miners, raised in pursuance of an act of Congress passed 29th of April, 1812. This company, as soon as it was organized, was marched to the frontiers, where it assisted in the defence of Fort Erie, and in other operations of the campaign. After the close of the war it was stationed at West Point, for the purpose of protecting the magazines, stores, and other public property at that post. It was also employed in making various local improvements, and assisted in erecting the buildings of the academy, by which considerable expense has been saved to the Government.

Although these men were serviceable in many respects to the academy, not a soldier has been employed (certainly since 1816) in the personal service, or for the private convenience of any officer or cadet of the institution.

Query 9. "The number of cadets educated at the academy since its establishment, distinguishing those who are the sons of officers and soldiers who have fallen in the defence of their country, or died in its service?"

Answer. The number of cadets who have been educated at the academy is two hundred and eighty-one. The number of cadets educated at the Military Academy, who were the sons of officers or soldiers who have fallen in defence of their country, or died in its service, cannot be ascertained. Upon this last section of the resolution, I beg leave to refer you to a report upon the Military Academy, made by my predecessor, dated 8th of January, 1821.

All which is respectfully submitted.

ALEXANDER MACOMB,
Major General, Inspector of the Military Academy.

Hon. J. C. CALHOUN, *Secretary of War.*

A.

List of Cadets who have left the Military Academy without commissions, specifying the amount of money paid to each since the 1st of September, 1817.

17th Congress.] No. 227. [1st Session.

FORTIFICATIONS ON DAUPHIN ISLAND AND MOBILE POINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 13, 1822.

Mr. Eustis, from the Committee on Military Affairs, to whom was referred the message of the President, of the 26th of March, on the subject of fortifications, and particularly of those on Mobile Point and Dauphin Island, reported:

That on the important subject of defending the seacoast they concur must fully in the opinion expressed in the message. They are equally agreed in the preference of permanent works over those of a temporary and perishable nature, in all cases where they are adequate to the object. At the same time, a view of the numerous and extensive bays and rivers with which our country is indented naturally suggests the idea that a floating force is required to co-operate with, and to derive protection from, the permanent fortifications.

The committee are further agreed that it is the peculiar province and duty of the Executive Department of Government to select and determine on the proper sites, and on the nature and extent of the fortifications to be constructed. This power and this duty appertain necessarily to the President, who is commander of the national forces, and is responsible for the national defence.

On the other hand, the means of carrying into effect the plans and designs of the Executive are constitutionally and necessarily dependent on appropriations of money made by Congress. In the exercise of this power, which is exclusive on their part, it is the duty of Congress to inquire and examine into the nature, extent, necessity, or utility of every object for which appropriations are required, and to judge of the expediency of granting or withholding them.

It is stated in the message that an appropriation on account of the fortification on Dauphin Island was suspended by the last Congress, in consequence of a doubt which was entertained of the propriety of that position; that a new survey has been made, the result of which is reported, and the work as originally contemplated is recommended to be carried on.

The considerations which induced the last Congress to decline making an appropriation for Dauphin Island cannot be expected to be developed by this committee. It is well known, however, that the positions on Dauphin Island and Mobile Point, with their respective bearings and relations, and the extent and depth of the watercourses, were considered and made the subjects of public debate; and it is to be presumed that the decision was made on due consideration of all the circumstances relating thereto, and with a just regard to the public interests. Whether, and how far, they were influenced by a knowledge that the works on those sites had not progressed in proportion to the appropriations which had been already made, and that of $377,800, advanced under the contracts for their construction, a considerable part had not been expended on the works, and remained unaccounted for, without a prospect of recovery; or that this item would have increased the loan of $5,000,000, to which the Government was compelled in that year to resort, and that of $8,000,000, borrowed in 1820 and 1821, one-eighth part had been appropriated to fortifications in those years; how far any of these considerations may have had an effect on the last Congress, is not for this committee to determine.

The material facts on which the committee rested the opinion contained in their report of the 28th of February are sustained by the new survey, with two exceptions; one giving only twelve feet water, instead of eighteen, heretofore given by the first survey to the entrance of the anchorage ground under Pelican Island; the other giving eight and a half instead of ten feet to the western channel. From this survey it follows, and is indeed conceded, that one of the main objects of the fort on Dauphin Island, viz: that of covering the passage to the anchorage ground under Pelican Island, where our own or enemies' vessels might take shelter, and from whence they might annoy or protect the coast, is wholly lost, as the water is too shallow to float the smallest national vessel of an enemy. If the statement in the new survey be correct, that the depth of water in the western channel be ten feet at high water, and eight feet and a half at low water, and admitting that the pass of seven feet, laid down in Curtis Lewis's chart, has not been omitted in the late survey, the inference drawn by the committee in their former report is not materially affected, as in either case there is not sufficient depth of water for enemies' vessels of war to pass.

Other objects are now assigned for erecting a fortification on Dauphin Island, to contain 108 guns, requiring, in the estimation of the committee, the expenditure of $1,000,000.

First. That it would be important in the defence of New Orleans, as it would prevent the landing at Mobile bay, and render it dangerous for an invading force to land at any place between the Rigolets and the bay of Mobile, for the purpose of marching to the Mississippi above the city.

The importance of providing an efficient defence for New Orleans is fully impressed on the minds of the committee. In their judgment it is entitled to primary consideration, and no reasonable means or expense, necessary to secure it from attack, should be withheld by Congress.

In addition to the works already projected, the committee would see with pleasure a proposal, and recommend an appropriation for a small work on the Bayou Bienvenue, for repairing and strengthening Fort St. Philip, at the Plaquemine turn, with a work opposite to that fort on the western side of the Mississippi, provided a proper site can be had; and for providing at Baton Rouge materials for a floating force.

It appears to be the opinion of the Board of Engineers that there is no danger of the landing of an enemy any where between Dauphin Island and the Rigolets, for the purpose of marching to the Mississippi, above New Orleans. In their first report they observe, "We think that it is useless to say that an enemy cannot undertake any thing reasonable against that part of the frontier which is between the Lake Pontchartrain and Mobile bay; the nature of the country uncultivated, and the facility to come from the west and the east to separate the vessels from the enemy's forces that would have thrown themselves into the country, and, finally, the non-existence of any profitable object, are motives enough to consider that part of the frontier sufficiently defended by itself."

With respect to any land operation on the part of an enemy from the bay of Mobile, the opinion expressed by the Board of Engineers, in the following extract from the same report, appears to be conclusive:

"An enemy that would attempt to go up Mobile, in order to get to Tombigbee and Alabama, would expose himself to be separated from the sea by the arriving troops of the westward from the interior of the country; and if to all this be added the difficulties of conducting, offensively, a divergent operation through the two valleys that unite themselves, it may be concluded that on that part of the frontier of the Union all kinds of offensive operations must be limited to occupy Mobile and Mobile town," &c.

Admitting that, according to the message, it were practicable for an enemy, when we have possession of Mobile Point, to overcome the obstacle of shoalness of water, and that presented by an efficient floating force on our part

to destroy the small craft in which he must land, and that he should effect a landing with ten or fifteen thousand men on Dauphin Island; that, leaving his vessels, provisions, and munitions, with all hope of retreat in case of disaster, he should have the temerity to pass over to the land, and hazard a march of two hundred miles to Baton Rouge, (that being the distance as laid down in Ellicot's survey between the rivers Mobile and Mississippi;) that the brave militia, who conquered at New Orleans the last war, should be wholly unadvised of his movement, and suffer him to pass unmolested; admitting, also, that no preparations for his reception should be made at Baton Rouge; how is his descent to New Orleans to be effected? Having left his ships and boats two hundred miles in his rear, he must march down the levee on the left bank of the Mississippi, a distance of one hundred and fifty miles, part of the way with a morass on his left, liable to be arrested in his march by temporary batteries in front at every turn of the river, to be flanked by gun-boats in the river, and in the last resort to have the levee cut from under him, and the country inundated, the militia hanging on his rear.

Under these circumstances, would an enemy of any foresight or calculation make the attempt?

The preference of permanent fortifications over a floating force, in all cases where they will fulfil the object, being admitted, the only question is, whether this is such a case; or whether, in other words, the contemplated works on Mobile Point and Dauphin Island will defend the bay of Mobile?

That they will not, is admitted by the engineers, who state in their report that a floating force is required in aid of the permanent works. It is further evident, because it is well known, and conceded, that vessels of war which can pass the bar may, especially by night, pass the forts, run on out of reach of their fire, and leave them harmless in their rear. Thus anchored, and master of the bay, the defence of which was the principal object of the fortifications, what security remains for the shipping, the towns, and the immense property above, against which he may commit his depredations at his own time, and according to the nature and amount of his force? A movable and floating force, as contemplated in the former report of this committee, appears to be the only satisfactory answer.

In the last report of the engineers a calculation is made of the relative expenses of permanent and floating forces. It would not be difficult to show that the interest on $2,000,000, the cost of the contemplated works on Dauphin Island and Mobile Point, amounting in ten years to $1,200,000, would be amply sufficient for a floating force for twenty years; nor would it be more difficult to prove, from experience, that permanent works also require constant expenditures for alterations, repairs, garrisons, &c., and that positions have been heretofore taken, on which permanent fortifications have been constructed at great expense, which are about to be abandoned, either on account of the positions, or because the nature or structure of the works is not approved; while a floating force is put in operation in time of war only, its expenses are limited by the war, and may, at the expiration of the war, be either preserved at a very small expense, or totally abandoned, (which may, perhaps, be most eligible,) preserving only their armament.

It is also worthy of observation that, in their former reports, stating the necessity of a floating force to co-operate with permanent works to prevent an enemy from entering the bay of Mobile, the engineers do not appear to have made these calculations, nor, indeed, any objections to such a force. As this subject has been presented to the committee in a financial point of view, and as they have not yet obtained all the information necessary to enable them to give a detailed opinion in this report, they leave that part of the subject for future consideration.

It is further stated in the message that an enemy may take possession of Dauphin Island, and that he did so at the close of the last war. Having at the close of the war taken the small fort on Mobile Point, and possessed himself of the channel road, the enemy might make his incursions to Dauphin Island unmolested. It will also be recollected that he took possession of Tangier and Kent islands, in the bay of Chesapeake; but it is not inferred that it is therefore necessary to fortify these islands. If these should be fortified, others remain equally accessible to him on various parts of the coast.

From every view of the subject which the committee have been able to take on a careful examination of all the facts, and with the most respectful attention to the opinions expressed in the message, they do not find any justifiable cause for changing the opinion contained in their former report of the 28th of February, that it is inexpedient to construct the projected fortification on Dauphin Island.

In the opinion expressed in the message, on the expediency of progressing in the completion of the fortifications on the seaboard, the committee entirely agree, and that the necessary appropriations therefor should be made. They are also well satisfied that, "in case any emergency should require it," the people would willingly submit to any burdens necessary to accelerate their completion. Whether, at this time, and under existing circumstances, they would be willing to increase the national debt by recurring to loans, as in the two years last past, or that additional taxes should be imposed on them for this purpose; or whether the progress in these works ought to keep pace with and to be limited by the ordinary revenue of the country, are questions requiring, in the judgment of the committee, the most serious consideration of Congress.

All which is respectfully submitted.

17th Congress.] No. 228. [1st Session.

MILITIA FINES IN PENNSYLVANIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 25, 1822.

Mr. Buchanan, from the select committee, appointed on the 24th January last, to inquire and report to this House the causes why no part of the sum of $243,609 41, the amount imposed as fines by courts-martial held under the authority of the United States, on militiamen within the commonwealth of Pennsylvania, for delinquencies which occurred during the late war with Great Britain, has yet been received in the Treasury; how much of the said sum has been collected from the delinquents by the late marshal and the present marshal of Pennsylvania and their deputies, respectively; and what are the names and places of residence of such deputies; how much of the money collected remains in the hands of the deputies, and how much has been paid over by them to their

respective principals; who are the sureties of the late marshal, John Smith, and of his deputies, respectively; what is the amount of each of their bonds, and what is the prospect of recovering the whole or any part of the money remaining in their hands; what causes have heretofore prevented the institution of suits against the said John Smith, his deputies, and their sureties, to recover the militia fines retained by them, respectively; and under what authority, by whom, and to whom, the sum of $41,531 77 has been paid out of the said fines to defray the expenses of the courts-martial by which they were assessed," reported:

That they have bestowed upon the subject their most serious attention, being sensible that it is one deeply interesting not only to the State of Pennsylvania, but to the Union. They have obtained all the information which could be procured since their appointment; but still, after having used every exertion in their power, they feel satisfied that their report will be imperfect in several particulars. This arises from the mystery in which the subject was involved on account of the total neglect, for so long a time, of the proper public officers to give it that attention which their duty required and its importance demanded.

Before the committee proceed to detail the facts which they have collected, they will briefly state the principles of law applicable to the case, so that the House may be enabled to judge, with the more precision, in what manner the laws of the country have been executed.

It appears by the twenty-seventh and twenty-eighth sections of the act of Congress, approved the 24th of September, 1789, entitled "An act to establish the judicial courts of the United States," that marshals are officers appointed for the term of four years, but removable at pleasure. They possess the power of appointing as many deputies as they may think proper, who are removable from office at pleasure by the judge of the district court, or the circuit court sitting within the district. Before any marshal can enter upon the duties of his office "he shall become bound for the faithful performance of the same by himself and his deputies, before the judge of the district court, with two good and sufficient sureties, inhabitants and freeholders of such district, to be approved by the district judge, in the sum of twenty thousand dollars." The first section of the act relating to bonds given by marshals, passed the 10th April, 1806, requires that they shall be filed and recorded in the office of the clerk of the district court or circuit court sitting within the district.

Both the marshals and their deputies are required by the act of 1789, before they enter upon the duties of their appointment, to take an oath binding themselves to discharge them faithfully. The defaults or misfeasances in office of deputy marshals are declared to be a breach of the condition of the bond given by the marshal who appointed them.

Whether a marshal shall take any security from his deputies, and, if he does, to what amount, are subjects left by the laws of the country altogether within his own discretion.

By the seventh section of the act to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions, &c., passed on the 28th February, 1795, it is declared that all fines to be assessed on delinquent militiamen, by virtue of its provisions, "shall be certified by the presiding officer of the court-martial, before whom the same shall be assessed, to the marshal of the district in which the delinquent shall reside, or to one of his deputies, and also to the supervisor of the revenue of the same district, who shall record the said certificate in a book to be kept for that purpose. The said marshal or his deputy shall forthwith proceed to levy the said fines, with costs, by distress and sale of the goods and chattels of the delinquent," &c. Under the provisions of the supplement to the above act, approved on the 2d of February, 1813, all fines assessed by virtue of the original act must be certified to the Comptroller of the Treasury of the United States, in the same manner as it directed them to be certified to the supervisor of the revenue. The supplement also enacts "that the marshals shall pay all fines which have been levied and collected by them, or their respective deputies, under the authority of the acts herein referred to, into the Treasury of the United States, within two months after they shall have received the same, deducting five per centum for their own trouble; and, in case of failure, it shall be the duty of the Comptroller of the Treasury to give notice to the district attorney of the United States, who shall proceed against the said marshal in the district court, by attachment, for the recovery of the same.

Thus it appears that the duties of the marshal and his deputies, and of the Comptroller of the Treasury, respectively, relative to this subject, are precisely defined by law. In what manner their conduct has corresponded with their duty will be seen in the sequel.

The first circumstance demanding explanation, which engaged the attention of your committee, was the difference which exists between the report of the Secretary of War to the Senate of the United States, and that of the Secretary of State of Pennsylvania to its Senate, respecting the amount of fines assessed upon delinquent militiamen in that State. The Secretary of War, in his report to the Senate of the 14th of February, 1821, states the number of such delinquents to have been five thousand eight hundred and thirty-seven, and the amount of fines assessed to be $243,609 41. The Comptroller of the Treasury, upon whose information to the Secretary of War the report was made, has informed your committee that he has lately re-examined the subject, and the result proves to be the same; and that he has received no additional returns since its date. It appears from the report to the Senate of Pennsylvania, made by the Secretary of State of that commonwealth, on the 9th of January last, that the fines assessed by courts-martial on citizens of that State amounted to $294,974. He has since re-examined that report, at the request of your committee, and the result has been a trifling difference. The correct aggregate amount of the lists of fines in his office is $293,928, a sum greater by $50,318 59 than that stated by the Comptroller of the Treasury. This difference struck your committee with the more force, as it was made by law the positive duty of each presiding officer of a court-martial to certify to the Comptroller of the Treasury all the fines assessed by the court-martial over which he presided. The returns, therefore, in both offices, should have corresponded.

After a careful examination, your committee have discovered both reports to be defective. Returns have been made to the Comptroller which are not in the office of the Secretary of the commonwealth of Pennsylvania; and there are returns in the office of the Secretary of that commonwealth which are not in the office of the Comptroller. The method, therefore, adopted by your committee, of ascertaining the whole amount of fines assessed, was to add to the returns in the office of the Secretary of State of Pennsylvania those in that of the Comptroller which had never been made to the Governor of that commonwealth. The following table will show their amount, and will also furnish the House with a statement of the fines assessed in each brigade of each division of Pennsylvania militia, so far as they have been returned either to the Governor of that State, or to the Comptroller of the Treasury of the United States.

Divisions.	Brigades.	COUNTIES COMPOSING BRIGADES.	Amount of fines imposed on delinquents, as appears by the lists in the office of the Secretary of State of Pennsylvania.	Amount of fines imposed on delinquents, as appears by the lists in the office of the Comptroller.	Amount of returns in the office of the Comptroller, not in that of the Secretary of State of Pennsylvania.

	2	Crawford, Erie, Venango, and Warren,	do	do	
			$293,928 00	$243,609 41	$58,053 66

It appears, from the foregoing statement, that the following returns have been made to the Comptroller, which are not in the possession of the Secretary of State of Pennsylvania:

3d division, 2d brigade,	$8,547 00
12th division, 1st brigade,	3,739 66
13th division, 1st brigade,	17,671 00
And the excess in the amount of returns in the Comptroller's office, over those in the office of the Secretary of State of Pennsylvania, in the following divisions, are—	
1st division,	6,181 00
2d division,	85 00
6th division,	831 00
7th division,	20,999 00
	$58,053 66

This sum of $58,053 66 added to $293,928, the fines returned to the Governor of Pennsylvania, would make the whole amount assessed be $351,981 66. This sum would be accurate, upon the supposition that each presiding officer of a court-martial made a return, according to law, either to the Governor of Pennsylvania, or to the Comptroller. That this has not been the case will appear manifest from the foregoing table. Your committee, however, for the sake of having a definite sum, will consider it as accurate throughout this report, believing, at the same time, that it is considerably less than the truth.

It was expected by your committee that some light would have been cast upon this subject by John Smith, late marshal of Pennsylvania; but, after examination, it appeared that he could give them no information, as he never had kept any books in which he made regular entries of his transactions respecting the collection of militia fines; and the lists which had been certified to him by the presiding officers of courts-martial were in the hands of his deputies. Your committee have no knowledge that any attempt has ever heretofore been made by the proper authorities, either in the State of Pennsylvania, or in the General Government, to ascertain whether the returns of militia fines, in their respective departments, were complete, and, if not, to have the defects supplied.

As the Comptroller of the Treasury cannot have this business finally adjusted without perfect lists of all the fines assessed by courts-martial, it is confidently expected by your committee that he and the Secretary of State of Pennsylvania will adopt the means necessary for obtaining them without delay.

Of this sum of $351,981 66, the Governors of Pennsylvania, on the 9th January last, had remitted $34,132 24, and since that date until the 3d of this instant, (April,) the present Governor has remitted $4,690. The aggregate amount of remissions is, therefore, $38,822 24; leaving a balance remaining, and yet to be accounted for, of $313,159 42.

After the lapse of almost seven years from the time when these militia fines were assessed, your committee are under the painful necessity of stating that not one cent of their amount has yet reached the Treasury of the United States. Instead of receiving any money from this source, the United States have paid the sum of $24,241 08 out

of the public Treasury, towards defraying the expenses of the courts-martial by which those very fines were assessed. Had the laws slumbered, and had they never been put in execution against the delinquents, there would have been some consolation in the reflection that if injustice had been done to the Government, the poorer classes of our citizens were not distressed, nor the property of those who, from conscientious motives, refused to bear arms, seized and sold. This, however, has not been the case. A large proportion of the fines has been collected from the people by John Smith, the late marshal, and his deputies. He has received, as appears from his own examination, on oath, before the committee, the sum of $75,719 68, from his deputies, and the sum of $1,217 83 from the delinquents themselves.

Your committee deem it proper here to mention the names of the deputies from whom Mr. Smith acknowledges he has received money, and the sum which he states has been paid to him by each. They are as follows:

Greenberry H. Murphy,	$6,864 00
William Kincaid,	300 00
Joseph McMasters,	520 00
William Turner,	2,200 00
Joseph Weatherby,	105 00
John Kelker,	1,000 00
Joseph Woodman,	2,745 00
Lewis Diffebach,	770 00
Andrew Quinton,	1,750 00
John L. Wolf,	1,200 00
Samuel Markley,	1,860 00
Daniel Moore,	26,961 75
Thomas Wills,	2,066 68
James Hudson,	11,199 90
John Sisk,	1,093 00
Abel Reese,	3,752 75
John Thompson,	400 00
Peter Aurand,	7,000 00
Charles Gleim,	256 00
Abraham Horn, Jun.,	2,204 60
George D. Foulke,	1,471 00
	$75,719 68

The above statement Mr. Smith believes to be correct, with these exceptions: that John Kelker paid him more than $1,000, but how much he cannot recollect, and he has refunded $260 to Greenberry H. Murphy, which the latter alleged he had overpaid. Mr. Smith is uncertain whether he may not have received money from John Baldy, though he does not remember that he did. Your committee will, therefore, for the sake of precision in the course of this report, take it for granted that the sum received by Mr. Smith from his deputies was $75,719 68. They are satisfied that, by doing so, he will suffer no injustice.

There is one inquiry submitted to your committee by the resolution directing their appointment, to which they have not been able to furnish any satisfactory answer. It is, how much of the militia fines has been collected by the deputies of the late marshal, and what portion of the sums collected yet remains in their hands.

Your committee have used every exertion in their power to obtain this information, but they have not been successful to any great extent. After having resorted to a number of expedients, they at length discovered that there was no other mode of obtaining it during the present session, but to ask the House for leave to send for persons and papers, and bring the deputies before them. This course they did not think proper to pursue on account of the late period of the session, and because it was deemed proper to afford the deputies time, until the commencement of the next session, to make final settlements with the late and present marshals, before a measure so harsh should be adopted.

There is a circumstance connected with this part of the subject which your committee will now proceed to mention, that will render the final adjustment of the accounts of the late marshal and his deputies a matter of much difficulty. On the 18th of January, 1814, Mr. Rush, then the Comptroller, in answer to a letter on the subject addressed to him by the late marshal, informed him that the expenses attending the courts-martial might be deducted from and paid out of the militia fines paid over to him. This authority was countermanded by the present Comptroller on the 27th December, 1815, but was afterwards renewed by him on the 13th August, 1817. On the 5th January, 1818, the same officer addressed a letter to the Secretary of the Treasury, from which the following is an extract:

"I take leave to observe, that the instructions to the marshal to pay the members of the courts-martial out of the fines collected is not conceived correct. The law which authorizes the collection of such fines requires that, when collected, they shall be paid into the Treasury. The members of the courts-martial should, I respectfully conceive, receive their pay from the War Department, where their accounts ought to be settled; and I have to request that I may receive authority to advise the marshals accordingly."

On the 5th of May following, in pursuance of an arrangement made between the Treasury and War Departments, instructions were sent to John Smith, the late marshal, directing him to continue to pay the members of the courts-martial out of the moneys which he had collected, or might collect, from militia fines. This order still continues in force.

The consequences of the adoption and continuance of this measure have been extremely injurious to the public interest. The power which the late marshal had received he delegated to his deputies. In this manner all these officers, as well as their principal, after having received the money of the United States, instead of being directed to pay it over into the public Treasury as the act of Congress expressly requires, were authorized to audit and settle the accounts of the members of the courts-martial, and out of it to discharge their amount. Thus the adjustment of these accounts, which peculiarly belonged to the War Department, was transferred to the deputies of the marshal. The intention of those salutary checks which have been interposed by law to prevent money from being drawn improperly out of the public Treasury was, in consequence of this arrangement, defeated; and the discretion of these officers was substituted in their stead. Out of this circumstance, confusion almost inextricable has arisen. It has been impossible for your committee to ascertain, with any degree of certainty, how much of the money belonging to the United States has been expended in this manner. No deputy marshal in the State of Pennsylvania, within the knowledge of your committee, except Daniel Moore, of Lancaster, and Abraham Horn, Jun., of Easton, have ren-

dered to the late marshal an account of such expenditures, accompanied by proper vouchers to support it. Their accounts and vouchers are now in the office of the Third Auditor of the Treasury, but they have not yet been audited.

The late marshal estimates the amount of money which he and his deputies have expended in the payment of courts-martial throughout the State of Pennsylvania at $41,556 33. This estimate your committee believe to be imperfect; they therefore forbear to state the names of the deputies who have made such payments, and the amount paid by each, lest it might do them injustice. This amount includes the sum of $19,407 94, vouchers for the payment of which, by the late marshal and his deputies to the members of courts-martial, were filed by him in the office of the Third Auditor of the Treasury, on the 2d July, 1816, and the 28th December, 1818; though they have never yet been audited and passed. Of this sum the late marshal alleges that he has paid $4,068 57 out of the money received by him, and that the remainder has been disbursed by his deputies. He has also stated before the committee that he has since paid to the officers of courts-martial the sum of $1,546 28. By his own acknowledgment he is, therefore, a defaulter in a sum not less than $71,322 36, for money actually received by him. This appears by the following statement:

Amount received by the late marshal from his deputies, - - -	$75,719 68
Amount received by the late marshal from delinquents, - - -	1,217 53
	$76,937 21
From which deduct the whole amount which he alleges he has paid to the members of courts-martial, out of the money received by him, consisting of the sums of $4,068 57, and $1,546 28, -	5,614 85
Balance, - - - -	$71,322 36

The amount of militia fines which have been collected and paid over to the present marshal, John Conard, since his appointment, has been $6,379 30; $3,407 of which he has paid to the members of a court-martial in the second brigade third division of Pennsylvania militia, and the balance remains in his hands, applicable to the public service.

The whole of this information, therefore, taken together, enables us to state, with some degree of accuracy, that the whole amount of the fines which yet remain uncollected, or are in the hands of the deputies of the late marshal, is not less than $195,118 96. It is probable it may be considerably more. This will appear from the following statement:

Amount received by the late marshal, - - - -	$75,719 68
Amount received by the present marshal, - - - - -	6,379 30
Amount paid by the deputies of the late marshal, as he alleges, to the members of courts-martial, $41,556 33, less $5,614 85, paid by himself, which is included in the above sum of $75,719 68,	35,941 48
	$118,040 46
Which sum, deducted from the whole amount of the fines unremitted, - -	313,159 42
Leaves a balance of - - -	$195,118 96

A large proportion of this balance of $195,118 96 is yet uncollected, and the remainder is in the hands of the deputies of the late marshal. How much of this sum remains in their hands, your committee cannot pretend to say with any degree of accuracy; they will not, therefore, enter upon the subject, lest they might do injustice to individuals.

From the examination of the late marshal, it appears that no one of all his deputies has ever furnished him with a complete list of the names of the delinquents from whom they had collected fines, and the amount received from each. Without such information it is manifest that, although a settlement between him and them might be intrinsically just, yet it would not afford such information to the present marshal as would enable him to proceed in the collection of the balance of the fines. Without a knowledge of the names of those delinquents who have already paid their fines, he cannot know against whom to proceed.

The late marshal, in his examination, has informed us "that he has never made any settlement with any of his deputies except Andrew Quinton, John L. Wolf, Daniel Moore, James Hudson, and Charles Gleim. This deponent settled with the deputies last mentioned, upon their statements of the gross amount received by them; and, when he settled, he had no return from the said deputies of the individuals from whom they had collected fines, or of the fines outstanding, except from Daniel Moore, who had made such a return up to a certain date, some time before settlement, of the names of the persons from whom he had collected fines."

Charles Gleim has since made such a return to the present marshal, and your committee entertain no doubt, from the general appearance of Mr. Moore's accounts, but that his will be speedily completed. John W. Robinson has also made a return of a similar nature to the present marshal; and, since the appointment of this committee, Abraham Horn, Jun. has transmitted to them such a return, which is now on file in the office of the Third Auditor.

In this manner, from the want of a knowledge of those who have already paid their fines, has the collection of the remainder of them been suspended, in a great degree, throughout the State of Pennsylvania; and it has thus been rendered impossible for your committee to ascertain, with certainty, who are the delinquent deputies, and what is the extent of their delinquencies. On this subject, however, they have collected much information; but, upon the whole, they have believed it to be most proper, before they expose the character of any of the deputies, to give them an opportunity, until the commencement of the next session of Congress, to make a full and final settlement of their accounts with the present marshal. Against those who shall neglect to do so during the intermediate time, the strongest presumption must necessarily arise.

Your committee will now proceed to state the names of the deputies of the late marshal, and the places within which they were appointed to collect militia fines, as stated by himself.

James M. Riddle, Somerset county.
William Turner, Mifflin county.

It is but justice to Samuel Maffit and William B. Irish to observe, that your committee have received information from each of them, denying, in the most positive terms, that they have ever received one cent of militia fines, as deputies of the late marshal, Smith.

Your committee have carefully inquired whether there is any prospect of recovering from John Smith, or his sureties, the whole or any part of the sum of $71,323 36, which, by his own acknowledgment, he owes to the Government; and they are decidedly of opinion it is altogether lost.

John Smith had held the office of marshal upwards of thirteen years previous to his last re-appointment, which was made on the 10th December, 1814. His last official bond was executed on the 28th March, 1815, and in it, Joseph Jones and Ebenezer Betts, both of the city of Philadelphia, became his securities. Previous to that date, Thomas Leiper, of the same city, had been one of his sureties during the whole period he had held the office, and John Barker had been the other, except for his first term. John Smith is now wholly insolvent, and has been considered so by some ever since the year 1814. A suit was instituted against him, on his official bond, in the summer of the year 1820, on which judgment was rendered on the 7th December of that year. He has since been discharged from imprisonment by the President of the United States. His sureties, Joseph Jones and Ebenezer Betts, have been insolvent for several years. Ebenezer Betts is now dead.

The general statement which your committee have already furnished might, perhaps, be considered a sufficient answer to that part of the resolution which makes it their duty to inquire and report to the House the causes why no part of these militia fines has yet been received in the Treasury. They feel themselves constrained, however, to make a few additional remarks upon this part of the subject.

Regular lists of the fines assessed, to the amount of $243,609 41, were certified to the Comptroller of the Treasury of the United States, according to law, during the years 1814, 1815, and 1816. He was, therefore, to that extent, in possession of the assessment of fines; and it was his duty to take care that the late marshal should collect them promptly and faithfully. That officer was bound by the laws of the country to pay into the Treasury of the United States all fines collected either by himself or his deputies, within two months after their collection. When he neglected to do so, it became the duty of the Comptroller to notify the district attorney, who was authorized to proceed against him, by attachment, for their recovery.

It follows, as a necessary consequence, that it was the duty of the Comptroller to have demanded of John Smith, from time to time, during his continuance in office, an account of the fines collected by him and his deputies; because, without such information, the law could not have been executed. This demand, in addition to the common powers of the Comptroller in such cases, might then have been enforced by the penalty of the loss of office; the marshal being removable at pleasure. Such a demand was, however, never made from the last re-appointment of John Smith, on the 10th December, 1814, until his office expired on the 10th December, 1818, nor even until this day. In consequence of this neglect, the Comptroller was so entirely ignorant of the extent of John Smith's delinquency, as it respected militia fines, that, on the 30th June, 1820, when by letter he directed suit to be brought against him on his official bond, and stated an account against him for revenue, amounting to $3,713 91, he writes as follows: "It is also probable that he [Mr. Smith] collected some militia fines which have not been accounted for by him; but what amount is not known to this Department." At that very time, and for a long time before, John Smith was a defaulter, in this particular, to the amount of $71,323 36.

It is unnecessary to enlarge upon this subject. The history of this country clearly shows the temptation and the danger of suffering large sums of public money to remain in the hands of officers for years, without requiring them to render an account.

The resolution of the Legislature of the commonwealth of Pennsylvania, passed on the 29th March last, requesting the Senators and Representatives from that State in the Congress of the United States "to use their best efforts to procure the passage of a law vesting in the commonwealth of Pennsylvania any right that the United States may have, or may be supposed to have, to the fines assessed upon citizens of Pennsylvania for non-performance of militia duty during the late war, and clothing the said commonwealth also with the same powers, rights, and remedies, which the United States Government may possess for the recovery of the same, either from the original delinquent, or from the respective marshals and their deputies who may have collected the same," has also been referred to your committee; and, in their opinion, the request contained in it should be granted by Congress.

There can be no doubt that, the President possessing the power under the constitution and laws of the country to call forth the militia, the Federal Government have a right to the fines assessed on individuals as a punishment for disobeying such a call. This proposition is so plain that it requires no illustration. Equitable circumstances, however, may exist which ought to induce the United States to transfer this right, in certain cases, to the States. In the opinion of your committee, such circumstances do exist upon the present occasion.

The commonwealth of Pennsylvania, during the late war with Great Britain, furnished and placed, under the orders of the President of the United States, the number, and more than the number, of militia required by him for the service of the Federal Government. Of the men thus furnished, a considerable proportion were volunteers; and, in procuring the residue by draughting, the number of delinquencies was so great, that the fines assessed amounted, as has been before stated, to $346,367. If, then, the United States should receive this enormous sum, it is manifest that, notwithstanding the State of Pennsylvania may have complied, and more than complied, with all her federal obligations, yet, in addition, her citizens would be obliged to pay this amount into the United States Treasury. Equal justice, therefore, towards both parties, requires that the Federal Government should permit that State to collect these fines for her own benefit. The United States, after obtaining all the men they wanted, surely should not have the money also.

There is another reason which has had an influence in bringing your committee to this conclusion. The experience of the past has shown how little calculated officers of the United States are to collect small sums of money from delinquents scattered over the surface of an extensive State. This circumstance, connected with the great length

of time which has elapsed since the fines were imposed, and the general change in the circumstances of the people during that period, has induced your committee to believe that the sum which can now be collected by the United States will amount to little or nothing. If, however, these fines should be given to the State of Pennsylvania, she could, perhaps, by means of her county officers, collect a small proportion of them. Such a relinquishment in her favor might, therefore, in the opinion of your committee, be a benefit to her, without doing any injury to the United States.

There is another circumstance which should be taken into view in the determination of this question. The act of Congress of 1795, although it provides for the punishment of delinquent militiamen by courts-martial, to be composed of militia officers only, yet it does not specify how, when, or by whom, such courts shall be selected and organized. The militia law of Pennsylvania supplied these defects, and prevented the act of Congress from becoming in practice a dead letter. These fines were, therefore, assessed by virtue of the joint operation of both acts. Indeed, in the opinion of the President, the power of remitting these fines was not vested in him, but in the Governor of Pennsylvania. This appears from a letter directed to the Secretary of State of Pennsylvania, by the Secretary of State of the United States, dated 14th April, 1818. The Governor of that State has uniformly exercised this power. These fines, then, which that State requests you to transfer to her, may all, at any time, in the opinion of the President, be remitted by her Governor. In every view which your committee can take of this subject, it is their opinion that Congress should grant these fines to the State of Pennsylvania. They therefore submit the following resolution:

Resolved, That the uncollected militia fines, due from delinquents in the State of Pennsylvania, which have been assessed by courts-martial, and all fines collected by the late or present marshals of Pennsylvania, or their deputies, which have not been paid into the Treasury of the United States, or applied to the payment of the expenses of courts-martial, be transferred to the State of Pennsylvania, with full power to collect the same.

17th Congress.] No. 229. [1st Session.

PROCEEDINGS OF THE SENATE ON THE NOMINATION OF OFFICERS TO BE RETAINED IN THE ARMY UNDER THE ACT OF THE 2d OF MARCH, 1821.

IN THE SENATE OF THE UNITED STATES, APRIL 30, 1822.

Ordered, That the injunction of secrecy be removed from the following proceedings and documents, and that they be printed.

MONDAY, JANUARY 21, 1822.

The following written message was received from the President of the United States, by Mr. Gouverneur, his secretary:

To the Senate of the United States: WASHINGTON, *January* 17, 1822.

I nominate the persons whose names are stated in the enclosed letter from the Secretary of War, for the appointments therein respectively proposed for them.

The changes in the army growing out of the act of the 2d of March, 1821, "to reduce and fix the military peace establishment of the United States," are exhibited in the official Register for the year 1822, herewith submitted for the information of the Senate.

Under the late organization of the artillery arm, with the exception of the colonel of the regiment of light artillery, there were no grades higher than lieutenant colonel recognised. Three of the four colonels of artillery provided for by the act of Congress of the 2d of March, 1821, were considered, therefore, as original vacancies, to be filled, as the good of the service might dictate, from the army corps.

The pay department being considered as a part of the military establishment, and within the meaning of the above-recited act constituting one of the corps of the army, the then paymaster general was appointed colonel of one of the regiments. A contrary construction, which would have limited the corps specified in the twelfth section of the act to the line of the army, would equally have excluded all the other branches of the staff, as well as that of the pay department, which was expressly comprehended among those to be reduced. Such a construction did not seem to be authorized by the act, since, by its general terms, it was inferred to have been intended to give a power of sufficient extent to make the reduction, by which so many were to be disbanded, operate with as little inconvenience as possible to the parties. Acting on these views, and on the recommendation of the board of general officers, who were called in, on account of their knowledge and experience, to aid the Executive in so delicate a service, I thought it proper to appoint Colonel Towson to one of the new regiments of artillery, it being a corps in which he had eminently distinguished himself, and acquired great knowledge and experience, in the late war.

In reconciling conflicting claims, provision for four officers of distinction could only be made, in grades inferior to those which they formerly held. Their names are submitted with the nomination for the brevet rank of the grades from which they were severally reduced.

It is proper, also, to observe, that as it was found difficult, in executing the act, to retain each officer in the corps to which he belonged, the power of transferring officers from one corps to another was reserved, in the general orders published in the Register, till the first day of January last, in order that, upon vacancies occurring, those who had been put out of their proper corps might, as far as possible, be restored to it. Under this reservation, and in conformity to the power vested in the Executive by the first section of the seventy-fifth article of the general regulations of the army, approved by Congress at the last session, on the resignation of Lieutenant Colonel Mitchell, of the corps of artillery, Lieutenant Colonel Lindsay, who had belonged to this corps before the late reduction, was trans-

ferred back to it, in the same grade. As an additional motive to the transfer, it had the effect of preventing Lieutenant Colonel Taylor and Major Woolley being reduced to lower grades than those which they held before the reduction, and Captain Cobb from being disbanded under the act. These circumstances were considered as constituting an extraordinary case, within the meaning of the section already referred to of the regulations of the army. It is, however, submitted to the Senate whether this is a case requiring their confirmation, and, in case such should be their opinion, it is submitted to them for their constitutional confirmation.

JAMES MONROE.

SIR: WAR DEPARTMENT, *January* 2, 1822.

I have the honor to lay before you a list of promotions and appointments, requiring the confirmation of the Senate.

I have the honor to be, sir, with perfect respect, your obedient servant,

J. C. CALHOUN.

THE PRESIDENT OF THE UNITED STATES.

Promotions and appointments in the army of the United States.

James Gadsden, late inspector general, to be adjutant general, August 13, 1821; Samuel B. Archer, captain of artillery, to be inspector general, November 10, 1821; William Linnard, late deputy quartermaster general, to be quartermaster, November 12, 1813; Henry Stanton, late deputy quartermaster general, to be quartermaster, May 13, 1820; Daniel Parker, late adjutant and inspector general, to be paymaster general, June 1, 1821; Thomas Wright, late paymaster 8th infantry, to be paymaster, June 22, 1815; Asher Phillips, late paymaster 3d infantry, to be paymaster, August 26, 1815; Alphonso Wetmore, late paymaster 6th infantry, to be paymaster, October 14, 1815.

Corps of Engineers.—Cadet Edward H. Courtenay, to be brevet second lieutenant, July 1, 1821.

First regiment of artillery.—Second lieutenant Matthew A. Patrick, to be first lieutenant, August, 11, 1820; third lieutenant Daniel D. Tompkins, of ordnance, to be second lieutenant, July 1, 1820; brevet second lieutenant Jonathan Prescott, to be second lieutenant, July 1, 1821; brevet second lieutenant Charles Dimmock, to be second lieutenant, July 1, 1821; cadet Washington Wheelwright, to be brevet second lieutenant, July 1, 1821.

Second regiment of artillery.—Nathan Towson, late captain light artillery, to be colonel, June 1, 1821; first lieutenant Thomas C. Legate, to be captain, May 13, 1820; second lieutenant C. M. Eakin, to be first lieutenant, May 13, 1820; second lieutenant Samuel Cooper, to be first lieutenant, July 1, 1821; third lieutenant William C. De Hart, late ordnance, to be second lieutenant, July 1, 1820; third lieutenant William P. Buchanan, late ordnance, to be second lieutenant, July 1, 1820; cadet David Wallace, to be brevet second lieutenant, July 1, 1821; cadet James Grier, to be brevet second lieutenant, July 1, 1821.

Third regiment of artillery.—Second lieutenant S. S. Smith, to be first lieutenant, November 30, 1820; third lieutenant Francis N. Barbarin, ordnance, to be second lieutenant, July 1, 1820; third lieutenant Charles Thomas, ordnance, to be second lieutenant, June 1, 1821; cadet Robert W. Allston, to be brevet second lieutenant, July 1, 1821; cadet J. F. Scott, to be brevet second lieutenant, July 1, 1821.

Fourth regiment of artillery.—J. R. Fenwick, late lieutenant colonel of light artillery, to be colonel, June 1, 1821; second lieutenant John M. Washington, to be first lieutenant, May 23, 1820; second lieutenant William Wright, to be first lieutenant, August 23, 1820; second lieutenant Harvey Brown, to be first lieutenant, August 23, 1821; third lieutenant William H. Bell, ordnance, to be second lieutenant, July 1, 1820; cadet Clark Burdine, to be second lieutenant, July 1, 1821; cadet W. W. Wells, to be second lieutenant, July 1, 1821; cadet J. C. Holland, to be second lieutenant, July 1, 1821; cadet Edward C. Ross, to be second lieutenant, July 1, 1821; cadet John B. Scott, to be brevet second lieutenant, July 1, 1821.

First regiment of infantry.—Cadet Jefferson Vail, to be second lieutenant, July 1, 1821.

Second regiment of infantry.—Second lieutenant E. K. Barnum, to be first lieutenant, December 31, 1820; cadet Alexander Morton, to be second lieutenant, July 1, 1821.

Third regiment of infantry.—Cadet Otis Wheeler, to be second lieutenant, July 1, 1821; cadet Henry Bainbridge, to be second lieutenant, July 1, 1821.

Fourth regiment of infantry.—First lieutenant Francis W. Brady, to be captain, December 31, 1820; second lieutenant Thomas Johnson, to be first lieutenant, December 31, 1820.

Fifth regiment of infantry.—First lieutenant J. Plympton, to be captain, January 1, 1822; second lieutenant C. Burbridge, to be first lieutenant, November 1, 1821; second lieutenant J. B. F. Russell, to be first lieutenant, January 1, 1822; cadet Seth M. Capron, to be second lieutenant, July 1, 1821; cadet Julius A. Lagnel, to be second lieutenant, July 1, 1821.

Sixth regiment of infantry.—Second lieutenant W. D. McCray, to be first lieutenant, November 5, 1821; third lieutenant Joseph Buckley, ordnance, to be second lieutenant, June 1, 1821; cadet Joseph Pentland, to be second lieutenant, July 1, 1821; cadet W. W. Gaillard, to be second lieutenant, July 1, 1821; cadet Jason Rogers, to be second lieutenant, July 1, 1821; cadet D. M. Porter, to be second lieutenant, July 1, 1821.

Seventh regiment of infantry.—Major J. B. Many, to be lieutenant colonel, January 1, 1822; second lieutenant John B. Hobkirk, to be first lieutenant, October 31, 1820; third lieutenant James Dawson, ordnance, to be second lieutenant, June 1, 1821.

Edward Purcell, late surgeon 5th infantry, to be surgeon, June 18, 1821; John A. Brereton, D. C., to be assistant surgeon, July 1, 1821; Henry Stevenson, late post surgeon, to be assistant surgeon, July 16, 1821; Mordecai Hale, late post surgeon, to be assistant surgeon, October 27, 1821; Richard S. Satterlee, ————.

Walter Jones, D. C., to be brigadier general of the militia of the District of Columbia, August 1, 1821; Israel P. Thompson, D. C., to be captain 1st regiment 2d brigade militia of the District of Columbia, August 1, 1821; George Brent, D. C., to be lieutenant 1st regiment 2d brigade militia of the District of Columbia, August 1, 1821; Samuel McChain, to be ensign 1st regiment 2d brigade militia of the District of Columbia, August 1, 1821.

The following officers have been razeed in the United States army:

Corps of Engineers.—Brevet Major General Alexander Macomb, late brigadier general, to be colonel, July 6, 1812, with the brevet rank of brigadier general, January 24, 1814.

Sixth regiment of infantry.—Brigadier General Henry Atkinson, to be colonel, April 15, 1814, with the brevet rank of brigadier general, May 13, 1820.

Seventh regiment of infantry.—Major William Bradford, late of the rifle, to be captain, July 6, 1812, with the brevet rank of major, November 10, 1818.

First regiment of artillery.—Major James Dalliba, late of the ordnance, to be captain, August 5, 1813, with the brevet rank of major, February 9, 1815.

The message was read.

On motion,

Ordered, That it be referred to the Committee on Military Affairs to consider and report thereon.

WEDNESDAY, JANUARY 23, 1822.

On motion, by Mr. Williams, of Tennessee,

Ordered, That the message nominating persons to promotions and appointments in the army be printed for the use of the Senate, under an injunction of secrecy.

MONDAY, FEBRUARY 25, 1822.

Mr. Williams, of Tennessee, from the Committee on Military Affairs, to whom was referred the message of the 21st January, nominating persons to promotions and appointments in the army, reported on the nomination of Richard S. Satterlee; and

Resolved, That the Senate do advise and consent to the appointment, agreeably to the nomination.

FRIDAY, MARCH 8, 1822.

On motion, by Mr. Benton,

Resolved, That the Committee on Military Affairs be instructed to make a report to the Senate, showing the number of the colonels in the army of the United States on the 2d of March, 1821, their names, dates of commissions, and corps; also, showing the number of colonels in service under the peace establishment of 1821, their names, the highest grade before held by them, the date of that commission, and the corps to which they belonged, if attached to any corps; also, showing the number of adjutant and inspector generals in service on the said 2d of March, their names, the highest lineal rank previously held by each in the United States army, and the date of that commission; also, showing the number of adjutant and inspector generals in service under the peace establishment of 1821, their names, the highest lineal rank previously held by them, and the date of commission; also, a list of all transfers and promotions made under or since the said act of March 2d, showing the names, grades, dates of commissions, and corps to which each belonged at the time of the transfer or promotion, and the office to which transferred or promoted; also, showing the highest lineal rank held by Colonel R. Butler in the army of the United States, at any time before the said 2d of March, the time when, and his rank when he may have quit the line of the army, and the grade and date of commission of Major William Bradford at the date aforesaid.

WEDNESDAY, MARCH 13, 1822.

Mr. WILLIAMS, of Tennessee, from the Committee on Military Affairs, to whom was referred the message of the 21st January, nominating to promotions and appointments in the army, made the following report, which was read:

That Colonel Towson, on the 2d day of March, 1821, was paymaster general; that he held neither rank nor command in the army, and, not belonging to any corps of the army, the President had no power, under the law reducing and fixing the military peace establishment, to arrange him to the command of one of the regiments retained in service by said act.

The committee further report, that Colonel Gadsden, on the 2d of March, 1821, was one of the two inspector generals of the army, both of whom were retained in service by the act reducing the army; that there were two adjutant generals in service, one of whom was retained in service; and the President was not authorized to dismiss both of them, and retain Colonel Gadsden as adjutant general.

The committee further report, that Colonel Fenwick, on the 2d March, 1821, was lieutenant colonel of the light artillery; that, by appointing him to the command of one of the regiments of artillery, it will disband, as supernumerary, a full colonel, who, by the terms of the law of the 2d March, 1821, was entitled to be retained. The committee, therefore, recommend that the Senate do not advise and consent to the nomination of Colonel Fenwick.

The committee further report, that Generals Macomb and Atkinson, and Majors Bradford and Dalliba, are nominated to grades below the rank they formerly held in the army; that the principle of *razee* was recognised by the Senate on the reduction of the army in 1815; and, under the authority of that precedent, the committee recommend that the four last-mentioned nominations be confirmed.

Mr. Williams, from the same committee, pursuant to a resolution of the 8th instant, reported the Army Register of May 17, 1821, which was read.

THURSDAY, MARCH 14, 1822.

The Senate proceeded to consider the nomination of Nathan Towson to the appointment in the army, as contained in the message of the 21st January; and, after debate,

The Senate adjourned.

FRIDAY, MARCH 15, 1822.

The Senate resumed the consideration of the nomination of Nathan Towson; and, on motion,

Ordered, That it lie on the table.

SATURDAY, MARCH 16, 1822.

The Senate resumed the consideration of the nomination of Nathan Towson; and,

On the question, "Will the Senate advise and consent to this appointment?"

It was determined in the negative: Yeas 19—Nays 25.

On motion, by Mr. Lanman,

The yeas and nays being desired by one-fifth of the Senators present,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Findlay,	Mr. King, of N. Y.,	Mr. Parrott,
Brown, of La.,	Holmes, of Miss.,	Knight,	Southard,
Brown, of Ohio,	Johnson, of Ky.,	Lanman,	Stokes,
Eaton,	Johnson, of La.,	Mills,	Talbot
Edwards,	King, of Ala.,	Otis,	

Those who voted in the negative are,

Mr. Barton,	Mr. Gaillard,	Mr. Palmer,	Mr. Thomas,
Benton,	Holmes, of Me.,	Pleasants,	Van Dyke,
Boardman,	Lloyd,	Ruggles,	Walker,
Chandler,	Lowrie,	Seymour,	Ware,
D'Wolf,	Macon,	Smith,	Williams, of Miss.,
Dickerson,	Morril,	Taylor,	Williams, of Ten.
Elliott,			

So it was

Resolved, That the Senate do not advise and consent to the appointment of Nathan Towson to be colonel of the second regiment of artillery.

MONDAY, MARCH 18, 1822.

The Senate proceeded to consider the nomination of James Gadsden to be adjutant general, contained in the message of the 21st January; and, after debate,

The Senate adjourned.

THURSDAY, MARCH 21, 1822.

The Senate resumed the consideration of the nomination of James Gadsden to be adjutant general, contained in the message of the 21st January; and,

On the question, "Will the Senate advise and consent to this appointment?"

It was determined in the negative: Yeas 20—Nays 23.

On motion, by Mr. Eaton,

The yeas and nays being desired by one-fifth of the Senators present,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Elliott,	Mr. King, of Ala.,	Mr. Otis,
Brown, of La.,	Findlay,	King, of N. Y.,	Parrott,
Brown, of Ohio,	Holmes, of Miss.,	Knight,	Southard,
Eaton,	Johnson, of Ky.,	Lanman,	Stokes,
Edwards,	Johnson, of La.,	Mills,	Williams, of Miss.

Those who voted in the negative are,

Mr. Barton,	Mr. Gaillard,	Mr. Pleasants,	Mr. Van Buren,
Benton,	Holmes, of Me.,	Seymour,	Van Dyke,
Boardman,	Macon,	Smith,	Walker,
Chandler,	Morril,	Talbot,	Ware,
D'Wolf,	Noble,	Taylor,	Williams, of Ten.
Dickerson,	Palmer,	Thomas,	

So it was

Resolved, That the Senate do not advise and consent to the appointment of James Gadsden to be adjutant general.

The Senate proceeded to consider the nomination of Alexander Macomb to be colonel of the corps of engineers, contained in the last-mentioned message; and,

On motion, by Mr. Smith,

Ordered, That the question, "Will the Senate advise and consent to this appointment?" be taken by yeas and nays.

On motion,

Ordered, That the nomination lie on the table.

FRIDAY, MARCH 22, 1822.

The Senate resumed the consideration of the nominations to promotions and appointments in the army, as contained in the message of the 21st January, and not before acted on.

On the question, "Will the Senate advise and consent to the appointment of Alexander Macomb to be colonel of engineers, with the brevet rank of brigadier general?"

A division of the question was called for, and the vote was taken on the first member thereof,

Which was determined in the affirmative: Yeas 26—Nays 14.

The yeas and nays being previously ordered,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Findlay,	Mr. Macon,	Mr. Stokes,
Boardman,	Holmes, of Miss.,	Mills,	Talbot,
Brown, of La.,	Johnson, of Ky.,	Morril,	Van Buren,
Brown, of Ohio,	King, of Ala.,	Parrott,	Van Dyke,
Dickerson,	King, of N. Y.,	Pleasants,	Walker,
Eaton,	Knight,	Southard,	Williams, of Ten.
Elliott,	Lanman,		

Those who voted in the negative are,

Mr. Barton,	Mr. Gaillard,	Mr. Ruggles,	Mr. Taylor,
Benton,	Holmes, of Me.,	Seymour,	Thomas,
Chandler,	Noble,	Smith,	Ware.
D'Wolf,	Palmer,		

The vote was then taken on the second member of the said question,

And determined in the affirmative: Yeas 28—Nays 15.

On motion, by Mr. Southard,

The yeas and nays being desired by one-fifth of the Senators present,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Holmes, of Miss.,	Mr. Mills,	Mr. Stokes,
Benton,	Johnson, of Ky.,	Morril,	Talbot,
Brown, of La.,	Johnson, of La.,	Otis,	Van Buren,
Eaton,	King, of Ala.,	Parrott,	Van Dyke,
Edwards,	King, of N. Y.,	Pleasants,	Walker,
Elliott,	Lanman,	Seymour,	Ware,
Findlay,	Macon,	Southard,	Williams, of Ten.

Those who voted in the negative are,

Mr. Barton,	Mr. D'Wolf,	Mr. Knight,	Mr. Smith,
Boardman,	Dickerson,	Noble,	Taylor,
Brown, of Ohio,	Gaillard,	Palmer,	Thomas.
Chandler,	Holmes, of Me.,	Ruggles,	

So it was

Resolved, That the Senate do advise and consent to the appointment of Alexander Macomb, agreeably to the nomination.

On the question, "Will the Senate advise and consent to the appointment of Henry Atkinson to be colonel of the sixth regiment of infantry, with the brevet rank of brigadier general?"

A division of the question was called for, and the vote taken on the first member thereof,

And determined in the affirmative: Yeas 29—Nays 14.

On motion, by Mr. Holmes, of Maine,

The yeas and nays being desired by one-fifth of the Senators present,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Findlay,	Mr. Lanman,	Mr. Southard,
Boardman,	Holmes, of Miss.,	Macon,	Stokes,
Brown, of La.,	Johnson, of Ky.,	Mills,	Talbot,
Brown, of Ohio,	Johnson, of La.,	Morril,	Van Buren,
Dickerson,	King, of Ala.,	Otis,	Van Dyke,
Eaton,	King, of N. Y.,	Parrott,	Walker,
Edwards,	Knight,	Pleasants,	Williams, of Ten.
Elliott,			

Those who voted in the negative are,

Mr. Barton,	Mr. Gaillard,	Mr. Ruggles,	Mr. Taylor,
Benton,	Holmes, of Me.,	Seymour,	Thomas,
Chandler,	Noble,	Smith,	Ware.
D'Wolf,	Palmer,		

And the second member of the question having been agreed to, it was

Resolved, That the Senate do advise and consent to the appointment of Henry Atkinson, agreeably to the nomination.

The Senate then proceeded to consider, separately, the nominations contained in said message which had not been finally acted on; and,

Resolved, That they do advise and consent to the said appointments, agreeably to the nominations, respectively, with the exception of Samuel B. Archer, Daniel Parker, J. R. Fenwick, and William Bradford; which were,

On motion,

Ordered, To be postponed to Tuesday next.

On motion, by Mr. Smith,

To reconsider the vote of yesterday, on the nomination of James Gadsden,

It was determined in the affirmative: Yeas 23—Nays 21.

On motion, by Mr. Morril,

The yeas and nays being desired by one-fifth of the Senators present,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Elliott,	Mr. King, of N. Y.,	Mr. Parrott,
Brown, of La.,	Findlay,	Knight,	Smith,
Brown, of Ohio,	Holmes, of Miss.,	Lanman,	Southard,
Chandler,	Johnson, of Ky.,	Mills,	Stokes,
Eaton,	Johnson, of La.,	Noble,	Williams, of Miss.
Edwards,	King, of Ala.,	Otis,	

Those who voted in the negative are,

Mr. Barton,	Mr. Holmes, of Me.,	Mr. Ruggles,	Mr. Van Buren,
Benton,	Macon,	Seymour,	Van Dyke,
Boardman,	Morril,	Talbot,	Walker,
D'Wolf,	Palmer,	Taylor,	Ware,
Dickerson,	Pleasants,	Thomas,	Williams, of Ten.
Gaillard,			

On the question, "Will the Senate advise and consent to the appointment of James Gadsden to be adjutant general?"

It was determined in the negative: Yeas 21—Nays 23.

On motion, by Mr. Dickerson,

The yeas and nays being desired by one-fifth of the Senators present,

Those who voted in the affirmative are,

Mr. Barbour,	Mr. Findlay,	Mr. King, of N. Y.,	Mr. Parrott,
Brown, of La.,	Holmes, of Miss.,	Knight,	Smith,
Brown, of Ohio,	Johnson, of Ky.,	Lanman,	Southard,
Eaton,	Johnson, of La.,	Mills,	Stokes,
Edwards,	King, of Ala.,	Otis,	Williams, of Miss.
Elliott,			

Those who voted in the negative are,

Mr. Barton,	Mr. Gaillard,	Mr. Pleasants,	Mr. Van Buren,
Benton,	Holmes, of Me.,	Ruggles,	Van Dyke,
Boardman,	Macon,	Seymour,	Walker,
Chandler,	Morril,	Talbot,	Ware,
D'Wolf,	Noble,	Taylor,	Williams, of Ten.
Dickerson,	Palmer,	Thomas,	

So it was

Resolved, That the Senate do not advise and consent to the appointment of James Gadsden to be adjutant general.

On motion, by Mr. Benton,

Resolved, That the Committee on Military Affairs inquire into the facts, and inform the Senate whether Colonel Robert Butler has resigned, or refused to accept the place of colonel or lieutenant colonel in the military peace establishment of the United States, and whether his resignation has been accepted.

TUESDAY, MARCH 26, 1822.

The following written message was received from the President of the United States, by Mr. Gouverneur, his secretary:

To the Senate of the United States: WASHINGTON, *March* 26, 1822.

Having executed the act entitled "An act to reduce and fix the military peace establishment of the United States," on great consideration, and according to my best judgment; and, inferring from the rejection of the nomination of Colonel Towson and Colonel Gadsden, officers of very distinguished merit, that the view which I took of that law has not been well understood, I hereby withdraw all the nominations on which the Senate has not decided, until I can make a more full communication and explanation of that view, and of the principles on which I have acted, in the discharge of that very delicate and important duty.

JAMES MONROE.

The message was read.

FRIDAY, APRIL 12, 1822.

The two following written messages were received from the President of the United States, by Mr. Gouverneur, his secretary:

To the Senate of the United States:

Having cause to infer that the reasons which led to the construction which I gave to the act of the last session, entitled "An act to reduce and fix the military peace establishment of the United States," have not been well understood, I consider it my duty to explain more fully the view which I took of that act, and of the principles on which I executed the very difficult and important duty enjoined on me by it.

To do justice to the subject, it is thought proper to show the actual state of the army before the passage of the late act, the force in service, the several corps of which it was composed, and the grades and number of officers commanding it. By seeing, distinctly, the body in all its parts, on which the law operated; viewing, also, with a just discrimination, the spirit, policy, and positive injunctions of that law, with reference to precedents, established in a former analogous case, we shall be enabled to ascertain, with great precision, whether these injunctions have, or have not, been strictly complied with.

By the act of the 3d of March, 1815, entitled "An act fixing the military peace establishment of the United States," the whole force in service was reduced to ten thousand men, infantry, artillery, and riflemen, exclusive of the corps of engineers, which was retained in its then state. The regiment of light artillery was retained, as it had been organized by the act of 3d of March, 1814. The infantry was formed into nine regiments, one of which consisted of riflemen. The regiments of light artillery, infantry, riflemen, and corps of engineers, were commanded each by a colonel, lieutenant colonel, and the usual battalion and company officers; and the battalions of the corps of artillery, of which there were eight, four for the northern, and four for the southern division, were commanded by lieutenant colonels, or majors, there being four of each grade. There were, therefore, in the army, at the time the late law was passed, twelve colonels belonging to those branches of the military establishment. Two major generals and four brigadiers were likewise retained in service by this act; but the staff, in several of its branches, not being provided for, and being indispensable, and the omission inadvertent, proceeding from the circumstances under which the act was passed, being at the close of the session, at which time intelligence of the peace was received, it was provisionally retained by the President, and provided for, afterwards, by the act of the 24th of April, 1816. By this act the ordnance department was preserved, as it had been organized by the act of February 8, 1815, with one colonel, one lieutenant colonel, two majors, ten captains, and ten first, second, and third lieutenants. One adjutant and inspector general of the army, and two adjutant generals, one for the northern, and one for the southern division, were retained. This act provides, also, for a paymaster general, with a suitable number of regimental and battalion paymasters, as a part of the general staff, constituting the military peace establishment; and the pay department, and every other branch of the staff, were subjected to the rules and articles of war.

By the act of March 2, 1821, it was ordained that the military peace establishment should consist of four regiments of artillery, and of seven of infantry, with such officers of engineers, ordnance, and staff as were therein specified. It is provided that each regiment of artillery should consist of one colonel, one lieutenant colonel, one major, and nine companies, with the usual company officers, one of which to be equipped as light artillery; and that there should be attached to each regiment of artillery one supernumerary captain, to perform ordnance duty; thereby merging the regiment of artillery and ordnance department into these four regiments. It was provided, also, that each regiment of infantry should consist of one colonel, one lieutenant colonel, one major, and ten companies, with the usual company officers. The corps of engineers, bombardiers excepted, with the topographical engineers and their assistants, were to be retained under the existing organization. The former establishment, as to the number of major generals and brigadiers, was curtailed one-half, and the office of inspector and adjutant general to the army, and of adjutant general to each division, annulled; and that of adjutant general to the army instituted. The quartermaster, paymaster, and commissary departments were also specially provided for, as was every other branch of the staff, all of which received a new modification, and were subjected to the rules and articles of war.

The immediate and direct operation of this act on the military peace establishment of 1815 was that of reduction, from which no officer belonging to it was exempt, unless it might be the topographical engineers; for, in retaining the corps of engineers, as was manifest, as well by the clear import of the section relating to it, as by the pro-

visions of every other clause of the act, reference was had to the organization, and not to the officers of the corps. The establishment of 1815 was reduced from ten thousand to about six thousand men. The eight battalions of artillery, constituting what was called the corps of artillery, and the regiment of light artillery, as established by the act of 1815, were to be incorporated together, and formed into four new regiments. The regiments of infantry were to be reduced from nine to seven, the rifle regiment being broken. Three of the general officers were to be reduced, with very many of the officers belonging to the several corps of the army, and particularly of the infantry. All the provisions of the act declare of what number of officers and men the several corps provided for by it should thenceforward consist; and not that any corps as then existing, or any officer of any corps, unless the topographical engineers were excepted, should be retained. Had it been intended to reduce the officers by corps, or to exempt the officers of any corps from the operation of the law; or, in the organization of the several new corps, to confine the selection of the officers to be placed in them to the several corps of the like kind then existing, and not extend it to the whole military establishment, including the staff; or to confine the reduction to a proportional number of each corps, and of each grade in each corps, the object, in either instance, might have been easily accomplished by a declaration to that effect. No such declaration was made, nor can such intention be inferred. We see, on the contrary, that every corps of the army and staff was to be reorganized, and most of them reduced in officers and men; and that, in arranging the officers from the old to the new corps, full power was granted to the President to take them from any and every corps of the former establishment, and place them in the latter. In this latter grant of power, it is proper to observe that the most comprehensive terms that could be adopted were used, the authority being to cause the arrangement to be made from the officers of the several corps then in the service of the United States, comprising, of course, every corps of the staff, as well as of artillery and infantry, and not from the corps of troops, as in the former act, and without any limitation as to grades.

It merits particular attention, that, although the object of this latter act was reduction, and such its effect, on an extensive scale, five new offices were created by it; four of the grade of colonel for the four regiments of artillery, and that of adjutant general for the army. Three of the first mentioned were altogether new, the corps having been newly created; and, although one officer of that grade, as applicable to the corps of light artillery, had existed, yet, as that regiment was reduced, and all its parts reorganized in another form, and with other duties, being incorporated into the four new regiments, the commander was manifestly displaced, and incapable of taking the command of either of the new regiments, or any station in them, until he should be authorized to do so by a new appointment. The same remarks are applicable to the office of adjutant general to the army. It is an office of new creation, differing from that of adjutant and inspector general, and likewise from that of adjutant general to a division, which were severally annulled. It differs from the first in title, rank, and pay; and from the two latter, because they had been created by law, each for a division; whereas the new office, being instituted without such special designation, could have relation only to the whole army. It was manifest, therefore, that neither of those officers had any right to this new station, nor to any other station, unless he should be specially appointed to it, the principle of reduction being applicable to every officer in every corps. It is proper, also, to observe, that the duties of adjutant general, under the existing arrangement, correspond, in almost every circumstance, with those of the late adjutant and inspector general, and not with those of an adjutant general of a division.

To give effect to this law, the President was authorized, by the twelfth section, to cause the officers, non-commissioned officers, artificers, musicians, and privates of the several corps then in the service of the United States, to be arranged in such manner as to form and complete out of the same the force thereby provided for, and to cause the supernumerary officers, non-commissioned officers, artificers, musicians, and privates to be discharged from the service.

In executing this very delicate and important trust, I acted with the utmost precaution. Sensible of what I owed to my country, I felt strongly the obligation of observing the utmost impartiality in selecting those officers who were to be retained. In executing this law I had no personal object to accomplish, or feeling to gratify; no one to retain, no one to remove. Having, on great consideration, fixed the principles on which the reduction should be made, I availed myself of the example of my predecessor, by appointing, through the proper department, a board of general officers to make the selection, and whose report I adopted.

In transferring the officers from the old to the new corps, the utmost care was taken to place them, in the latter, in the grades and corps to which they had respectively belonged in the former, so far as it might be practicable. This, though not enforced by the law, appearing to be just and proper, was never departed from, except in peculiar cases, and under imperious circumstances.

In filling the original vacancies in the artillery, and in the newly created office of adjutant general, I considered myself at liberty to place in them any officer belonging to any part of the whole military establishment, whether of the staff or line. In filling original vacancies, that is, offices newly created, it is my opinion, as a general principle, that Congress have no right, under the constitution, to impose any restraint, by law, on the power granted to the President, so as to prevent his making a free selection of proper persons for these offices from the whole body of his fellow-citizens. Without, however, entering here into that question, I have no hesitation in declaring it as my opinion that the law fully authorized a selection from any branch of the whole military establishment of 1815. Justified, therefore, as I thought myself, in taking that range, by every the highest sanction, the sole object to which I had to direct my attention was the merit of the officers to be selected for those stations. Three generals, of great merit, were either to be dismissed, or otherwise provided for. The very gallant and patriotic defender of New Orleans had intimated his intention to retire, but, at my suggestion, expressed his willingness to accept the office of commissioner to receive the cession of the Floridas, and of Governor, for a short time, of that Territory. As to one, therefore, there was no difficulty. For the other two, provision could only be made in the mode which was adopted. General Macomb, who had signalized himself in the defence of Plattsburg, was placed at the head of the corps of engineers, to which he had originally belonged, and in which he had acquired great experience; Colonel Armistead, then at the head of that corps, having voluntarily accepted one of the new regiments of artillery, for which he possessed very suitable qualifications; General Atkinson, likewise an officer of great merit, was appointed to the newly created office of adjutant general; Brevet General Porter, an officer of great experience in the artillery, and merit, was appointed to the command of another of those regiments; Colonel Fenwick, then the oldest lieutenant colonel of artillery, and who had suffered much in the late war by severe wounds, was appointed to a third; and Colonel Towson, who had served with great distinction in the same corps, and been twice brevetted for his gallantry, in the late war, was appointed to the last remaining one. General Atkinson having declined the office of adjutant general, Colonel Gadsden, an officer of distinguished merit, and believed to possess qualifications suitably adapted to it, was appointed in his stead. In making the arrangement, the merits of Colonel Butler and Colonel Jones were not overlooked. The former was assigned to the place which he would have held in the line if he had retained his original lineal commission; and the latter to his commission in the line which he had continued to hold with his staff appointment.

That the reduction of the army, and the arrangement of the officers from the old to the new establishment, and the appointments referred to, were, in every instance, strictly conformable to law, will, I think, be apparent. To the arrangement, generally, no objection has been heard; it has been made, however, to the appointments to the original vacancies, and particularly to those of Colonel Towson and Colonel Gadsden. To those appointments, therefore, further attention is due. If they were improper, it must be either that they were illegal, or that the officers did not merit the offices conferred on them. The acknowledged merit of the officers, and their peculiar fitness for the offices to which they were respectively appointed, must preclude all objection on that head. Having already suggested my impression that, in filling offices newly created, to which, on no principle whatever, any one could have a claim of right, Congress could not, under the constitution, restrain the free selection of the President from the whole body of his fellow-citizens, I shall only further remark, that if that impression is well founded, all objections to these appointments must cease. If the law imposed such restraint, it would, in that case, be void. But, according to my judgment, the law imposed none. An objection to the legality of those appointments must be founded either on the principle that those officers were not comprised within the corps then in the service of the United States, (that is, did not belong to the peace establishment,) or that the power granted by the word "arrange" imposed on the President the necessity of placing in these new offices persons of the same grade only from the old. It is believed that neither objection is well founded. Colonel Towson belonged to one of the corps then in the service of the United States, or, in other words, of the military peace establishment. By the act of 1815–'16, the pay department, of which the paymaster general was the chief, was made one of the branches of the staff, and he and all those under him were subjected to the rules and articles of war. The appointment, therefore, of him, and especially to a new office, was strictly conformable to law. The only difference between the fifth section of the act of 1815, for reducing the army, and the twelfth section of the act of 1821, for still further reducing it, by which the power to carry those laws into effect was granted to the President, in each instance, consists in this: that, by the former, he was to cause the arrangement to be made of the officers, non-commissioned officers, musicians, and privates of the several *corps of troops* then in the service of the United States; whereas, in the latter, the term *troops* was omitted. It cannot be doubted that that omission had an object, and that it was thereby intended to guard against misconstruction in so very material and important a circumstance, by authorizing the application of the act, unequivocally, to every corps of the staff as well as of the line. With that word, a much wider range was given to the act of 1815, on the reduction which then took place, than under the last act. The omission of it from the last act, together with all the sanctions which were given by Congress to the construction of the law, in the reduction made under the former, could not fail to dispel all doubt as to the extent of the power granted by the last law, and of the principles which ought to guide, and on which it was thereby made the duty of the President to execute it. With respect to the other objection, that is, that officers of the same grade only ought to have been transferred to these new offices, it is equally unfounded. It is admitted that officers may be taken from the old corps, and reduced, and arranged in the new, in inferior grades, as was done under the former reduction. This admission puts an end to the objection in this case; for, if an officer may be reduced and arranged from one corps to another, by an entire change of grade, requiring a new commission, and a new nomination to the Senate, I see no reason why an officer may not be advanced in like manner. In both instances, the grade, in the old corps, is alike disregarded. The transfer from it to the new turns on the merit of the party; and it is believed that the claim, in this instance, is felt by all with peculiar sensibility. The claim of Colonel Towson is the stronger, because the arrangement of him to the office to which he is now nominated is not to one from which any officer has been removed, and to which any other officer may, in any view of the case, be supposed to have had a claim. As Colonel Gadsden held the office of inspector general, and, as such, was acknowledged by all to belong to the staff of the army, it is not perceived on what ground his appointment can be objected to.

If such a construction is to be given to the act of 1821 as to confine the transfer of officers from the old to the new establishment to the *corps of troops*, (that is, to the line of the army,) the whole staff of the army, in every branch, would not only be excluded from any appointment in the new establishment, but altogether disbanded from the service; it would follow, also, that all the offices of the staff, under the new arrangement, must be filled by officers belonging to the new establishment, after its organization and their arrangement in it. Other consequences, not less serious, would follow. If the right of the President to fill these original vacancies, by the selection of officers from any branch of the whole military establishment, was denied, he would be compelled to place in them officers of the same grade, whose corps had been reduced, and they with them. The effect, therefore, of the law, as to those appointments, would be to legislate into office men who had been already legislated out of office, taking from the President all agency in their appointment. Such a construction would not only be subversive of the obvious principles of the constitution, but utterly inconsistent with the spirit of the law itself; since it would provide offices for a particular grade, and fix every member of that grade in those offices at a time when every other grade was reduced, and among them generals and other officers of the highest merit. It would also defeat every object of selection, since colonels of infantry would be placed at the head of regiments of artillery—a service in which they might have had no experience, and for which they might, in consequence, be unqualified.

Having omitted, in the message to Congress at the commencement of the session, to state the principles on which this law had been executed, and having imperfectly explained them in the message to the Senate of the 17th of January last, I deem it particularly incumbent on me, as well from a motive of respect to the Senate, as to place my conduct in the duty imposed on me by that act in a clear point of view, to make this communication at this time. The examples under the law of 1815, whereby officers were reduced and arranged from the old corps to the new, in inferior grades, fully justify all that has been done under the law of 1821. If the power to arrange, under the former law, authorized the removal of one officer from a particular station, and the location of another in it, reducing the latter from a higher to an inferior grade, with the advice and consent of the Senate, it surely justifies, under the latter law, the arrangement of these officers, with a like sanction, to offices of new creation, from which no one had been removed, and to which no one had a just claim.

It is on the authority of these examples, supported by the construction which I gave to the law, that I have acted in the discharge of this high trust. I am aware that many officers of great merit, having the strongest claims on their country, have been reduced, and others dismissed; but, under the law, that result was inevitable. It is believed that none have been retained who had not, likewise, the strongest claims to the appointments which have been conferred on them. To discriminate between men of acknowledged merit, especially in a way to affect so sensibly and materially their feelings and interests, for many of whom I have personal consideration and regard, has been a most painful duty; yet, I am conscious that I have discharged it with the utmost impartiality. Had I opened the door to change, in any case, even where error might have been committed, against whom could I afterwards have closed it? and into what consequences might not such a proceeding have led? The same remarks are applicable to the subject, in its relation to the Senate, to whose calm and enlightened judgment, with these explanations, I again submit the nominations which have been rejected.

JAMES MONROE.

WASHINGTON, *April* 12, 1822.

To the Senate of the United States: WASHINGTON, *April* 12, 1822.

I renominate Nathan Towson to be colonel of the 2d regiment of artillery.

James Gadsden to be adjutant general of the army of the United States.

JAMES MONROE.

The messages were severally read; and,

On motion,

Ordered, That they be severally referred to the Committee on Military Affairs, to consider and report thereon; and that they be printed for the use of the Senate, under an injunction of secrecy.

On motion,

Ordered, That the message of the 21st January last, nominating to promotions and appointments in the army, be recommitted to the Committee on Military Affairs, further to consider and report thereon; and that it be reprinted for the use of the Senate, under an injunction of secrecy.

On motion,

Ordered, That the message of the 26th March, withdrawing certain nominations to appointments in the army, be referred to the Committee on Military Affairs, to consider and report thereon; and that it be printed for the use of the Senate, under an injunction of secrecy.

[Mr. Williams communicated to the Senate the following letter.]

Copy of a letter to the Hon. William Eustis, Chairman Military Committee, House of Representatives.

SIR: WAR DEPARTMENT, *January* 29, 1822.

I have submitted to the President, for his direction, your letter of the 17th instant, in which you state that the Committee on Military Affairs are of the opinion that the appointment of Colonel Gadsden to the office of adjutant general, when there were, at the time of his appointment, two adjutant generals in service; that the appointment of Colonel Towson, not at the time an officer in the line of the army, to be colonel of artillery; and the transfer of Lieutenant Colonel Lindsay, of the 7th infantry, to fill a vacancy in the 4th artillery, occasioned by the resignation of Lieutenant Colonel Mitchell, subsequently to the arrangement of the army, established May 17th, 1821, and after the 1st of June, the time limited by law for the organization of the army, are not conformable to the provisions of the law nor to the regulations of the army; and request me to communicate to them the grounds and authority on which the appointments and transfer before mentioned have been made: and I am directed by him to state to the committee, that, in making the appointments and transfer in question, he was governed by that construction of the laws and regulations in relation to the subject of inquiry which appeared to him conformable to their real intention, and to the principles established in reducing the army, under the act of the 3d of March, 1815, for fixing the peace establishment at the termination of the late war; the provisions of which act, in relation to the points in question, being similar to those in the act of the 2d March, 1821, under which the late reduction was made.

He also directs me to state to the committee, that he has submitted to the Senate the cases to which they have objected, as well as others of a similar character, growing out of the late reduction, by a nomination to them for their constitutional sanction.

The committee appear to be under a mistake as to the facts in relation to the appointment of Colonel Gadsden as adjutant general. Instead of two adjutant generals being in service at the time he was appointed, (the 13th of August last,) as the committee suppose, there was no officer of that grade in the service at the time. Col. Gadsden, in the arrangement of the army under the act making the late reduction, was retained as inspector general, which office he held before the reduction; and the adjutant generals of the northern and southern divisions, (Colonels Butler and Jones,) to whom it is supposed the committee refer, had been arranged, the former to the 4th infantry provisionally, and the latter to his place in the line of artillery, as will appear by a reference to the Register herewith transmitted. General Atkinson, who had been arranged to the office of adjutant general, declined accepting it, and Colonel Gadsden was appointed by the President to fill the vacancy, in conformity to the provisions of the tenth section of the act of the 24th of April, 1816, "for organizing the general staff," &c., which authorizes the President to appoint staff officers from the line of the army, or from citizens, without any limitation. But, admitting that the committee were correct in their statement, and that Colonel Gadsden, at the time of the reduction, had been arranged to the place of adjutant general, there being two adjutant generals then in service, instead of being retained as inspector general, the principles established in the reduction of the army, under the act of the 3d of March, 1815, would have fully justified the arrangement. The provisions of the two acts for reducing the army are, in relation to this point, precisely the same. In the reduction under the act of 3d March, 1815, Colonel Hayne, inspector general at the time, was provisionally retained as adjutant general of the north division, there being at that time eight adjutant generals in service; which arrangement received the sanction of Congress, in the act already referred to, of the 24th April, 1816, the tenth section of which confirmed the provisional arrangement of the staff officers.

In relation to the transfer of Lieutenant Colonel Lindsay to the corps of artillery after the 1st of June, the time limited by law for the reorganization, to which the committee object, as not being conformable to law and regulation, it is proper to observe, that it is fully supported by the precedent established in the reduction of the army under the act of 1815. Under that act, the Army Register, by general orders, (see Register for 1815, herewith transmitted, marked A,) was kept open to fill vacancies of any grade which might occur from among the reduced officers, from the 17th of May, 1815, to the 17th of May, 1816. Under this order, eighteen transfers from and to various corps, and sixty appointments from disbanded officers, were made, which will appear by reference to the general order of the 17th of May, 1816, a copy of which is herewith transmitted (marked B.) Under the late reduction, the Register was kept open, for the purpose of transferring only, from the 1st of June to the 1st of January last, as will appear by reference to the Register; and only two officers, Lieutenant Colonel Lindsay and Lieutenant Walker, were transferred, excepting such as were made on mutual application for that purpose. It may be said that a reduction so great as that which was made after the late war justified the principle then adopted, but that there existed no necessity to apply it to the late reduction. The difference between the two cases is no doubt great, as is the difference between the extent to which the principle was carried in them; but, to an objection to the *power* of the President under the laws and regulations, which the committee are understood to make, it is believed that the consideration of greater or less expediency can have no weight.

Lieutenant Colonel Lindsay, before the late reduction, was lieutenant colonel of artillery, in which corps he had served eight years; but, on the late reduction, he was arranged to the infantry. On the resignation of Lieutenant Colonel Mitchell, it was considered as an act of simple justice to transfer him back to his proper corps, from which, in the reduction, he had been removed only from the necessity of the case. It was, however, not an act of justice

to Lieutenant Colonel Lindsay only, but more emphatically so to three other meritorious officers. In the late reduction, Lieutenant Colonel Taylor and Major Woolley, on General Atkinson being arranged as colonel of the 6th infantry, would have been reduced, from necessity, as junior officers in their grades, to inferior grades, had not Lieutenant Colonel Lindsay been transferred to the artillery; which transfer, making a vacancy in the infantry of the grade which he held, restored the two former to the rank from which they had been reduced, and retained Captain Cobb in service by the arrangement. Such were the motives for the transfer, which were considered much stronger than those which opposed it. Had the transfer not been made, brevet Lieutenant Colonel Eustis would have been raised to a full lieutenant colonel, by promotion; brevet Major Wilson, to be major; brevet Captain Welch to be captain; and Second Lieutenant Cooper to be first lieutenant. Highly valuable as these officers are esteemed, with them it was a question of promotion; while, with the others, of equal merit, it was that of reduction; between which the President could not hesitate, believing he possessed the power. If the construction given to the act of 1815 should be supposed to be the one intended to be given to the act making the late reduction, (and it is not perceived how a different supposition can be admitted, the wording of the two acts being similar, and the construction given to the former being well known,) it would seem to admit of little doubt that the President was authorized to consider the military establishment, under the act making the late reduction, as not definitively closed at the time of issuing the general order of the 17th May, to which the committee refer, nor as being necessarily closed even on the 1st of June. The general orders designate, it is true, the officers to be retained, with their grades and corps; but the same orders announced that, until the 1st of January, the President, in conformity to the power exercised in the former reduction, did not consider the arrangement as to the corps to which the officers were attached as definitive, reserving, until that time, the right of making transfers. In keeping open the definitive adjustment of the establishment until the time specified, the President was governed by a due regard to the good of the service and to the just claims of the officers, by correcting, as far as it could be done with propriety, cases of great hardship, such as that of Lieutenant Colonel Lindsay, and the others connected with it.

It only remains to consider the case of Colonel Towson, to whose appointment in the corps of artillery it is objected by the committee that he did not belong at the time to the line of the army. The twelfth section of the act of the 2d March last, to reduce the military establishment, authorizes the President to "arrange the officers, non-commissioned officers, artificers, musicians, and privates of the several corps now in the service of the United States, in such manner as to form and complete out of the same the force authorized by this act." In considering the authority of the President under this section, it became a question with him whether it was the intention of Congress that each corps should be reduced and arranged by itself; that is, that those officers belonging to the corps of artillery or infantry should be retained only in the artillery or infantry, as the case might be, in their proper grades, and so in relation to the several branches of the staff; or that a more liberal construction should be given, so that the officers of the several corps might be arranged to any corps in the same, or different and inferior grades, care being taken that no officer should be removed without reason from his corps or grade. In determining which of these constructions ought to prevail, reference was had to the construction adopted under the fifth section of the act of 1815, fixing the peace establishment, from which the section under consideration was obviously taken, being in almost the same words. It was believed to be a fair deduction that Congress, in adopting the same provisions in both, intended that the two sections should receive the same construction; and, consequently, as the fifth section of the act of 1815 had received the freest construction, (see table herewith transmitted, marked C,) the President determined that Congress did not intend, in the act making the late reduction, that, in arranging the officers to constitute the present establishment, he should be restrained to the particular corps and grade to which they belonged, but that it was intended that he should give the same construction which the former act had received. He was confirmed in the belief that such was the intention of Congress from the fact, that, in the particular instance in which the wording of the two sections differ, that of the act making the late reduction is less limited; indicating, on the part of Congress, a disposition to enlarge rather than to restrain the power of the Executive; and from the manifest injury which would result from the opposite construction, both to the public and to the officers of the army. Were the officers of every corps and grade possessed of equal merit and claims on the public for length and importance of their service, but little inconvenience could result from adopting the most rigid construction; but, as that cannot be expected, it was obviously advantageous both to the public service and the officers that a more liberal construction should be adopted. Under a rigid construction, many cases of great hardship would have occurred. Not to notice many others, such a construction would have disbanded two general officers (Generals Macomb and Atkinson) of great merit, and having strong claims on the public, who, from the necessity of the case, could only be provided for in inferior grades and corps to which they did not belong, as general officers are not attached to any particular corps. Under the liberal construction adopted, and which was fully sanctioned by the precedent growing out of the former reduction, Colonel Towson, the paymaster general at the time of the late reduction, was appointed by the President to fill the rank of colonel in one of the regiments of artillery created by the act reducing the army, and being, consequently, an original vacancy. The army regulations provide (see fourth article of the regulations) that such vacancies may be filled by selection, at the discretion of the President; and there is in the act for reducing the army no limitation on the power of the President in filling the original vacancies under the act, which would restrain him in his selection either to the line or to the staff. The only limitation in this particular which can be inferred from the act is, that the selection should not extend beyond the military establishment, which comprehends the pay department as a portion of the staff. Under these impressions, the President did not hesitate to appoint Colonel Towson to the command of one of the new regiments of artillery, it being a corps in which he had in the late war acquired great experience and reputation both for himself and the country.

I have the honor to be, &c.

J. C. CALHOUN.

THURSDAY, APRIL 25, 1822.

Mr. WILLIAMS, of Tennessee, from the Committee on Military Affairs, to whom were referred the army nominations and the two messages of the President on that subject, reported as follows:

That they have carefully examined the reductions of the army, made in 1802 and 1815, for the purpose of discovering if there were precedents which would justify the course pursued in the reduction of 1821. The result of the examination is, that the three acts of Congress are substantially the same, but the practice under them has been widely different. In 1802 Mr. Jefferson executed the law strictly. In 1815 Mr. Madison departed from the law, by retaining officers in a grade below the rank they formerly held in the army; and, in 1821, not only was the precedent of 1815 pursued, but principles were introduced unknown to our military code. The provisions of the law of the 2d March, 1821, were disregarded in many particulars. The committee have examined the argument in the message which is intended to justify the transfer of Colonel Lindsay from the infantry to the artillery, subsequent to the 1st of June, 1821, and have formed an opinion different from that entertained by the President.

The transfer is attempted to be supported on the exception alleged to exist in the 75th article of the rules and regulations established for the government of the army, which article is in the following words: "The transfer of officers will only be made by the War Department, in orders, on the mutual application of the parties, *except in extraordinary cases.* See 63d article of war. Nor shall an officer be transferred into a regiment to the prejudice of the rank of any officer thereof. When officers are transferred at their own request, the order for change of station will specify the fact." On referring to the 63d article, which is in the following words: "The functions of the engineers being generally confined to the most elevated branch of military science, they are not to assume, nor are they subject to be ordered on any duty, beyond the line of their immediate profession, except by the special order of the President of the United States; but they are to receive every mark of respect to which their rank in the army may entitle them respectively, and are liable to be *transferred*, at the discretion of the President, from one corps to another, regard being paid to rank;" it will be seen that this article relates exclusively to the *engineer corps*, and, consequently, there is no legal authority for the transfer of Colonel Lindsay from the infantry to the artillery. The 75th article, referred to by the President, determines the principle, and in fact the rule, by which transfers can be lawfully made. The article provides "that the transfer of officers will only be made by the War Department, in orders, on the application of the parties, *except in extraordinary cases.* See 63d article of war," &c. It is not pretended, in this case, that the parties applied for a transfer; but, on the contrary, the transfer gave great displeasure, because it took away the rank and the right of promotion from all the officers under Colonel Lindsay in the corps of artillery, and gave to the infantry officers a fictitious rank, to which they were not entitled.

Independently of this view of the subject, which the committee consider conclusive, there is another ground, which places this question beyond the possibility of doubt. During the last session of Congress, the Book of Regulations was printed, and each member furnished with a copy. By comparing the 75th article in this book with the same article in the book lately printed for the use of the army, it will be found that the exception relied upon by the President is an *interpolation*, and is not in the original, submitted to Congress when that body was called on last session to enact these regulations into law. The President, however, submits to the Senate for confirmation only the names of the officers on the list accompanying the message. On examining this list, the name of Colonel Lindsay is not to be found. It is, therefore, in the opinion of the committee, not competent for the Senate, at this time, to control this illegal transfer.

The committee, on examining the new Register of the Army, find many irregularities, and beg leave to refer to one in the inspector's department. The 6th section of the act, passed the 2d of March, 1821, to reduce and fix the military peace establishment, provides that there shall be two inspectors general, with the rank, pay, and emoluments of colonels of cavalry. The terms of the act in relation to these two officers are precisely the same; but a construction has been given to the act very different as regards these two officers. One of them, Colonel Wool, is in service *without*, and the other, Colonel Archer, *with* lineal rank. This arrangement is calculated to produce great sensibility among the officers of the army, and to embarrass the service.

On the list accompanying the message of the 17th of January, Colonel Towson is nominated to the Senate in the following words: "*Second regiment artillery.*—Nathan Towson, late captain light artillery, to be colonel, 1st June, 1821." This nomination shows (what is the fact) that Colonel Towson, some years ago, was a captain in the light artillery, which office he resigned before he was appointed paymaster general. It is usual, both in the army and naval nominations, to state the former rank of the officers, to enable the Senate to determine whether their promotions are regular, and according to the principles of seniority. If this description of Colonel Towson's former rank in the army was given with this view, it is evident that the promotion is irregular, because it is to the prejudice of all the officers, under the grade of a colonel, who ranked this gentleman whilst he was an officer in the artillery. The President in his message does not rest the claims of Colonel Towson to the command of a regiment on the ground taken in the list of nominations, but further insists that the pay department, being a part of the military establishment, within the meaning of the act of 2d of March, 1821, "*constituted one of the corps of the army;*" and it was competent for him, under the provisions of said act, to appoint Colonel Towson to the command of one of the regiments of artillery; Colonel Towson having resigned the captaincy which he formerly held in the army, and accepted the office of paymaster general.

The message does not furnish the rule whereby he was translated from the pay department to the command of a regiment, in preference to his old rank of captain, or to a majority, or to the rank of lieutenant colonel. The message not having furnished a rule on this subject, the committee were compelled to look into the law and former usage; and they come to the conclusion that the paymaster general could not legally be transferred from that situation to the command of a company, battalion, or regiment, and that he did not constitute one of the *corps of the army;* that he was a salary officer, under bond and security; and the duties required of him were those of the quill, and not of the sword. The 12th section of the act of 2d March, 1821, is in the following words: "Sec. 12. *And be it further enacted*, That the President of the United States cause to be *arranged* the *officers*, non-commissioned officers, artificers, musicians, and privates of the several corps *now* in the service of the United States, in such manner as to form and complete out of the *same* the *force* authorized by this act, and cause the *supernumerary* officers, non-commissioned officers, artificers, musicians, and privates to be discharged from the service of the United States." The question arises, on the construction of this section, whether "*the pay department constituted one of the corps of the army*," out of which the President was required to arrange and complete the force retained by said act. The committee hold the negative of this proposition, and rely upon the law of the land and military usage to sustain them in this position.

It is provided in the 6th section of the act of the 24th April, 1816, that all paymasters, commissaries, and storekeepers shall be subject to the rules and articles of war, in the same manner *as commissioned officers: Provided, also*, That all officers of the pay and commissary departments be submitted to the Senate for their confirmation, in the same manner as the officers of the army.

Here are but two points wherein the three classes of officers above enumerated are likened unto *officers of the army.* But these apparent assimilations are not confined alone to these public agents. Officers of marines, when on shore, are subject to the "rules and articles of war;" and judges, foreign ministers, and most other officers under the Federal Government, are submitted to the Senate for confirmation. To be classed, therefore, with the officers of the army, so as to come within the obvious meaning of the above-recited 12th section of the act of the 2d March, 1821, the paymaster general should be clothed, by law, with other and more important military properties than the two above mentioned. But the President, in his message, insists that the pay department is a part of the military establishment. This is admitted. *Military establishment* is a comprehensive term, and includes every one subject to martial law. By recurring, however, to the 12th section of the act before cited, the words "military establishment" are not to be found. The terms used are, "the several corps now in service," out of which he was to "arrange" the force retained by the act. Admitting the paymaster general to be a staff officer, his duties are of a civil character, and may be classed with the commissary of purchases, the surgeon general, chaplains, storekeepers, wagon-masters, sutlers, &c. These officers have neither rank nor command in the army. They have no

prescribed uniform, nor do they wear either sword or epaulets. Their duties are peaceful. They are non-combatants. In civilized warfare, if taken prisoners, they would be liberated like other citizens; and the laws and usages of service distinctly mark their civil character. *Army corps* signifies a body of forces, not civil, but warlike; such as have prescribed uniforms and epaulets, wear swords, or carry arms, such as muskets, and bayonets, with which they meet and combat the enemy in the field. Major generals, brigadier generals, adjutant and inspectors general, and the like, properly speaking, constitute the staff of the army. They have command and "assimilated rank" in the army. They are men at arms, and wear prescribed uniforms, swords, and epaulets; and the laws and usages of service distinctly mark their warlike and military character. The argument in the message that the President had the whole range of the military establishment, out of which he could, at pleasure, select the commanders of regiments, if it prove any thing, proves too much. It has already been shown that this is a comprehensive term, and it includes not only paymasters, surgeons, chaplains, storekeepers, sutlers, &c., but also all retainers of the army who are subject to martial law, according to the usages of service. The President could, with the same military propriety, arrange any one of these civil characters to the command of regiments, as he could transfer Colonel Towson from the pay to the military department.

In the sixth paragraph of the third article of the army regulations, it is provided that "No officer of the staff, not having lineal rank, or rank *assimilated* thereto, shall command any officer whatever having such rank; but, on the other hand, the former shall be subordinate to the latter, under the following restrictions: 1st, the commissary general of purchases, the surgeon general, the *paymaster general*, and the apothecary general, to general officers only," &c. Here a clear distinction is taken between officers of the army having rank, and staff officers having no rank; the latter, to wit, purchasing commissaries, the surgeon, *paymaster*, and apothecary generals, are prohibited from commanding even a second lieutenant.

The position taken by the committee, in behalf of the army, is applicable to the navy also. The duties of a purser in the navy are analogous to the duties of a paymaster in the army. The principle which would justify the appointment of a paymaster to command a regiment would authorize the appointment of a purser to command one of our ships of the line, to the exclusion of the long list of gallant officers who have, by their valor, acquired so much renown for the country.

In the 8th section of the 1st article of the constitution of the United States, it is provided that Congress shall have power "to make rules for the government and regulation of the land and naval forces." In virtue of this power, Congress have directed, both in the land and naval service, that promotion shall be according to *seniority*. This principle has heretofore been held sacred. The army and navy were created for national purposes. By adhering to the principle of promotion, which is coeval with their existence, they will retain their national character. The individuals who compose these arms of national defence have rights secured by law; and when these rights are violated, it is their privilege to appeal to the tribunals of the country for redress, (as many officers have done on this occasion to the Senate, as a part of the executive council of the nation.) A departure from this principle would have the most fatal effect. It would verify the adage, that one campaign to Washington was worth two upon the lines. A system of favoritism in promotion would supply the place of law and regulation. The army and navy, instead of retaining their *national* character, would become the creatures of the Executive. Men of honor, whose rights had been violated, would be driven from the service, and those only retained who would patiently submit to any indignity. An army and navy composed of such materials, in times less virtuous than the present, would be dangerous instruments in the hands of those who would have the power to wield them. The committee believe that both law and policy unite in resisting every attempt to introduce such doctrines in our service.

The great object of the act of the 2d of March, 1821, was to reduce, and not to increase the military force of the country. But, with the view of improving the organization of the artillery, the battalions were converted into regiments, and four colonelcies were created. But it is denied that the office of adjutant general was created by that act, as will be hereafter shown. The question again recurs whether these four offices were to be filled by officers then in service, or by citizens, or by non-combatant staff officers. The President insists that he had the right to fill those offices from the latter description of persons. The committee hold the negative of that proposition. Before the passage of the act of the 2d of March, 1821, there were eleven regiments in service, to wit, one of riflemen, one of ordnance, one of light artillery, and eight of infantry. By said act, eleven regiments were retained, to wit, four of artillery, and seven of infantry. By the third section of the act, the *corps of engineers* was retained as *then organized*. When it is remembered that, before the passage of the act, there were *eleven* regiments, and the *same number* were retained by the act, it is a fair presumption that *all* the colonels, lieutenant colonels, and majors were intended to be retained. This presumption is strengthened, when it is distinctly recollected that this exposition was given of the act, by the committee who reported it, when the bill was discussed in the Senate. By recurring to the eleventh section of the act, this question rests no longer on presumption, but is made manifest by positive law. The eleventh section is in the following words: "That the officers, non-commissioned officers, artificers, musicians, and privates, *retained* by this act, except those specially provided for, shall have the same rank, pay, and emoluments as are provided in like cases by existing laws; and that the force authorized and *continued* in service under this act shall be subject to the rules and articles of war." The twelfth section of the act before referred to directs that "the President *cause to be arranged* the officers, &c. of the *several corps now in service*, in such manner as to *form and complete out of the same the force*" authorized by the act. The word *arrange* signifies "to put in proper order for any purpose." The purpose was to *reduce* the army to the standard pointed out by the preceding sections of the act, and to put in proper order the officers, &c. "*retained*" by said act. The committee believe they cannot be mistaken in this conclusion; and that the term *arrange* does not mean to *create*, and put out of order, as it has been interpreted in the late reduction of the army. The words of the act, in relation to the four regiments of artillery, are the same; but a construction has been given to it widely different. It has been made to mean "*to put in order*," as regards the first and third, and to "*create and put out of order*," as relates to the second and fourth regiments. Colonel Porter, who takes rank from the 12th March, 1812, is "*arranged*" to the first regiment of artillery, and Colonel Armistead, who takes rank from the 12th November, 1818, is "*arranged*" to the third. But Colonels Towson and Fenwick are "*appointed*" to the second and fourth regiments, taking rank from the 1st of June, 1821. The President's message of the 12th of April, 1822, when treating of the regiment of light artillery, formerly commanded by Colonel Porter, says: "that regiment was reduced, and all its parts reorganized in another form, and with other duties; being incorporated into the four new regiments, the commander was manifestly displaced, and incapable of taking the command of either of the new regiments, or any station in them, until he should be authorized to do so by a new appointment." The committee dissent from this proposition, and contend that the interpretation first given by the President to the twelfth section of the act, so far as relates to this officer, was the correct construction, and that he was authorized to "*arrange*" Colonel Porter to the command of either of the regiments of artillery, as he did "*arrange*" him to the first, without a re-appointment or nomination to the Senate, and that Colonel Porter was in the legal discharge of his official duties, under the commission which he had long before the reduction of the army. The

twelfth section of the act authorized the President, after arranging the officers, &c. out of the former, so as to complete out of the same the retained army, to cause the "*supernumerary*" officers to be discharged from the service of the United States. By the thirteenth section of the act, it is provided "that there shall be allowed and paid to each commissioned officer, discharged from the service of the United States, in *pursuance* of this act, three months' pay, in addition to the pay and emoluments to which he may be entitled by law, at the time of his discharge." The word "*supernumerary*" signifies above a stated number. The object of the act was reduction; and when the new standard was complete, by arranging from among the materials on hand, the residue or "*supernumerary*" officers were to be discharged, with three months' gratuitous pay. To discharge an officer legally, and pay him three months' additional pay, he must have been "*in service*" in the former army, and *no place* for *him* in the reduced army. He would then, and then only, be "*a supernumerary*," according to the provisions of the act, and then only could he be discharged in pursuance of the act. The committee regret to say that several officers of great merit, who would not suffer by a comparison with those retained, have been discharged with gratuitous pay, on the alleged ground that they were "*supernumeraries*," or that there was no place provided for them under the law, when, in truth and in fact, to the places provided for *them* by law, others, not contemplated by the act, were appointed. The message assumes the ground that Congress could "not, under the constitution, restrain the free selection of the President, from the whole body of his fellow-citizens, to appoint to these places." The constitution of the United States provides that "Congress shall have power to make rules for the government and regulation of the land and naval forces." Under this article of the constitution, it is competent for Congress to make such rules and regulations for the government of the army and navy, as they may think will promote the service. This power has been exercised from the foundation of our Government, in relation to the army and navy. Congress have fixed the rule in *promotions* and *appointments*. Every promotion is a new appointment, and is submitted to the Senate for confirmation. In the several reductions of the army and navy, Congress have fixed the rules of reduction; and no Executive, heretofore, has denied this power in Congress, or hesitated to execute such rules as were prescribed.

The President "*approved*" and *signed* the act of the 2d March, 1821, and *at that time*, made no declaration of an opinion that the law was unconstitutional, and thereby sanctioned its constitutionality. Having given his assent to this law, the committee believe he is, as well as all others, bound by it. The committee will not dispute the legal power of the President to discharge an officer from the land or naval service; but, in such case, the officer discharged would not be entitled to three months' additional pay, which has been paid to all the officers who have been put out of service in the late reduction. There is, therefore, no pretence for saying, as has been urged, that the President exercised his constitutional power in discharging several officers. He says himself he acted "*in pursuance*" of the law. In the second section of the second article of the constitution of the United States, it is provided "that the President shall have power, by and with the advice and consent of the Senate, to *appoint* all officers of the United States, whose appointments are not therein otherwise provided for, and which shall be established by law." By the construction heretofore given to this article, the Senate had the same power, and the same range of discretion to withhold their "*advice*" and "*consent*," that the President had to *nominate;* and the Senate would abuse the trust confided to them if they were to ratify nominations, when either policy or law required their rejection. In the message accompanying the "*re*-nominations" of Colonels Towson and Gadsden, it is urged that, "if an officer may be *reduced* and *arranged* from one corps to another by an entire change of grade, requiring a new commission and a new nomination to the Senate, there is no reason why an officer may not be *advanced* in like manner;" and the example of 1815 is relied upon in support of this position. It is true that, in the reduction of 1815, the law was departed from in the instance of retaining an officer in a grade below the rank he had before held in the army. A great proportion of the officers in 1815 were retained on this principle; and when their names were submitted to the Senate *a considerable time after* the reduction had been made, that body, with much hesitation, lent a reluctant assent to the arrangement, without supposing that this departure would be set up as a justification for another, still more dangerous to the rights and character of the army. The principle of razeeing having been recognised in 1815, the Senate, under the authority of that precedent, in the reduction of 1821, have ratified the nominations of Generals Macomb and Atkinson, and Major Dalliba, officers who were *razeed*. The Senate having, by their decision in the reduction of 1821, gone as far as the precedents of 1815 would justify, the committee think it proper to pause, and seriously to reflect, before they give their assent to the doctrines advanced in the message, whereby the President would be sustained in *advancing* second lieutenants to the head of our regiments, and midshipmen to the command of our ships of the line, to the exclusion of colonels and naval commanders who are in service under the law.

It is correctly stated in the message that the fifth section of the act of 1815 contains the words "*corps of troops*," and the twelfth section of the act of 1821 uses the term "corps," out of which the force retained was to be constituted. It is conceded that the omission had an object. But it was not intended that that omission should give to the President a wider range, or place his discretion above the provisions of the law, but was designed alone to improve the phraseology of the section, by omitting a superfluous word, without affecting the obvious meaning of that section. If it were necessary further to prove that the pay department does not constitute one of the "*corps*" of the army out of which the army *retained* was to be composed, the committee would refer to the commission issued to Mr. Brent, late paymaster, and signed by Mr. Jefferson; and also to the fact that this officer has heretofore been placed on the civil list in the different appropriation bills. These circumstances also distinctly mark his civil character.

If the committee should be mistaken in the correctness of the views before presented, (and they feel confident they are not,) there is a document among the proceedings of the board of general officers, which, independent of all other facts and arguments, proves incontestibly that the construction put by the committee on the act is the correct one, and that the proceedings of the board of general officers charged with the reduction of the army were not regulated either by the provisions of the law, or by any construction of it. The document is in the following words:

"The board of general officers, of which Major General Brown is president, being of opinion that Colonels Wadsworth, Bissell, King, and Smith should not be retained, beg leave respectfully to recommend that Brigadier General Atkinson be arranged to the office of adjutant general; that General Parker be appointed to the office of paymaster general, and that Colonels Towson and Bomford be appointed colonels of artillery.

"JACOB BROWN, *President.*"

"APRIL 13, 1821."

It is thus seen that the board of general officers, who were called in to aid in the execution of the law to reduce the army, and to "*arrange*" each officer to his proper place, *commenced* that work by recommending to the President *to put out four of the eleven colonels then in service*. The board did not pretend that these officers were "*supernumeraries*," or that it was necessary to discharge them as such. It is, therefore, manifest they substituted their own will and pleasure for the rule prescribed by law. It is in proof before the committee that the original

paper containing this recommendation was deposited in the adjutant general's office for safe keeping; and, afterwards, at the request of General Brown, it was delivered to him, who immediately destroyed it.

The committee have examined, with great care, the message renominating Colonel Gadsden to be adjutant general, and have looked in vain for an argument which could convince them that the decision lately made by the Senate was erroneous. It has been urged "that General Atkinson, who had been *arranged* to the office of adjutant general, declined accepting it, and Colonel Gadsden was *appointed* by the President to fill the vacancy, in conformity to the provisions of the 10th section of the act of the 24th of April, 1816."

If the provisions of this act were inconsistent with the provisions of the act of the 2d March, 1821, so much of the former act as is so inconsistent is repealed by the last-mentioned act, and, of course, the appointment is not supported by the authority relied on. But the committee are in possession of a copy of a letter from General Atkinson to General Brown, dated St. Louis, April 6, 1821, in answer to one which had been written to him on that subject, in which General Atkinson *positively* declines accepting the office of adjutant general. This letter was received by General Brown on the 27th of the same month, and *before* General Atkinson was arranged by the board to the office of adjutant general. When it was known *positively* that General Atkinson would not accept this office, why was he arranged to it? This arrangement was nominal, and could not but have the effect of evading the law, or creating a vacancy which did not before exist. And the committee are of opinion that the tender of this office to General Atkinson, with a knowledge that he would not accept it, did not produce a vacancy, and that, in deciding on the legality of Colonel Gadsden's appointment, this arrangement of General Atkinson must be left out of view. The 6th section of the act of the 2d March, 1821, is in the following words: "That there shall be one adjutant general and two inspectors general, with the rank, pay, and emoluments of colonels of cavalry." Before the passage of the act there were one adjutant and inspector general, two inspectors general, and two adjutants general. The object of the act was "*reduction*," and, with that view, the office of adjutant and inspector general was dispensed with, and also that of one adjutant general; and the two offices of inspectors general and one of adjutant general retained. This section having retained the two offices of inspectors general; and the 11th section, before cited, having *retained* the incumbents, it was not supposed by any one that either or both of them could be discharged as *supernumeraries* under the provisions of the act. By referring to the general order of May 17, 1821, it will be seen that those who were charged with the reduction of the army were of this opinion. The law left these officers where it found them, and the general order announced that they remained in the offices they before held. But a very different construction was given to that part of the same section which relates to the adjutant general. There were two adjutants general in service, Colonels Butler and Jones; and the committee insist, by a fair construction of the act, one of them was "*retained*," and the President was authorized only to elect which of the two should be "*discharged*" as a "*supernumerary*."

It is contended in the message that this was an "*original vacancy*," and it was competent for the President to discharge both Butler and Jones, and fill this office by *appointing* any other person. As the object of the act was to reduce the army, and not create offices, it is fair to presume that excision was intended to be applied only where there was an excess either in number or organization. This rule was applied to that part of the same section relating to the inspectors general. As it regards them, there was no excess, and all agree that they were retained by the law. Colonels Butler and Jones had the rank, pay, and emoluments of colonels of cavalry, the precise attributes of the adjutant general secured to the army by the act. But it is said that the adjutant general of a *division* was deemed not to be co-ordinate with the adjutant general of the *army*. On the subject of their duties nothing has been prescribed. The laws are silent. Their rank, pay, and emoluments are the same; and there is a perfect coincidence in all their endowments. The 5th section of the act provides that there shall be one major general and two brigadier generals. There were then in service two major generals and four brigadier generals, making an excess of one-half. According to the principle applied to the adjutant general, the commission of a major general commanding a *division* is inferior to the same commission when the same person commands the whole *army*. But the major general of the late northern *division* is now major general of the *army* of the United States, in virtue of his former commission. The two cases are precisely similar. There were two major generals, making an excess of one; it cannot be inferred that they were *both* to be disbanded, and some citizen on non-combatant staff officer to be *appointed* to command the army. Perfectly analogous is the case of the two adjutants general; but the rule applied to them by the board has been different. The major general of the late northern division now commands the whole army; but the two adjutants general are *both* and *singular* "*supernumerary officers*," and, as "*adjutants general*," have both been discharged from the service of the United States. The committee cannot believe that this is a fair construction of the act; particularly when the board of general officers charged with the reduction of the army have adopted a different rule in their *own case*, which is precisely parallel to the case of the adjutant general retained; and more especially when it is distinctly remembered that the construction now given to the 6th section of the act by the committee is the same which it received when the bill was discussed on its passage in the Senate. It has been further insisted, in support of the "*appointment*" of Colonel Gadsden, that it was fully justified by the retention of Colonel Hayne in 1815. It is true that in 1815, at the close of the war, there were eight adjutants general in service; and it is equally true that the law of 1815 "reducing and fixing the army," disbanded the whole of them, not retaining even one; but the law of 1821 says "there shall be one adjutant general," with all the attributes of the two officers of that rank then in service.

In the absence of law, therefore, President Madison, on his responsibility, chose "*provisionally*" to *add* to the army what the law had omitted, to wit, two adjutants general. This being the case, neither of the eight adjutants general had a right to demand of the Executive places of his own temporary creation. The Executive could select any one he chose to act as adjutant general, as he had exercised the power of creating those offices. Colonel Hayne could not have been "*retained*" as inspector general, because that office was abolished by law. For what purpose, then, can it be said that Colonel Hayne, inspector at the time, was "*retained*" as adjutant general? It certainly cannot be to elucidate the subject. It is evident, therefore, that the appointment of Colonel Gadsden is in no particular parallel with the appointment of Colonel Hayne. The latter *avowedly* was in the absence of all law on that subject, and the former *professedly* in pursuance of law. By tracing the progress of the principles for which the committee now contend, through the vicissitudes of the revolutionary war, it will be seen that the basis of our rules for the government of the army was established as early as the 30th of June, 1775; and by these rules "sutlers, retainers, and other persons of the army," (not being soldiers,) were made subject to the articles of war.

By a resolution of the 10th January, 1778, reducing the number of regiments on the continental establishment, it was directed, in order to avoid just cause of complaint as to rank, that those charged with the reduction were confined as nearly as possible *to the military line.*

By a resolution of the 27th May, 1778, it was ordained that aids-de-camp, brigade majors, and quartermasters, *heretofore* appointed from the line, were to hold their present rank, and be admitted again to the same, but were not to *command any one who commanded them while in the line.*

On the 3d of October, 1780, among other things, it was directed for the regiments to be *raised;* the commander-in-chief was to direct the officers of regiments to meet and agree upon the officers for them from among those who inclined to serve; and, when it could not be done by agreement, it was to be determined by *seniority*.

On the 22d of April, 1782, it had been found necessary to reduce the lieutenants of each regiment to ten, and it was provided that the reduction should be made from the supernumerary *junior* lieutenants in each regiment.

On the 7th August, 1782, it became necessary further to arrange the army, according to the resolutions of the 3d and 21st October, 1780; and for this purpose it was provided that the *junior* regiments should be draughted to fill the *senior* regiments, and the commander-in-chief should direct the officers of the line of each State to meet and agree who should command the troops so arranged; and when they could not agree, *the junior officers of each grade were to retire.* Under this resolution it became doubtful whether a senior officer could retire with honor, if he would; and, on the 19th November, it was, by another resolution, provided that the *senior officers of each grade* should, under the act of the 7th August, be retained, and that the redundant *junior officers* of the several grades should retire, but the commander-in-chief might permit a *senior* to retire. The committee appeal with veneration to this period of our military history for the correctness of the doctrines they now contend for, and cannot but mark the contrast between the principles then held sacred, and those which were introduced in the late reduction of the army.

In the 2d section of the 2d article of the constitution of the United States, it is provided that "the President shall have power to fill up all vacancies that may *happen* during the recess of the Senate, by granting commissions which shall expire at the end of their next session." If the offices to which Colonels Towson and Gadsden are nominated were original vacancies created by the act of the 2d March, 1821, the committee contend that they were not filled agreeable to the provisions of the constitution. The words "all vacancies that may *happen* during the *recess* of the Senate," evidently mean vacancies occurring from death, resignation, promotion, or removal; the word *happen* must have reference to some casualty not provided for by law. *Original vacancies* must mean offices created by law, and not before filled. Admitting, then, that the offices to which Colonels Towson and Gadsden are nominated were original vacancies created by the law to reduce the army, the Senate was *then in session*, and these nominations were not made during that session. From whence, then, does the President derive his power to fill those offices in the *recess* of the Senate? Certainly not from the constitution; because the Senate was in session when the law passed, and the appointments were made after the adjournment of Congress; and he had no power to make them in the recess, because the vacancies did not *happen* in the recess of the Senate. The committee believe this is the fair construction of the constitution, and the one heretofore observed. For many instances have occurred where offices have been created by law, and special power was given to the President to fill those offices in the recess of the Senate; and no instance has before occurred, within the knowledge of the committee, where the President has felt himself authorized to fill such vacancies without special authority by law. Hence the committee conclude, from the President's own showing, that the appointments of Colonels Towson and Gadsden were not authorized either by the constitution or law.

The committee take great pleasure in admitting the merits of these gentlemen, but believe that this consideration cannot fairly enter into the construction of the law and constitution. But they do not admit that their claims on the country are superior to those who have been put out of their proper places in the army, in order that these gentlemen might occupy them. And whilst the committee forbear entering into a comparative view of the merits of all the officers illegally discharged, and those put into their places, they must be permitted to say that General Bissel entered the service, as a soldier, about the year 1790, and, for his distinguished bravery at St. Clair's defeat, was promoted from a sergeant to an ensign, and has risen through every rank to that of a brigadier general in the late war; and that, in every situation, he has been distinguished for his bravery and correct military conduct. Colonel Smith has lately been recommended in the warmest terms by General Brown for the important office of Governor of Florida, and has been actually nominated by the President to the Senate for the office of judge of that Territory.

The committee are of opinion, if those officers merited dismissal in the judgment of the board, the reasons for their discharge should have been stated, and the necessity of the act justified; but that it cannot be correct to attribute it to the operation of the law of 1821, when the provisions of that act had no effect on the measure.

When the committee add their acknowledgment to the assertion of the merits of Colonels Towson and Gadsden, it is proper they should repel the inference that the rejection of their nominations by the Senate evinces a disregard of their merits, or an indifference to their just reward. Whether a suitable provision ought to be made for Colonel Towson is not now the question. That was done by the act. By it he was left in the office of paymaster general, a place of distinction and superior emolument. Colonel Gadsden, too, was left by the act in the office of inspector general, in which he might have been continued, and the necessity thereby avoided of reducing Colonel Jones, who had been twice brevetted for distinguished gallantry during the late war, to the rank of captain, which he held at its commencement.

The committee regret that there exists a difference of opinion between the President and Senate, and must express an unfeigned regret that, in the discharge of a paramount duty, they should have induced a suspicion of an arraignment of his motives, or a want of due consideration, on their part, of these nominations, when first presented. The questions at issue are not of a personal or political character, in which the merits of the officers are at all concerned, but are of law and constitution.

On such questions the President and Senate might differ, as do the highest judicial tribunals of our country, without a suspicion of unkind feelings. With that disposition to harmony and good feelings, which does, and is to be hoped always will, exist on the part of the Senate towards the Chief Magistrate of the nation, the committee have carefully examined the message of the 12th of April, 1822, and have not been able to discover any views in that message which were not presented, and duly considered, during the deliberations which occupied the serious attention of the Senate for more than two months before these nominations were rejected. However delicate the measure of sending back to the Senate nominations rejected by them, or however liable to abuse the practice in other times might become, the constitution does not prohibit the President from doing so; but, whilst it imposes no restriction on his discretion in this particular, the right belongs to the Senate to confirm or reject them. If a difference is thus produced, the Senate have no means of avoiding it, and it rests alone with the President to create or continue such collisions, at his discretion. Under the foregoing views, the committee believe it to be their duty to submit to the Senate the following resolution:

Resolved, That the Senate do not advise and consent to the "renominations" of Colonels Towson and Gadsden.

[Mr. Williams, of Tennessee, communicated to the Senate the following deposition.]

Deposition of General Parker.

Having been summoned before the Military Committee of the Senate of the United States, and having been required by them to state, in a deposition, the substance of my oral communication, which was made in answer to their inquiries relative to certain copies which were laid before the Secretary of War, with my letter of the 15th instant, and in relation to the reduction of the army, conformably to general orders of the 17th of May, 1821, I, Daniel Parker, depose and state, that, soon after the passage of the act to reduce and fix the military peace establishment, dated the 2d of March, 1821, I understood the Secretary of War to say that the Executive had determined to offer me the reduced rank, pay, and emoluments appertaining to the office of adjutant general, in which office the same duties before performed by me as adjutant and inspector general would be required, as far as should be found consistent with the new organization; that the same clerks who had been authorized by law for the adjutant and inspector general's office would be continued; and that the general officers to be retained would be called to this city to aid and advise in relation to some parts of the reduction. The arrangement, as it related to myself, was communicated by me to at least one of the generals, before their board met in April. During the session of the board, I was often ordered by the Secretary of War to make communications to them; and I was sometimes called on by the board for official information, between the 12th of April and the 14th of May, 1821. Their proceedings and views were not communicated to me, further than was necessary to enable me to answer inquiries. Two of the members of the board, in their individual and private capacity, as I understood, expressed to me a wish that I would take the office of paymaster general, and that such consent on my part would promote the service, as it would facilitate the desirable arrangement of making General Atkinson adjutant general, and Colonel Towson a colonel of artillery. I had understood General Atkinson was offered the 6th regiment, before the board met; and I stated, as well to those gentlemen, as to the Secretary of War, that several years since, when Atkinson was only colonel, he had said to me he would not exchange his regiment for the office of adjutant and inspector general, with the rank, pay, and emoluments of brigadier general, and that, of course, I was convinced he would not now take it with reduced rank, &c. When the papers were put into my hands by the Secretary of War, directing me to make out and publish the new army list as soon as practicable, I perceived that there were several contingent conditions of office, which seemed necessary to be published as explanations of the Register, and those, as well as the list, were copied. On a careful reading of those recommendations, I had some doubt whether all, and what part, should be published; and was going to the Secretary of War for his further directions in relation to them, when I was stopped at the room of the board of officers, which was then occupied by Generals Brown and Gaines; (General Scott, I believe, had left the city.) General Brown asked for those papers, all of which, I believe, were then in my hand, and commenced destroying them. I requested his forbearance, and stated that I received them from the Secretary of War, to whom I was then carrying them. He said they had a substitute, which would be given me. I immediately reported the fact to the Secretary of War, and left the further explanation for General Brown. I afterwards received, in lieu of them, on the same day, the recommendation which was signed by General Brown, and is published with the general orders of the 17th of May, 1821. The copies of three separate papers, dated April 13, May 8, and May 11, 1821, and signed by General Brown, were first taken, under the impression that they must necessarily be published, in explanation of the new army list. When the originals were withdrawn from me, and the one dated May 14 substituted, I retained the copies, because they related to my own official situation, in connexion with others. A transcript was taken, and furnished to the Secretary of War, on a recent application to know if I had any papers in relation to the late reduction of the army.

If all the papers referred to were not destroyed (as I am sure part of them were) by General Brown, they may perhaps be among the records and files of the late adjutant and inspector general's office, of which General Brown relieved me, on the 1st of June, by order of the Secretary of War, dated 31st May, 1821.

The foregoing contains, briefly, all that I understood to be deemed material in my answer to the inquiries of the Committee of Senate on Military Affairs, and is, to the best of my recollection and belief, a true statement.

DANIEL PARKER.

Sworn and subscribed, this 23d day of April, 1822, before me,

ENOCH REYNOLDS, *J. P.*

[Received by the committee after their report.]

GEORGE WASHINGTON, *President of the United States of America.—To all who shall see these presents, greeting:*

Know ye, that, reposing special trust and confidence in the integrity, diligence, and ability of Caleb Swan, of Massachusetts, I have nominated, and, by and with the advice and consent of the Senate, do appoint him paymaster of the troops of the United States, to reside with the army; and do authorize and empower him to execute and fulfil the duties of that office, according to law; and to have and to hold the said office, with all the rights and emoluments thereunto legally appertaining, unto him, the said Caleb Swan, during the pleasure of the President of the United States for the time being.

In testimony whereof, I have caused these letters to be made patent, and the seal of the United States to be hereunto affixed. Given under my hand, at the city of Philadelphia, this ninth day of May, in the [L. S.] year of our Lord one thousand seven hundred and ninety-two, and of the independence of the United States of America the sixteenth.

GEORGE WASHINGTON.

By the President:

TH: JEFFERSON.

The PRESIDENT *of the United States of America.—To all who shall see these presents, greeting:*

Know ye, that, reposing special trust and confidence in the patriotism, fidelity, and abilities of Robert Brent, I have nominated, and, by and with the advice and consent of the Senate, do appoint him paymaster of the army of the United States, in conformity to an act of Congress passed the sixteenth day of March, one thousand eight hundred and two, entitled "An act fixing the military peace establishment of the United States." This commission to continue in force during the pleasure of the President of the United States.

Given under my hand, at Washington, this first day of March, in the year of our Lord one thousand eight [L. S.] hundred and nine, and in the thirty-third year of the independence of the United States.

TH: JEFFERSON.

By command of the President of the United States of America:

JOHN SMITH, *Chief Clerk, acting Secretary of War.*

[Received by the committee after their report.]

The PRESIDENT *of the United States of America.—To all who shall see these presents, greeting:*

Know ye, that, reposing special trust and confidence in the patriotism, valor, fidelity, and abilities of Nathan Towson, I have nominated, and, by and with the advice and consent of the Senate, do appoint him paymaster general of the army in the service of the United States, to rank as such from the twenty-eighth day of August, eighteen hundred and nineteen. He is, therefore, carefully and diligently to discharge the duty of paymaster general, by doing and performing all manner of things thereunto belonging. And I do strictly charge and require all officers and soldiers under his command to be obedient to his orders as paymaster general. And he is to observe and follow such orders and directions, from time to time, as he shall receive from me, or the future President of the United States of America, or the general or other superior officers set over him, according to the rules and discipline of war. This commission to continue in force during the pleasure of the President of the United States for the time being.

Given under my hand, at the city of Washington, this eighteenth day of March, in the year of our Lord
[L. S.] one thousand eight hundred and twenty, and in the forty-fourth year of the independence of the United States.

JAMES MONROE.

By the President: J. C. CALHOUN, *Secretary of War.*

SIR: ST. LOUIS, *April* 6, 1821.

The letter of Colonel Wool, containing your propositions for me to accept the situation of adjutant general, under the new organization of the army, has been received. I have to offer you my thanks for the complimentary terms in which I am mentioned, but I must decline acceding to the proposals. I cannot go to Washington with degraded rank. The only situation, below my present grade, that I would accept of, has been offered to me by the Secretary of War—a regiment, with brevet rank of brigadier. With this I can wear out my time on a remote frontier till better times offer, when, if I merit it, I shall be rewarded. Accept my best wishes for your health and prosperity, whilst, with respect and esteem,

I am, my dear sir, your most obedient servant,

H. ATKINSON, *Brigadier General.*

Major General BROWN, *United States army, city of New York.*

MY DEAR GENERAL: HEAD-QUARTERS, WASHINGTON, *April* 13, 1821.

I am here, as you will perceive by the papers, for the purpose of aiding in the selection and arrangement of the officers to be retained in service, under the act of the 2d of March, reducing the military peace establishment. You will have seen, also, that Generals Gaines and Scott have been retained as brigadiers. General Macomb will, if agreeable to himself, be placed at the head of the corps of engineers, as colonel, with his brevet rank; and it is my anxious wish that you should be arranged to the office of adjutant general, with your brevet rank. As I am to be stationed here as general-in-chief of the army, it is to me a subject of deep interest to have an officer as chief of my staff in whom I can place, and the army and country repose, the most implicit confidence. You are that officer; and if, as I believe it will, the selection should fall upon you, as a friend who has rendered you some service, permit me to claim your acceptance of this situation in my military family. It is very possible that I may be the greatest gainer by this arrangement, but it will be a part of my duty to see that you are not a loser. Admitting that your command upon the Missouri is more agreeable to your views, I should hope that you would be willing to make some sacrifice to meet my wishes and the just expectations of the army.

It may be proper for me to say, in this place, that it appears to be a well digested and settled opinion here that the brigadiers are to be so arranged, that one of them will command upon the Atlantic, and the other upon the Mississippi, or western frontier, including the Gulf of Mexico; and should this arrangement be made, St. Louis, or some place in that section of the country, would be the head-quarters of the general commanding in the west.

I cannot close this letter without saying that it is my confirmed opinion that you can be more useful to yourself and the army, by accepting a situation that will place you under the immediate eye of the Government, than in any other which you can hold under the present law, and that it is your duty to accept the office of adjutant general, if it be assigned to you.

Your friend,

JACOB BROWN.

Brigadier General H. ATKINSON.

DEAR SIR: ST. LOUIS, *June* 15, 1821.

I have had the honor to receive your favor of the 27th April. The same reasons that I offered in my letter of the 4th May prevent me from accepting of the situation of adjutant general of the army.

I regret that it is not in my power, consistently with my own interest, to oblige you in your repeated requests to take a place in your staff.

With very great respect and esteem, I have the honor, &c.

H. ATKINSON,
Brigadier General United States army.

Major General BROWN,
United States army, Washington City.

MONDAY, APRIL 29, 1822.

Mr. Williams, of Tennessee, laid on the table the following papers, which were read:

[Received by the Military Committee on the day of its date.]

DEAR SIR: DEPARTMENT OF WAR, *January* 31, 1822.

Since I had the conversation with you, I have compared the 75th article, as printed in the Book of Regulations, with the same article in the document which was printed by the order of Congress at the last session; and it has resulted in an opinion that the words in the Book of Regulations, "except in extraordinary cases, see 63d

article of war," ought not to constitute a part of the text, but a mere matter of reference, introduced by the indexing, which was done after the adoption of the regulations by Congress; and that, consequently, the whole of those words ought to have been placed in a parenthesis, the omission of which, by the printer, has caused the apparent variation.

With great respect, I am, &c.

J. C. CALHOUN.

Hon. J. WILLIAMS.

[The following, with its enclosures, was received by the committee four days after their report.]

SIR: WAR DEPARTMENT, *April* 29, 1822.

I herewith enclose a deposition of brevet Major General Scott, accompanied by a letter from the Honorable Alexander Smyth to him, which satisfactorily explains the difference between the army regulations, as printed by the order of the War Department, under the superintendence of General Scott, and the manuscript which was laid before the House of Representatives, and printed by its order previously to the adoption of the regulations by Congress. By reference to the deposition and letter, it will be seen that the regulations printed by the order of this Department accord with those adopted by Congress, though they do not, in every particular, with the volume printed by the order of the House for its consideration, previously to the adoption of the regulations by Congress; and that, in particular, article 75, in relation to transfers, is correctly printed, as adopted.

I also enclose a letter from General Scott, in relation to the arrangement of General Atkinson to the place of adjutant general, under the act making the late reduction of the army, in which he states his reasons for believing, at the time, that General Atkinson would accept of that office in preference to the command of a regiment, which had been offered him by the President, through this Department.

Although my own impression (which was communicated to the board) was, that General Atkinson would probably prefer the command of the sixth regiment to the office of adjutant general, yet I did not believe it to be certain; particularly as I knew that the major general, to whom the adjutant was immediately attached, took a deep interest in his acceptance of that office, and would use his personal influence with him, to its full extent, to induce him to accept it.

Very respectfully, your obedient servant,

J. C. CALHOUN.

Hon. J. WILLIAMS,
Chairman of the Committee on Military Affairs.

SIR:

I accidentally omitted to enclose the letter of General Scott to which I referred in mine of this morning. I now enclose it.

Very respectfully, I am, &c.

J. C. CALHOUN.

Col. WILLIAMS.

SIR: WASHINGTON CITY, *April* 28, 1822.

I proceed to state what I recollect concerning the corrections made by you, in the system of field service and police, adopted by Congress at their last session, for the army of the United States.

As chairman of the Committee on Military Affairs in the House of Representatives, I received two printed copies, corrected by you, of the system. The first, I received directly from you, as I believe; the second, through the War Department, or the office of the adjutant and inspector general, which I understood to have your final corrections. This last was the copy which I intended that the regulations should be printed from; and I am very confident that, for that purpose, I deposited it with the clerk of the House of Representatives. It is also impressed on my mind, that I wrote either to the Secretary of War or yourself, referring to that copy as the one from which the regulations ought to be printed.

It is not in my power to say in what the copy which I suppose to have been deposited with the clerk differed from the copies which were printed for the use of the members of Congress. There were corrections of errors of the press, verbal alterations, and some additions, in the first copy; and, I believe, still more of the latter in the second copy, which was that deposited with Mr. Dougherty.

Very respectfully,

ALEXANDER SMYTH.

Major General SCOTT, *Washington City.*

WASHINGTON, *April* 27, 1822.

In compliance with your request, I will state, to the best of my memory and belief, the material circumstances known to me, relative to the recommendation of brevet Brigadier General Atkinson, for the office of adjutant general, made by the board of general officers, of which I was a member, assembled for the purpose of assisting in the late reduction of the army.

It is not deemed material for me to say what were my own wishes or opinion on that recommendation, though I am free to declare that I entertain for General Atkinson the greatest respect as an officer, and hold him in the closest esteem as a man.

On taking a view of the whole army list, and the general effect of the impending reduction, it very early occurred to the board, (I mean at least a majority thereof, either including or excluding myself individually,) that it would be desirable, in order to save the greatest number of valuable officers for the service, generally, to retain General Atkinson as adjutant general. Before, however, any decision was taken on the question, I understood from General Brown that he had written to General Atkinson, intimating what would probably be done by the board relative to the latter; and, afterwards, when the arrangement had been definitively made in that case, and in the others of importance connected therewith, I learned from General Brown that he had received a letter from General Atkinson, expressing a preference for his then situation, and a desire to be continued in it, with the reduced rank of colonel of the 6th infantry, and the brevet of brigadier of the army. Now there was an official letter of General Atkinson, addressed to the War Department, before the board at that time, in which it was dis-

tinctly seen what was his meaning as to *his then situation*, (for he was already advised, at the time of writing the letter, of his reduction to the rank of colonel,) viz: the command of a department, with, of course, the pay and emoluments of his brevet rank. But, understanding from you that he could not be continued in that command, (that is, that you would be obliged, under the law, to have but two great departments, for myself and General Gaines,) the board concluded that when General Atkinson should become acquainted with that decision, (of which he was then ignorant,) he would prefer the office of adjutant general to the immediate and sole command of the 6th regiment, particularly as all the difficulties in making the establishment at the Council Bluffs had been already overcome, and there was no longer room for activity or enterprise in that quarter. I feel myself at liberty to say that this was my own opinion, and appeared to be that of the other members of the board, down to the period of my leaving Washington to attend to other duties. I, however, never saw General Atkinson's letter to General Brown, nor do I know that it was shown to either yourself or General Gaines. I am confident it was not laid before the board. There were other considerations which contributed to the pursuasion last expressed above; such as General Brown's declared intention to write a second time to urge General Atkinson to accept; to inform him of the important contingencies which would depend on his decision, &c. &c. I was, at the time in question, not unacquainted with the opinion entertained by my friend General Parker on this subject, and the reasons on which it was founded; but, nevertheless, confidently expected a different result.

I have the honor to be, sir, very respectfully, your obedient servant,

WINFIELD SCOTT.

To the Hon. J. C. CALHOUN, *Secretary of War.*

Deposition of Major General Scott.

The deponent saith he was, some time in March, 1821, employed by the War Department to superintend, at Philadelphia, the printing of the book entitled "General Regulations for the Army;" that he, accordingly, carefully examined the *proof-sheets* as they successively came from press; that the articles of the book which had then been recently approved by Congress were *reprinted* with the most perfect good faith; that no alteration was, *after* the 2d of March, 1821, made in either of those particular articles, except in some very few instances, wherein a word was substituted for another, merely with a view to grammatical accuracy, without changing a principle; and excepting also some slight changes in article 38, ("organization of departments,") such as striking out "major general of the division;" striking out "assistant" before the words "inspector general," &c.; which changes were, in the opinion of the editor and compiler, (this deponent,) rendered necessary by the very act that approved the article; the act giving to the army, in those particulars, a new organization.

It remains for the deponent to explain *other variations* between the articles of the book first printed at Washington, by order of the House of Representatives, and the same articles reprinted at Philadelphia. The first printing was early in January, 1821; and the book was not sanctioned till the 2d of March following. Very early in this interval the deponent received several copies from the press of the public printer. On reading over one of them at Philadelphia, he discovered, besides *typographical* errors, (of which there were many,) that some of the articles of the book did not perfectly harmonize with others; that certain principles laid down required a greater development for practical purposes; and feeling much anxiety, in his capacity of compiler, for the literary and professional merits of the work, he immediately employed himself in correcting those errors and defects, which were more readily perceived in the *printed* shape the articles had then assumed. Having corrected, with *red ink*, two of the printed copies, so as to render them exact duplicates, this deponent retained one in his own possession, and sent the other through the War Department, (some time in February, certainly many weeks before the 2d March, 1821,) with a request that it might be laid before the Military Committee of the House, and accepted as the copy to be approved. This was accordingly done, as the deponent is again advised by the chairman of that committee, who is still a member of that House; and the deponent avers that the duplicate retained by him was the copy from which the articles approved by Congress were reprinted, as above stated.

In respect to article 75, ("transfers,") one of those altered or recast in February, as he verily believes, and transmitted as above, the deponent solemnly avers that he received from no person whatever any suggestion to make an alteration therein; that its present verbal shape was given to it on his own mere motion, without a view to any particular case then foreseen; that, in his humble opinion, the principles embraced in the article are professionally sound, right, and proper; that the words "except in extraordinary cases," inserted by him, were borrowed from the article on promotions, (see article 4, paragraph 1; which regulation is at least as old in our service as 1813,) where the same words will be found; giving to the Executive, in an analogous case, a greater power than he can exercise under the article on "transfers," even as it at present stands; that the reference in the last-mentioned article, to be found in these words, "see 63d article of war," was merely editorial, and not intended to make part of the text, but simply to assist the reader (as in numerous other places in the book) to find kindred legislation on the same subject.

The custom of printers in cutting up copy into leaves, it is presumed, is well understood. These detached leaves are sent by the printer, from time to time, and in parcels, with proof-sheets of the new impression, for the correction of the latter by the superintendent of the press, who, in the instance in question, was the deponent; the proof-sheets, being verified, are then returned to the printer with the original copy. The deponent has recently caused a search to be made for the original copy printed from in this case, but has only found one or two detached leaves among his own papers, probably left by accident, and nothing among the printer's papers. By him, after the new book was out of the press, those leaves were considered as mere waste paper, as is believed to be usual in such cases. The leaves found by the deponent contain no part of article 75, or any other that was altered between the first and second impressions.

WINFIELD SCOTT.

Sworn and subscribed before me, one of the justices of the peace for Washington county, in the District of Columbia, this 29th day of April, 1822.

T. H. GILLIS.

The Senate proceeded to consider the message of the 12th April, nominating Nathan Towson and James Gadsden to military appointments, together with the report of the Military Committee thereupon.

On the question, "Will the Senate advise and consent to the appointment of Nathan Towson to be colonel of the second regiment of artillery?"

It was determined in the negative: Yeas 17—Nays 25.

On motion,
The yeas and nays being desired by one-fifth of the Senators present,
Those who voted in the affirmative are,

Mr. Barbour,	Mr. Findlay,	Mr. King, of Ala.,	Mr. Rodney,
Brown, of Lou.,	Holmes, of Miss.,	Knight,	Southard,
Brown, of Ohio,	Johnson, of Ken.,	Lanman,	Stokes,
Eaton,	Johnson, of Lou.,	Parrott,	Talbot.
Edwards,			

Those who voted in the negative are,

Mr. Barton,	Mr. Lloyd,	Mr. Pleasants,	Mr. Van Buren,
Benton,	Lowrie,	Ruggles,	Van Dyke,
Chandler,	Macon,	Seymour,	Walker,
Dickerson,	Morril,	Smith,	Ware,
Gaillard,	Noble,	Taylor,	Williams, of Miss.,
Holmes, of Maine,	Palmer,	Thomas,	Williams, of Tenn.
King, of N. Y.,			

On the question, "Will the Senate advise and consent to the appointment of James Gadsden to be adjutant general?"
It was determined in the negative: Yeas 17—Nays 25.
On motion,
The yeas and nays being desired by one-fifth of the Senators present,
Those who voted in the affirmative are,

Mr. Barbour,	Mr. Findlay,	Mr. King, of Ala.,	Mr. Rodney,
Brown, of Lou.,	Holmes, of Miss.	Knight,	Southard,
Brown, of Ohio,	Johnson, of Ken.,	Lanman,	Stokes,
Eaton,	Johnson, of Lou.,	Parrott,	Williams, of Miss.
Edwards,			

Those who voted in the negative are,

Mr. Barton,	Mr. Lloyd,	Mr. Pleasants,	Mr. Thomas,

Dickerson,	Morril,	Smith,	Walker,
Gaillard,	Noble,	Talbot,	Ware,
Holmes, of Maine,	Palmer,	Taylor,	Williams, of Tenn.
King, of N. Y.,			

So it was
Resolved, That the Senate do not advise and consent to the appointments of Nathan Towson and James Gadsden.

TUESDAY, APRIL 30, 1822.

Mr. Williams, of Tennessee, communicated the following paper, which was read:

APRIL 30, 1822.

I certify that I was one of the Committee on Military Affairs during the last session of Congress, and punctually attended each meeting of the committee, and frequently acted as chairman in the absence of General A. Smyth, who declined attending the committee after it was determined by them to reduce the army. At an early period of the session the regulations for the government of the army, compiled by General Scott, were referred to said committee. The House of Representatives had them printed. I further certify that no other or corrected copy was submitted to the examination, or received the approbation, of the committee. I am confirmed in this opinion from the fact that General Smyth did not attend at any meeting of the committee after the bill was reported to reduce and fix the military peace establishment of the United States, until that bill had passed the House, and was returned by the Senate with amendments. This bill was referred to the Committee on Military Affairs, and, when under examination, General Smyth attended. The particular subject of their consideration was, whether a major general and two brigadier generals, with their aids, should be retained in service. If the Book of Regulations was mentioned, I have not the least recollection of it; and my belief is, it was not. I am sure no corrected copy of the work was.

JOHN COCKE.

WASHINGTON, *April* 30, 1822.

We, the subscribers, were members of the Military Committee in the winter of 1821, and usually attended the meetings of said committee, and agree that the foregoing statement of facts by General Cocke is correct, according to our best recollection and belief.

JOSHUA CUSHMAN,
JOHN RUSS.

17th Congress.] No. 230. [1st Session.

OPERATIONS OF THE COMMISSARY'S DEPARTMENT.

COMMUNICATED TO THE SENATE, MAY 1, 1822.

To the Senate of the United States: WASHINGTON, *April* 30, 1822.

In compliance with a resolution of the Senate, requesting the President of the United States to cause to be laid before the Senate certain information respecting the practical operation of the system of subsisting the army, under the provisions of the act passed the 14th of April, 1818, &c., I herewith transmit a report from the Secretary of War, furnishing the information required.

JAMES MONROE.

DEPARTMENT OF WAR, *April* 29, 1822.

The Secretary of War, to whom was referred the resolution of the Senate, requesting the President of the United States "to cause to be laid before the Senate a report of the practical operation of the system of subsisting the army, under the provisions of the act passed the 14th day of April, 1818, together with a comparative view of the present and former mode of supplying the army; stating the rank of the officers, their number, and the number of the soldiers in actual service for each year; together with the amount of their pay and subsistence from the commencement of the military establishment;" has the honor to transmit, herewith, statements of the Second and Third Auditors, of the commissary general of subsistence, marked A, B, C, and a return of the army, marked D, by the adjutant general, which furnish the information required.

J. C. CALHOUN.

A.

SIR: TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE, *April* 25, 1822.

In obedience to the resolution of the Senate, of the 20th December last, requesting the President of the United States to cause to be laid before that honorable body "a report of the practical operation of the system of subsisting the army, under the provisions of the act passed the 14th day of April, 1818, together with a comparative view of the present and former mode of supplying the army; stating the rank of the officers, their number, and the number of the soldiers in actual service for each year; together with the amount of their pay and subsistence from the commencement of the military establishment," and referred to this office, I have the honor to enclose a statement showing the whole amount charged to contractors on the books of this office, for the supply of provisions to the United States troops and Indians, from the 1st June, 1816, to the 31st May, 1817.

It is proper to observe, that all the accounts relating to the subsistence of the army, prior to the former period, were settled by the accountant of the War Department, and turned over to the additional accountant; and that, subsequent to the 31st May, 1817, they have been adjusted in the office of the Third Auditor.

I have the honor to remain, with high respect, your obedient servant,

WILLIAM LEE.

Hon. J. C. CALHOUN, *Secretary of War.*

Amount paid to contractors, for the supply of provisions to United States troops and Indians, from the 1st of June, 1816, to the 31st of May, 1817.

Amount brought to their debit by warrant, - - - - -		$717,424 01
Amount of provisions deposited by former contractors, and with which the contractors for the above period are charged, - - - - - -		97,922 86
Amount due the United States by contractors, on account of former contracts, brought to their debit on their accounts for the above period, - - - - -		29,309 72
Amount charged to contractors on account of their having failed to supply, - -		11,069 73
		$855,726 32
From which deduct:		
Amount of provisions issued to Indians, - - - -	$19,466 87	
Amount of provisions deposited on the 1st June, 1817, to be disposed of by succeeding contractors, and with which they were charged, - -	35,881 73	
		55,348 60
		$800,377 72

TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE, *April* 24, 1822.

WILLIAM LEE.

B.

SIR: TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *April* 24, 1822.

In pursuance of the resolution of the honorable the Senate of the United States, requesting the President of the United States "to cause to be laid before the Senate a report of the practical operation of the system of subsisting the army, under the provisions of the act passed the 14th day of April, 1818, together with a comparative view of the present and former mode of supplying the army; stating the rank of the officers, their number, and the number of the soldiers in actual service for each year; together with the amount of their pay and subsistence from the commencement of the military establishment," and referred by you to this office for such information as the books and accounts on file therein would enable me to furnish; I have the honor to state, that all the accounts of the War Department which had been settled to the year 1812, and a number of those settled in that year, were transmitted, according to law, to the Treasury Department, for examination and revision, and were lost or destroyed at the burning of the public buildings in 1814; and, consequently, the information called for as to the period prior to the year 1813 cannot be furnished, the books of the office not having been kept, with reference to the objects of inquiry, so as to enable me to ascertain the facts; and that the accounts settled during that year, and those subsequently settled, though within the reach of the office, are of such a description, that the information could not be obtained without an investigation almost equal to another settlement of the accounts of all the paymasters and contractors during the late war, and requiring, therefore, a great length of time.

Subsequent to the war, the duty of adjusting the accounts for the pay and subsistence of the troops devolved on the Second Auditor, till the 1st of June, 1817, when the accounts for subsisting the army were directed to be

audited in this office. From that date to the 1st of June, 1819, the commencement of the commissariat system, constituting two entire years, the amount for provisioning the army, so far as the accounts of the contractors rendered and settled have enabled me to ascertain the same, was $1,561,076 25. Of this sum, however, it is proper to remark, $370,364 35 remain to the debit of the contractors, and for the recovery whereof suits have been instituted, which have not been decided on; and that, for such amount as may ultimately be recovered, the system for supplying the army by contract will be entitled to credit. But it is proper also to observe, as to the balances thus in suit, that it is believed credits to a large amount remain to be claimed for provisions issued, and the vouchers for which have not been rendered; and that large deductions have been made on the settlement of some of the accounts for charges not deemed admissible by the accounting officers, and the allowance whereof is nevertheless dependent upon the decisions of the courts and juries to whom the cases will be referred.

With great respect, your most obedient servant,

PETER HAGNER, *Auditor.*

The Hon. J. C. CALHOUN, *Secretary of War.*

C.

SIR: SUBSISTENCE OFFICE, WASHINGTON, *April* 24, 1822.

I have the honor to lay before you a statement showing the cost of subsisting the army for one year, commencing on the 1st of June, 1820, and ending on the 31st of May, 1821. This year has been selected, in preference to the one preceding, because of the expense necessarily attendant on the first operations of the new system. The contract year commencing 1st June, 1816, has been selected to contrast with the second year of the new system, because the contractors' accounts for the subsequent years are not finally adjusted, as appears by the letter of the Third Auditor, and the amount may be hereafter affected by decisions which may take place on them. In ascertaining the number of men subsisted in the contract years, under the former and present systems, I have deemed it most equitable to take the number of men in service, in the month of December, in each year, that period being the middle of the contract year.

In furnishing this statement, it may be proper to remark that, although the price of provisions was considerably lower in the year commencing on the 1st of June, 1820, yet the contracts were necessarily made in the fall of 1819, when provisions were not so much reduced in price as during the period embraced in the settlement. It may also be proper to remark, that considerable expense has accrued from the regular issue of fresh beef at the posts on the Missouri, Upper Mississippi, and at Green bay, by reason of the great distance cattle had to be driven, and the loss sustained in wintering them at those cold and remote points. I beg leave, also, to draw your attention to the subject of the commutation of the hospital rations, by which a supply of fowls, milk, vegetables, and other necessaries, is furnished to the sick, at considerable cost to the subsistence fund. The greatest expense, however, has accrued from the improvement in the quality of the ration issued under the new system. The pork is rather better than prime, but not so good as navy mess; and the flour is fine, and sometimes superfine. Under the old contracts, pork and flour of inferior brands could be issued, provided it was pronounced "merchantable" by two citizens; and I know of no instance wherein this was not the case.

With great respect, your most obedient servant,

GEO. GIBSON, *C. G. S.*

The Hon. JOHN C. CALHOUN, *Secretary of War.*

Cost of subsisting the troops of the United States for one year, commencing the 1st day of June, 1820, and ending the 31st day of May, 1821.

Amount of subsistence stores remaining on hand 31st day of May, 1820, at the different posts,			$91,895 65
Amount paid to general contractors for the period embraced,			371,915 15
Amount paid to special contractors for complete rations furnished recruits at the different rendezvous,			6,394 81
Amount of purchases made by the assistants, acting assistants, and military storekeepers, of fresh beef and hospital stores, not included in the contracts,	$137,681 61		
Amount of stationary, weights, measures, scales, &c.	5,804 41		
		143,486 02	
Amount of transportation, as per statement of the quartermaster general,			37,526 63
Amount of pay of the commissary general, his assistants, acting assistants, and storekeeper, as also officers, and others detailed for duty in the commissariat,			20,814 45
Amount of salaries of two clerks employed in the office at Washington,			2,150 00
Amount of the contingent expenses of the office,			607 36
Amount of balances in the hands of contractors, $3,200, and of assistant commissaries, $2,205 46, unaccounted for,			5,405 46
			680,195 52
From which deduct—			
Amount of subsistence stores on hand 31st of May, 1821, at the several posts,	117,535 67		
Amount of sales of damaged provisions, of sales to officers, and sales of empty boxes, barrels, &c.	12,194 69		
Amount of issues to Indians on the frontier posts, to laborers on fortifications, to men on board the revenue cutter at Mackinaw, and oxen turned over to quartermaster's department,	30,413 31		
Amount of issues to Spanish troops upon taking possession of the Floridas,	2,064 61		
Amount of beans, which article has been added to the ration under the commissariat system,	17,008 46		
Amount of sums recovered from contractors, as forfeitures on failure to deliver,	1,177 29		
Amount of subsisting 433 men more, during the year embraced by the caption, and the year 1816, making 158,045 rations, at 14½ cents per ration,	22,912 82		
		203,306 85	
			$476,888 68
Amount of subsisting the army under the old system,	$800,377 72		
Amount of subsisting the army under the new system,	476,888 68		
Difference,	$323,489 04		

GEO. GIBSON, *C. G. S.*

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *January* 9, 1822.

JAMES GADSDEN, *Colonel and Adjutant General.*

17th Congress.] No. 231. 1st Session.

EXPENDITURES OF THE WAR DEPARTMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 1, 1822.

Mr. Tucker, of Virginia, from the Committee on the Accounts and Expenditures of the War Department, reported:

That they have examined the said accounts and expenditures, and they beg leave to detail the result of their inquiries and examinations, under the several heads of duty prescribed to them by one of the standing rules of the House.

1. Whether the said expenditures are justified by law?

The committee have perceived no expenditure that is unwarranted by law, unless the extra compensation, which is occasionally made to officers of the army for services not within their regular official duties, may be considered to be of that character. It would at first seem that, although an officer in the monthly pay of the Government is not bound to render every portion of his time to the public service, yet that he cannot perform such extra services without neglecting his stated regular duties, and that, most commonly, the time employed in the one is precisely so much taken from the other. But, on the other hand, it is represented to the committee, with some reason, that the practice of employing officers as clerks in the War Department may, in several ways, be advantageous to the public; that, while they are better able, from their more accurate professional and local knowledge, to judge of the propriety and the economy of distant disbursements, they themselves are improved in a species of knowledge which every officer is occasionally required to discharge, and which is indispensable to the offices of quartermaster, paymaster, and commissary; and, at the same time that their services are better done than they would be by an ordinary clerk, the cost to the Government, in their extra compensation, ought to be considerably less.

The committee were also at first inclined to think that the money paid to the Attorney General, under the sanction of the Secretary of War, for an argument in a case submitted to arbitrators, was not warranted by law; but, on a reference to the act of Congress which prescribed the duties of that officer, they find that they clearly do not comprehend the services rendered by him on this occasion, but are limited to the cases of the United States in the Supreme Court, and to giving legal counsel to the President and heads of Departments. The reasons assigned for this disbursement are, that the matter in controversy was of great magnitude, involving several hundred thousand dollars; that able counsel were employed by the opposite party; that no other counsel could be obtained, in whom the agents of the Government had equal confidence; and that the compensation allowed was not greater than is usually paid for similar services. If the practice be deemed objectionable, the committee think that the remedy which will be most consistent with the public interest will be to extend the duties of the Attorney General by law.

2. Whether the expenditures are supported by vouchers establishing their justness, both as to character and amount?

In those cases in which the rate of the expenditure is fixed by law, such as pay, rations, and the like, the committee have been content with a slight inspection of the accounts. Where there was latitude for more or less economy, either as to quantity or price, they have been more particular in their investigation; but where the disbursements were altogether discretionary, as in the case of contingencies, the committee have examined every voucher with the minutest accuracy. The result of their examination is, that the vouchers, in every instance, agree with the accounts; that, so far as the committee can judge, the items are, with some few exceptions, at the ordinary market rate as to price, and reasonable as to quantity. Among the exceptions, we would mention the commutation allowance to officers employed in extra service, such as surveying Mobile bay, in lieu of transportation, quarters, and fuel, and for making disbursements. This allowance was at the rate of $1,472 for officers of the rank of captain, according, as it is said, to long established regulations, which the committee think was too large an addition to their regular pay. The character, too, of many small items in the contingent expenses of the War Department, though sanctioned by usage in that and the other Departments, appear to the committee to be highly objectionable, such as the purchase of books by the subordinate officers of the Department, which have no connexion with their clerical or *bureau* duties. The increased expense incurred for carpets, maps, engravings, and newspapers, seems to be liable to a similar objection, though not of the same decided character.

3. Whether the disbursements have been made in conformity with the appropriation laws?

The committee know of no instance of an expenditure out of funds not appropriated therefor, except the $60,000 expended on Fort Calhoun be of this description. As the money appropriated for fortifications in 1820 was not specific as to the objects, it was at the discretion of the Executive to expend it on such of the fortifications as it should select. But if the appropriation act of 1821, which appropriated specific sums to the fortifications on the Chesapeake, at the time when the money, of which the above $60,000 was a part, was believed by the Legislature to be either expended, or about to be expended, in the Gulf of Mexico, be considered to have repealed so much of the act of 1820 as left the destination of the funds discretionary, then the expenditure of the $60,000 on the fortifications in the Chesapeake was not warranted by law, and ought to have been returned among the unexpended balances of the preceding year. The committee deem it unnecessary to add any thing further on this subject, as the facts of the transfer, and the considerations which induced it, are exhibited to the House in the letter of the Secretary of War of the 19th instant.

4. What further provisions are necessary for the proper application of the public money, and its economical disbursement?

The committee, in the course of their examination, have not been inattentive to this part of their duty. They are persuaded that, under the most vigilant and judicious administration, there will occasionally be some mismanagement, some waste, some peculation; and the most that can be effected is, to lessen the temptations and the facilities to these malversations, to provide for their early detection, and for indemnity to the public when detected. So far as concerns mere accountability, the committee consider the present system as unexceptionable and complete. But so far as regards economy, there has been considerable improvement within a few years, and there is probably room for still more. A brief statement of the course pursued in any branch of military expenditure, that of the Quartermaster's Department, for example, may serve to illustrate the security which the public have against injury and abuse. The accounts for supplies are first transmitted to the quartermaster general for investigation, who returns them to the quartermaster, if he thinks them palpably wrong, or, in a doubtful case, transmits them to the Third Auditor, with his remarks. They are examined by that officer with reference to the laws and regulations of the War Department, or the contracts that may have been made. If there are any items not embraced either by the regulations or contracts, they are specially referred to the head of the Department for his decision. They are then

reported to the Second Comptroller, and, if passed by him, they are returned to the Third Auditor, who enters them on his books, and communicates the same to the party. The evidences of these transactions, through all their details, are carefully preserved, and so methodically arranged as to be readily referred to. If, then, there is any charge that is illegal or extravagant; if any defect in the vouchers, or any delinquency, they can be discovered without difficulty by one at all conversant with accounts.

With a view to economy, the committee have no hesitation in saying that contracts by the Government should be confined to provisions, rations, wood, and such articles as have a stated market price to govern both the contractor and the agent of the Government. But fortifications, and other permanent works, ought always to be built under the direction and superintendence of a capable and responsible public officer. Experience has shown that the contracts are seldom or never executed, unless they are advantageous to the undertaker. Where they are not fulfilled, the contractor often proves insolvent; and when his securities are sufficient, the Government has, in lieu of the work it contracted for, and the money it had advanced, a law-suit that is always tedious and troublesome, and sometimes abortive. Nor can there ever be that security for the goodness of the workmanship or materials, in the case of private contracts, as when the work is conducted by a respectable officer.

The committee would further suggest, that, where large sums are placed in the hands of agents and superintendents of the Government, they should be required to deposite the same in some convenient and responsible bank, (to be designated by the head of the Department,) in the name of such person, as agent; that the money should be drawn by him in that character; and that he should send weekly or monthly statements of his bank account to the War Department. Though such regulations would not always prevent the agent from using the public money as his own, it would have an evident tendency to lessen the chance of it, and to give early intimation of it when it did happen.

5. Whether any retrenchments can be made in the expenditure of the War Department without detriment to the public service?

The committee addressed a letter to the Secretary of War, on the 4th of March last, to inquire whether the number of clerks in the War Department proper, as well as in the Engineer, Ordnance, and Pay Departments, could not be reduced; to which he replied that the number would not admit of further present reduction. His letter, with its enclosures from the Engineer, Ordnance, Pay, and Quartermaster's Departments, are hereto annexed, and marked A, B, C, D, and E. The present organization of the War Department, by which its business is distributed into distinct *bureaus*, or sub-departments, requires a great number of clerks; but it has been found conducive not only to despatch, regularity, and the accountability of public officers, but also to economy of disbursement. The committee think that it would be a mistaken economy which would, to save the salaries of a few clerks, run the risk of having this important branch of the national administration imperfectly executed. And, although their compensation is somewhat higher than is paid in the neighboring States for similar services, yet it is presumed the public will in general be compensated for their liberality by the greater skill and respectability of its officers. None of the preceding remarks are meant to apply either to the Indian trade or Indian agencies, which have not much occupied the attention of the committee, as those subjects have been particularly submitted to several different committees of the House.

The committee think that it would check the irregular and improper disbursements to which they have before adverted, if the appropriation for the contingencies of the War Department should be sub-divided into specific sums for printing, stationary, fuel, and miscellanies, (these several items not so materially varying in different years as to produce inconvenience,) as the advantages of specific appropriations are now universally admitted; and they also think that it would further the objects of such a change, if the disbursements were made for all the offices of the War Department by one of its clerks specially appointed for that purpose.

6. Whether any abuses exist in the failure to enforce the payment of moneys due to the United States by public defaulters or others?

Cases of delinquency have of late years been very frequent, and much greater delay than seems necessary has taken place in recovering the money from the defaulters, and in conducting the suits against them to a termination. These suits are now placed under the direction of the Fifth Auditor of the Treasury; but it has been suggested that it would greatly tend to hasten their decision, and thereby to prevent much loss to the United States, if they were placed under the direction and superintendence of the Attorney General, whose duty it should be to correspond with the several district attorneys, direct the institution of suits against delinquents, attend to them throughout their progress, and aid by his counsel in removing such delays and impediments as may occur in their prosecution. These duties, which could be well performed only by a law officer of talents and weight of character, it is thought would be very advantageous to the national Treasury.

The committee will now take occasion to remark, that the duties prescribed to them, to be completely executed, require much time and labor; and the more, because most of their examinations are made at the offices of the War Department, to avoid the trouble and risk of removing so large a number of accounts and vouchers. They think it highly desirable that the duties should be performed in the early part of the session, that the Legislature may thereby be able to correct abuses, if they exist; and if they do not, to remove unfounded causes of distrust, and restore the public confidence; for, next to the evil of having a wasteful and corrupt Government, is the belief that we have one. The committee think that this early investigation cannot be performed with that minuteness and accuracy which will make it useful, without increasing the number of the committee. Influenced by the preceding considerations, they offer the following resolutions:

Resolved, That the standing rules of this House shall be so amended as that the Committee on the Accounts and Public Expenditures relative to the War Department shall hereafter consist of seven members.

Resolved, That the Committee on the Judiciary shall inquire into the expediency of enlarging the duties of the Attorney General.

A.

SIR: DEPARTMENT OF WAR, *March* 8, 1822.

I have received your letter of the 4th instant, relative to a reduction of clerks in this Department, as well as in the Engineer, Ordnance, and Pay Departments.

The law of the 20th of April, 1820, allows to the War Department twenty-three clerks, whose compensation is fixed at $25,800.

Owing to the diminution of business in the section of bounty lands, the number was reduced last year to nineteen, whose compensation is $23,400. As it is not calculated any further diminution of business will take place this year, a like number of nineteen, with the same compensation, will be necessary. Of this number, five are employed in the section of bounty lands, and are not more than adequate to the management of that branch of the business of the Department. Nine are employed in the Pension Office, and it is believed no reduction in the number of clerks can be made without injury to the public in that branch of the business of this Department. Five, including the chief clerk, are employed in the War Office proper. Of these, one is wholly employed upon

Indian affairs; one in recording; one in keeping the register of letters received, and filing them; and one in keeping the warrant book.

In relation to the clerks in the Pay Department, I enclose, herewith, a report of the paymaster, by which it will appear no further reduction can be made in that department, consistently with the good of the service. It will also appear, by the same report, that a reduction from seven to three has already been made in that office since the late reduction of the army.

In relation to the number of clerks employed in the Engineer and Ordnance Departments, I also enclose, herewith, reports from the chief engineer and the lieutenant colonel of ordnance, by which the committee will see that the present number employed in those departments is considered not more than adequate to the discharge of the business of their respective offices, and that it cannot be reduced without injury to the public.

It is proper to observe, that this Department promptly reduces the number of clerks employed whenever the state of the business will admit of it, without regarding the number authorized by law to be employed.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

Hon. GEORGE TUCKER,
Chairman of Committee on Expenditures of War Department, H. R.

B.

SIR: ENGINEER DEPARTMENT, WASHINGTON, *March* 6, 1822.

In obedience to your orders of yesterday, requiring "*a report whether or no the clerks in this office can be reduced*," I have the honor to state, that the number employed at this time is two, and both of whom are indispensably necessary for keeping up the files of this department, and copying the various reports, letters, and other documents concerning the engineer service and the Military Academy. I therefore report, that it is my opinion that they cannot be reduced without manifest injury to the service.

I have the honor to be, sir, very respectfully, your obedient servant,

ALEX. MACOMB, *Maj. Gen.*

C.

SIR: ORDNANCE DEPARTMENT, *March* 7, 1822.

In compliance with your orders to report "whether the number of clerks in this office can be reduced," I beg leave respectfully to state, that the business of the Ordnance Department having recently been considerably increased rather than diminished, it is not deemed that a less number of clerks than now employed can be safely dispensed with. The causes are as follows: Since the law merging the corps of ordnance with the artillery, I have caused, agreeably to your orders, the accounts of all the moneys disbursed for the ordnance service, previously to their being laid before the Second Auditor for settlement, to be examined, and passed (if approved) by this office; a business requiring much time and care for its proper performance, and which, it is expected, will produce beneficial public effects.

Your transfer, also, of the charge of the lead-mine lands in the western and northwestern States to this office has added to its business concerns; as, from the irregular and unproductive state in which those mines have hitherto been left, it will require considerable attention and labor to render them as productive to the United States as it is hoped and believed they may be made.

The extensive correspondence carried on by this department with every (the most remote) part of the United States, with the arsenals and depots, the national armories, and private contractors for arms, the military posts and garrisons, &c., also gives constant and great employment for the clerks now engaged. In fact, judging from the recent and accumulated business of the office, an additional clerk could find sufficient employment; and it may therefore be inferred that the public business would be seriously delayed and injured were the present number of clerks to be reduced.

With great respect, I am, sir, your most obedient servant,

G. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. J. C. CALHOUN, *Department of War.*

D.

SIR: PAY DEPARTMENT U. S. ARMY, WAR OFFICE, *March* 7, 1822.

On your order of the 5th instant, which I have just received, requiring me to "report whether or no the number of clerks in this office can be reduced," I have the honor to state, that, since I was appointed paymaster general, the number of clerks in this office has been reduced from seven to three. With these I have discharged all the current duties of the office; and I believe, with close application, we shall be able to meet promptly all the duties which may hereafter be required conformably to the laws and existing regulations. The compensation required for the clerks in this office for this year is $4,950 less than was allowed by the act of the 20th of April, 1818; and I am convinced the number of clerks cannot be further reduced without embarrassment and injury to the service. For a more detailed report on this subject, I take the liberty to refer to the letter I had the honor to lay before you on the 26th of June last.

I have the honor to be, with perfect respect, your obedient servant,

D. PARKER, *Paymaster General.*

To the SECRETARY OF WAR.

E.

SIR: PAY DEPARTMENT U. S. ARMY, WAR OFFICE, *June* 26, 1821.

Agreeably to your order, I have the honor to report, after having looked into the details, that, in addition to my own labor, I believe three clerks will be constantly required in this office.

One will be charged with the examination of paymasters' accounts in detail, and keeping the records of remittances, disbursements, &c.; one will endorse the letters received, enter them in a book kept for that purpose, and copy and record letters; the other must aid in the details of estimates, assist in copying, and such other casual service as may be required for a prompt discharge of the duties of the department. I have not yet had an opportunity to discover the full strength of the gentlemen of the office; they all appear to be intelligent and competent. I contemplate this distribution of labor, reserving a full share for my best exertions, under the limit you have giv...

me of "the smallest efficient force for the current duties of the office." I am convinced, however, this arrangement will require our constant attendance, and will leave us no idle time during regular office hours. I am not fully certain that we shall be able to discharge all the duties required; but I am the more willing to make the experiment, having always found that the less the number of men employed, if competent to the work, the better the work is done.

The pay of the gentlemen should be equal to the labor required, and I anticipate in this the three best salaries heretofore given. Colonel Towson stated to me that Mr. Frye, Mr. Ramsay, and Mr. Andrews were the three first to be retained. I am satisfied with those gentlemen, and the current duties, at this time, are fully within our grasp. A month, however, is not a fair experiment, and I have before informed you that the records of the office are not complete. There is no letter-book from the 26th of March to the 11th of October, 1814, an important period of the war; and there is no letter-book from the 9th of April, 1816, to the 18th of October, 1819. The rough copies of the letters are on file, and in boxes, and should be recorded in the letter-book. One of the disbanded clerks, who had been but a short time attached to the office, is sick; the other three have great merit; they served during the war, and ever since. They have not yet been able to make arrangements for other pursuits. I have, therefore, to submit, for your approbation, that I be allowed to divide the letter file referred to, give to each a book, and allow them three months from the 1st of July to bring up the records.

I have the honor to be, &c.

D. PARKER, *Paymaster General.*

The Secretary of War.

17th Congress.] No. 232. [1st Session.

SYSTEM OF FIELD SERVICE AND POLICE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 6, 1822.

Mr. Eustis, from the select committee, to whom was referred the resolution of the House of Representatives of the 1st instant, directing an inquiry as to the publication of the field service and police adopted for the government of the army at the last session of Congress, reported:

That they have used their best endeavors to ascertain every fact that appeared material to the true understanding of the conduct of the individuals, and of the occurrences involved in the transaction. It appears that, on the 26th of December, 1820, the Speaker laid before the House of Representatives a letter from the Secretary of War, transmitting a system of field service and police, prepared in obedience to a resolution of a previous session; which letter and document were referred to the Military Committee. This document was in manuscript, and was compiled by Major General Scott, of the United States army. The manuscript was ordered to be printed, and a copy laid upon the desk of each member. On the 23d of January, 1821, a bill "to reduce and fix the military peace establishment," reported by the Military Committee, passed the House of Representatives. This bill contained no section in relation to the "rules and regulations for the field service and police of the army." That, on the 24th of February, a substitute for this bill, by way of amendment, passed the Senate, was sent to the House on the same day, and referred to the Military Committee; nor did this bill contain any provision in relation to the "rules and regulations." On the 27th of February, the chairman of the Military Committee reported the bill of the Senate with sundry amendments, and, among the number, *the fourteenth section of the act of* 1821, adopting the "rules and regulations" now the subject of inquiry; which finally passed both Houses in that shape.

In determining the question "whether the system of field service and police, adopted at the last session of Congress, has been published in form and effect different from the system adopted," the committee find that the copy printed and laid before Congress, and the one adopted, is different in several essential points from the copy published and distributed amongst the army. This difference is, however, accounted for in a satisfactory way. It appears, from the statements submitted to the committee, that, on printing the manuscript laid before Congress, several copies were forwarded to General Scott, for his correction. That he made many corrections of typographical errors and other particulars, and returned a copy, thus corrected, to the chairman of the Military Committee. That, on a more careful examination of the work, General Scott was induced to make still further corrections, and to extend more fully some of the principles laid down, which he considered as essential to the harmony and consistency of its parts. These latter corrections were made in "red ink," and on the 20th of February forwarded to the War Department, and, on the 23d, to the chairman of the Military Committee. That it must have been in the possession of the chairman, although, from the statements of several of its members, not submitted to the consideration of the Military Committee, before the bill, with its last amendments, was reported; nor does it appear to have been presented to the House. After the passage of the act, and before the rising of Congress, the chairman of the Military Committee offered to deliver to the clerk of the House the corrected copy, who declined accepting it, on the grounds that he did not consider it his official duty to attend to the printing of the laws. It does not appear what disposition was then made of this copy. That, some time after the rising of Congress, General Scott was directed by the War Department to superintend the printing of the work. This was done in Philadelphia, where General Scott was stationed, and from the duplicate of the last corrected copy retained by him, and which he had been advised, by letter from the chairman of the Military Committee, was the one adopted by Congress. In discharge of this duty, General Scott made no corrections except such as became necessary to accommodate the terms used to the reorganization of the army which had been made, and of grammatical errors. The committee can discern nothing of impropriety, much less grounds of censure, on the part of General Scott. As the author of the work, it was due to his own reputation as a scholar and an officer to present it to the public as free from defects as possible. That he did nothing more than he was justifiable in doing for this purpose. The War Department was the mere channel of communication, and, therefore, not responsible for what occurred. That it was an act of omission on the part of the chairman of the Military Committee in not submitting the corrected copy to the consideration of the committee, and not of intention or design.

The committee beg leave to submit the following resolution:

Resolved, That the select committee, to whom was referred the resolution of the House of Representatives of the 1st instant, directing an inquiry as to the publication of the field service and police adopted for the government of the army, at the last session of Congress, be discharged from the further consideration of the subject.

WASHINGTON, *May* 2, 1822.

Major General Scott has the honor to submit to the committee of the House of Representatives, to which was referred a resolution relative to the regulations of the army, the following "condensed statement of facts," and shall be happy to furnish any further explanation in his power that may be required by the committee.

General Scott compiled all the articles of the book originally submitted to Congress, and many of the others, and was the editor of the whole.

He brought the manuscript of that part of the book submitted to Congress with him to Washington, in December, 1820, and intended to request leave to superintend the printing of it for the use of Congress; but his duties called him away from Washington on the 28th or 29th of the same month. As soon as the book was out of the press of the public printer, General Scott received, at Philadelphia, some four or five copies sent to him by request, and from several persons. He immediately perceived that the impression contained many typographical errors; and, on a more attentive examination, (which the *printed* form enabled him to make,) he discovered that some parts of the book did not perfectly harmonize with each other, and that *principles* laid down in other articles required a fuller development. Fearful that the book would be immediately acted on by Congress, he hastily sent to the chairman of the Military Committee of the House, direct, a copy containing such corrections as first occurred to him, and proceeded somewhat more at his leisure to render the book as perfect as it was in his power to make it. General Scott has now ascertained that it was on the 20th February, 1821, that he sent a copy, with *all* his corrections, through the War Department, to the same committee. This copy was the exact duplicate of another retained by him, both corrected in red ink, and verified in the most particular manner. About the 2d March he received a letter from General A. Smyth, chairman, &c., advising him, General Scott, that the corrected copy had been received, and that the 14th section of the act of 2d March, 1821, had been added to a bill from the Senate, by way of amendment, &c. Early in the same month, General Scott received instructions to put the book to the press for the use of the army. All the proof-sheets of the new impression passed under the inspection of General Scott, and he solemnly avers that all the articles which had been before Congress for sanction were strictly reprinted from the corrected duplicate copy retained by General Scott, as above stated, and that the article 75 was one of those which had been previously so corrected. He is confirmed in his strong recollection on this subject by the positive conviction that he received no suggestion from any body to alter article 75, but was himself induced to insert the words "except in extraordinary cases," at the time the other corrections were made, in order that the rule might correspond with the analogous but stronger case contained in article 4, paragraph 1, where the same words will be found. The latter rule has existed in our service since the year 1813, at least.

General Scott has said, above, that the articles which were first printed for the use of Congress were strictly reprinted, after the duplicate copy retained by him. He ought to have said that they were reprinted in the most perfect good faith, as he recollects to have made, perhaps, two or three *verbal* corrections, after the 20th February, 1821, merely with a view to grammatical propriety; and he also recollects that article 38 ("organization of departments") was slightly altered at the time it was reprinted; as thus: the words "major general of the division" were stricken out, and so was "*assistant*," before the words "inspector general." These changes it was thought were rendered necessary by the act that sanctioned the regulations, and which gave to the army a *new* organization in those particulars.

The foregoing statement is made on the strength of a memory that has but rarely deceived. General Scott has not had in his hands (in all *five minutes*,) a copy of the regulations as printed for the use of Congress, in the last ten months.

All which is most respectfully submitted.

WINFIELD SCOTT, *Major General by brevet.*

P. S. General Scott begs leave to add, that, to the best of his knowledge and belief, not a principle embraced by the work originally laid before Congress has been changed or impaired by the alterations and amendments above noticed.

WINFIELD SCOTT.

SIR: MAY 4, 1822.

Having been desired to state what I recollect concerning the adoption of the system of field service and police, compiled by Major General Scott, I proceed to do so.

On the 22d December, 1819, I moved, and the House of Representatives adopted, the following resolution:

"*Resolved*, That the Secretary of War be instructed to cause to be prepared and laid before this House, at the next session of Congress, a system of martial law, and a system of field service and police for the government of the army of the United States."

It appears by the Journal, that, on the 26th December, 1820, the Speaker laid before the House a letter from the Secretary of War, transmitting a system of field service and police, and a system of martial law for the government of the army of the United States, prepared in obedience to the said resolution.

On the 28th of December, 1820, two days after the system of field service was laid before the House, I reported a bill to reduce and fix the military peace establishment of the United States, which had been agreed on by the Committee on Military Affairs, of which I acted as chairman; and soon afterwards I offered a substitute for that bill, having been in the minority of the committee. The system of field service was not mentioned in either the bill or substitute.

On the 25th of January the bill to reduce and fix the military peace establishment was passed by the House, and on the 24th of February it was returned from the Senate, with an amendment, which was referred to the Committee on Military Affairs. On the preceding day, as appears from the date of a note from the Secretary of War to me, I received from the War Department a copy of the system of field service, with the corrections of Major General Scott. Monday was, as well as I recollect, the usual day for the meeting of the Committee on Military Affairs. I do not find on the Journal that I made any report from the committee between the 28th of December, and the 27th of February. I presume I attended the sitting of the committee on Monday, the 26th of February, in consequence of the importance of the bill returned from the Senate, and of a desire to establish the system of field service, compiled in compliance with the resolution which I had offered. On the 27th of February, as appears

by the Journal, I reported to the House, as chairman of the Military Committee, the amendment of the Senate, with sundry amendments, one of which was the fourteenth section of the act to reduce and fix the military peace establishment of the United States, which declares that the system of "general regulations for the army," compiled by Major General Scott, shall be, and the same is hereby, approved and adopted for the government of the army of the United States, and of the militia when in the service of the United States. This section was drawn and proposed to the Military Committee by me, and approved by them, probably on the third day after I had received the copy from the War Department, with the corrections of General Scott. I do not recollect what was said in the committee on the subject of the system of field service. I do not recollect exhibiting the corrected copy. I had no motive to conceal the corrections; and, therefore, conceive it more probable that they were mentioned than that they were not.

It is strongly impressed on my mind, that, when I reported the amendments to the House, I had the copy of the system of field service, with General Scott's corrections, and deposited it with the clerk, with intent that from that copy the system should be published; and it seems to me as if the clerk had said something of the expediency of sending the copy with the amendments to the Senate; but on this point my recollection is indistinct. I afterwards wrote, either to the Secretary of War or to General Scott, and mentioned where the copy was deposited, and that the regulations should be printed from it, or to that import. Such is the impression on my memory. From recent conversations with both of those gentlemen, I rather conclude that it was to General Scott that I wrote.

I hand you, herewith, a copy of the system of field service and police, as printed for the use of members of Congress, with a variety of corrections made by General Scott; but this I consider to be a copy which I had received some time previous to the 23d of February, 1821, probably direct from General Scott; for the corrections on this copy, although numerous, are not very material; and a note says, "the compiler is now making experiments to enable him *to fill the blanks* in this article," which indicates an intention to make the system more complete; and, as General Scott affirms that the copy published for the army was printed from a duplicate of the copy sent by him to the War Department, and as the copy published varies materially (as I understand) from this copy which I now hand you, this cannot be the copy forwarded on the 23d of February to me.

I have nothing to add, except that it was my intention, when I drew the fourteenth section of the act to reduce and fix the military establishment of the United States, to adopt the system of field service and police, as completed by the corrections on the copy which had been transmitted to me a few days before from the War Office.

I have the honor to be, very respectfully, your most obedient,

ALEXANDER SMYTH.

Hon. WILLIAM EUSTIS, *Chairman of a Committee.*

APRIL 30, 1822.

I certify that I was one of the Committee on Military Affairs, during the last session of Congress, and punctually attended each meeting of the committee, and frequently acted as chairman in the absence of General A. Smyth, who declined attending the committee, after it was determined by them to reduce the army. At an early period of the session, the regulations for the government of the army, compiled by General Scott, were referred to said committee. The House of Representatives had them printed. I further certify that no other or corrected copy was submitted to the examination, or received the approbation, of the committee. I am confirmed in this opinion from the fact that General Smyth did not attend at any meeting of the committee after the bill was reported to reduce and fix the military peace establishment of the United States, until that bill had passed the House, and was returned by the Senate with amendments. This bill was referred to the Committee on Military Affairs, and, when under examination, General Smyth attended. The particular subject of their consideration was, whether a major general and two brigadier generals, with their aids, should be retained in service. If the Book of Regulations was mentioned, I have not the least recollection of it; and my belief is, it was not. I am sure no corrected copy of the work was.

JOHN COCKE.

WASHINGTON, *April* 30, 1822.

We, the subscribers, were members of the Military Committee in the winter of 1821, and usually attended the meetings of said committee, and agree that the foregoing statement of facts by General Cocke is correct, according to our best recollection and belief.

JOSHUA CUSHMAN,
JOHN RUSS.

HOUSE OF REPRESENTATIVES, *May* 3, 1822.

Having been requested by the chairman of the committee appointed by the House of Representatives, &c. to make a statement of the facts, in my recollection, which transpired in the Committee on Military Affairs at the second session of the sixteenth Congress, as respects their recommending the adoption of the rules and regulations drawn up by General Scott, and communicated by the War Department for the government of the army of the United States, I state that the communication of the Secretary of War was, according to my best recollection, made to the House, and referred to the Committee on Military Affairs, and was printed for the use of the members; which printed copy I read and examined, and am confident there were no alterations or corrections therein. I would further state that, according to my best recollection and belief, no corrected or altered copy was, at any meeting of the committee, when I was present, submitted to their consideration. I generally attended the meetings of the committee, and well recollect being present when they agreed to adopt those rules and regulations, &c., but have no recollection whatever that any suggestion or intimation that there was a corrected copy was communicated in any way to the committee. If it were so, I have no knowledge of the fact. I acted on the copy printed for the House, and was entirely ignorant that there was any other in existence.

I am, respectfully, your humble servant,

J. RUSS.

Mr. EUSTIS, *Chairman Committee, &c.*

MAY 3, 1822.

The undersigned was a member of the Committee on Military Affairs during both sessions of the sixteenth Congress. In the course of the second session, a copy purporting to be "regulations for the army," of which Gene-

ral Winfield Scott was the author, was laid on the table in the committee room, and examined. The copy was printed; and the undersigned has no recollection of having seen but one copy, and this he is sure contained no corrections or emendations marked in red ink, or any other manner whatever.

JOSHUA CUSHMAN.

To the CHAIRMAN *of the Military Committee.*

MAY 4, 1822.

Mr. Dougherty, being before the committee, stated, that in consequence of an application by Major Vandeventer, of the War Department, some little time since, two several searches were made among the papers of the office of the clerk of the House of Representatives, for a printed copy of the "rules and regulations," submitted to Congress during the last session, said to contain certain corrections in *red ink;* that no such copy could be found in the office; that the clerks of the office have no recollection of ever having seen such a copy, and that they never heard of it until this session; that he himself has no recollection of having seen such a book *before* the passage of the law; that, before its passage, no such corrected copy was presented to him, to his recollection and belief; that, had that been done, it would have been his duty to have presented it, with the bill which passed the House of Representatives, to the Senate; that he did present no such copy to the Senate, as the clerk of the Senate will declare.

That he has, however, a pretty distinct recollection of *having seen a copy*, such as has been described; but his decided impression is, that this was *subsequent to the passage* of the law; that he thinks it was exhibited to him by General Smyth, and at the time when the general, as chairman, made a return to his office or table of various papers which had been before the Committee on Military Affairs; that he refused to receive the copy, stating, as he thinks, to the general, the impropriety of his receiving the copy, as he was not the proper repositary, having nothing to do with the printing or publishing of the laws of Congress; and believes, if it had been left with him as the *text*, it would have been demanded *as such* by the proper Department.

THOS. DOUGHERTY.

Mr. Burch stated to the committee, that, until within the last fortnight, he had neither seen nor heard of a copy of "the rules and regulations," said to *contain corrections in red ink*. He is confident no such copy was ever in the clerk's office. Until the period stated he knew of no copy other than the manuscript, and the one which was printed from that original manuscript, and laid, during the last session, upon the desks of the members.

S. BURCH.

17th CONGRESS.] No. 233. [1st SESSION.

LOANS OF GUNPOWDER AND LEAD.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 7, 1822.

Mr. EUSTIS made the following report:

The Committee on Military Affairs, to whom was referred the report of the select committee, of the 7th of February, 1821, [See No. 204,] relative to the loans of gunpowder and lead, the munitions of the United States, have had that subject under consideration, and report:

That they addressed a letter to the Secretary of War, requiring information whether any payments or reimbursements in kind, by the individuals to whom loans of gunpowder and lead, the munitions of the United States, have been made, since the report of the select committee of the 7th of February, 1821, and particularly whether Daniel Bussard had made any payments, either on account of loans of powder, or on account of $10,000 advanced or loaned to him by the Secretary of War, as stated in the report of the select committee, and whether interest had been charged on said $10,000; what are the pecuniary circumstances of the borrowers, and of their securities; what measures had been adopted with respect to the officers loaning, or those to whom the loans were made, to indemnify the United States; whether any of those officers are now in service; and whether any other loans than those specified in said report had been made by any officer or other person in the War Department.

In answer to these inquiries, the committee are informed, that, since the 7th of February, 1821, Messrs. Dupont de Nemours & Co. have delivered six hundred and eighty-seven barrels of powder; that the total quantity received from said company, in consequence of the loans, as stated in the report of the select committee, is fifteen hundred and fifteen barrels, leaving now outstanding two thousand and fourteen barrels. No legal proceedings have been instituted either against the borrowers or against the persons who made this loan, to indemnify the United States, notwithstanding nearly five years have elapsed. The committee are informed that Daniel Bussard has delivered, since the 7th of February, 1821, one hundred and sixty-three barrels of powder; that the total quantity received from him is five hundred and forty-five barrels, leaving outstanding four hundred and forty-five barrels. The one hundred and sixty-three barrels of powder delivered since the 7th of February, 1821, have been recently applied to the payment of the $10,000 loaned. They are informed that Daniel Bussard has reported fifty barrels of powder, in addition to the one hundred and sixty-three, ready for inspection and delivery, which were received last week. They are further informed that no interest is expected, or even required, from any person to whom loans of powder or money have been made. No suit, or other legal proceedings, have been instituted to indemnify the United States against this transaction, although the time limited for the return of the powder loaned to Stull & Williams, and for the delivery of that article, in consideration of the $10,000 before stated, expired in August last; on the contrary, the committee are informed that the War Department has extended the time of payment one year longer, and agreed to receive powder at the original price named in the contract, which is greater than that article will now command in market.

These appear to be the only payments made on account of the loans reported by the select committee since the 7th of February, 1821.

This committee have been furnished with a letter from the Fifth Auditor of the Treasury Department, by which it appears that suit had been instituted against George W. Murray, in the southern district of New York, for the recovery of the sum of $11,279 12, being the value of the lead loaned to him; and that the suit was continued, at the instance of the defendant; but they are also informed that the United States were compelled to suffer a non-suit, on the ground that no law justified the act, and have the costs of suit to pay.

Thus, by this illegal transaction, it seems the Government is likely to sustain, besides costs of suit, a loss of $11,279 12, unless they resort to the officers who made the loan for indemnity.

In the case of John R. Mifflin, on account of gunpowder loaned him, as reported by the select committee, they are informed that suit has been ordered for the sum of $12,250, the value of the powder loaned; but no return has been received from the district attorney of Alabama, nor do the committee believe it important there ever should, as they are well advised that John R. Mifflin is long since totally insolvent. From information furnished by the Fifth Auditor, it appears that the value of the powder loaned to Peter Baudry, as stated in the report of the select committee, amounts to $17,500; that no suit has been instituted, because, on inquiry, it was ascertained that Baudry and his surety had left the United States, and were residing at the Havana, and had left no property which was liable for this debt.

This committee are informed that the loan of powder mentioned in the report of the select committee, made to Israel Wheelan, of Philadelphia, was returned in 1817 and 1818, but not ascertained at the date of that report.

The committee have thought it somewhat important to inquire into the loss likely to be sustained by those transactions; they cannot, for one moment, rely on the calculations made by the present head of the Ordnance Department, who estimates the whole of the powder loaned at six dollars per hundred pounds, including 60,000 pounds actually sold to Stull & Williams, on the 23d of June, 1815, at thirty-six cents per pound, amounting to $21,600. This powder was loaned on the 25th May, 1815, to the same Stull & Williams, and then sold as above stated. Neither can they be persuaded that the Government would demand of Peter Baudry $17,500 for powder loaned him, worth only $3,000, according to the valuation of the officer who made those unauthorized loans. The same remarks equally apply to the loan made to John R. Mifflin, which is contained in the report of the select committee.

Your committee are informed that the quantity of powder now in the different depots is immense; that the Government will not be required to purchase for a number of years; that, in fact, the public arsenals are completely stored. If this information is correct, (of which they have no doubt,) it would follow that the powder loaned to individuals, and not returned, should be paid for in money, as the time for the return of that article has expired.

For the particular character of the loans of powder, lead, and money, this committee refer to and adopt the statement of facts contained in the report of the select committee.

Your committee have received no information as to that part of their inquiry whether any of the officers who made the several loans enumerated are now in the service of the United States. They have not thought it expedient to recommend the adoption of any resolution; but have concluded to submit the foregoing statement, leaving it to the discretion of the House to direct such measures as the interest of the public may require.

SIR: WAR DEPARTMENT, *January* 31, 1822.

In conformity with the request of the Military Committee, as communicated by you on the 21st of the last month, I have the honor to enclose, herewith, a report from the Ordnance Department, containing the information required.

Very respectfully, I am, sir, your most obedient servant,

J. C. CALHOUN.

Hon. WM. EUSTIS, *Chairman of Military Committee, H. R.*

SIR: ORDNANCE OFFICE, *January* —, 1822.

In compliance with your reference of the call of the Military Committee upon the War Department, dated 21st December, 1821, I have the honor to submit the following statement in reply thereto, embracing such information on the several points of inquiry as this office has the means of affording.

	Barrels gunpowder.
There have been received from Dupont de Nemours & Co. since 7th February, 1821, -	687
Total received from said company, - - - - -	1,515
Remain to be received, - - - - -	2,014
From Daniel Bussard, since 7th February, 1821, - - -	163
Total received from him, - - - - -	545
Remain to be received, - - - - -	445

Also, fifty barrels reported by Daniel Bussard as ready for inspection and proof.

The returns have been regular, and there is every reason to believe that they will continue so until completed.

Interest has never been charged by the War Department on advances made on contracts. The advances have been viewed as part of the consideration, and the contract, made upon the best terms practicable, taking them into account and the ordinary rules as to advances; were deemed applicable to the case of Daniel Bussard; and, considering the original loan to Stull & Williams to be in danger, both on account of the insolvency of the principals, and the doubt as to the responsibility of Bussard as security, (as was made to appear in the report of Colonel Wadsworth, of 28th February, 1820, to which the committee is respectfully referred,) were the best that could be attained. And although I had no agency therein, (not acting at that time in the department,) I have always been of the opinion that the arrangement with Bussard was the best to secure the Government from loss, and which, there is every reason to believe, will have the desired effect.

No unauthorized loans have been made by the officers of this department, but in the instances previously reported, of Captains Tyler and Rees. The former was dismissed, as reported by Colonel Wadsworth, 13th of August, 1819, before the unauthorized loan by him was known; the latter was in the last stage of a consumption at the time it was ascertained he had made the loan to J. R. Mifflin, and died a few weeks afterwards.

A suit has been instituted against George W. Murray, which, it is expected, will eventuate in the recovery, he being believed to be solvent; whereas the solvency of Captain Tyler was reported doubtful.

For similar reasons no suit was instituted against the estate of Captain Rees, there being very little doubt of its insolvency; but there is every probability of recovery from J. R. Mifflin, against whom a suit has been brought.

The pecuniary situation of all the parties, including their sureties generally, from all the information I can obtain, has not materially varied since my report of the 6th of January, 1821, herewith enclosed; and, in all cases of default, on the part of the contractors, the necessary documents have been regularly transmitted to the proper officer of the Treasury, as already stated in my report of the 9th of February, 1820, to which the committee ase respectfully referred.

The enclosed letter from the Fifth Auditor of the Treasury will also show the present state of the cases in question.

No other loans but those previously reported are known to this department, unless the inquiry extends to transactions between the different branches of the General Government; those frequently occurred during the late war, and have, in a few instances, where public emergency required, taken place since that period.

Understanding that doubts are entertained how far this department acted under the authority and direction of the Executive in the loans which were made, and as I was principally on duty at the time, I deem it proper to give a brief view of the whole transaction.

Shortly after the termination of the late war, a large quantity of damaged and inferior gunpowder, and other military stores, remained on hand, liable to further injury; while, and at the same time, most of the public magazines and storehouses required repairs.

Mr. Dallas, then acting Secretary of War, issued a general order, of which the enclosed is a copy, to make sale of all damaged or useless military stores; gunpowder constituting one of the principal articles embraced in the order.

Finding the market so stocked, from the large quantity previously offered by the War and Navy Departments, and their depression as to the prices usually current, (occasioned by the general peace,) that not more than six dollars per barrel could be obtained, this department refrained from ordering a disposal of its stock of the article, at so great a reduction from its original cost.

In this stage of the case under discussion, application was made by Mr. Dupont de Nemours, one of the principal manufacturers of gunpowder in the United States, to the President, for a loan of that article, upon the condition of his giving bonds and good security for returning an equal quantity of the same of the first quality. He was referred to the then acting Secretary of War, Mr. George Graham, and by whom my opinion was required as to the expediency of the exchange. Believing, for the reasons already assigned, that the powder should not be retained, and having also ascertained that it could not, from the causes already noticed, be advantageously sold, I gave it as my opinion that it was the best disposition that could be made; it being considered, in point of fact, as tantamount to a sale, but upon terms much more highly advantageous to the Government than a cash sale. I consequently received directions from Mr. Graham to make arrangements with Messrs. Dupont de Nemours & Co., and subsequently with Mr. Baudry; the contracts, stipulating a return from them of gunpowder of the highest and best quality, (copies of which accompanied my reports to the "select committee,") were guarantied by such good and sufficient securities as were certified in the usual manner by the district attorneys and respectable private individuals, to whom reference in such cases is usually made. And it is believed that, had it not been for the great difficulties which shortly after ensued in the commercial part of the community, no loss would have accrued in the returns of the powder loaned.

One loan only of lead was made through this department, for the reasons which were assigned in my report of the 9th of February, 1821, and under the same authority.

Whatever may be the eventual loss upon any one particular loan, it is manifest that the United States are already gainers, and that the whole transactions must ultimately prove highly advantageous to them; and, as elucidating this view of them, I would beg permission to refer the committee to my report of the 6th of January, 1821; in addition to which I annex a statement, exhibiting, from the present returns on the loans, the gain accrued at the present date.

The United States have received from Dupont de Nemours & Co., and Daniel Bussard, two of the parties to whom loans were made, a quantity of the best gunpowder, exceeding in value the whole amount loaned by Government through this department, including that to Mr. Baudry, and the unauthorized loan to J. R. Mifflin.

	Barrels.	
Total amount of loans of inferior gunpowder - - -	4,979	
Which, if sold, would not have produced more than $6 per barrel, equal to -	-	$29,874
Total amount of the best quality, proof, of gunpowder returned to this date -	2,060	
Which, if sold at the lowest current prices, would produce $16 per barrel, equal to	-	32,960
Exhibiting a profit to the United States, in the present state of the returns, of -	-	$3,086

And I am still induced to believe that the eventual profit to the United States will not fall short of the amount estimated in my report of the 6th of January, 1821, which, if realized, will give a gain to the Government of $74,000 by the transactions.

I am, sir, very respectfully, your most obedient servant,

G. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. J. C. CALHOUN, *Department of War.*

SIR: WASHINGTON, *February* 9, 1820.

In reply to your inquiries of the 8th instant, on the subject of United States' loans of lead and gunpowder, I shall, in compliance with your suggestions, confine myself to a statement of the reasons which influenced, at the time, the War Department to authorize the transaction.

The loan of lead was made to George W. Murray, the proprietor of a white lead manufactory in New York, at the intercession of Captain Tyler, late of the ordnance, and upon the ground that it would have a tendency to reduce the price of white lead from one to two dollars per hundredweight. At this time, also, a quantity of white lead was required for the public use, and for which the most extravagant price was demanded; and a considerable supply of lead was then in the public stores, and no immediate demand expected. The loan was considered as aiding the public interest, and, at the same time, benefiting an important branch of domestic manufacture.

When the loans of gunpowder were made to Dupont and Baudry, the public magazines were filled with gunpowder; a part of which was damaged, or of an inferior quality, and the whole subject to constant deterioration, from the imperfect state of the buildings. It had also become necessary, in many cases, to remove the gunpowder, not only for its preservation, but also for the repairs of the magazines. At this period, Messrs. Dupont and Baudry proposed, separately, to take from the War Department gunpowder of an inferior quality, and return for the same,

at specified times, an equal quantity of proof or standard gunpowder of the first quality. These proposals, so promising to the interest and convenience of the United States, were accepted by Mr. George Graham, acting Secretary of War, and the loans were accordingly made. And it may not be improper further to remark, that an additional motive for acceding to these loans was, that of aiding a domestic manufacture of great national importance.

Some doubts, I understand, are now entertained of the entire solvency of one or more of the parties. Upon this point I have only to observe, that, at the time the loans were made, particular instructions were transmitted to the officers charged with the delivery of the gunpowder, directing them to obtain the most unexceptionable security to double the amount of the current value of the article, and, in every case, to advise with the district attorney of the United States, or other public officers resident, upon the credit and ability of the persons who might be presented as sureties.

Respectfully, I remain, sir, your most obedient and humble servant,

GEORGE BOMFORD, *Lieut. Col. of Ordnance.*

Col. D. WADSWORTH, *of the Ordnance.*

SIR: ORDNANCE DEPARTMENT, *December* 14, 1820.

In answer to the inquiries made by the committee of the House of Representatives, on the 10th instant, respecting the loans of powder and lead, I beg leave, in obedience to your orders, respectfully to state:

1st. That the application for the loan of lead to George W. Murray was not made by Captain Tyler, but by Mr. Murray, personally, as will appear from a copy of a letter to Captain Tyler, herewith transmitted, bearing date the 25th February, 1815; from an extract of a second letter to him, of the 6th March following; also, from Mr. Murray's letter of the 25th September, same year, soliciting an extension of the time for returning the lead; and from my reply thereto, addressed to Captain Tyler, dated 9th October, 1815; all of which are contained in the paper marked A.

2d. That forty-two thousand four hundred pounds of powder have been returned by Messrs. Dupont & Co. since 12th of February last.

3d. That a copy of the receipt and bond given by Mr. Baudry is, as requested, herewith furnished, in the paper marked B; that no part of said loan has been returned; and that the original receipt and bond of surety were placed in the hands of the Treasury Department, on the 5th January last, in order that the same might be proceeded on for the recovery of the property.

4th. That one hundred and eighty-seven barrels of powder, weighing eighteen thousand seven hundred pounds, have been received from Mr. Daniel Bussard, since the 12th of February last, on account of the original loan to Stull & Williams.

I have the honor to be, sir, very respectfully, your obedient servant,

GEORGE BOMFORD, *Lieut. Col. of Ordnance.*

The Hon. J. C. CALHOUN.

SIR: ORDNANCE DEPARTMENT, *January* 17, 1821.

In answer to the call of the committee for information respecting the delivery of three hundred and fifty barrels of gunpowder, from the depot on the Schuylkill, by Captain J. H. Rees, to John R. Mifflin, of Philadelphia, I beg leave to represent to you that the books of this office, and the correspondence with Captain Rees, have been examined, and no record or authority discovered to warrant the transaction; and that this department remained wholly ignorant of it, until communicated this day by Lieutenant Thomas, of the ordnance.

A letter has, in consequence, been addressed to Captain Rees, calling for prompt explanation, preparatory to such military investigation as his case, and that of the parties previously acquainted with the transaction, may require. It is proper, however, to remark, that the conduct of Captain Rees, in whom this department formerly had the highest confidence, for the last eighteen months has been such, that the most rigorous measures would have been pursued, and were only suspended, but from his low and enfeebled state of health.

With regard to the second inquiry of the committee, I can only observe, that in very few instances has more than verbal authority been required, in consequence of the ordnance having been considered as a branch of the War Department, (with such daily, and almost hourly, communication was held,) and subject to obey the orders, whether written or verbal, emanating from that Department, which, at the time alluded to by the committee, was directed by Mr. George Graham; and further, that no contract or agreement has been, at any time, entered into by this department, within my knowledge, without the sanction of such authority.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. of Ordnance.*

The Hon. J. C. CALHOUN.

SIR: ORDNANCE DEPARTMENT, *January* 6, 1821.

In obedience to your directions, to present to you, as an answer to the inquiries of the Committee of the House of Representatives of the 1st instant, "a copy of the report made to the War Department, by the colonel of ordnance, on the 18th day of July, 1818, detailing the loans of munitions which had been made prior to that period," I have the honor to transmit, herewith, a transcript of the document required.

With respect to the "copy of the first notice given the Ordnance Department of the loan of twenty-eight tons of lead, made to George W. Murray, on the 25th October, 1815; and, also, a copy of the correspondence in reference to that transaction, and what order the Ordnance Department took thereon, I beg leave to state, that the loan having been unauthorized by this department, the fact remained unknown until the appointment of an officer to supersede Captain Tyler (who was dismissed from the service) in the command at New York.

That officer, in November, 1819, stated his having found, among Captain Tyler's papers, two receipts for lead loaned to Mr. Murray; which circumstance first caused the discovery of the second loan, as will appear from copies of the correspondence which took place on the subject, transmitted in the paper marked A.

The further correspondence relative to the recovery of the whole proving ineffectual, the business (of recovery) was placed in the hands of the First Comptroller of the Treasury.

As the circumstances attending the loans of the munitions alluded to have materially varied since the report of the colonel of ordnance of July, 1818, the justice due to those who have manifested a desire to comply honorably with their engagements to this department, by performing them to the extent hereinafter stated, would require that a representation of those circumstances should accompany that document; and I therefore feel it a duty to lay them before you, and also to submit a statement of the ulterior advantages to the United States, growing out of

those loans or exchanges, which, I trust, it will be deemed but equitable to have brought into view in additional justification of the original motives in making them.

And, first, in regard to Messrs. Dupont de Nemours & Co.: it is but doing common justice to those gentlemen to observe, that thus far they have fully and fairly complied with their engagement; the powder which they have returned being of a very superior quality, and the deliveries made as frequently as the interests of the Government required; and, until the perfection of an improvement in the means of preserving powder, which has for some time occupied my attention, be completed, it is not desirable to receive it in greater quantities than can be done consistently with that object. It may be proper to add, that every repeated inquiry as to the responsibility of themselves and their sureties has proved satisfactory.

With respect to Messrs. Stull & Williams, it will appear from the subsequent report of the colonel of ordnance of February, 1819, that the deficit anticipated by him was avoided by the new engagement entered into with one of their sureties, Daniel Bussard; that four hundred barrels of powder have been returned on the original loan of six hundred; and that Mr. Bussard's engagement for delivering the remainder is secured by landed estate, assigned over to the United States, in trust for that object.

In relation to Mr. Baudry, it may also be proper to observe that this department has been given to understand that he is doing very good business at the Havana, and that measures may be taken to ensure the recovery.

It may be added, also, that Mr. Murray has offered to return the amount of the first (authorized) loan of lead; but as the measures for recovering the whole had been previously referred to the First Comptroller of the Treasury, the decision on his proposal has been left to that Department; all of which will appear in the paper annexed hereto, marked B.

To revert now to the original motives in making the principal loans which have become the subject of discussion, I beg leave to repeat in substance what was stated in my communication of the 9th February ultimo. The public magazines at the time were filled with gunpowder, the greater part of which was damaged, and much of it of an inferior quality, and the whole subject to constant deterioration, from the imperfect state of the buildings; rendering it necessary, in many instances, to remove it, not only for its preservation, but also for the repairs of the magazines, to other places of depot, until those could be effected, and new magazines be erected: a work of time and considerable expense.

At this period, the proposals were made to take from the United States powder of an inferior quality, and to return for the same an equal quantity of the first quality and of standard proof.

Conditions so favorable, in that view alone, to the convenience and interest of the United States, were accepted, and the deliveries accordingly made; an additional motive occurring in the belief that it was aiding a domestic manufacture of great national importance.

But still greater advantages may be estimated as the actual result of those measures, and to which I beg leave now to request your attention.

After the termination of the late war, very large quantities of gunpowder were remaining in depot of an inferior quality, and subjected to the deteriorating circumstances already stated; and it is well known that sales to a very considerable amount were in consequence made in one of our principal cities, at six dollars per barrel, and considered a transaction highly favorable to Government.

In this state of things, and under the consideration that not more than six dollars per barrel could be obtained for powder of an inferior quality, or damaged, the advantage of an exchange such as could be obtained for powder of that description, belonging to the United States, and as was finally effected, appeared too great and too evident to be rejected.

The great and evident gain resulting to the United States, in thus replenishing or stocking our magazines, at a late period, with good powder for that of an inferior quality, is exhibited upon the following grounds or calculations:

Loan to Stull & Williams, - - - - - -	60,000 lbs.	
Dupont de Nemours & Co., - - - - - -	352,902	
P. Baudry, - - - - - -	50,000	
	462,902 lbs.	
At the rate at which powder of an inferior quality, or damaged, was sold after the late war, the above would have amounted (say at six cents) to - - - -		$27,774 12
At the present price of powder of the first quality, such as was stipulated to be returned for the loan, (say twenty-two cents,) it would amount to - - - -		101,838 44
Probable gain to the United States, - - - -		$74,064 32
Messrs. Dupont & Co. have returned eighty-two thousand eight hundred pounds, which, at the present price or value, would amount to - - - -		$18,216 00
If the same amount had been sold at six cents, it would have produced - -		4,986 00
Gain, - - - - - -		$13,230 00
Mr. Baudry has to return fifty thousand pounds, which, admitting it to be irrecoverable, would, at six cents, its original supposed value, be a loss of - - - -		3,000 00
Gain from Mr. Dupont de Nemours' delivery, - - -		$10,230 00

The loss on Mr. Baudry's loan, if ultimately sustained, being thus more than covered.

And the anticipation of a loss of $100,000, alluded to in the letter of 18th July, 1818, was probably caused by the fact not having been adverted to, that inferior or damaged powder did not command more than six dollars per barrel; at which rate the loss, if sustained, could only have amounted to $21,174, whereas the gain may be safely calculated at $56,464 upon that particular loan itself.

Had further loans or exchanges been made of the remaining inferior powder, an additional gain, to a large amount, would, in all probability, have resulted from the transaction; rendered certain, in fact, from the circumstance that the powder which had not been so exchanged, and which remains on hand, is not worth the one-half (or as two barrels to one) compared with that received since in exchange.

I have the honor to be, sir, very respectfully, your obedient servant,

GEORGE BOMFORD, *Lieut. Col. of Ordnance.*

The Hon. J. C. CALHOUN.

GENERAL ORDER.

DEPARTMENT OF WAR, *July* 26, 1815.

It having been deemed expedient to ascertain, with precision, as well the quantity of public stores now on hand at the several depots, as that portion of them which, from their nature, being subject to waste or decay, or which may no longer be considered as necessary for the public use, it would be advisable to dispose of, I have, therefore, to request that you will detail an officer of the Ordnance Department, who will, in conjunction with such person as shall be authorized by the commissary general of purchases to act with him at the respective depots, proceed to take an accurate inventory of all the public stores in charge of the several military storekeepers, and which have been deposited there by the commissary general of purchases, or his deputies, within your military department; designating such of them as the public interest may, in their opinion, require to be sold. This inventory will be returned to the office of the superintendent general, and they will forthwith proceed, jointly, to sell, at public sale, those articles which they may designate as proper to be sold, on the following terms: the price must be the fair market price of the article, according to its quality and condition; and payment must be either in approved bank notes, or in the notes of individuals, with approved endorsers. A credit of sixty or ninety days may be allowed.

The money or notes, the proceeds of the sale, must be deposited in such convenient bank as the public money is usually deposited in, to the credit of Thomas T. Tucker, Treasurer of the United States, as agent for the War Department; duplicates or copies of which must be returned to this Department. Care will be taken to designate the several heads of appropriation that ought to be credited, with the amount of articles sold. A special report of each sale will be made to this office, specifying the time, place, price, quantity, and name of the purchasers.

Should the officer detailed by you, and the person nominated by the commissary general of purchases, differ as to the propriety of selling any particular article, they will make a special report on the case to this Department, and transmit a copy of their report to the commissary general of purchases.

The officer detailed by you for this service will receive an extra allowance of one dollar a day when actually engaged in the performance of it, provided he is not already in the receipt of such extra allowance.

You will perceive the necessity of selecting an officer for this service whose judgment and integrity can be entirely confided in; and your selections will, therefore, not be confined to the Ordnance Department, but be made from the line, should you, in any case, deem it advisable. Your prompt attention to this business is particularly requested.

A. J. DALLAS, *Acting Secretary of War.*

SIR: TREASURY DEPARTMENT, FIFTH AUDITOR'S OFFICE, *May* 1, 1822.

I have had the honor to receive your letter of yesterday's date.

The Comptroller, on the receipt of the account of Peter Baudry for powder loaned him, having understood that Baudry had previously left the United States, and that his sureties had become bankrupt, declined ordering suit in the case; and, under these circumstances, the papers were transferred to me on the 1st of July last. Knowing of no means by which payment of the debt could be obtained, no step was taken with that view by me until the 27th of March last, when I was informed by Col. Bomford, of the Ordnance Department, that a considerable property of Mr. Baudry was advertised for sale in a Wilmington newspaper, by the sheriff of New Castle county. Upon the receipt of this information, I lost no time in instructing the attorney for the district of Delaware to claim the priority of payment, to which I considered the United States entitled. A copy of my letter to him on the subject, of the 27th March, and of his answer of the 25th April, which I have the honor to enclose, will inform the committee of the situation of the case at this time.

With respect to the debt of Israel Wheelan, I know nothing; no account, as appears from the records of this office, having ever been transmitted for suit.

With great respect, I have the honor to be, sir, your obedient servant,

S. PLEASONTON, *Agent of the Treasury.*

The Honorable JOHN COCKE.

SIR: TREASURY DEPARTMENT, FIFTH AUDITOR'S OFFICE, *March* 27, 1822.

I have just been informed that a large property of Peter Baudry is advertised for sale on Saturday next, by the sheriff of New Castle county, and I lose no time to request your immediate attention in claiming for the United States the priority to which they are entitled under the 5th section of the act of the 3d March, 1797, vol. 2, page 595. The transcript of the account, duly authenticated, establishing the claim against Baudry, is herewith enclosed, as well as the bond given by him and his sureties for discharging it.

You will be pleased to inform me of the steps you may take, and of the prospect there may be of a recovery of the debt, in whole or in part, as soon as you can conveniently do it.

I am, &c.,

S. PLEASONTON, *Agent of the Treasury.*

GEORGE READ, Esq., *United States' Attorney, New Castle, Delaware.*

Extract of a letter from George Read, Jun., Attorney of the United States for the district of Delaware, dated 25th April, 1822.

"In the case of Baudry, (indebted for powder,) I immediately, upon the receipt of your letter on the subject, gave the sheriff written notice of the United States' claim to priority. The sale was postponed, and is now again advertised for the 12th of May. I shall take every proper measure for insisting on priority; for I think, unless this claim is successful, the debt will be lost, there being liens, older in point of time, enough to sweep the property. I question, however, success in bringing the case within the decisions upon the act of the 3d of March, 1797, to which you have referred. Baudry is not legally insolvent, nor has he made any legal assignment of his property; and, although he is an *absent* debtor, no *attachment* has issued against his estate and effects, according to the apparent meaning of that proviso.

"The case, however, shall have every attention."

SIR: TREASURY DEPARTMENT, FIFTH AUDITOR'S OFFICE, *January* 25, 1822.

In answer to the inquiries contained in your letter of the 23d instant, I have to inform you, that it appears, by the records of this office, that suit was directed to be instituted against George W. Murray, in the southern district of New York, on the 19th July, 1820, for the sum of $11,279 12, being the value of certain lead loaned him from the United States' arsenal, and that the cause was marked for trial at the last November term, but continued by the court, on the affidavit of the defendant that a material witness on his part was absent.

In the case of John R. Mifflin, on account of gunpowder loaned him, suit was ordered for $12,250, in the State of Alabama, on the 2d of June last; since which time no return has been received relating to the case from the district attorney there.

With respect to Peter Baudry and his surety, for a loan of gunpowder also, to the amount of $17,500, no suit has been ordered, because it was ascertained, on inquiry, that they had left the country, and were residing at the Havana, and had left no property which was liable for this debt.

I have the honor to be, sir, respectfully, your obedient servant,

S. PLEASONTON, *Agent of the Treasury.*

Lieut. Col. GEORGE BOMFORD.

[NOTE.—See additional report, No. 239.]

17th CONGRESS.] No. 234. [1st SESSION.

CONTRACT FOR STONE AT THE RIP RAPS AND OLD POINT COMFORT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MAY 7, 1822.

Mr. BUTLER made the following report:

The committee appointed by a resolution of the House of Representatives, of the 22d of April, 1822, to "inquire into the contract between the War Department of the United States and Elijah Mix, of the 25th of July, 1818, and report whether the same was made in pursuance of law, and whether the said Mix has performed his covenant, and such other facts as they may deem proper relative to said contract, and that the said committee have leave to send for persons and papers," respectfully report:

That, as soon as your committee received their commission, they commenced an examination of the contract formed with Elijah Mix, and addressed several inquiries to the Secretary of War, and have received from the War Department, on and since the 30th of April, several communications, accompanied with various documents and papers, which were deemed by the chief engineer pertinent to the inquiry; but time will not permit the committee to detail all the facts and circumstances which are contained in these papers, and such other documents and testimony as the committee have obtained.

In reply to the first inquiry of the committee, viz: Whether any advertisement for proposals had been published? the engineer reports, that he believes there had been no advertisement; but he says "The practice of advertising, in all cases which have existed since the complete organization of this department, does not appear to have been the practice in the engineer service previous to the establishment of the Engineer Department in this place, in April, 1818, under similar circumstances to those under which this contract was formed, to wit, where the frequency of intercourse with all the points from which proposals were likely to be offered would admit of direct notification being communicated to them."

Hence it appears that it was not deemed necessary by the engineer to invite proposals for the construction of the works at the Rip Raps and Point Comfort by public advertisement, and that he considered himself justified in forming the contract with Mr. Mix without public notice, by the peculiar circumstances of the case, and the practice which he says had prevailed previous to April, 1818, when the Engineer Department was established in this city.

But it appears, by the same report, that advertisements for proposals for the construction of the fortifications on the Gulf of Mexico were published throughout the country for nearly three months before the contracts were formed. And it appears, by documents communicated to the House of Representatives in 1820, that the contracts for these fortresses, viz: at Mobile Point, Dauphin Island, and Lake Pontchartrain, were formed by the same engineer; the first on the 13th of May, the second on the 17th of July, and the other on the 20th of July, 1818, and previous to the formation of the contract with Mix, on the 25th of July, 1818.

As public notice has been given for proposals for every contract which has been formed by the War Department, since the organization of the Engineer Department, in April, 1818, except that with Mr. Mix, and inasmuch as that contract was for the supply of a large quantity of stone, viz: 150,000 perches, to be taken from the bank of the York river, in Virginia, about forty miles from the place of deposite, and delivered, at the rate of not less than 3,000 perches per month, and for which the Government was obligated to pay the sum of $450,000, your committee believe that no sufficient reason has been, or can be, assigned for this *singular* neglect of duty in the officers of Government. But the chief engineer contends that the Government has sustained no loss in the omission to invite proposals by public advertisement. He states that "all the precautions were taken which were requisite to guard the interests of the Government," and states that Captain Maurice was despatched to Richmond to ascertain the cost of getting stone on James river, and that Colonel Armistead made an experiment by procuring stone to be quarried and freighted for the same purpose. And he further reports that application was made to Mr. Leckie, Mr. Pumphrey, and Mr. Baker, stone quarriers, in order to ascertain the expense of getting stone, and delivering it at the Rip Raps and Point Comfort; and also refers to proposals which were made by Mr. Brooks, on James river, Virginia, and Mr. Denison, near the Susquehannah river, before the contract was formed with Mr. Mix, and to two other proposals which were made after the contract was entered into. By such inquiries and proposals, the engineer believes it was fully ascertained that the stone could not be obtained at a less rate than $3 50 per perch. In confirmation of this opinion he refers to the certificates and proposals which accompany his report, showing that $3 50 per perch was the lowest sum

for which the stone could have been procured, except by the contract which was made with Mr. Mix. The committee have examined the proposals, and find those of Messrs. Crandall & McDugall, and one other, were, for the "first rate building stone," at the rate of $3 50 per perch; and the committee are informed that such stone will cost from 35 to 50 cents per perch more than the rough granite, (such as Mix has generally furnished,) besides the additional trouble and cost of loading and unloading it. It also appears, by a letter from Mr. Allason Crandall to the engineer, dated May 4th, 1818, that he had procured some stone for the Government, and delivered the same at Point Comfort or the Rip Raps, at $3 per perch, and that he was desirous of making a contract; but the engineer informed him that his terms were too high, and that he must cease his operation.

By the terms of the contract, Mr. Mix was obliged to procure the stone from the banks of the York river, in Virginia; and the committee are informed by Mr. Bassett and Mr. New, members of the House of Representatives, that there is a large body of newly formed limestone near Yorktown, on that river, (from which place it was expected the stone would have been taken,) about forty miles from the Rip Raps; and, as the freight of stone is the greatest part of the expense, it is obvious that the contract, in its terms, was very favorable to Mr. Mix, if the stone could be easily procured at that point, although the price given might not be considered at that time very high for stone procured at Georgetown, on the Potomac. The engineer informs the committee that only a few cargoes of stone were delivered from York river, it having been ascertained that it would not answer the purpose intended; and states that Mr. Mix was required to obtain stone elsewhere, of a different description, or to surrender the contract. Mr. Mix protested against this decision of the engineer, as he had made preparations to procure the stone on that river, and could not obtain it elsewhere so cheap. But he at length complied; and the engineer says that, notwithstanding he sustained a loss by the change, he has been enabled to carry on the contract with profit to himself.

Notwithstanding it seems to have been the opinion of Mr. Goldsborough, whose deposition has been taken, and the opinion of Commodore Rodgers, and others who have been consulted, and those who made proposals, the committee were not satisfied that the contract formed with Mr. Mix was the most advantageous one which might have been made; and they took the deposition of Mr. Perley, who was recommended to the chief engineer by Colonel Bomford as a very suitable person for such an undertaking, and also the deposition of Mr. Edgar Patterson, of Georgetown, who owns a considerable part of the quarries on the Potomac, and Mr. John W. Baker, who has been a stone quarrier for fifteen years. By the deposition of Mr. Perley, it appears he enclosed proposals to the engineer to furnish building or flint stone at the Rip Raps for $2 50 per perch, but the engineer says he never received them; and a deposition of Captain Smith, voluntarily made, has been transmitted, among other papers, to the committee, tending to impair the testimony of Mr. Perley; but the committee are informed, not only by Colonel Bomford, but by others who know Mr. Perley, that he is a man of good character.

Mr. Patterson testifies that stone might have been freighted, in 1818, from the quarries on the Potomac, for $1 50 per perch, and that he would take such a contract now for $100,000 less than the sum agreed upon with Mix; and as Mr. Baker testifies that he quarried and sold stone to Mr. Mix in 1818 for one dollar; in 1819, part for 85, and some for 75 cents; and, in 1820, for 68 cents per perch, it would seem, from their testimony, that a contract might have been formed in 1818 for $2 50 per perch, if public notice had been given for proposals. Though the engineer believes that the intention of the Government to form the contract was well known to all whose interest it could be to undertake it, yet it appears, by the deposition of Mr. Patterson and the statement of General Mason, of Georgetown, who own most of the stone quarries on the tide-waters of the Potomac, where the stone has been procured by Mix, that they did not know it till after the contract was formed with Mr. Mix. Why application was not made to these gentlemen, as well as despatching Captain Maurice to Richmond to ascertain the cost of getting the stone, or to contract for the delivery of so large a quantity as 150,000 perches, the committee have not been informed. Neither does it appear, by the proposals, or any other evidence submitted to the committee, that either of the persons who made proposals, either before or after the contract was formed with Mix, knew what quantity or quality of stone was required by the Government, nor the period in which any given quantity should be furnished. Had the Government published advertisements several months for proposals to deliver 150,000 perches of stone at the Rip Raps, at the rate of 3,000 perches per month, describing the quality, it would have excited a general inquiry and competition among the citizens upon the several rivers which empty into the Chesapeake bay, and probably a more advantageous contract might have been formed. At least, your committee cannot discover any good cause for dispensing with the law which requires "that all purchases, contracts for supplies or services, which are, or may, according to law, be made by or under the direction of either the Secretary of the Treasury, the Secretary of War, or the Secretary of the Navy, shall be made either by open purchase, or by previously advertising for proposals respecting the same."

To the next inquiry of the committee, viz: Whether Mr. Mix has performed his covenants? the engineer replies, in his letter to the Secretary of War, dated 30th April, 1822, "that the contract, to this period, has been executed faithfully, and to the satisfaction of the department; and that the quantity delivered has, in every instance, been equal to the portion of appropriation allotted to the contract." By the terms of the contract, Mix was bound to deliver, from the bank of York river, in Virginia, at least 3,000 perches of stone per month, according to a sample lodged in the Engineer Department, commencing on the 15th September, 1818; and the Government was bound to pay $3 for every perch of stone delivered at the Rip Raps or Point Comfort; and, by a statement of the Third Auditor of the Treasury Department, it appears that, on the 8th of August, 1818, $10,000 was advanced to the said Mix, and that, in the month of November, 1818, he delivered 2,187$\frac{3}{4}$ perches of stone; that, on the 30th March last, he had delivered 87,964$\frac{3}{4}$ and $\frac{19}{25}$ perches; and that, on that day, $263,895 45 had been paid to him and others under the contract. It also appears by the Auditor's statement, that, from the 31st December, 1820, to the 31st December, 1821, there had been delivered, under said contract, only about 9,000 perches of stone, and that, during that period, nearly $28,000 had been paid to Mix and others; and it appears, by a letter from the chief engineer, that the sum of $40,806 was allotted to the contract for that year, and that not more than 9,000 perches of stone were delivered by Mix, and not over $28,000 paid him in the same year; but, by the contract, Mix was obligated to deliver 36,000 perches of stone annually; and, on the 30th March last, there were due 127,500 perches, and only 87,964 perches had been delivered on that day, leaving a balance due, at that time, of 39,536 perches; and the residue of the stone yet to be delivered under said contract is 62,036 perches, which, at $3 per perch, amounts to $186,108; and it appears, by the depositions of Mr. Patterson and Mr. Baker, the stone might now be furnished at about $1 75 per perch, and the sum of $77,547 saved, if the Government is absolved from its obligation to the contractor by the non-performance of his covenants. Not only $10,000 was advanced to Mix before he commenced the work, but he has been paid as fast as he delivered the stone, though the Government was not bound by its stipulation in the contract to do it; and it cannot be said that the failure of Mix to perform his covenant has been occasioned by any omission or refusal on the part of Government to pay or advance more money.

A bond executed on the 15th of June, A. D. 1821, by Messrs. Davidson and Goldsborough, to the United States, for the performance of one-fourth part of the contract made with the said Mix, shows that Christopher

Vandeventer, chief clerk in the War Department, bought of the said Mix, on the 24th of April, 1819, one-half of said contract; and that, on the 20th of January, 1820, (about the time a former committee was appointed to inquire into the same,) he sold out one-half of his interest in said contract to Samuel Cooper, his father-in-law, and that the said Cooper sold the same on the 1st of July, 1820, to the firm of Goldsborough & Co. And Major Vandeventer also informs the committee that he bought one-half of the contract of Mr. Mix some time after it was formed, and became liable to pay him (Mix) one-half of the debts against the contract, which were then about $18,000; that his principal inducement to participate in the contract was ultimately to secure himself against any loss which he might sustain by reason of his having lent his name to enable Mix to raise money to execute his contract. But he says he did not influence the Engineer Department to give the contract to Mr. Mix, nor did he recommend him. That he afterwards reconveyed to Mix one-half of the interest which he before bought of Mix, and sold the remainder of his interests in it to Mr. Cooper, of New York; that when the accounts growing out of the subject shall be adjusted, he may eventually realize from three to four thousand dollars; and Mr. Vandeventer further states that, at the time he became interested, he inquired of the Secretary of War whether it would be improper for him to invest money in the contract, and that the Secretary stated that under the law he did not think it improper, but it might expose him to improper insinuations.

By the report of the present engineer, and the deposition of General Swift, transmitted among other papers from the War Department to the committee, it appears that no other person but Mr. Mix was known to that Department in the formation of the contract; but it is said, and so understood by Mr. Vandeventer, that a Mr. Jennings, of Norfolk, took one-fourth of the contract; but the committee have not been able to ascertain whether there are any other persons now concerned in the contract with Mix besides Messrs. Goldsborough & Co. and Mr. Jennings, nor have they been informed of the precise terms of the agreement between Mr. Mix and Major Vandeventer, or of the consideration of the transfer from Vandeventer to his father-in-law, Samuel Cooper. It is, however, manifest, from the statement of Mr. Vandeventer, that he is not wholly divested of all interest or concern in the contract, or its performance, as he says the accounts are not yet adjusted, so as to enable him to determine precisely what his gain may be. As Mr. Vandeventer and Mr. Mix married daughters of the said Samuel Cooper, who is surety with Mr. James Oakley, of the city of New York, in the bond which Mr. Mix gave to the United States for the fulfilment of his contract, and as these gentlemen were each once interested in said contract, the committee did suspect that the contract was entered into for their mutual advantage; but General Swift believes, and Mr. Vandeventer declares, that he had no interest in it when it was formed.

The committee have obtained the depositions of Mr. Hone and Mr. Van Hook, respectable gentlemen of the city of New York, which show that Mr. Mix, who formerly resided in that city, has not sustained a good character, and that he is not entitled to the full confidence of his fellow-citizens, nor of the Government; and, from the testimony of Mr. Van Hook, and from other information derived from a correct source, it also appears that he became a bankrupt in 1817, and took advantage of the insolvent laws of the State of New York. General Swift, however, testifies that "he had no knowledge or intimation of any fact or report which impeached his (Mix's) character at the time of forming the contract, and believed him well qualified to fulfil his agreement." Mr. Vandeventer also declares that though he married into the same family with Mix, and became acquainted with him in 1815, he did not know of any charges against the character of Mix, but he says he knew that before he formed the contract he had become insolvent. It is not stated by the engineer that Mix was recommended by any person, nor whether recommendations are generally required in the War Department in making contracts; but General Swift testifies that the security furnished by the bond of Mr. Mix, with a penalty of $20,000, was sufficient for the faithful execution of his contract. The character and insolvency of Mr. Mix, which the committee had supposed were known to General Swift and Mr. Vandeventer, induced them (as Vandeventer was present and witnessed the agreement, and afterwards participated in it) to suspect the fairness and justice of the contract. Your committee, however, have not, in all the investigation which they have been able to make, yet discovered any facts which clearly stamp the transaction with a fraudulent character; but they are compelled, from what they have discovered, to express their disapprobation of the conduct of the Engineer Department in forming the contract.

And in this report the committee take the liberty to remark, that they deem it essential to the interest of the nation, that, in making contracts, a very general and public notice should be given, describing particularly the nature of the work to be performed, the quantity and kind of materials of which it is to be composed or formed, and the time in which they are required to be furnished; and, also, that the engineer or agents who are authorized to form contracts in behalf of the Government should possess a particular knowledge of the various parts of the works which are to be constructed, and the practicability and cost of procuring the articles which are required. Besides, the same regard to the interest and prosperity of the country should govern its agents which actuates every prudent individual in his own private and lawful undertakings. Contracts of a very large amount ought not to be formed hastily, nor with men who have no responsibility or integrity, although security may be given. In all contracts, whether private or public, a strict and punctual performance depends in some degree upon the honesty of the contractor; but, in forming contracts for the Government, more scrutiny and vigilance in this respect seem necessary than among individuals. If the same special confidence is not reposed in a contractor with the Government that is placed in an officer appointed by the Government, yet it will not be said that the character of the person proposing to undertake or accomplish a great national work, at the expense of half a million of dollars, should be wholly disregarded. Under such impressions, and with peculiar concern for the feelings and character of the gentlemen who have been concerned in the transaction, your committee have examined into the contract made with Elijah Mix; and, having given the subject all the attention which the short time allowed them would admit of, and having considered all the communications made to them by the War Department, they have come to the following conclusion, viz: that the contract was not formed in the manner which the law prescribes, and that the said Mix has failed in the performance of his covenants, according to the terms of the agreement; therefore the committee submit the following resolution:

Resolved, That further appropriations, to be expended under the contract made by the Engineer Department with Elijah Mix, ought not to be made.

SIR: APRIL 23, 1822.

I am directed by the committee which was appointed to inquire into the contract between the United States and Elijah Mix, made July 25, 1818, to submit the following questions, and request of you an answer as soon as may be:

Was there any advertisement for proposals to make the contract published? and, if so, when and where?

Was there any surety for Mix, the contractor? if so, you will oblige the committee with a copy of the instrument.

How many perches of stone have been delivered under said contract, and from what place or quarry, and what kind of stone?

In what manner, or how is the quantity delivered ascertained?

Has the contractor (Mix) sold his contract? and, if so, to whom? when? and at what price per perch? if known to the War Department.

Has a new contract been made with the person to whom Mix sold? and, if so, has security been given?

Very respectfully,

To the Hon. J. C. CALHOUN, *Secretary of War.* JOSIAH BUTLER.

SIR: WAR DEPARTMENT, *April* 30, 1822.

In reply to your letter of the 23d instant, I transmit, herewith, a report accompanied with documents of Major General Macomb, chief engineer, which furnishes the information required.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

Hon. JOSIAH BUTLER,
Chairman of committee to investigate the contract of the Engineer Department and E. Mix, H. R.

Report of General Macomb to the Secretary of War.

SIR: ENGINEER DEPARTMENT, *April* 29, 1822.

In obedience to your order, I furnish, herewith, the information requested by the committee appointed by the House of Representatives to investigate the contract between the United States and Mr. Mix, by answers to the inquiries contained in the letter of their honorable chairman, dated the 23d instant.

It is proper, however, to premise that the contract with Mr. Mix was made by General Swift, while at the head of the Engineer Department, long before I was appointed to that station; and that most of the information which I have obtained has been collected, not only from the records of this office, but from other sources, and particularly from the recollection of those who have been attached to the office much longer than myself. It is probable that, if General Swift were here, the report might be made still more complete and satisfactory.

In reply to the first inquiry of the committee, "Was there any advertisement for proposals to make the contract published? and, if so, when and where?" I have to state that, on diligent inquiry, I do not find that there was any advertisement, and it is believed that there was none. The practice of advertising in all cases which has existed since the complete organization of this department does not appear to have been the practice in the engineer service previous to the establishment of the Engineer Department at this place, which was in April, 1818, under circumstances similar to those under which this contract was formed, to wit, where the frequency of intercourse with all the points from which proposals were likely to be offered would admit of direct notifications being communicated to them. It appears that they were resorted to only when it was uncertain from what quarter proposals would be offered, and when it was necessary to invite distant and general competition; and it is probable that necessity was considered to be applicable to the contracts for the construction of the fortifications on the Gulf of Mexico, as advertisements for proposals for them were published throughout the country for nearly three months before they were formed. It appears that this contract was made strictly in conformity to the usual practice at that time, and that all the precautions were taken which were requisite to guard the interests of the Government, and to secure the contract on the most moderate terms. By adverting to the position of the works at Old Point Comfort and the Rip Raps, near the mouth of Chesapeake bay, it must be apparent that the stone necessary for the construction thereof would naturally be supplied from the various rivers which flow into that bay, and that it must be obtained from the James, York, Potomac, or Susquehannah rivers; and such appears to have been the impression of the chief engineer at the time the contract was about to be formed. His attention was directed to all of those points, and the owners of the quarries were informed that the Government was about to form contracts for the supply of the stone that would be required for those works. The engineer superintending the district embracing the Chesapeake, and having special charge of those works, was instructed by General Swift to take measures to ascertain the price at which materials could be obtained for their construction. In pursuance thereof, Captain Maurice, of the corps of engineers, was despatched to Richmond in order to ascertain at what price the stone could be obtained from the quarries on James river; the result of his inquiry was, that the stone to be procured at that point would cost $4 to $4 50 the perch. Application, at the same time, was made to Mr. Baker, stone quarrier at Georgetown, on the Potomac, to know at what price stone could be obtained at that point; the result of which was, that it would be about the same price as that on James river. In addition to these inquiries, Colonel Armistead had actual experiments made, by having the stone quarried and transported under his immediate direction and superintendence; the result of which was, that it could not be delivered at the works for less than $3 50 per perch. His impression is, that the transportation of so large a quantity of stone as the Government required might have raised the rate of freight to $2 50 or $3, and, in that case, the price would have been augmented in the proportion of the difference between those rates and that upon which was founded the estimate of $3 50. He considered the contract with Mr. Mix as being highly advantageous to the Government at the time it was made; (see his certificate herewith accompanying, and marked A.) The certificate of Colonel Armistead is confirmed by that of Captain Maurice, (marked B,) by which it appears that the lowest offer he received would have cost the Government $4 25, viz: $1 50 at Manchester, 75 cents cartage to Rocketts, and $2 for freight thence to Old Point Comfort.

While these inquiries and experiments were conducted by Colonel Armistead, the superintending engineer, General Swift, in order that the most accurate information might be obtained, also employed Mr. Leckie, a stone mason of intelligence and experience, to examine the several quarries with a view to ascertain the lowest rate at which stone of a suitable quality could be obtained; the result of his inquiries was, that it could not be supplied for less than $3 50 per perch. He reported in writing, but his report cannot be found. The result, however, is distinctly recollected by the officers attached to the department who have seen the report. These various inquiries attracted the attention of the owners of quarries at the various points from which the stone would naturally be supplied, and produced a competition not less considerable than if proposals had been invited by advertisement. Bids were accordingly received from the quarriers at James, York, Potomac, and Susquehannah rivers; those from the last being founded upon experiments made by the permission of the Engineer Department, and at the expense of the Government; and although some of these bids were received shortly after the contract was formed, yet it is manifest from them that it was impossible to form the contract upon terms more advantageous to the Government. The proposal of Mr. Brooks, from James river, for stone of the kind required, was $1 25 per perch at the quarry; to which being added the expense of freight to Richmond, portage to Rocketts, and freight to Old Point Comfort,

the rate would be increased to at least $4 50; (see Mr. Brooks's proposal, herewith, marked C.) The proposal from Messrs. McDugall & Crandall, from the quarries on the Susquehannah, was at the rate of $3 50 per perch delivered; (see the proposal, dated the 4th of August, 1818, together with the letter from Mr. Crandall, dated the 4th of May preceding, herewith transmitted and marked D.) By the latter of which it appears that stone obtained from the Susquehannah, in the cheapest manner, and the most convenient for loading, without regard to quality, (by which it is understood to be loose stone, obtained without the expense of quarrying,) would cost $3, the stone being rated at only 50 cents per perch. A proposal was also received from Mr. Denison, upon the Susquehannah, at the rate of $3 50; but it cannot be found. A letter, however, from Commodore Rodgers, recommending Mr. Denison, has been found, and is herewith transmitted. Both of these bids were made after long consideration and actual experiments; made, as before stated, at the expense of the Government, and may be supposed to be as favorable as the rates of freight and labor would justify. From the proposal of Mr. Yeaton, which is at the rate of $4 per perch, and the statement of Mr. Cruttenden, a merchant of respectability and extensively engaged in shipping, and of Mr. Baker and Mr. Pumphrey, stone quarriers, it appears that stone could not have been delivered from the Potomac at that time on terms as favorable as those on which Mr. Mix contracted. They tend also to show that the intention of the Government to form the contract was well known to those whose interest it would be to undertake such a contract. Mr. Cruttenden, after two trips, did not think $2 sufficient for transportation alone, and accordingly abandoned it at that price; (see papers marked E.) The contract with Mr. Mix was formed upon proposals from him for supplying the stone from a quarry on York river, agreeably to two specimens of different qualities which accompanied his proposal; (it is transmitted herewith, and marked F.) General Swift, being under the impression that the best of the specimens was of a suitable quality, and the offer being fifty cents per perch lower than the rate which, by the experiments made both by the Government and individuals, it could, under the most advantageous management be furnished, closed with the proposal, and formed the contract in conformity to it. After the delivery of a few cargoes, doubts arose respecting the suitableness of its quality, which, upon its being more critically examined, terminated in the belief that it would not answer the purpose for which it was intended. Mr. Mix was notified, accordingly, that a further supply of that kind of stone could not be received, which involved the necessity of abandoning the contract altogether, or of supplying stone of a suitable quality from some other point. Mr. Mix protested against the determination of General Swift, on the ground that the contract had been made in relation to that particular kind of stone; that he had made his arrangements by purchasing quarries, and that it could not be delivered from any other point equally cheap; but, finally, rather than lose the expenses he had incurred in preparations, he determined to comply with the decision of the chief engineer. The declension in the price of freight and the expense of quarrying, which subsequently took place, has enabled Mr. Mix, notwithstanding the loss occasioned to him by the refusal of General Swift to receive the York river stone, to carry on the contract with profit to himself. It is, however, confidently believed that, without such declension, the refusal of the chief engineer to receive the York river stone would have involved the contractor in serious consequences, and put it out of his power to comply with his contract, as it appears from facts, which have already been stated, that stone could not have been delivered from any other point for less than $3 50. In fact, the contract, at the time, was considered so advantageous to the Government, that it is understood General Swift was desirous to extend it to the whole quantity required, which was declined by the contractor. It is believed under no other circumstances than those which have been mentioned could the contract have been made for less than $3 50. As the principal item of expense was the freight, which, as the York river quarry was not more than a sixth of the distance from the point of delivery of the quarries on the Potomac and Susquehannah, the difference in the freight in its favor more than compensated for the additional expense of getting out the stone from it. Whether the act of ———, 1809, required that proposals for contracts should be advertised, it would be improper for me to offer an opinion. It is, however, but due to General Swift to state that, on inquiry, it is ascertained that the practice of forming contracts without advertising, which has already been stated as being usual in the engineer service, previously to and at the time of forming this contract, equally extended to every other branch of the Government. It is particularly ascertained to have been the practice in the Ordnance and Quartermaster's Departments, and in the General Land Office attached to the Treasury Department, (as will appear by the statement from Mr. Meigs, transmitted herewith, and marked G.) Even higher example may be quoted for its authority. Among other instances which might be referred to, it is sufficient to cite the contract made in 1815 by the Secretary of War with Captain Thomas Clark, for diking the Pea Patch; and that made by the Ordnance Department, in 1816, under the sanction of the Secretary of War, with Mr. G. Boyd, for supplying ten thousand stands of arms, tools, materials, &c., for the use of the Ordnance Department; for neither of which contracts was there any advertisement. It is believed there are many other instances, and, in fact, that it was the universal practice.

Second inquiry. "Was there any surety for Mix, the contractor? If so, you will oblige the committee with a copy of the instrument."

Answer. Mr. Mix's contract was accompanied by a bond for its faithful execution, in the penal sum of $20,000, with sureties, which were approved and certified to be competent by the recorder of the city of New York. Copies of the contract and bond are herewith transmitted, marked H.

Third inquiry. "How many perches of stone have been delivered under said contract, and from what place or quarry, and what kind of stone?"

Answer. The whole quantity delivered is 87,964¾ perches. It has been delivered from various places, of which however, no account has been kept. The principal deliveries have been from the quarries on the Potomac, near Georgetown. Except the few cargoes delivered from York river, at the commencement of the contract, as has been stated, the stone has been granite.

Fourth inquiry. "In what manner, or how, is the quantity delivered ascertained?"

Answer. At the commencement of the contract, the quantity was ascertained by actual measurement on the deck of the vessel; but, being accompanied with much delay, and some uncertainty, it was changed to marking the depression of the vessels in the water before discharging the cargoes, and then accurately measuring the quantity of stone of which they consisted; the process being occassionally repeated, to test its accuracy. As connected with this point, I furnish herewith (marked I) a copy of the correspondence relating to it, of Colonel Gratiot, the engineer charged with the superintendence of the works, with this department, which will afford more particular information. It is proper to observe, that, with respect to this contract, the perch is estimated at 25 cubic feet, while at the Pea Patch it is estimated at 22 feet, and at some other places, particularly at Niagara and Rouse's Point, as low as 16½ feet.

Fifth inquiry. "Has the contractor (Mix) sold his contract? and, if so, to whom? when? and at what price per perch? if known to the War Department. Has a new contract been made with the person to whom Mix sold? and, if so, has security been given?"

Answer. The whole of the contract, except one-fourth, which has been transferred to Messrs. Howes Goldsborough & Co., of Havre de Grace, with the assent of the department, remains in the name of Mr. Mix, for which

he and his securities are responsible. It is understood, however, that a sub-contract was made with Major Vandeventer for one-half of the contract, some time after its formation; but as the arrangement was a private one between Mr. Mix and Major Vandeventer, and the latter was not recognised by the department, he has not been responsible to the Government for any part of the contract, which still remains in the name of Mr. Mix, with the exception of the fourth above stated. The terms and conditions on which Mr. Mix may have disposed of any part of his contract have never been communicated to this department. No new contract has been made with Messrs. Goldsborough & Co. They are bound by the stipulations of the original contract for the performance of the portion thereof of which they have become possessed, as will be seen by the bond given by them for its faithful execution, a copy of which, and of the letter from Mr. Mix, under which they were recognised as the owners of the fourth of the contract, are transmitted herewith, and marked K.

I have just received a reply to an application made to Mr. Mix, requesting him to state what had been the cost of the stone first delivered under his contract. It is founded on the expense of freight and quarrying, as ascertained by the charter-parties and bill of the quarrier, compared with the quantity delivered. Copies of the charter-parties, and of the bill of the quarrier, together with Mr. Mix's letter, are transmitted herewith, and marked L.

Respectfully submitted.

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

Hon. J. C. CALHOUN, *Secretary of War.*

A.

FORT WASHINGTON, *April* 26, 1822.

I certify that, in the years 1817 and 1818, I was instructed by General Joseph G. Swift, then chief engineer, to make inquiry with respect to the price of materials for the fortifications about to be erected at Old Point Comfort, of which I was the local engineer; and, agreeably to his instructions, I ordered Captain T. W. Maurice, of the corps of engineers, to proceed to Richmond and examine the stone quarries and the quality of the stone, together with the price per perch delivered at the nearest point of navigable transportation. His report justified me in concluding that the stone necessary for construction would cost the Government from $4 to $4 50. Under such circumstances I deemed it proper to abandon the project of getting stone from the neighborhood of Richmond, and applied to Mr. Baker, the stone quarrier, at the falls of the Potomac, (I think early in the year 1818,) who stated to me, from the best recollection I have of the subject, that he would not engage to deliver stone at Old Point for less than $4 or $4 50 per perch. I gave to this subject all the notoriety possible by verbal observation, and found no offers. When I understood that the contract was made at $3, I thought it one of the most advantageous contracts that could have been made under existing circumstances.

Before this contract was entered into, I had made experiments by having the stone quarried near Georgetown by laborers hired by the United States, and found that it could not be procured and carried to Old Point Comfort and there landed for less than $3 50 per perch, which, together with the great uncertainty of getting vessels to transport it, gave me no reasonable hope that so extensive a work would be conducted properly without the price was greatly enhanced for the transportation of the material. I should, as the agent of the Government, have had to offer from $2 50 to $3 per perch to have ensured at that time an adequate supply. The contract certainly was an advantageous one at the time the engagement took place, and saved the Government many thousand dollars.

W. K. ARMISTEAD, *Late Chief Engineer.*

B.

Certificate of Captain Maurice.

FORT WASHINGTON, *January* 26, 1822.

I certify, on honor, that, in the month of June, 1817, I was ordered by Lieut. Col. Walker K. Armistead, commanding the engineer corps, to proceed to Richmond, Virginia, and there examine the quarries of stone in the vicinity of that city, with a view to ascertain what such could be had for from thence, delivered at Old Point Comfort, Virginia; when the following proposals were made to me, viz:

Dr. Trent, of Manchester, for blown granite, on the spot, (per perch,) - - -	$1 50
For face granite, on the spot, - - - - - -	2 00
Mr. Kincaid, above the falls of James river, for the same, delivered at the shipping place, lower end of the city of Richmond, - - - - - -	3 25

and the transportation from thence to Old Point Comfort, from the best information I could collect, could not be had, at that time, for less than two dollars per perch.

THEO. W. MAURICE, *Captain Engineers.*

C.

Mr. Brooks's proposals.

DEAR SIR: RICHMOND, *June* 27, 1818.

Agreeably to your request to me in Norfolk to state to you on what terms I would furnish stone from my quarry, I now think proper to state to you that this quarry lies twenty-five miles above this place, one-fourth of a mile up —— creek, which is navigable for boats of any burden that can navigate the river below, and I will furnish the stone, on the bank of said creek, to the amount of from 100 to 150 perches per day, until any quantity we may contract for is furnished, (having about 100 hands now engaged on a building in the neighborhood that will soon be completed,) at the following prices, viz: for stone 3 feet and under, $1 25 per perch; for stone over 3 feet and under 5 in length, $1 50; over 5 and not exceeding 7 feet in length, $1 75 per perch; and if any should be wanted over 7 and not exceeding 10 feet in length, $2 25. It is unnecessary to say any thing with respect to the quality of the rock, as the piece I showed you in Norfolk was a fair sample of it. I shall be glad of your answer as soon as convenient, having propositions from the Dock Company of this place for about 30,000 perches, though I would prefer a larger contract.

Yours, respectfully,

ZACHARIAH BROOKS.

General SWIFT.

D.

Proposals of Crandall & McDugall.

WASHINGTON, *August* 5, 1818.

Crandall & McDugall, of Port Deposite, will engage to deliver any quantity of first rate building stone, at Old Point Comfort, for $3 50 per perch. If necessary, they will deliver the stone at the rate of 1,000 perches per month; and having a good saw-mill, and plenty of lumber on hand, together with a thorough knowledge of building and workmanship, they are persuaded they can do the wood work as satisfactorily, and on as reasonable terms, as any other persons in the United States.

CRANDALL & McDUGALL.

Commodore Rodgers's letter.

SIR: WASHINGTON CITY, *March* 13, 1818.

Mr. Denison, who hands you this, has very extensive stone quarries near the mouth of the Susquehannah, of the best quality for building. Mr. D. is desirous of contracting for the delivery of a large quantity, and has it in his power to fulfil any engagements he may enter into.

With great respect, I have the honor to be, &c.,

JNO. RODGERS.

Brigadier General SWIFT, &c. &c., *Washington.*

Allason Crandall's proposal.

PORT DEPOSITE, *May* 4, 1818.

On my return to Baltimore I made search for vessels, and offered $2 50 per perch for the stone; I then came on here, and have got the promise of two, at the rate of $2 50, but they will not go while they can get a freight here, which will not last more than this week. I am quite sure that I shall load one the last of this week, so as to arrive at the fort by the middle of next. These first stone will cost $3, and I wish you would make it suit to pay at least one-half the freight on delivery of the stone, as the vessels will not promise to go more than once. I am well assured that, when the thing is begun, there may be vessels enough.

Until then, I remain, yours sincerely,

ALLASON CRANDALL.

General J. G. SWIFT.

N. B. The first stone will not be a sample, as I shall get them in the cheapest manner, and the handiest for the vessels, to make the thing more flattering. When I am apprised of the value of the stone, I will send the sample. Should this meet your entire approbation, you will let me have a line from you.

A. C.

E.

Certificate of Mr. Cruttenden respecting freight.

GEORGETOWN, *April* 26, 1822.

In the summer of 1818 I made a trial of transporting stone to Old Point Comfort, with a view of ascertaining what it could be done for; after making two trips, per sloop Java, and for which I received two dollars per perch, I did not think the business worth following, and therefore abandoned it.

Respectfully,

JOEL CRUTTENDEN.

Certificate of Lloyd Pumphrey as to expense.

GEORGETOWN, *April* 29, 1822.

I certify that I was engaged in the years 1817-18 in quarrying and shipping stone to Old Point Comfort, and found it very difficult to obtain vessels to take stone at two dollars per perch freight; some few tried it, but said they could not make a business of it, as it would not pay expenses. The cost of quarrying and putting on board was considered to be worth about one dollar and a quarter per perch, making about $3 25 delivered. In 1820, Mr. Baker and myself got $3 50 for stone at Norfolk.

LLOYD PUMPHREY.

W. Yeaton's proposals.

SIR: ALEXANDRIA, *August* 7, 1818.

Having heretofore supplied Fort Washington (and contracted for Old Point) with stone lime, agreeably to an agreement with Colonel Armistead, at the very low price of $2 37½ per cask, I expected and believed I was to furnish the whole required at those places; and if it meets your approbation, I should like to furnish what may be wanted for the works in the Chesapeake bay, on the same terms—say in all the month of April 600 casks, or more if wanted, and continue through the summer and fall — casks per month, as may be required.

This price is less than ought to be given, or I can afford; yet as I understood by my *present contract*, at the time the proposals were made, that it was for *all* the lime wanted at those places, I am willing to furnish the quantity at that price.

While I was complying with my contract, lime was, and is now, selling here at from $2 75 to $3 00 per cask.

I also take the liberty to offer the following proposals for furnishing stone at Old Point:

For the gray granite rock, as taken from the quarry, $4 per perch.

For cut granite rock for cordon, or coping, measured in the usual way, $1 per foot. The quantity and time of delivery may be arranged to meet your wishes.

Very respectfully, &c.,

W. YEATON.

To General SWIFT.

John W. Baker's certificate.

GEORGETOWN, *April* 26, 1822.

I hereby certify, that at the time the contract for furnishing stone for the Rip Raps was about to be given out, I was solicited to offer for the same; and, understanding that there were offers for said contract at a lower rate than I thought would be profitable, declined offering; and also do further certify, that it was my opinion, when I heard of the price Major Mix was to get for delivering said stone, that it was an unprofitable contract at the time; further, I will state that, in the year 1820, I contracted to deliver stone at Norfolk to the Canal Company at $3 50 per perch.

JOHN W. BAKER.

F.

Elijah Mix's proposals.

SIR: WASHINGTON, *July* 23, 1818.

I offer to deliver at Old Point Comfort from one to one hundred and fifty thousand perches of stone, at $3 per perch, of sample No. 1, exhibited; I will deliver at the same place from one to two thousand perches of the sample No. 2 for $2 75 a perch.

I offer Samuel Cooper, James Oakley, and Mudler Robbins, as securities, in such sums as may be agreed upon, for the performance of any contract I may make with the United States.

I have the honor to be, &c.,

ELIJAH MIX.

Brigadier General SWIFT, *Chief Engineer, U. S.*

G.

SIR: GENERAL LAND OFFICE, *April* 23, 1822.

In answer to your inquiry as to the manner of disposing of the lead mines or salt springs on the public lands, I have to state that the practice has been to apply to the register and receiver of the office in whose district the mine or spring is, or to the recorder of land titles in Missouri, for leases; which leases are submitted to the approbation or rejection of the President of the United States. It has not been customary to advertise for the disposal of mines or springs.

I am, very respectfully, yours,

JOSIAH MEIGS.

Major VANDEVENTER.

H.

This agreement, made between Joseph G. Swift, on the part of the War Department of the United States, of the one part, and Elijah Mix, of New York, of the other part, witnesseth: That the said Elijah Mix agrees to deliver one hundred and fifty thousand perches of stone, from the banks of York river, Virginia, agreeably to samples this day lodged in the Engineer Department, at Old Point Comfort and the Rip Rap Shoals, in Hampton Roads, Virginia, at the rate of not less than three thousand perches a month, commencing by the 15th of September, 1818. And the aforesaid Joseph G. Swift agrees to pay, or cause to be paid him, the said Elijah Mix, three dollars a perch, for every perch of stone delivered at the above-mentioned places, agreeably to this contract.

In witness whereof, we have hereunto set our hands and seals, this 25th day of July, one thousand eight hundred and eighteen, at the city of Washington.

J. G. SWIFT, [SEAL.]
ELIJAH MIX. [SEAL.]

Witness: C. VANDEVENTER.

I.

Know all men by these presents: That we, Elijah Mix, Samuel Cooper, and James Oakley, are held and firmly bound to the United States of America, in the sum of twenty thousand dollars, lawful money of the United States, for which payment, well and truly to be made, we bind ourselves, and each of us, our and each of our heirs, executors, and administrators, for and in the whole, jointly and severally, firmly by these presents. Sealed with our seals, and dated the fifth day of August, in the year of our Lord one thousand eight hundred and eighteen, and of the independence of the United States the forty-third.

The condition of the above obligation is such, that whereas the above bounden Elijah Mix has contracted with Joseph G. Swift, United States' chief engineer, to deliver one hundred and fifty thousand perches of stone at Old Point Comfort, Virginia: Now, if the said Elijah Mix does faithfully perform his part of said contract, then the above obligation to be void; otherwise, to remain in full force and virtue.

ELIJAH MIX, [SEAL.]
SAMUEL COOPER, [SEAL.]
JAMES OAKLEY. [SEAL.]

Sealed and delivered in the presence of
EDWARD MACOMBER, for E. MIX,
R. RIKER.

NEW YORK, *August* 5, 1818.

The sureties having been by me duly sworn, I do hereby approve of them as good and sufficient.

R. RIKER.

Extract of a letter of instructions to Lieutenant Colonel C. Gratiot.

"ENGINEER DEPARTMENT, WASHINGTON, *August* 19, 1819.

"The draughts of their vessels to be marked, and several cargoes of each vessel to be measured; and if the results shall be satisfactorily conclusive of the correctness of that mode of ascertaining the measurement, then to adopt it."

Extract of a letter of instructions to Captain F. Lewis, of the engineers, (then in the temporary command of the works at Old Point Comfort.)

"ENGINEER DEPARTMENT, WASHINGTON, *June* 1, 1820.

"Should the mode prescribed by the department for ascertaining the deliveries be not sufficiently guarded to prevent such [alleged] abuses, you will adopt proper precautions, and, if necessary, have each delivery perched by a proper measurer. It is supposed, however, that the ensuing plan will obviate the necessity of measuring each load, which process is objectionable on the score of the delay to which it is subject. Have each vessel accurately perched, and her water-mark, when properly loaded, permanently fixed upon her, and examined, as often as may be necessary to prevent frauds, whether she has her true ballast, and is free from water kentledge, or other unnecessary lumber."

Extract of a letter from Lieutenant Colonel C. Gratiot to the Hon. Secretary of War.

"FORT MONROE, *June* 19, 1820.

"That, respecting the frauds supposed to exist in the deliveries of stone at the Rip Raps and this post, the modes of measurement are such at both places as to render it almost impossible for captains of vessels to attempt imposition on the officers and other persons charged with that duty, without immediate detection.

"Captain Lewis has had charge of the delivery at the Rip Raps, and had to assist him Mr. Superintendent Smith, and three stone measurers of approved character, of great zeal and activity for the public welfare and interest, who made it their invariable rule, with all vessels discharging on marks, to have them brought in smooth water, pumped dry, and the run examined; if found free of water, the marks were next inspected, to see if they were down previous to their being allowed to unlade. These vessels are not permitted to make more than three trips without being remeasured, and this remeasurement is renewed when least expected, frequently at successive trips. In most instances the mark vessels carry no ballast.

"The mode for marking is to take the vessels in smooth water, where they are, by pumping, freed of the water they may contain; after which, the distance of the water line is carefully measured externally to some irremovable part of the stern and bow, which distances are noted in a book. The load is then discharged in the manner that vessels on freight are, to ascertain their contents.

"Vessels carrying ballast have the ballast as well as the loaded marks. To ascertain the contents of cargoes on freight, the stone is removed in parcels from the hold to the deck, where it is closely packed in rectangular masses, and measured by multiplying the length and breadth into the depth, to determine the cubical contents of each parcel. An account is kept of each measurement, stating the number of cubical feet and inches, and the aggregate of the whole calculated at the proper office, in the presence of the agents of the contractors, to whom receipts are given. The sums of the deliveries are divided by twenty-five, thereby allowing one-quarter of a foot in the length of the perch for vacuities."

K.

SIR: GEORGETOWN, *April* 13, 1821.

Mr. H. Goldsborough having purchased from Mr. S. Cooper the undelivered part of one-fourth of my contract, I have no objection to his being recognised by the Government as the owner thereof, and to their giving orders for payment to be made to him, or to such persons as he may authorize to receive it for him, without further authority from me, for the deliveries that have already been made, or that may hereafter be made thereon, provided the responsibility now attaching to me, for the due fulfilment of the whole contract, be so modified as to transfer from me to him so much thereof as will apply to the portion withdrawn, as above stated, from my jurisdiction, and provided, also, the Government will exonorate me from obligations to liquidate one-fourth of the $10,000, advanced by them on the contract, holding him liable therefor.

The foregoing I will consider to be binding on me whenever I shall receive a notification of its acceptance by the War Department.

I have the honor to be, sir, with much respect, your obedient servant,

ELIJAH MIX.

Hon. J. C. CALHOUN, *Secretary of War.*

Know all men by these presents: That we, Major John Davidson and Richard Y. Goldsborough, both of Washington, District of Columbia, are held and firmly bound unto the United States of America in the just and lawful sum of $5,000, for the payment whereof, well and truly to be made, we bind ourselves, and each of us, our and each of our heirs, administrators, and assigns, jointly and severally, firmly by these presents. Sealed with our seals, and dated the 15th day of June, in the year of our Lord 1821.

Whereas, on the 25th of July, 1818, the War Department of the United States, by their agent, Joseph G. Swift, entered into a contract with Elijah Mix, of Georgetown, in the District of Columbia, for the delivery at Old Point Comfort and the Rip Rap Shoals, in Hampton Roads, Virginia, 150,000 perches of stone, for which payment was to be made at the rate of three dollars per perch, as by reference to said contract will fully appear: and whereas the said Mix, by an instrument of writing, dated the 24th of April, 1819, did sell and convey to Christopher Vandeventer, of Georgetown, in the District of Columbia, one-half part (75,000 perches) of said contract: and whereas the said Vandeventer did, on the 20th January, 1820, sell and convey to Major Samuel Cooper, of New York, one-half of his interest in said contract, namely, 37,500 perches: and whereas the said Cooper did, on the 1st day of July, 1820, sell and convey to Henry Denison, of Maryland, Francis Le Barron, of New York, and Howes Goldsborough, of Maryland, composing the firm of Howes Goldsborough & Co., his entire right to and in said contract, as derived from said Vandeventer, being the 37,500 perches last mentioned, or so many thereof as remained to be delivered, which said right is hereby recognised by the Government of the United States, and also the right of said Howes Goldsborough & Co. to participate in any advantages which may hereafter be extended to the original contractor, the said Mix:

Now the condition of this obligation is such, that if the said Howes Goldsborough & Co. shall deliver, or cause to be delivered, from quarries on the Susquehannah river, the residue of the 37,500 perches of stone before mentioned, of such quality and size as the Secretary of War shall approve, and at the aforesaid Old Point Comfort, or the Rip Raps, as the said Secretary may determine upon, then this obligation to be void; otherwise, to remain in full force and virtue.

JOHN DAVIDSON, [SEAL.]
RICHD. Y. GOLDSBOROUGH. [SEAL.]

Test: BRICE J. GOLDSBOROUGH.

The signers of the within bond are personally known to me, and are, in my opinion, fully competent to the payment of the penalty, in the event of any failure in the performance of the contract.

D. PORTER.

L.

SIR: GEORGETOWN, *April* 26, 1822.

In answer to your inquiry respecting the cost and transportation of stone for the first six months that I was employed in fulfilling my contract, I have enclosed to you a copy of an account from Mr. T. Baker, to which is to be added the putting on board, which is equal to 25 cents per perch, which will make the cost of the stone when on board $1 25. I have likewise enclosed two charter-parties for vessels hired by the month, and refer you to the books of the department to see the quantity that they delivered during the four months employed; and it will be seen that the Flag, Captain Skidmore, delivered but 396 perches, for which I paid him $1,200; that the Brilliant, Captain Bunce, delivered but 324 perches, for which I paid him $1,000, which exceeds by $40 the amount that I received from the Government for stone and transportation. Calculating the stone at the above price, I could not have lost less than $940 on those two vessels. I had at this time several vessels equally unsuccessful. I have likewise to state, and pledge myself to prove it, that during the first year's operation my deliveries amounted to $13,640, and that the expenses in delivering that quantity cost me $21,461, making a clear loss of $7,821 in my first year's business.

The price of freight during the year 1818 was never less than $2 per perch, and in several instances $2 25 was paid, to induce freighters to commence the business, in hopes that they would get more accustomed to it, and induce others to try the experiment.

I have the honor to be, &c.

E. MIX.

General ALEXANDER MACOMB, *Engineer Department, Washington.*

Mr. E. Mix to John M. Baker, DR.

1818.		
October 22,	To 608 perches, at $1 per perch, by scow measure, - -	$608

Received the above. JOHN M. BAKER.

Contract of E. Mix with J. Skidmore for vessel, &c.

Articles of agreement made this 12th day of August, in the year of our Lord 1818, between Joel Skidmore, of the city of New York, and Elijah Mix and George Cooper, of the same place, as follows, that is to say:

The said Joel Skidmore agrees to employ and use the sloop called the Flag in the service and business of the said Elijah Mix and George Cooper to and from the port of New York, and any ports or places in the State of Virginia that the said Elijah Mix and George Cooper may require, and to victual, man, equip, and furnish the said sloop with, and sufficiently for, such service and business, for the term and period of four months from the day of the date hereof; and the said Elijah Mix and George Cooper jointly and severally covenant and agree to and with the said Joel Skidmore to hire the said sloop of him, the said Joel Skidmore, for the term and period of four months aforesaid, and to pay him at the end and expiration of every month, from the day of the date hereof, the monthly sum of $300 for the use and employment thereof, it being understood that the said Joel Skidmore is to sail in and command the said sloop, and that the said monthly payments are to be in full of all expenses or charges whatsoever; and for the faithful performance hereof the said Joel Skidmore pledges to the said Elijah Mix and George Cooper the said sloop, her tackle, apparel, and furniture; and the said Elijah Mix and George Cooper pledge to the said Joel Skidmore the goods, wares, articles, merchandise, and loading that may from time to time be on board of the said sloop or vessel.

In witness whereof, the said parties to these presents have hereunto set their hands and seals the day and year first above written.

JOEL SKIDMORE,
ELIJAH MIX.

Sealed and delivered in presence of
HARVEY BUNCE,
RICHARD SNEDEN.

Contract between E. Mix and H. Bunce for vessel, &c.

Articles of agreement made this 10th day of August, in the year of our Lord 1818, between Harvey Bunce, of Huntington, Suffolk county, of the one part, and Elijah Mix and George Cooper, of the city of New York, of the other part, as follows, that is to say:

The said Harvey Bunce agrees to employ and use the sloop called the Brilliant in the service and business of the said Elijah Mix and George Cooper, to and from the port of New York, and any ports or places in the State of Virginia that the said Elijah Mix and George Cooper may require, and to victual, man, equip, and furnish the said sloop with, and sufficiently for, such service and business, for the term of four months from the day of the date hereof; and the said Elijah Mix and George Cooper jointly and severally covenant and agree to and with the said Harvey Bunce to hire the said sloop of him, the said Harvey Bunce, for the term and period of four months aforesaid, and to pay him at the end and expiration of every month, from the day of the date hereof, the monthly sum of $250 for the use and employment thereof, it being understood that the said Harvey Bunce is to sail in and command the said sloop, and that the said monthly payments are to be in full of all expenses or charges whatsoever; and for the faithful performance hereof the said Harvey Bunce pledges to the said Elijah Mix and George Cooper the said sloop, her tackle, apparel, and furniture; and the said Elijah Mix and George Cooper pledge to the said Harvey Bunce the goods, wares, articles, merchandise, and loading that may from time to time be on board of said sloop.

In witness whereof, the said parties have hereunto set their hands and seals the day and year first above written.

HARVEY BUNCE,
ELIJAH MIX.

Sealed and delivered in presence of
JOEL SKIDMORE.

Mr. Calhoun to Mr. Butler.

SIR: DEPARTMENT OF WAR, *April* 30, 1822.

I have the honor to communicate, herewith, an additional report of the chief engineer on the subject of Mr. Mix's contract.

I have the honor to be, sir, with great respect, your obedient servant,

J. C. CALHOUN.

Hon. JOSIAH BUTLER,
Chairman of the committee appointed to investigate Mr. Mix's contract with the United States.

General Macomb to Mr. Calhoun.

SIR: ENGINEER DEPARTMENT, *April* 30, 1822.

I addressed a note this morning to General Swift, who arrived last evening, requesting him to examine the report made by this department yesterday on the subject of Mr. Mix's contract, and to state how far it accorded with the facts; and, also, any circumstances within his knowledge respecting the transaction that may not have been embraced in the report.

I have just received the answer of General Swift, accompanied by his deposition, and have the honor to transmit them herewith.

I transmit, also, a statement from Commodore Rodgers, respecting the proposal of Mr. Denison, which, in the report of yesterday, was stated to have been mislaid, which he was polite enough to furnish in answer to an application on the subject, addressed to him this morning.

I take occasion to make here a remark, which should properly have been introduced in my report of yesterday, in the answer to the inquiry respecting the quantity of stone which had been delivered under Mr. Mix's contract. It is, that the contract to this period has been executed faithfully, and to the satisfaction of the department; and that the quantity delivered has, in every instance, been equal to the portion of the appropriation allotted to the contract.

I have the honor to be, sir, your most obedient servant,

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

Hon. J. C. CALHOUN, *Secretary of War.*

General Swift to General Macomb.

SIR: WASHINGTON, *April* 30, 1822.

Your letter of this A. M., submitting for my examination a report to the Secretary of War from the Engineer Department, dated 29th instant, upon the subject of Mix's contract, I have examined, and believe it to be correct. Herewith I enclose you my deposition in relation to the subject. Should the committee of Congress wish to have me before them, I am ready to wait upon them, and am to be found at Major Roberdeau's, at Georgetown.

I remain, your most respectful, humble servant,

J. G. SWIFT.

Maj. Gen. MACOMB.

Brigadier General Swift's deposition.

WASHINGTON, *April* 30, 1822.

Joseph G. Swift, late of the United States engineers, deposeth and saith, that, in the summer of 1818, he made a contract with Elijah Mix, for stone, to be delivered in Hampton Roads, at the Rip Raps. That said contract was made upon the best procurable terms, and, as he (the deponent) believes, fifty cents less per perch than could be procured from any other quarter. That good and sufficient security was taken of Mr. Mix for the faithful execution of his contract, in a penal sum of twice the amount that would in any case be advanced to him. That, at the time of forming the contract, this deponent verily believes that Major Christopher Vandeventer had no interest whatever in said contract; that said Vandeventer had no sort of control or direction in forming the contract; and that the contract was made solely with Mr. Mix, and with no other person. That, with respect to Mr. Mix's character, the deponent had no knowledge or intimation of any fact or report which impeached his (Mix's) character at the time of forming the contract; but that the deponent believed Mix to be well qualified, from his activity and enterprise, to fulfil his agreement. That the deponent has been informed that he was suspected of being interested in said contract. Such suspicion is unfounded in truth; he (the deponent) is not, and has not at any time been, interested in said contract. That, in relation to the statement of the chief engineer, General Macomb, made to the Secretary of War on 29th of April instant, about the said contract, it is, to the best of his (the deponent's) knowledge and belief, a true statement of the manner in which the contract was made and has been conducted; and further the deponent saith not.

J. G. SWIFT.

DISTRICT OF COLUMBIA, *County of Washington, ss.*

On this 30th day of April, 1822, before the subscriber, one of the justices of the peace for the said county, appears J. G. Swift, and makes oath, in due form of law, that the foregoing and above statement, and every matter and thing therein contained, is just, true, and correct, to the best of his knowledge and belief.

Subscribed and sworn to before me,

JOHN N. MOULDER, *Justice of Peace.*

Commodore Rodgers to General Macomb.

SIR: WASHINGTON, *April* 30, 1822.

In answer to your inquiry of this date, I have to state, that, previously to Mr. Denison's sending to the Engineer Department his proposal to furnish stone for the fortifications constructing at the entrance of Hampton Roads, he showed me his calculations with respect to the price at which he thought he could deliver the stone, and asked

my opinion as to their correctness. As well as my recollection serves me, the tender which he showed me was put at $3 25 per perch, but at my suggestion he increased it to $3 50. At that time I was under the impression that at $3 50 he would not be able to make more than from 37½ to 50 cents per perch, even with the best management, and nothing without very good management, owing to the high price of freight, quarrying, and loading the vessels; the former being, I think, $2 25 to $2 50 per perch, and the latter 70 to 75 cents.

I am, sir, very respectfully, your obedient servant,

JOHN RODGERS.

To Maj. Gen. ALEXANDER MACOMB, *Chief Engineer, &c. &c.*

P. S. In the above the price of the stone is not included; the quarry from which Mr. Denison intended getting it belonged to his mother.

SIR: WAR DEPARTMENT, *May* 1, 1822.

In reply to your communication of yesterday, I have the honor to enclose a report from the chief engineer, affording the information requested.

I am, sir, very respectfully, your most obedient servant,

J. C. CALHOUN.

To the Hon. JOSIAH BUTLER,
Chairman of the committee of the House of Representatives, on the Mix contract.

General Macomb to the Secretary of War.

SIR: ENGINEER DEPARTMENT, WASHINGTON, *May* 1, 1822.

I communicate herewith a letter of General Swift, in answer to the inquiry made by the honorable chairman of the select committee appointed to investigate Mr. Mix's contract.

In addition to what General Swift has communicated with regard to Mr. Perley's offer to furnish stone, I have to state that I have caused a careful examination to be made of the records of this office, and find no evidence of his offer on file; and, upon inquiry of the gentlemen attached to the department, I can obtain no recollection or information relating to it. As it regards the price, it may be proper, in addition to what was stated in my report of yesterday, to observe, that the contract of Mr. Mix for the delivery of stone at the Rip Raps and Old Point Comfort has been invariably construed to mean stone of the size and dimensions which the works require. Under this construction, the contractor is not permitted to deliver any stone of less than one hundred and fifty pounds weight, to form the mole at the Rip Raps. It is also proper to state that the mole, being erected in the open sea, and in eighteen feet water, very considerable expense attends the delivery of stone for the formation thereof. The contractor is compelled to graduate the mole seven feet above the water, in the formation of which his vessels are obliged to be secured between two anchors, in such manner as to be enabled to land their cargoes by means of stages from the decks of the vessels to the top of the deposite. In this situation they are in contact with the slope of the mole, subject to constant attrition and thumping against the sharp edges of the rocks, occasioned by the swell and agitation of the sea, and thereby exposed to increased wear and injury.

I have the honor to be, very respectfully, sir, your obedient servant,

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

The Hon. J. C. CALHOUN, *Secretary of War.*

General Swift to General Macomb.

SIR: WASHINGTON, *May* 1, 1822.

In reply to your inquiry whether Mr. Mix was recommended to me as a suitable contractor, I have to state that I never received any recommendation of Mr. Mix. My idea of his fitness was derived from his personal deportment and conversation, and from having heard him spoken of as being an active and intelligent man of business, who had been employed during the late war in annoying the enemy in Chesapeake bay; at which time, as a sailing-master in the United States navy, he had nearly succeeded in an enterprise to blow up the Plantagenet 74.

I learn that a Mr. Perley has stated that he made proposals to me, in 1818, to supply stone at Hampton Roads, from Aquia creek, at two dollars and fifty cents per perch. I recollect that Mr. Perley did propose to supply stone from Aquia, but do not recollect the price, though it may have been two dollars and fifty cents; but the stone at Aquia is freestone, and not fit to form a foundation under water, and would not have been used for that purpose at any price. Whether Mr. Perley made written or verbal proposals to me, I do not remember; but my impression is, that the communication was a few moments' conversation.

I remain, your respectful, humble servant,

J. G. SWIFT.

Major General MACOMB.

SIR: DEPARTMENT OF WAR, *May* 4, 1822.

I have the honor to transmit, herewith, through you, to the committee appointed to investigate the contract between the United States and Mr. Mix, a report, accompanied by documents, from Major General Macomb, the chief engineer, of this date.

I have the honor to be, sir, with the highest respect, your most obedient servant,

J. C. CALHOUN.

Hon JOSIAH BUTLER, *Chairman of the committee, &c.*

Letter from General Macomb to J. C. Calhoun.

SIR: ENGINEER DEPARTMENT, *May* 4, 1822.

I have the honor to transmit, herewith, a deposition from General Swift, dated the 3d instant; a letter from Colonel Bomford to General Swift, dated the 3d instant; a letter from Captain Smith to General Swift, dated

the 2d instant, to which is attached the deposition of Captain Smith; another letter from Captain Smith to this department, of this date; a statement from Mr. Steuart of yesterday's date; and a letter from Colonel Wadsworth to the Secretary of War, dated the 23d of July, 1818; all of which have reference to the investigation of Mr. Mix's contract with the United States now pending, and are respectfully submitted.

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

Hon. J. C. CALHOUN, *Secretary of War.*

Joseph G. Swift's deposition.

CITY OF WASHINGTON, *May* 3, 1822.

Joseph G. Swift deposeth and saith, that he has been informed that it has been stated by Mr. Perley and others to the committee of Congress who are examining Mr. Mix's contract, that proposals were made to him, the said Swift, in 1818, to furnish stone at Hampton Roads for a less sum than three dollars a perch. Said Swift saith that there was no bid whatever made to him by Mr. Perley, nor by any other person, for Potomac stone, nor for any other stone, (save freestone of Aquia, which is not proper for foundations under water,) for a less sum than three dollars a perch. This deponent further saith that, to the best of his knowledge and belief, all the bids which he received for stone are mentioned in the report of the Engineer Department of 29th April, 1822, with the exception of Aquia, as above stated.

J. G. SWIFT.

DISTRICT OF COLUMBIA, *Washington county, ss.*

On this 3d day of May, 1822, before the subscriber, one of the justices of the peace for the said county, personally appears J. G. Swift, and makes oath, in due form of law, that the foregoing and above statement, and every matter and thing therein contained, is just, true, and correct, to the best of his knowledge and belief.

Subscribed and sworn to before

JOHN N. MOULDER, *Justice of the Peace.*

Captain Smith to General Macomb.

SIR: WASHINGTON, *May* 4, 1822.

I omitted, in my letter to General Swift of the 2d instant, to state that, in the conversation to which it refers, Mr. Perley had told me his proposal for supplying stone at two dollars and fifty cents per perch was offered after he had received General Swift's letter, in which his proposal for furnishing bill freestone at twelve dollars per ton had been rejected.

My determination to call on Mr. Perley was occasioned by the following circumstances: Having understood that the quarries on Aquia and Potomac creeks were several miles distant from water carriage, I called on Mr. Blagden, the superintendent of stone work at the Capitol, who was stated to be well informed as to the situation of all those quarries, to ascertain the facts in the case, and particularly with respect to the quarry at which Mr. Perley was established; intending, if the information previously received should be confirmed by Mr. Blagden, to show that the land carriage alone from the quarries to the place where it would be shipped, of the stone contemplated by the proposal of Mr. Perley, would have cost more than the rate of that proposal. I learned from Mr. Blagden that Mr. Perley had been at different quarries, and that one of them was only a quarter of a mile distant from water carriage. I then determined to call upon Mr. Perley, with a view merely to ascertain from what quarry he intended to supply the stone. Nothing was more remote from my expectation than that the interview would have led to the disclosures which have been detailed in my letter to General Swift.

I am, sir, very respectfully, your obedient servant,

J. L. SMITH, *Captain corps of Engineers.*

Major General MACOMB, *Chief Engineer.*

Colonel Bomford to General Swift.

SIR: WASHINGTON, *May* 3, 1822.

Herewith I annex a brief of my knowledge of Mr. F. Perley, together with my recollection of the price of stone in the years 1817 and 1818, deliverable at the fortifications near the entrance of the Chesapeake.

To the best of my recollection, within the time above noted Mr. F. Perley called upon me with a request that I would introduce him to you; his object, he stated, was to obtain a contract, or some employment connected with the supply of stone for the fortifications on the Chesapeake. From my knowledge of him while he was quarrying marble for the Capitol, wherein he exhibited both capacity and industry, and having also been recommended to me by Mr. R. Leckie, I made no hesitation in complying with his wishes.

On the subject of the prices of stone, about the time above stated I had a conversation with Mr. R. Leckie, a very experienced and intelligent mason, in whose judgment I continue to entertain great confidence, who showed me an estimate which he had made, which, to the best of my recollection, did not materially vary from two dollars and fifty cents for sund or inferior stone, and three dollars and fifty cents for the Potomac granite. I recollect at the time to have expressed my surprise at the apparent extravagance of the calculation; that was, however, removed by an explanation of the items, particularly that of the cost of the freight from the quarries to the fortifications.

The above I have no objection to depose to, if required.

Respectfully, I remain your most obedient and humble servant,

G: BOMFORD.

General J. G. SWIFT.

Deposition of Mr. Steuart.

GEORGETOWN, *May* 3, 1822.

About the time that the contract for stone for the Rip Raps was entered into with Mr. Mix, in conversation with Mr. John Baker, to whom I had previously rented extensive quarries of stone on the Potomac, above Georgetown, he informed me of Mr. Mix having obtained the contract, and stated that he yet expected to furnish the stone, as it was impossible for any man to furnish it at the price contracted for, viz: three dollars per perch; and that his proposals, being lower than any except Mr. Mix's, would entitle him to a preference in the event of Mr. Mix finding that he could not comply; and went into a detailed calculation as to the cost, from which it was evident that, upon the

most sanguine calculation, fifteen cents per perch only would remain to compensate him for his labor, and to cover the variety of contingencies to which all such contracts are invariably liable; and that it was from his long practice in the quarrying business, his having all the necessary scows and implements on hand, and from his personal knowledge of the persons with whom he would have to deal, that he calculated upon the fifteen cents, and that he did not believe it possible for any other man to save himself at the price he had offered; and, from my own knowledge of the cost of the stone at the water's edge, and of the price of transportation, I felt confident that any other man but Mr. Baker would have sustained a loss of twenty-five cents at least upon Mr. Mix's contract. The result, however, so far, appears very different, owing to the very unexpected and rapid fall in the price of labor and transportation, which, I think, occurred within the first year of the contract, and to a very judicious purchase of a quarry by Mr. Mix; and it is from these causes solely that I am convinced Mr. Mix has derived his profit and been saved from ruin; and I do not hesitate to state that I would not have taken the contract off Mr. Mix's hands for $25,000, though the stone in the quarry would have cost me nothing.

WILLIAM STEUART.

DISTRICT OF COLUMBIA, *Washington county, ss.*

On this 3d day of May, 1822, before the subscriber, one of the justices of the peace for the said county, personally appears William Steuart, and makes oath, in due form of law, that the foregoing statement, and every matter and thing therein contained, is, to the best of his knowledge and belief, just, true, and correct.

Subscribed and sworn to before

JOHN N. MOULDER, *Justice of the Peace.*

SIR: ORDNANCE OFFICE, *July* 23, 1818.

Understanding Lieutenant Mix, formerly of the navy, has made application for the situation of military storekeeper, I should be much pleased if he could be appointed to the arsenal on the Hudson, near Troy, no storekeeper having yet been assigned to that post. The commanding officer at that station has been obliged to attend to the duties of storekeeper, and transmit the quarterly returns. There being a great deal of business to be done there, an active storekeeper, well acquainted with business, will be particularly useful, and is, it may be said, indispensable.

I have the honor to be, very respectfully, sir, your obedient servant,

DECIUS WADSWORTH, *Colonel of Ordnance.*

Hon. J. C. CALHOUN.

SIR: ENGINEER DEPARTMENT, WASHINGTON, *May* 6, 1822.

In reply to your letter of this day, desiring "to know what amount, or part, of the appropriation of 1821 for fortifications was applied or allotted to the contract of Mr. Mix for that year," I have the honor to state that forty thousand eight hundred and six dollars was the sum so allotted; and it is presumed that the said sum was so applied, as the balance in the hands of the agent was but eight dollars on the last settlement. The accounts being with the Military Committee, they cannot be referred to at this time.

I have the honor to be, very respectfully, sir, your most obedient servant,

ALEXANDER MACOMB, *Maj. Gen., Chief Engineer.*

To the Hon. JOSIAH BUTLER,
Chairman of the committee appointed to investigate Mr. Mix's contract.

SIR: WASHINGTON, *April* 27, 1822.

In conformity with the request contained in your letter of the 23d instant, I have the honor to transmit a statement of the money paid to Mr. E. Mix under his contract of the 5th of April, 1818, and to others, as subcontractors under the said Mix, and showing the dates of the several payments. The original vouchers are sent, which you will have the goodness to return when no longer necessary.

I remain, with respect, &c.

WILLIAM H. CRAWFORD.

Hon. JOSIAH BUTLER, *Chairman of a select committee.*

Total amount paid to E. Mix, - - - - - - $263,895 45
as far as the accounts have been rendered, being for 87,964¾ and 10-25 perches stone, at $3 per perch.

TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *April* 26, 1822.

PETER HAGNER, *Auditor.*

DEAR SIR: WASHINGTON, *May* 7, 1822.

Will you do me the favor to correct my letter and report of payments in the case of E. Mix, so far as it regards the date of his contract, which the clerk mistook, and put down in the letter 5th April, 1818; and in the caption of the statement, 5th April, instead of the 25th July, 1818, the correct date of that contract. I have before reported the error, but it may not have been altered in the cases above mentioned, and, if not, it might lead to misunderstanding.

Very truly, dear sir, yours,

P. HAGNER.

Hon. J. W. CAMPBELL, *House of Representatives.*

Deposition of Mr. Baker.

John W. Baker, of Georgetown, on oath, declares that, as near as he can recollect, in the latter part of the year 1817, or first of 1818, he heard that the War Department was about to make a contract for the delivery of stone at the Rip Raps, but never saw any advertisement for proposals. That he has been engaged in getting out stone from the quarries near Georgetown for fifteen years. That he bought the stone in the quarries. That he informed Mr. William O'Neale, who, he understood, talked of making proposals, that he would furnish stone on the deck of his vessels for one dollar per perch. That deponent has never been much employed in freighting stone, but heard that the freight was estimated by some persons at two dollars per perch in 1818. That the deponent, however, believes that a person having suitable vessels, and making it his business, might have freighted stone in 1818 at one dollar and seventy-five cents per perch, delivered at the Rip Raps. That the deponent has been employed by Mr. Mix in getting stone, and putting it on vessels for the Rip Raps, which was of the kind called rough stone. That Mr. Mix freighted the stone in his own vessels in 1818, and gave deponent one dollar per perch for the same in his vessels. That Mr. Mix, in 1819, had stone freighted to the Rip Raps for one dollar and fifty cents per perch; and paid deponent, in the first of 1819, eighty-five cents per perch, and in the latter part seventy-five cents per perch; and, in 1820, sixty-eight cents per perch, for the stone. That Mr. Mix pays now one dollar and twenty-five cents for the freight of stone to the Rip Raps, by the perch.

JOHN W. BAKER.

Sworn and subscribed before me, this 30th April, 1822,

DAN. RAPINE, *Justice of the Peace.*

Deposition of Samuel Cooper.

Samuel Cooper, in the office of the adjutant general, on oath, declares that he has been informed that Mr. James Oakley, of New York, and Samuel Cooper, his father, were sureties for Mr. Mix, in the contract he made with the War Department in 1818, and that he believes Mr. Oakley is esteemed a man of large property; that he, the deponent, is a brother-in-law of Mix, but did not know much about the property of the said Mix, though he thinks he was not considered a man of much property at the time he made the contract. Major Vandeventer, chief clerk in the War Department, married a sister of the deponent, and became acquainted with Mr. Mix in 1815, who, before he took the contract aforesaid, resided in the city of New York, and soon after removed to Georgetown, in the District of Columbia, where he now lives. The deponent does not know whether the said Mix possesses much property, and says that he is not engaged in any occupation, except in carrying on his contract, and some speculation.

SAMUEL COOPER, Jun.

DANIEL RAPINE, *Jus. Peace.*

Statement of Messrs. Bassett and New, members of the House, in relation to stone in the vicinity of the Rip Raps.

May 2, 1822.

Being requested by Mr. Butler, the chairman of a committee, to state what I know relative to the quantity of stone to be found on the banks of York river and its branches, I do certify that, at Yorktown, which is about forty miles from the Rip Raps, there is a large body of newly formed limestone, rather soft when first taken from the bed, but hardens on exposure to the air, or in water. This stone shows itself on the bank for two miles and upwards. Its extent into the bank has never been proved. Some stone has been taken from this place to the Rip Raps, as I have been told. Twenty miles higher up the river, there is a bed of stone called, with us, "iron mine stone," a sandstone mixed with iron ore. Of the quantity to be obtained here, I cannot say; though I presume, or believe, it is not very considerable; and that kind of stone, as far as I have observed it, is generally small. I was never at this point. Ten or twelve miles higher up the river, there is more of the same kind of stone, but very inconsiderable in quantity. With these exceptions, there is no stone, that I know of, on the branches of those rivers, below tide water. It is certain I have never seen any granite below tide water, and it is some distance above before you come to any considerable quantity.

BURWELL BASSETT.

From my knowledge of the lower parts of the State of Virginia, I perfectly agree with Colonel Bassett in the foregoing statement.

ANTHONY NEW.

Interrogatories to Colonel Bomford.

Were you acquainted with Frederick Perley in 1817 or 1818; and, if so, did you recommend him to General Swift as a suitable person to contract for the delivery of stone at the Rip Raps or Point Comfort?

At the request of Frederick Perley, I introduced him to General Swift, and recommended him as a suitable person for furnishing stone for the fortifications on the Chesapeake.

G. BOMFORD, *Lieut. Col. on ordnance duty.*

Deposition of Howes Goldsborough.

About the time the fortifications were about to be commenced at Old Point Comfort and the Rip Raps, I accidentally went down the bay with General Swift and some of the corps of engineers, who were about making a survey preparatory to the erection of those forts.

I perfectly well recollect having a conversation with General Swift as to the difficulty of procuring stone from the Chesapeake bay; I advised him to send an officer to Havre de Grace, to view the quarries of stone in that quarter; he said large quantities of stone would be wanted, of a good quality, and that he was desirous of getting it on the cheapest and best possible terms. He did send an officer, who reported favorably of the quarries. In order to test the expense of procuring the stone, I believe he chartered vessels and hired men here, to get out a few cargoes to be delivered at the works, which, I afterwards understood, cost from three to four dollars per perch; at this time the price of freight, labor, &c. was high. I shortly afterwards understood he made a contract with Elijah Mix for one hundred and fifty thousand perches of stone, at three dollars per perch, which I well recollect at *that* time was considered a very bad contract for Mix, and such a one as I *at that time* would not have made, and I think would have been ruinous to the contractor, had not an unprecedented fall in the price of freights, labor, provision, &c. taken place.

When this fall in prices took place (of at least one-half) in freights, labor, provision, &c., and in consequence of a prospect of their falling still lower, I determined, as I lived near the quarries, and owned vessels, to endeavor to pur-

chase a part of this contract, which I effected by a purchase from Samuel Cooper, of the city of New York, of the remaining part of the fourth of said contract, purchased by said Samuel Cooper of Major Vandeventer, and by him bought of Mix some time after the contract was taken by Mix from the Government, as I always understood. I did contract to deliver the stone at Fort Calhoun for two dollars and sixty cents per perch; by this contract, had not freight, &c. fallen to those unprecedented low prices, I must have lost a large sum of money. Since making this purchase of Major Cooper, and having some difficulties with Mix, my purchase has been recognised by the Government, to whom I have given bonds, with security, and am now acting as a contractor with the Government.

HOWES GOLDSBOROUGH.

MARYLAND, *Harford county, ss.*

On this 2d day of May, 1822, personally appeared before the subscriber, a justice of the peace for said county, Howes Goldsborough, and made oath on the Holy Evangelists of Almighty God that the foregoing statement is correct, to the best of his knowledge and belief.

Sworn before BENNETT BARNES.

Statement of Major Vandeventer.

Major Vandeventer states, that he did not, in any way whatever, influence the Engineer Department to give the contract to Mr. Mix; nor has he, directly or indirectly, exercised any control over its execution: that, some time after the formation of the contract, he became interested in it, from permitting said Mix, through motives of friendship, arising from his connexion with him by marriage, to use his name to raise funds to execute his contract; and that his principal inducement to participate in it ultimately, was in order to secure himself against any loss which might result from permission to use his name for the purpose above stated, he being under apprehension at the time that there was well-founded danger of such loss, of averting which there was no other means: that he felt a solicitude that any one connected with him, having any engagement with the public, should faithfully execute it: that, about the time he became interested, he asked the Secretary of War whether it would be improper for him to invest money in the said contract: that the Secretary replied that it would not be illegal, as there was no law to prohibit it; but it might expose him (Major Vandeventer) to improper insinuations, and would, therefore, be injurious: that, on much reflection, after he had become concerned, and believing his participation was not agreeable to the Secretary of War, he decided to divest himself of all interest in the contract, which he accordingly did, in a few months: that at the time Mr. Mix made the contract, he did not know of any charges against his character, which went to implicate his integrity: that he did not know him before 1815, when he became connected by marriage, as, during nearly the whole of the late war, he was confined as a hostage in Canada: that, after he made acquaintance with him, he did not remain in New York more than eighteen months, when he was ordered southward, whence he returned to assume the duties of his present station, in the fall of 1817: that, when he purchased the half of the contract, he became liable, as a consideration to Mr. Mix, for one-half of the debts against the contract, the whole amount of which was estimated at about $18,000: that he afterwards sold to Mr. Mix one-half of his purchase on the same terms, and the remainder of his interest to Mr. Cooper; and that, when the accounts growing out of the subject shall be adjusted, he may eventually realize from three to four thousand dollars.

The above statement was submitted to the committee by Major Vandeventer, and written by him.

JOSIAH BUTLER.

Deposition of Edgar Patterson.

With respect to the contract made by the War Department with Mr. Mix, to furnish stone for the Rip Raps, I know but little, except from hearsay.

I never knew that such a contract was to be given out until after it was made with Mr. Mix. No person ever applied to me to know at what price I would furnish such stone, until about a year after the contract was made with Mr. Mix.

EDGAR PATTERSON.

Interrogatories to Mr. Patterson.

Question. How long have you resided in Georgetown? Was it generally known in this city that General Mason and yourself were the owners of extensive stone quarries?

Answer. I have resided in Georgetown about twenty-two years. I believe it is pretty generally known that General John Mason and myself are the principal quarry owners on the tide water of the Potomac.

Question. What is the lowest price at which you would have been willing to contract for the delivery of stone at the Rip Raps?

Answer. Not being myself engaged in the stone quarrying business at the time the contract was made, I am not able to say what the cost of delivering such stone would have been. I would now be glad to contract to deliver a similar quantity and quality of stone for $100,000 less.

On the 31st April, 1822, before me, appeared Edgar Patterson, and made oath that the statements signed by him are true, and that the answers to the succeeding questions are true, to the best of his belief.

DANL. RAPINE, *Justice of the Peace.*

Mr. Patterson further states, this 2d day of May, 1822, that he has hired stone freighted to Old Point Comfort, in 1820, for $1 12 to $1 37½ per perch, and that they were large building stone; also, that he has been informed that stone has been freighted for Mr. Mix for $1 per perch; and he believes that in 1818 stone might have been freighted to Point Comfort or the Rip Raps for $1 50 per perch.

Mr. Mason to Mr. Butler.

SIR: ANALOSTAN ISLAND, *May* 2, 1822.

The letter you did me the honor to address me on the 30th ultimo came yesterday to hand.

I will readily proceed to answer the inquiries of the committee in which you preside. I have no recollection that I received any information from the Department of War of a contract to be made for the delivery of stone at the Rip Raps in 1818. Early in the month of December of that year, there appeared in the public prints an advertisement, by the commandant of engineers, inviting proposals to be made within some two or three months for a large quantity of building stone, to be delivered at Old Point Comfort, for which I put in proposals. Having, previous to the reception of your letter, received an application from the Engineer Department for information on that subject, I have furnished it with a statement of the transaction, a copy of which it seems to be proper, under the circumstances, that I should transmit to you; and you will accordingly, sir, find it enclosed.

I have the honor to be, sir, your most obedient servant, J. MASON.

Hon. JOSIAH BUTLER, *Chairman of a committee of H. of R.*

In the year 1819, in consequence of an advertisement from the Engineer Department, I made proposals to furnish a very considerable quantity of building stone at Old Point Comfort, on the Chesapeake, of the sort of granite usually found about the falls of our rivers, as will be seen by the letter I addressed to Colonel Armistead, a copy of which follows:

SIR: GEORGETOWN, *February* 27, 1819.

In consequence of your advertisement of the 2d of December last, I beg leave to offer to deliver, at Old Point Comfort, 80,000 perches of building stone, from my quarries in this neighborhood, of such quality as has been heretofore received from them at that place and at Fort Washington, for the public use, at $4 per perch, provided suitable provision is made for receiving the stone, and guarding against the delay of the vessels employed in the transportation of it; and that such advances are made, on satisfactory security, as will enable me to prosecute the business to advantage.

Very respectfully, I have the honor to be, sir, your most obedient servant,

J. MASON.

Colonel WALKER K. ARMISTEAD, *Lieut. Col. Com'dnt Engineers, Washington.*

ANALOSTAN ISLAND, *May* 1, 1822.

Having been in the habit, for more than twenty-five years, of disposing of stone in various ways from extensive quarries owned by me in this neighborhood, and knowing from personal experience all the minutiæ of the business, I thought myself competent to estimate the rates at which this material could be delivered at the place designated; and, founding my calculations on the prices of freight, labor, provisions, and other necessary supplies, prevailing at that time, I well remember that, when I put my name to the proposals, sent in as above shown, it was on a conviction that at a price less than that named by me there would not be left a profit sufficient to indemnify me for the time, labor, and risk of casualties necessarily attendant on an enterprise of that nature, and growing out of the employment of as many agents, and men, and vessels, and the purchase of as large supplies, as would be required by a punctual fulfilment of such a contract. Others, however, it appears, estimated differently; and the contract was given to a bid lower than mine.

J. MASON.

Honorable William H. Crawford to the Hon. Josiah Butler, relative to the transfer of funds from the Gulf of Mexico to Norfolk.

SIR: TREASURY DEPARTMENT, *April* 3, 1822.

In reply to your letter of the 2d instant, received this morning, requesting me to "inform the select committee on Mix's contract whether the contract, as stated in the enclosed, was considered as entered into on the 5th of April, 1818, or so entered of record; also, you will inform the committee who applied to you for your approbation in transferring money in the hands of an agent of the Government for the fortifications in the Gulf to the Chesapeake," I have the honor to state that no contract was enclosed in the said letter; but the Second Comptroller reports that the contract filed in his office is dated the 25th of July, 1818; and the Third Auditor states the same fact, and adds that, if any other date has been given to it in his statements, it is an error.

In reply to the latter part of your letter, I have the honor to state that Major Vandeventer, chief clerk of the War Department, called at this office, and requested that funds, which were in the hands of the agent for fortifications upon the Gulf of Mexico, might be transferred to Norfolk. I informed him that if the agent would deposite at New Orleans, or at the Bank of Tombigbee, any sum which the War Department wished to be transferred to Norfolk, I would have the amount transferred as requested.

The idea of transferring money from one account to another was not understood by me to be involved in the transaction. It was a mere transfer of money from one place to another, and not from one account to another. The funds intended to be transferred had not only been drawn from the Treasury, but had been placed by the Secretary in the hands of the agent for fortifications, and was, in no possible manner, subject to my control. It was, however, still public money, which the Bank of the United States was bound to transfer under the instructions and direction of the Secretary of the Treasury.

I have no recollection that any other person applied to me on this subject, nor do I recollect that any conversation ever occurred between the chief of the corps of engineers and me on this subject. According to my present recollection of the transaction, Major Vandeventer called twice at the Department; the first time when the Secretary was in the city, and the second during his absence; but it is possible that I may be incorrect as to the first.

I remain, with respect, your most obedient servant,

WM. H. CRAWFORD.

Hon. JOSIAH BUTLER, *Chairman of Select Committee.*

Deposition of John Hone.

CITY AND COUNTY OF NEW YORK, *ss:*

John Hone, of the said city and county of New York, merchant, being duly sworn, deposeth and saith, that some time near the close of the year one thousand eight hundred and ten, Samuel Stilwell, then of the city of New York, and now deceased, called at the counting-house of Hones & Town, (to which firm the undersigned belonged,) and expressed a wish to speak alone and in private with this deponent. He then exhibited, while apart with this deponent, a small part of a strip of paper which appeared to be a note or bill, and, showing an endorsement on the back of said paper, asked the deponent if that was the endorsement of any member of the firm, or whether it was the hand-writing of any one of the firm. To this question the deponent answered that it was his hand-writing, and that the name of the firm was genuine. To this remark the said Stilwell replied, "that is enough," "or I am satisfied." This deponent, thinking this kind of conduct very singular, immediately insisted on seeing the paper on which the name of the said firm was so written, and, after some difficulty, obtained a sight of the same, and found that it was a promissory note, drawn by Elijah Mix, in favor of Hones & Town, and apparently endorsed in the hand-writing of the said firm. The exact amount this deponent does not recollect, but thinks it was between $1,500 and $2,500. Immediately on seeing the said note, this deponent discovered that it was a piece of paper, two edges of which were green, and the other two white, and expressed a belief that it had been cut out of a receipt book. This deponent then declared that he had never signed such a note; that the firm of Hones & Town had never endorsed such a note, and that the whole was a forgery, and the whole transaction fraudulent, or to that

effect. This deponent then went to the police office of the city of New York, and informed against the said Elijah Mix, as a man guilty of forgery, and liable to be proceeded against as a criminal. It was a fact generally reported at the time, as this deponent believes, that Mix was guilty of forgery.

JOHN HONE.

Sworn before me, this 2d May, 1822.

W. P. VAN NESS,
Judge of the District Court U. S. for the southern district of New York.

William Van Hook's Deposition.

CITY AND COUNTY OF NEW YORK, *ss:*

William Van Hook, of the city of New York, counsellor-at-law, being duly sworn, doth depose and say, that, during the part of the year 1810 commencing with April, and until after February session, 1811, the Hon. Cadwallader D. Colden, now a member of Congress from this city, was the district attorney of this State for the district in which this city and county were included, and that the deponent, who had been a clerk in his office, was employed by him to conduct the detail of the business of said office of district attorney. That deponent well remembers drawing, in the month of January or February, 1811, an indictment for forgery, under the statute of New York, against Elijah Mix, then lately of said city, merchant, which indictment contained counts for forging, and uttering and publishing as true, *scienter*, a certain promissory note purporting to be drawn by said Elijah Mix, in favor of Messrs. Hones & Town, of the said city, merchants and auctioneers, and to be endorsed by them. And the deponent also thinks and believes it contained counts charging him with feloniously converting a receipt bearing the genuine signature of Hones & Town to the purpose of a promissory note, thereby making them liable therefor. That immediately after the detection of the forgery, and before the indictment was drawn, Mix absconded, and for a long time his residence was unknown. That the said indictment was found by the grand jury at the February court of general sessions of the peace a true bill, and returned by them into court on the 15th of February, 1811. That no proceedings were had in the said case during that court, and previous to the next court [which was held in April] Mr. Colden was removed from office, and the papers of every description appertaining to the office of district attorney, undisposed of, handed to his successor in office, among which papers was the indictment against the said Elijah Mix. That in the spring of 1813, Barent Gardenier, Esq. (formerly a member of Congress, and now deceased,) was appointed district attorney, and in April of that year deponent entered into copartnership with him in professional business, and that among the indictments handed to said Gardenier by *his* predecessor in office was the one against the said Elijah Mix. That the deponent determined that as soon as his residence could be found, if in the United States, he would pursue the necessary steps to bring him to justice, by demanding him as a fugitive from justice, considering him as well deserving exemplary punishment, from the peculiar nature of the offence, the manner it was perpetrated, and the rank he held in society.

That the first intimation the deponent had of his being any where within the United States was from some notice in the newspapers, mentioning him as being then employed in trying to destroy the British ships of war in the Chesapeake. That the deponent considered his being so employed justified him in withholding any proceedings against him at that time. That some time in the fall of that year, or early in the spring of the ensuing year, [1814,] deponent, acting as district attorney, was applied to by the counsel of William Adamson and Samuel Burling, or by themselves, who [one or both of them] had been sued in an action of damages for a large amount, to enter a *nolle prosequi* on said indictment, which application was bottomed on the fact of Mix then being meritoriously employed by the Government in the service of his country, and also on the fact of his being a very material witness for them in the said cause, then about being tried; that without his testimony great injustice would be done to them; and that the ends of justice would be much more subserved by discharging him from prosecution on the indictment, than by getting him on here at a great expense, and trying him; the respectability of the family of his father-in-law, [Major Samuel Cooper,] and the fact of Messrs. Hones & Town not having sustained any injury from the negotiating the forgery, were also urged as motives for entering the *nolle prosequi*. The deponent was also requested to make application to Mr. Chief Justice Kent, now chancellor of this State, and to the honorable De Witt Clinton, and Josiah Ogden Hoffman, the mayor and recorder of the city, for their opinion and advice on the subject, which he accordingly made to them; and on a mature consideration, and deponent believes a consultation among them, he was advised that in their opinion it was a case wherein he might enter a *nolle prosequi*, and that the ends of justice would be much better answered by doing so than by proceeding thereon; and the deponent accordingly determined to enter such *nolle prosequi* at the court then sitting, but which was not done in consequence of the indictment being fraudulently, and under false pretences, taken from the possession of the deponent by a person who subsequently admitted to him that he had destroyed it. For this reason a *nolle prosequi* was not entered, and cannot now be produced. Some time after the war, Mix returned to New York, and commenced business as an auctioneer, and so continued till he became bankrupt; and the files of the court show that he was discharged under an insolvent law of our State, as an insolvent debtor, on the 17th of April, 1817. During the time he conducted the auction establishment, which was called "The Ladies' Auction Room," his character for honesty was generally, so far as the deponent's knowledge and information extended, held to be very bad. And deponent has frequently heard him charged with having practised gross frauds in sales made by him.

WM. VAN HOOK.

Sworn before me, this 2d May, 1822.

W. P. VAN NESS,
Judge of the District Court U. S. for the southern district of New York.

DEAR SIR: MAY 1, 1822.

I have examined the minutes of the court of general sessions of the peace of this city, and find that on the 15th February, 1811, the grand jury presented a bill of indictment against Elijah Mix, for forging an endorsement of a promissory negotiable note, in the name of Hones & Town, and uttering the same, *scienter;* but I do not find the indictment on file, and, of course, cannot give you a copy, as you request.

William Van Hook, Esq., I understand, can give the reason why the indictment is missing from the files.

I am, sir, yours, &c., RICHARD HATFIELD.

CH. G. HAINES, Esq.

Mr. Hatfield is clerk of the court of general sessions.

CH. G. HAINES.

17th Congress.] No. 235. [2d Session.

CONDITION OF THE MILITARY ESTABLISHMENT AND FORTIFICATIONS.

COMMUNICATED TO CONGRESS, BY THE PRESIDENT OF THE UNITED STATES, DECEMBER 3, 1822.

SIR: DEPARTMENT OF WAR, *November* 27, 1822.

In compliance with your directions, I herewith transmit statements from the major general of the army, and the several subordinate branches of this Department, which give in detail the information requested.

In order to render the military organization more complete, the major general, after the late reduction of the army, under the act of 2d March, 1821, was stationed at the seat of Government; thus bringing the military administration of the army, as well as its pecuniary, through the several subordinate branches, under the immediate inspection and control of the Government. There is reason to believe that the arrangement will be highly useful.

The report of the major general, herewith transmitted, (marked A,) exhibits the present organization, strength, and distribution of the army. In the distribution, both in relation to the positions occupied, and the number at each post, regard has been had to the protection of important points and the discipline of the troops. The artillery, with the exception of four companies on the lakes, and one at West Point, has been assigned to the garrisoning of the various fortresses along the line of the seacoast, and the important ordnance depots in the interior; while the infantry, with the exception of a regiment at Pensacola, has been stationed at the important points in the interior, principally on the upper lakes and the western frontier.

No change has been made in the course of the year in the distribution of the troops, with the exception of transferring one company of artillery from Fernandina to Charleston harbor, one battalion of the 2d regiment of infantry from Sackett's Harbor to the Sault of St. Marie, at the outlet of lake Superior, and the whole of the 7th regiment from Fort Scott and bay of St. Louis to the Arkansas and Red rivers, to each of which one battalion has been assigned.

The inspectors general (one of whom has been assigned to the artillery, and the other to the infantry) have, in the performance of their duty, visited all the posts and military depots in the course of the year, with the exception of the posts on the Arkansas and Red rivers, the inspection of which was prevented by the inspector being severely attacked by a fever while on his tour of inspection. In addition to the inspection by the inspectors general, the generals commanding the departments have inspected, or are in the course of inspection, of the whole of their respective commands.

The various articles which constitute the supplies of the army have been during the year regularly issued, and of a good quality.

The report of the chief of the engineers (marked B) exhibits the progress which has been made in the course of the year in the erection of fortifications, also the operation of the board of engineers and the corps of topographical engineers, and the present condition of the Military Academy; by reference to which it will appear that the important duties assigned to that department have been performed in a very satisfactory manner.

The report of the colonel of ordnance (marked C) contains an exhibit of the operations in that branch of service during the last year, comprising the operations at the armories, the ordnance depots, and the measures which have been taken in relation to the lead mines, the superintendence of which has been recently annexed to the Ordnance Department. The report satisfactorily shows that this important department is gradually attaining a state of high perfection. The rigid inspection of the various ordnance depots, which has lately been made the duty of the inspector of artillery, will, it is believed, greatly contribute to improve this important branch of service.

The reports of the quartermaster general, paymaster general, surgeon general, and the commissaries general of provision and of purchases, herewith transmitted, (marked D, E, F, G, and H,) exhibit a very satisfactory view of the condition of their respective departments. On the 4th March, 1817, there remained unsettled on the books of the Second and Third Auditors, of the sums disbursed through this department previous to that date, $45,111,123 01, which on the 30th of September last was reduced to $4,689,292 95. Since the former period there has been disbursed through this department $40,887,772 83, of which on the 30th of September last there remained to be settled $6,290,110 60, the greater part of which consists of accounts in the ordinary and due course of settlement. Of the sums advanced in the year ending the 30th September, 1821, to the officers under the control of this Department, but $30,657 48 remained to be accounted for at the commencement of this quarter.

By reference to the statements in the reports of the subordinate branches of this Department, already referred to, it will appear that there was drawn from the Treasury in the first three quarters of this year, on account of the army, Military Academy, fortifications, and ordnance, $1,930,464 59, and that accounts amounting to $1,737,072 30 have been rendered for settlement, leaving but $193,392 29 to be rendered; all, or nearly all of which, it is believed, will be accounted for before the termination of the quarter; and there is reasonable ground to believe that the disbursements of the year will be made without any loss to the Government. Nearly the whole amount which is outstanding of the disbursements of the first three quarters of the year has been prevented from being accounted for, either by the sickness of the disbursing agents, or the very great distance of the posts at which the disbursements have been made.

Great reductions have been made in the amount of expenditures in every branch of service, as will appear by reference to the reports already referred to, which contain comparative statements of the present and former rates of expenditure.

All which is respectfully submitted:

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

A.

SIR: HEAD-QUARTERS OF THE ARMY, WASHINGTON, *November* 25, 1822.

In compliance with your instructions of the 6th instant, I have the honor to enclose the returns and statements following, viz:

A. [No. 1.] A statement of the organization of the army, agreeably to the act of Congress of the 2d March, 1821.

B. [No. 1.] A return of the strength of the army, from the last regimental and other returns received at head-quarters.

C. [No. 1.] A statement of the distribution of the troops in the eastern department.

D. [No. 1.] A similar statement of the troops in the western department.

E. [No. 1.] A statement showing the number of men enlisted since the 1st of January last, the amount of moneys advanced since that date for the purposes of recruiting, and the amount to which recruiting accounts have been rendered for settlement.

In connexion with the document last mentioned, I have the honor to state that of $12,256 35 advanced for the recruiting service, the sum of $3,500 was remitted on the 22d of May last to the most remote posts on the lakes, the Upper Mississippi, Missouri, &c., for the re-enlistment of men whose terms of service were expiring, and sufficient time has not yet elapsed for the receipt of accounts of disbursements. The remainder of the advance has been made since the date above mentioned to commanding officers of regiments and to the superintendents of rendezvous; and, from the promptitude with which these officers have rendered their accounts, there is every reason to believe that nearly the whole amount advanced will be accounted for by the 31st of December next.

In reply to that part of your communication directing a report of the inspections which have been made since the 1st of January, I have the honor to state that brevet Major General Scott inspected, in person, in the months of January, February, March, and April, all the posts on the Atlantic frontier south of New York.

Brevet Major General Gaines, during about the same time, inspected the posts of St. Mark's, Pensacola, and Baton Rouge, with those on the Red river and Arkansas, and was at the date of the last advices from him on a tour of inspection embracing the posts on the Missouri and Upper Mississippi.

Colonel Wool commenced a tour of inspection in June last, to embrace the troops and posts upon the northern, western, and southern lines of frontier. After passing from Green bay, on lake Michigan, to the falls of St. Anthony, on the Upper Mississippi, and from thence to Council Bluffs, he descended the Missouri on his way to the Red river, and was left by the last advices convalescent of a dangerous illness, contracted by exposure in his efforts to accomplish the laborious services which had been assigned to him.

Colonel Archer has been engaged since the first of January in an inspection of the posts of Baton Rouge, Pensacola, Mobile, and all the posts within the eastern department garrisoned by the artillery. This inspection has also embraced the ordnance, ordnance stores, &c. at those posts, as well as at the different arsenals.

In this branch of service, so vital to the mechanical discipline and moral efficiency of the army, I owe it, in justice to those concerned in its performance, to say that every possible exertion has been made to accomplish it effectually.

The commanding officers of the regiments of artillery within the eastern department were directed by Major General Scott, in the month of August, to inspect their respective regiments; but no report has yet been received as to the execution of the order.

I have the honor to be, sir, very respectfully, your obedient servant,

JACOB BROWN.

Hon. J. C. CALHOUN, *Secretary of War.*

A. [No. 1.]

Organization of the army of the United States, according to the act of 2d March, 1821.

	Major general.	Brigadier generals.	Adjutant general.	Inspectors general.	Quastermaster general.	Quartermasters.	Commissary general of subsistence.	Paymaster general.	Paymasters. CH. J. NOURSE, *Acting Adjutant General.*

SIR: WAR DEPARTMENT, PENSION OFFICE, *November* 8, 1822.

In conformity with your order of yesterday, I have the honor of informing you that the following sums have been transmitted to the agents for paying United States' pensioners during the present year:

Revolutionary pensioners	$1,353,308 58
Invalid pensioners	303,094 24
Half-pay, or commutation	12,689 30

I have the honor to be, very respectfully, your obedient servant,

J. L. EDWARDS.

Hon. J. C. CALHOUN, *Secretary of War.*

B.

SIR: ENGINEER DEPARTMENT, *November* 14, 1822.

I have the honor to submit the following report, in compliance with your order of the 6th instant, viz: "You will report, as early as practicable, the application of the appropriation of last session for fortifications to the several works, and the expenditure necessary for their completion; the works remaining to be commenced, according to the plans of the board of engineers; the estimate of the board for those works; the progress of the board of engineers in its labors, comprehending the operations of the topographical engineers, from the commencement of this year; the condition of the Military Academy, including its present number, and the number which graduated last year; the amount drawn for the first three quarters of this year, under the several heads of appropriation; and the amount of accounts rendered and settled in the same period."

So much of the information above required as can be exhibited in tables will be found in those accompanying, (marked Aa, Bb, and Cc;) and the residue, relating to the board of engineers, the topographical engineers, and the Military Academy, is stated herewith.

Table Aa exhibits the sums appropriated at the last session, and their application to the several fortifications, and also those necessary for their completion. Of those appropriated, amounting to $350,000, the proportion applied in the first three quarters of the year is shown to have been $221,154 33, and that applicable to the fourth quarter to be $128,845 67. These amounts indicate that the appropriations have been in a regular course of application.

Table Bb exhibits the works remaining to be commenced, according to the plans of the board of engineers, and the estimates of the board for them, arranged into three classes, in the order of their efficiency to meet the earliest probable emergency.

Table Cc exhibits $274,665 43 as the aggregate of amounts drawn for the first three quarters of this year, under the several heads of appropriation; deducting from which $62,484 84, the amount unexpended in the hands of agents, at the expiration of the third quarter, there will remain to be accounted for $212,180 59. The accounts rendered for settlement, as shown in the table, amount to $190,477 54, which being deducted from the last stated sum, will reduce the amount to be accounted for to $21,703 05; and this sum, with the exception of a trivial amount for contingent disbursements, not yet completed, will be covered by the accounts of Captain De Russy for disbursements at Mobile Point, the rendition of which has been delayed in consequence of the sickness of Captain De Russy.

The labors of the board of engineers commenced this year on the Gulf of Mexico, where, at the close of last year, they had arrived, on the completion of an examination of the Ohio and Mississippi rivers, with a view to the improvement of their navigation from the falls of Ohio to the Balize. Having inspected and reported upon the condition of the Rigolets, re-examined the localities of Mobile bay, and reported the result, (which confirmed and strengthened their previous reports on the propriety of fortifying the east end of Dauphin Island,) and reconnoitred Pensacola and its vicinity, they returned to New York, and shortly after repaired to this place. On their return to New York, they commenced immediately their report on the improvement of the navigation of the Ohio and Mississippi rivers, and, at the same time, resumed the prosecution of their projects for the defence of Narraganset and Boston bays. In June, besides the foregoing, they inspected and reported on the condition of Fort Diamond, and attended the examination at the Military Academy. In July, they commenced the projects for the defence of Salem and Marblehead; in August, completed those for Narraganset Roads; and in September, completed their report, &c. respecting the Ohio and Mississippi rivers; the projects for Boston, Salem, and Marblehead, being still under prosecution at the close of the month.

The operations of the topographical engineers embraced surveys at Mobile and Pensacola bays, and the contiguous coast; at Savannah river, and at the coast adjoining; at Fort Royal and St. Helena Sounds, Charleston, Georgetown, and their vicinities, in South Carolina; at Ocracock inlet, harbor, and bar, in North Carolina; at Marblehead and Salem, in Massachusetts; at Kennebeck and Sheepscut rivers, and Mount Desart bay and island, in Maine; also, roads in Michigan, and the lead mines on the Upper Mississippi; besides plattings and drawings relating to the surveys just mentioned, and others previously made, and the preparation for publication of an account of an expedition on the western waters.

The number of cadets belonging to the Military Academy amounted on the 31st ultimo to two hundred and forty-eight, and the number which graduated last year to forty. The condition of that institution is now, in every respect, more flourishing than it has been at any period heretofore. This is manifest equally in the extent and value of attainment, as in subordination and cheerful observance of police regulations; and may be attributed, in a great measure, to the operation of the excellent rules and regulations adopted last year, and now in force, together with the zeal and ability with which the duties of the superintendent and other officers of the academy have been performed. The additional studies in the higher branches of mathematics and philosophy, although not long since introduced, have now become familiar, and are prosecuted with zeal worthy of their importance.

Respectfully submitted.

ALEX. MACOMB, *Maj. Gen. Brv't, Chief Engineer.*

Hon. J. C. CALHOUN, *Secretary of War.*

Aa,

Exhibiting "the application of the appropriation of the last session for fortifications to the several works, and the expenditures necessary for their completion."

Designation of the several works.	Application of the appropriation of last session.			Expenditures necessary for their completion.
	Amount appropriated.	Am't applied to 1st three quart's.	Am't applicable to 4th quarter.	
Fort Delaware,	$20,000	$13,400 00	$6,609 00	$57,899 80
Fort Washington,	25,000	18,818 86	6,181 14	46,077 98
Fort Monroe,	75,000	60,178 63	14,821 37	175,560 86
Fort Calhoun,	50,000	37,400 00	12,600 00	530,554 32
Fort at Mobile Point, (collecting materials,)	50,000	20,000 00	30,000 00	547,065 94
Fort at Rigolets and Chef Menteur,	100,000	70,556 84	29,443 16	362,189 53
Fort on the right bank of the Mississippi, opposite Fort St. Philip, (collecting materials,)	30,000	800 00	29,200 00	392,127 40
	$350,000	$221,154 33	$128,845 67	

Remarks.—The sums stated for "expenditures necessary for their completion" are constituted of the differences between the estimated entire cost and the amount advanced for expenditures up to September 30, 1822.

It will be perceived that the appropriations are in a regular course of application, with the exception of those for Mobile Point and the fort on the Mississippi opposite Fort St. Philip. The reason of their not having been so at them is, that they were not available until the summer commenced, at which season at those places it is usual to diminish, and sometimes to suspend operations. The working season being now arrived, their application is, no doubt, in active progress.

Bb,

Exhibiting "the works remaining to be commenced, according to the plans of the Board of Engineers, and the estimates of the board for those works."

FIRST CLASS, TO BE COMMENCED AS SOON AS POSSIBLE

Designation of the works.	Estimate of the Board.
Fort St. Philip, Louisiana,	$77,810 79
Battery at bayou Bienvenue,	94,582 30
Fort at Soller's Point flats, Patapsco river,	673,205 44
Fort at New Utrecht Point, Narrows, New York harbor,	371,970 60
Redoubt in advance of New Utrecht Point, New York harbor,	53,024 72
Fort Tompkins, New York,	420,826 14
Redoubt in advance of Fort Tompkins, New York,	65,162 44
Fort at Wilkin's Point, New York,	456,845 51
Fort at Throg's Point, New York,	471,181 53
Fort at Brenton's Point, Rhode Island,	575,514 10
Redoubt in advance of Brenton's Point, Rhode Island,	154,652 42
Fort at Dumpling's Point, Rhode Island,	579,946 57
Fort at Rose island, Rhode Island,	82,411 74
Dike across west passage Narraganset Roads,	205,000 00
	$4,282,134 30

SECOND CLASS, TO BE COMMENCED AT A LATER PERIOD.

Designation of the works.	Estimate of the Board.
Fort at Grande Terre, Louisiana,	$264,517 52
Tower at Passe au Heron, Mobile bay,	16,677 41
Tower at bayou Dupré,	16,677 41
Fort at Hawkins Point, Patapsco river,	244,337 14
Fort at St. Mary's, Potomac river,	205,602 33
Fort opposite Pea Patch, Delaware river,	347,257 71
Fort at Middle Ground, outer harbor, New York,	1,681,411 66
Fort at East Bank, New York,	1,681,411 66
Fort Hale, Connecticut,	31,815 83
Fort Wooster, Connecticut,	27,793 34
Fort Trumbull, Connecticut,	77,445 21
Fort Griswold, Connecticut,	132,230 41
	$4,727,177 63

THIRD CLASS, TO BE COMMENCED AT A REMOTE PERIOD.

Designation of the works.	Estimate of the Board.
The rafts to obstruct the channel between Forts Monroe and Calhoun,	$240,568 00
Fort on Craney Island flats,	258,465 00
Fort on Newport News,	244,337 14
Fort on Naseway shoal,	673,205 44
	$1,416,575 58

RECAPITULATION.

First class, fourteen works,	4,282,134 30
Second class, twelve works,	4,727,177 63
Third class, four works,	1,416,575 58
	$10,425,887 51

Remarks.—The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest probable emergency.

Cc,

Exhibiting "the amounts drawn for the first three quarters of this year, under the several heads of appropriation, and the amount of accounts rendered and settled during the same period."

Designation of appropriations.	Amounts drawn in the first three quarters of this year.	Amount of accounts rendered for settlement in the same period.
Fort Delaware,	$20,900 00	$19,369 33
Fort Washington,	18,821 08	20,206 51
Fort Monroe,	60,178 63	55,965 27
Fort Calhoun,	37,400 00	46,350 68
Fort at Mobile Point, for 1821,	11,993 16	
Fort at Mobile Point, for 1822, (collecting materials,)	20,000 00	
Fort at Rigolets and Chef Menteur,	80,400 00	30,851 11
Fort on the right bank of the Mississippi, opposite Fort St. Philip, (for collecting materials,)	800 00	
Fortifications, (old account,)	3,591 59	
Repairs and contingencies,	13,614 57	12,214 47
The Military Academy,	6,882 00	5,520 17
The survey of the Ohio and Mississippi, from Louisville to the Balize,	84 40	
	274,665 43	190,477 54

Remarks.—All the accounts for disbursements during the first three quarters have been rendered, except a trivial amount for contingencies, and those of Captain De Russy, which will embrace the first two quarters of those at the Rigolets, and the third quarter at Mobile Point; there having been, at the latter, no disbursements during the first two quarters. The cause of delay in the rendition of Captain De Russy's accounts is, that he was unable to attend to any business on account of sickness, with which he was afflicted shortly after he received the funds applicable to the disbursements in question, and from which he had not entirely recovered at the date of his last report, of the 1st October.

ALEXANDER MACOMB, *Maj. Gen. Brevt., Chief Engineer.*

C

SIR: ORDNANCE DEPARTMENT, *November* 12, 1822.

In obedience to your directions of the 6th instant, to report to you "what measures have been taken in regard to the lead mines of the United States; the number of applicants for leases thereof; what number of leases have been granted; the prospect of utility to the Government; and what measures are, in my opinion, necessary to render the mines productive;" I beg leave respectfully to report as follows:

That, subsequently to the measures which had been taken, as detailed in the report I had the honor to make to you on the 3d of May last, notice was issued from this department, agreeably to your orders, inviting applications for leases of the lead mines, and published in all of the western States and the Territory of Arkansas, and in the public papers of this city, stating the terms upon which such leases could be obtained, and the mode of procedure in effecting the same; and to the applicants who offered, in consequence thereof, every further information has occasionally been rendered that the cases required.

That, in order to expedite the business of surveying the mine-lands, and as economically as possible, an officer of the topographical engineers, and another of the Ordnance Department, were, in the month of July last, directed to proceed to the Northwest or Michigan Territory, with instructions to lay off the lands reserved by the United States, in the treaty with the united tribes of Ottawas, Chippewas, and Pattawatamie Indians, in 1816: so that the whole of the richest mine-lands might be divided into half-sections of three hundred and twenty acres each, to supply the applicants, and to furnish them with plats of survey of those which they should select, and, as far as practicable, in the order in which such applications were made.

Greater delay has arisen, from unavoidable causes, in making those surveys, than was anticipated by this department; renewed efforts, however, are making for completing them, which it is expected will ere long be effected.

In consequence, however, of the numerous applicants for leases in the part of country mentioned, and the measures they had taken in anticipation, it has been concluded to direct that, where they shall have proceeded to locate and work the mines, it shall be endeavored to bring them within the surveys to be made by the officers of Government, and within the leases to be granted, provided a true account shall be rendered of the proceeds of the mines, and the rent duly paid from the commencement of the working thereof.

The number of applicants, up to the present time, amounts to upwards of eighty, mostly from the State of Missouri; and, with very few exceptions, for the mine-lands in the Northwest or Michigan Territory.

No leases have as yet been issued, for the reasons already stated.

With regard to the prospect of utility to Government from leasing the mine-lands, I have to observe that from a report of the officer of ordnance, on his return from his first service in the Territory just mentioned, there is every reason to conclude that immense quantities of lead ore may be produced therefrom; and, consequently, that, by proper management, very considerable revenue may be derived from the mines already discovered. From the mines of Missouri very great expectations of similar products may reasonably be formed, and of which some account was given in my report of the 30th of March last.

From the considerable length of time in which the mine-lands had been unattended to, it has become impossible to speak with more precision; but, as already observed, sufficient is known to warrant every exertion to bring forth their resources.

With reference to the further measures which may be necessary to render the mines productive, I would beg leave to suggest the expediency of recommending to Congress the passage of a law providing for the appointment of agents for the principal mining districts of Missouri and Michigan, who should be empowered to superintend the management of the mines; to receive and account for all rents, and pay the same into the Treasury; to see that

no mines were wrought without authority; to prevent the waste and destruction of wood; to keep an office of record of all leases and surveys; and keep the Government informed, periodically, of the quantity of lead made at the different mines, of their state generally, and improvements thereat, and also of new discoveries of lead and other minerals.

Provision, also, to be made by law for suitable compensation to the agents so employed; they giving bonds of surety for the faithful performance of their duties.

An appropriation is also required for defraying the expenses of surveys in the Northwest or Michigan Territory already undertaken, and for other contingent expenses already incurred, or which may accrue in organizing the mining concerns to the best advantage: for which the sum of two thousand dollars will probably be sufficient. In the event of such legislative measures being recommended, I would beg leave to state that the draught of a bill has been prepared in this department, embracing the objects stated herein.

It may be proper to add, that it is in contemplation of this department to apply for the transfer of a certain number of the cadets, who may graduate at the Military Academy, in order to their being employed as topographical surveyors in the mining districts, with the additional view of securing to them the acquisition of a geological and mineral knowledge of those sections of country, and the prosecution of new discoveries; objects which cannot fail of being successfully attained, if they shall be placed under the direction of an agent duly qualified to inform and direct their minds towards those desirable accomplishments: a measure which it is conceived may prove highly useful to Government, and unite in it, also, a more economical or less expensive means of procuring the services required.

Very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. J. C. CALHOUN, *Department of War.*

SIR: ORDNANCE DEPARTMENT, WASHINGTON, *November* 15, 1822.

In compliance with your instructions of the 6th instant, I have the honor to communicate, herewith, statements numbered 1, 2, and 3, which contain the information required.

No. 1 shows the aggregate of muskets manufactured, and work done at the armories and ordnance depots, from the 1st January to the 30th September, 1822. This tabular form, recently adopted, will serve in future to exhibit, at one view, a full statement of the operations of the department.

No. 2 exhibits a statement of the funds remitted, and the accounts rendered, during the same period. By this statement it appears that the remittances amount to - - - - $311,347 15

And that the accounts rendered amount to - - - - 297,852 16

Balance remaining in the hands of disbursing officers, - - - - $13,494 99

As no remittances have been made during the present quarter, the above balance has been greatly reduced, by payments made during the first month of this quarter. The principal one, that at Harper's Ferry, has doubtless been all expended in such payments. It is estimated that the total amount of balances now remaining in the hands of the disbursing officers of this department does not exceed $2,000, the whole of which will, no doubt, be accounted for in the accounts of the present quarter.

No. 3 shows the comparative cost of muskets now, and in 1817.

Average cost of muskets in 1817, - - - - - $13 90½

Average cost of muskets in 1821, - - - - - 12 51½

Difference, - - - - - $1 39

It is estimated that the cost of muskets this year will be about two dollars per stand less than in 1817. The quality of the arms now manufactured is greatly superior to those made in 1817. The introduction of labor-saving machinery has effected not only a reduction of expense, but more perfect workmanship, and a more exact system of uniformity. The arms now made are considered to be worth at least 20 per cent. more than those made in 1817.

Very respectfully, I am, your most obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

Work done at the Armories and Ordnance Depots, from the 1st of January to the 30th of September, 1822.

	Muskets manufactured.	Ball screws manufactured.	Screw drivers manufactured.	Spring vices manufactured.	Arm chests manufactured.	Muskets cleaned and repaired.	Rifles cleaned and repaired.	Pistols cleaned and repaired.	Swords cleaned and repaired.	Bayonets cleaned and repaired.	Gun locks cleaned and repaired.	Musket barrels proved.	Rifle barrels proved.	Cannon scraped, oiled, &c.	Gun carriages painted and repaired.	Cartouch boxes cleaned.	Sets artillery harness cleaned.	Sword scabbards cleaned.	Breastplates cleaned.	Powder barrels repaired.	Rammers and sponges made.	Rammers and sponges repaired.	Ladles and worms repaired.	Ladles repaired.	Stands grape shot made.	Sets of guns' instruments made.	Port-fire stocks made.	Gin blocks made.	Prolongs made.	Mortar beds made.	Cannon cartridges made.	Packing boxes made.	Packing boxes repaired.	Rockets made.	Tubes cast.

	30,588 06	280,759 09	311,347 15	297,852 16	13,494 99

NOTE.—The accounts of all the disbursing officers of this department have been received for the first three quarters of the present year, except those of Harper's Ferry armory. The money remitted to that place, it is presumed, has been applied to the regular monthly payments of the workmen, but the illness of the paymaster has occasioned a delay in transmitting his accounts for the third quarter.

ORDNANCE DEPARTMENT, *November* 13, 1822.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

No. 3.

Comparative expense of manufacturing a musket now, and in 1817.

The muskets manufactured at the national armories in 1817 were then estimated to have cost—

At Springfield armory, - - - - - - -	$13 56
At Harper's Ferry, - - - - - - -	14 25
	27 81
Average, - - - - - -	$13 90½

The contract price at that period was $14.

In 1821, the arms made at Springfield are estimated at - - - - -	$12 06
In 1821, the arms made at Harper's Ferry, - - - - - -	12 97
	25 03
Average, - - - - - -	$12 51½
Difference between the average of 1817 and 1821, - -	1 39

The average cost of the arms made this year, it is believed, will not exceed $12.
The present contract price is $12.

ORDNANCE DEPARTMENT, *November* 13, 1822.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

D.

SIR: QUARTERMASTER GENERAL'S OFFICE, *November* 16, 1822.

In compliance with your instructions, I have the honor herewith to submit a statement (No. 1) exhibiting the amount of money remitted to the officers of the Quartermaster's Department from the commencement of the present year to the termination of the third quarter, and the amount of disbursements within the same time, so far as the accounts have been rendered for settlement; also, a comparative view (No. 2) of the expenditures of the department in the years 1817 and 1822.

The explanatory note annexed to statement No. 1, will, it is hoped, sufficiently account for the apparent excess of advances, within the period referred to, beyond the amount for which accounts have been rendered. The most of it will be accounted for in Captain Hunt's returns for the third quarter, which, in consequence of the remoteness of his station, and the laborious nature of his duties for the past season, have not yet been received, but are expected daily.

On the subject of accountability generally, I take this occasion to remark, that, from the caution with which advances are made on monthly detailed estimates to all adjacent posts, and on quarterly estimates to those more remote, together with the promptness manifested on the part of the several officers in rendering their accounts, it is believed there will not, at the end of the year, be a single instance of delinquency.

In reference to statement No. 2, you are aware of the difficulty of exhibiting, with absolute accuracy, a comparative view of the expenditures of a department, subject, as this is, to be influenced by many contingent considerations.

I feel a strong conviction, however, that the statement submitted approximates as near to the truth as the nature of the case admits of, and that it is substantially correct in the result, if not strictly so in all its details.

The current appropriations for the respective years, taking them as equal only to the calls of those years, were considered the proper sums to be compared, making the necessary allowance in the one case for excess of force, and in the other for the items of expenditure chargeable in 1817 to different heads of appropriation. The deductions, in the latter case, are taken, for the first three quarters of the year, from our analysis of the actual expenditures; for the fourth quarter a corresponding amount has been assumed.

In attempting a comparative exhibit of this kind, a sameness of circumstances for the periods taken seems to be implied. Such, however, is not the case in reference to 1817 and 1822, and I will endeavor to show briefly in what they differed.

For the difference of force in favor of 1817, an allowance of one-third has been made on the face of the statement: this is the proportion which the aggregate numbers bear to each other, without reference to grades. An allowance in favor of 1822 might fairly be claimed, for the excess of commissioned officers in that year, beyond those of 1817, relatively to the rank and file of the respective years; but the difficulty of fixing upon a proper allowance prevented it being introduced into the statement, though it is obviously deserving of some consideration. But it is from the difference in the *disposition* of the troops that we have a right to claim a *heavy* allowance in favor of 1822. The extension of our military frontier several thousand miles necessarily carries with it an increased expense, and especially so in the Quartermaster's Department. No specific allowance, however, has been made for this consideration on the statement, because, from the nature of the case, the amount must have been, in a great measure, conjectural; but a brief enumeration of the difference of circumstances in that respect will show that it should not be estimated lightly.

In 1817, our highest post on the Red river was at Natchitoches, which was garrisoned by three companies: in 1822, a cantonment has been established twenty miles in advance of that post, in the direction of the Sabine, garrisoned by five companies.

In 1817, we had no military post at all on the Arkansas: in 1822, we support a post situated six hundred miles up that river, garrisoned also by five companies.

In 1817, our remotest post on the Missouri was at Fort Osage, garrisoned by a single company: in 1822, we maintain a position at Council Bluffs, four hundred and fifty miles in advance of the former, garrisoned by an entire regiment.

In 1817, our highest post on the Mississippi was at Prairie du Chien, garrisoned by three companies: in 1822, we maintain a post at St. Peter's, two hundred miles in advance of the former, garrisoned by seven companies.

In the direction of the northwest, our remotest post in 1817 was at Mackinac, garrisoned by two companies: in 1822, we have established and maintained a post at the falls of St. Mary, one hundred and twenty miles in advance, garrisoned by five companies, which have been transported one thousand miles. A new post has also been established on the Saguina bay, garrisoned by two companies.

The statement submitted shows a difference equal to twenty-four per cent. in favor of 1822, without taking into view the important considerations noted above; and were it practicable to form an accurate estimate of the increased expense in 1822, occasioned by this manifest, and, in a general point of view, this highly advantageous change of circumstances, the result, already so favorable, would be much improved.

I have the honor to be, &c.,

T. CROSS, *Assistant Quartermaster*,
In charge of the Quartermaster's Department, in the absence of the Quartermaster General.

Hon. J. C. CALHOUN, *Secretary of War*.

No. 1.

Statement showing the amount of moneys drawn and remitted to the disbursing officers of the Quartermaster's Department, within the first three quarters of the year 1822, *and the amount disbursed by them during the same period, so far as the accounts and returns have been received.*

Amount drawn and remitted in the 1st quarter, - - - - - -		$56,655 91
Amount drawn and remitted in the 2d quarter, - - - - - -		148,418 47
Amount drawn and remitted in the 3d quarter, - - - - - -		81,333 09
		$286,407 47
Amount disbursed in the 1st quarter, - - - - -	$59,629 87	
Amount disbursed in the 2d quarter, - - - - -	117,197 13	
Amount disbursed, as far as the accounts have been received, in the 3d quarter,	50,463 21	
	227,290 21	
Excess of remittances,		$59,117 26

NOTE.—The accounts of Captain Thomas F. Hunt, the assistant quartermaster at New Orleans, for the third quarter of the year, and those of a few other officers at distant posts, have not been received. They are daily expected, however, and will, it is believed, nearly cover the apparent excess of remittances. Those of Captain Hunt for the third quarter, including la arge item for arrearages, will equal $30,000. The residue of the excess is made up of small accounts of other officers not rendered for the third quarter, and of about $12,000 remitted towards the close of that quarter for future service at remote points.

QUARTERMASTER GENERAL'S OFFICE, *November* 16, 1822.

T. CROSS, *Assistant Quartermaster*,
In charge of the Quartermaster's Department, in the absence of the Quartermaster General.

No. 2.

Comparative view of the expenditures of the Quartermaster's Department in the years 1817 *and* 1822.

Amount appropriated for current service in the year 1817, - -	-	-	$460,000 00
Amount appropriated for current service in the year 1822, - -	-	$313,217 00	
From which deduct the following items of expenditure in 1822, included in the estimate and appropriation for the department for that year; which, in 1817, were charged to the appropriation for army contingencies, &c., viz:			
1st. Transportation of officers' baggage, - - - - -	$27,887 92		
2d. Expenses of courts-martial, - - - - -	3,286 02		
3d. Postage on public letters, - - - - -	4,555 00		
4th. Forage in kind for officers' horses, not issued as such in 1817, but drawn through the Pay Department, - - - -	9,525 00		
5th. Transportation of provisions, which, in 1817, was done by the contractors, who, by their contracts, were bound to make deliveries, on reasonable notice, at any point within their districts, free of expense to the public, - - - - - - - -	4,469 00		
		49,722 94	
Amount remaining of the appropriation of 1822, applicable to the same objects charged to that of 1817, - - - - -	-	263,494 06	
The strength of the army in 1817 was 8221; and in 1822 it is 6183; the difference is equal to one-third more in the former than in the latter year; for which add - - - - - - - -	-	87,831 35	
			351,325 41
Difference in favor of 1822, resulting from administration on those items only which are common to both years, - - - - -	-	-	108,674 59

QUARTERMASTER GENERAL'S OFFICE, *November* 16, 1822.

T. CROSS, *Assistant Quartermaster*,
In charge of the Quartermaster's Department, in the absence of General Jesup.

E.

SIR: PAYMASTER GENERAL'S OFFICE, WAR DEPARTMENT, *November* 29, 1822.

In obedience to your order, I have the honor herewith to submit "a report of the amount of money drawn from the appropriation for the Pay Department, and remitted to the disbursing officers, on account of the payments of the first three quarters of the present year; the periods to which accounts have been rendered; the amount remaining to be accounted for, and the periods to which the troops have been paid."

From this report, it will be seen that the remittances amount to $693,925 47. The accounts rendered amount to $611,851 85, leaving a balance of $82,073 62 to be accounted for. From the reports of paymasters recently received, I am warranted in stating that, *by this time*, the balance has been applied to the purposes for which it was intended, and that the whole will be fully accounted for before the end of the fourth quarter; also, that the troops are paid up to the 31st August, with the exception of the companies in the district paid by Major Massias, who was authorized to postpone the company payments, in consequence of the recommendation of the commanding officers, and the opinion of the surgeons, that it would be injurious to the health of the men to receive pay in the sickly season. The officers in his district have been paid to the last of August.

Company payments for the last month of the third quarter (September) do not become due until after the October muster, and cannot, therefore, be made before November.

In justice to those paymasters who have the largest balances to account for, it may be proper to state the causes that have occasioned delay in rendering their accounts.

Captain Larned has been employed in paying Randall's district in the absence of that paymaster, which he has completed to the 31st August; but it has delayed the payment of his own.

Paymaster Phillips received funds in July, and has made partial payment to the last of August. He was prevented visiting the remote posts in his district by a severe attack of the fever prevailing at Louisville, Kentucky. He reports that he left Louisville to pay the troops on the Arkansas river on the 5th of October, and that he expects to return by the 18th November, when his payments will be completed to the last of August, and his accounts rendered.

Major Gwynne has also been delayed in making his payments by sickness. He reports, however, his district paid to the last of August, with the exception of two companies; that he has made arrangements to have them paid; and that his accounts will be rendered as soon as he is sufficiently recovered to attend to business.

Paymaster Tallmadge was not furnished with funds for his present district until the month of August, as the troops he is to pay did not reach their stations on the lakes till late in the season.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. J. C. CALHOUN, *Secretary of War.*

Report of the amount of money drawn from the appropriation for the Pay Department, and remitted to the disbursing officers, on account of the payments for the first three quarters of the year 1822; *the periods to which accounts have been rendered; the amount remaining to be accounted for; and the periods to which the troops have been paid.*

Names and stations of Paymasters.	Posts composing pay districts.	Am't of funds remitted each in 1st three quarters of year.	Periods to which accounts are rendered.	Balances to be accounted for.	Periods to which the troops are paid.	Remarks.
D. S. Townsend, Boston, -	Forts Sullivan and Preble, in Maine; Fort Independence and the arsenal, in Massachusetts; Fort Constitution, in New Hampshire; and Fort Wolcott, in Rhode Island, - - - -	$57,500 00	1822. August 31,	$2,015 27	August 31, - -	Balance carried to debit of 4th quarter.
S. Clark, Utica, New York, -	Sackett's Harbor, Fort Niagara, Plattsburg, arsenals at Rome and Watervliet, New York, - -	65,360 00	August 31,	3,099 12	August 31, - -	Balance carried to debit of 4th quarter.
T. J. Leslie, West Point, -	West Point, Fort Columbus, arsenal near New York; and Fort Trumbull, in Connecticut, - -	95,100 00	August 31,	5,098 96	August 31, - -	Balance carried to debit of 4th quarter.
C. H. Smith, Norfolk, -	Forts Norfolk and Nelson, arsenal near Richmond, Va.; and Fort Johnson, in North Carolina, -	22,500 00	August 31,	4,919 12	August 31, - -	Balance carried to debit of 4th quarter.
T. Wright, Pensacola, -	Pensacola and St. Mark's, - - -	61,000 00	August 31,	5,445 28	August 31, - -	Balance carried to debit of 4th quarter.

D. Gwynne, Detroit, -	Detroit, Chicago, and Sagana, - -	55,000 00	June 30,	15,727 95	August 31, excepting two companies at Chicago, by his report.	
A. A. Massias, Charleston, S. C.	Charleston, South Carolina; Savannah and Augusta, Georgia; Fernandina and St. Augustine, East Florida,	26,500 00	June 30,	3,504 11	June 30.	
A. Wetmore, Franklin, Mo. -	Council Bluffs, - - - -	46,368 47	August 31,	2,866 24	June 30 and August 31.	
C. B. Tallmadge, Detroit, -	Michilimackinac, Green Bay, and Falls of St. Mary,	93,500 00	June 30,	23,000 00	June 30, in his former district.	
		$693,925 47		102,651 37		
	Amount of balances carried to debit of fourth quarter,	-	-	20,577 75		
				$82,073 62	Balance of remittances to be hereafter accounted for.	

PAYMASTER GENERAL'S OFFICE, *November* 29, 1822.

F.

SIR: SURGEON GENERAL'S OFFICE, *November* 28, 1822.

In compliance with your order of the 6th instant, I have the honor to report, that during the present year no money has been advanced on account of the Medical Department, and of course no accounts have been, or remain to be, rendered; as all bills are first examined, and the sums found due transmitted by the Treasurer of the United States directly to the claimants.

The enclosed table will give a comparative view of the expenditure of the department at several periods, viz: during the last two years of the establishment of 1802; the last two of that of 1808; the three previous, and the two subsequent to the present organization of the medical staff under the establishment of 1815; and during the present year under that of 1821. The data are taken from the appropriation laws and the Auditors' books; and in estimating the difference between the three years before and the two years after the organization of the medical staff in 1818, all other circumstances were equal, the army being the same, and an allowance being made for reduction in prices, &c. In explanation of this great difference of expense, it may be proper to add, that a perfect system of responsibility for all public property, from the period of its purchase to that of its expenditure, has been established in this office; that the returns of the surgeons, of every article, are regularly rendered and examined, and full receipts required in every case of transfer before their accounts are settled. This, with the plan of purchasing adopted, and of paying all bills without advancing money, absolutely precludes the possibility of fraud, extravagance, or undue expenditure. It may also be remarked, that, during the last four years, our military hospitals have been regularly and abundantly furnished with every article of furniture, medicines, stores, &c. necessary for the comfort, convenience, and recovery of the sick; to which, as well as to the skill and attention of the surgeons, the quarterly reports bear ample testimony; for, with the exception of two posts, at which there was unusual sickness from accidental causes, the whole number of deaths in the army for two quarters was but thirty-one, thirteen of which were from casualties, consumption, and sudden hæmorrhage; leaving but eighteen from all other diseases in six months: a proportion vastly less than occurs among the same class of men in civil life in any part of the country.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. J. C. CALHOUN, *Secretary of War.*

A comparative table of the expenses of the Medical Department, under its different organizations, from 1806 *to* 1822.

The average appropriation for the Medical Department for 1806 and 1807 was $13,500 per ann., or $4 per man.
The average appropriation for the Medical Department for 1810 and 1811 was $50,000 per ann., or $5 per man.
The average expenses of 1816, 1817, and 1818, by the Auditors' books and appropriation laws, were $95,382 per ann., or $7 per man.
The average expenses of 1819 and 1820, after the present organization, were $39,104 per ann., or $3 per man.
The average expenses of 1822, will be about $2 50 per man.

From 1815 to 1821 the aggregate of the army was the same; the number of men during 1819 and 1820 was greater than during the two preceding years; and yet, under the present organization, the expenses of the two latter years is four dollars per man, or $56,278 per annum, less than during the three previous years, due allowance being made for reduction of prices, &c. From this table, it will also be seen that, since the present organization, the expenses are one-fourth less than in 1810 and 1811, the last two years of the establishment of 1808, and two-fifths less than in 1806 and 1807, the last two years of the establishment of 1802. The appropriation required for 1823 is but $3,000 more than that for 1807, though the army is twice as large, and the posts nearly double in number. The total extra expense of the present organization, including the pay of the surgeon general, clerk hire, and contingencies of the office, is about $4,450 per annum.

JOSEPH LOVELL, *Surgeon General.*

G.

SIR: OFFICE OF COM. GEN. OF SUBSISTENCE, WASHINGTON, *November* 14, 1822.

In compliance with your orders, I have the honor to lay before you a statement (No. 1) of the expenditures on account of army subsistence for the first three quarters of the present year. Two hundred and seventeen thousand and seventy dollars and thirty-nine cents have been advanced and paid to contractors and assistant commissaries. The disbursements made and accounted for amount to two hundred and six thousand three hundred and forty dollars and forty-one cents, leaving a balance unaccounted for of ten thousand seven hundred and twenty-nine dollars and ninety-eight cents; the major part of which is in the hands of assistant commissaries, and has accrued, in a great measure, from the sales of damaged provisions, sales of provisions to officers at frontier posts, and sales of empty casks. There remain eight accounts due from the southern and western frontier for the third quarter, which will, when received, greatly reduce the above balance. It is confidently believed that not a cent will be lost to Government, by defalcation of agents of this department, for the present year.

I have also the honor to lay before you a statement (marked No. 2) of the expense of subsisting the army, from the commencement of the new system, on the 1st of June, 1819, to the 31st of May, 1822, a period of three years. The statements of the expense of subsisting the army for three years, commencing the 1st of June, 1816, to the 31st of May, 1819, have been furnished by the Second and Third Auditors. These statements may be varied hereafter, by the settlement of accounts.

The cost of subsisting the army for three years, under the old system, amounted to $2,361,453 97; that for three years by a commissariat, amounts to $1,575,933 18; making a difference of $785,520 79 in favor of the commissariat.

In making a comparative view, it became necessary, in the first two years, to deduct 1,241 men, or 905,930 rations, at 14½ cents per ration, that being the average cost of the ration for those two years. For the year commencing the 1st of June, 1821, and ending the 31st of May, 1822, it was necessary to add the cost of subsisting 4,119 men, there being that number less in service than in the preceding year.

Your attention is respectfully requested to the subject of the commutation of the hospital ration. The ration of each man in hospital is commuted at 15 cents; (for twelve months the commutation was 20 cents.) The fund accruing from this commutation is expended by the assistant commissaries of subsistence, on the requisition of the surgeon, in such articles as are required for the sick: thus, an ample supply of fowls, vegetables, eggs, butter, and

other necessaries, is furnished to the sick, at the cost of the subsistence appropriation. Formerly, those supplies were furnished from a separate appropriation, and not included in the cost of subsisting the army.

The greatest expense, however, has accrued from the improvement in the quality of the ration now furnished to the army; and I respectfully refer you to the reports of the inspectors of the army, on this subject, on file in the War Department.

I have the honor to be, &c.,

GEORGE GIBSON, *Commissary General of Subsistence.*

The Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

Statement of moneys remitted to contractors, assistant and acting assistant commissaries of subsistence, from the 1st of January to the 30th September, 1822, together with the amount charged to contractors, on account of failures, and the amount charged to the assistant and acting assistant commissaries of subsistence, on account of sales of damaged provisions, sales to officers at the frontier posts, sales of empty boxes, casks, &c., for the same period; and also the amount of supplies furnished by contractors, and the amount expended by the assistant and acting assistant commissaries of subsistence.

Total amount expended the three years antecedent to the commissariat system, - - -			2,361,453 97

STATEMENT No. 2—Continued.

Amount of subsistence stores in the hands of contractors, under the old system of subsisting the army, and by them deposited with the assistant commissaries of subsistence in 1819, and calculated at the prices of the contracts made by the commissary general for that year,		$91,451 97	
Amount of deliveries made by contractors, under the new system, for the two years commencing 1st of June, 1819, and ending 31st of May, 1821,		704,914 60	
Amount of full and complete rations, supplied by special contractors at the different rendezvous,		24,859 76	
Amount of purchases made by the assistant commissaries on account of failure of contractors, also of fresh beef, hospital stores, weights and measures, not included in the contracts,		450,151 17	
Amount of transportation, as per statement of the quartermaster general,		85,197 98	
Amount of pay of the commissary general, his assistants, acting assistants, military storekeepers, officers, and others detailed for duty in the commissariat,		41,628 90	
Amount of salaries of two clerks, in the office at Washington, at $2,150 per ann.		4,300 00	
Amount of contingent expenses of the office,		1,223 51	
Amount of balance in the hands of contractors $47,123 04, and of assistant commissaries of subsistence $2,205 46, unaccounted for,		49,328 50	
		1,453,056 39	
From which deduct:			
Amount of provisions on hand May 31, 1821, at the several posts,	$117,535 67		
Amount of sales of damaged provisions, of sales to officers on the frontier posts, sales of empty boxes, barrels, &c., issues to Indians at the frontier posts, to laborers on fortifications, to men on board the revenue cutter at Mackinac, and of oxen turned over to the quartermaster's department,	81,561 16		
Amount of issues to the Spanish troops, upon taking possession of the Floridas,	2,064 61		
Amount of beans, which article has been added to the ration under the new system,	36,215 56		
Amount of forfeiture on failures, recovered from contractors,	1,177 29		
Amount of subsisting the average number of men more during these two years than those subsisted the two preceding years, per report of the adjutant general, making a difference of 905,930 rations, at 14½ cents per ration,	131,359 85		
		369,914 14	
Total amount expended from 1st of June, 1819, to 31st of May, 1821,		1,083,142 25	
Amount of subsistence stores on hand 31st of May, 1821, as per above statement,	117,535 67		
Amount paid to general contractors, for the period embraced,	143,377 12		
Amount paid to special contractors for complete rations at the several rendezvous, and amount advanced to the assistant and acting assistant commissaries of subsistence, for the purchase of fresh beef, hospital stores, weights, measures, extra duty men, and other contingencies, not included in the contracts,	115,421 55		
Amount of transportation, as per statement of the quartermaster general,	21,668 76		
Amount of pay of the commissary general, his assistant and acting assistant commissaries, officers, and others detailed for duty in the commissariat,	12,122 45		
Amount of salaries of two clerks, in the office at Washington,	2,150 00		
Amount of contingent expenses of the office,	615 50		
Amount of balance in the hands of assistant commissaries, unaccounted for in the year,	1,129 91		
Amount of subsisting 4,119 men less this year than the year preceding, say 1,503,435 rations, at 12 cents per ration,	180,412 20		
	$594,433 16		
From which deduct:			
Amount of subsistence stores on hand 31st May, 1822, at the several posts,	$52,322 66		
Amount of issues to Indians, to laborers on fortifications, sales of damaged provisions, sales to officers, sales of empty barrels, boxes, &c., recoveries on account of failures, and of oxen turned over to the quartermaster's department,	42,117 57		
Amount of beans, which article has been added to the ration under the commissariat system,	7,202 00		
	$101,642 23		
Total amount expended from June 1, 1821, to May 31, 1822,		492,790 93	
Total amount expended during the three years of the commissariat system,			1,575,933 18
Total amount in the difference of expenditures,			$785,520 79

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE,
WASHINGTON, *November* 14, 1822.

GEO. GIBSON, *Commissary General of Subsistence.*

H.

SIR: COMMISSARY GENERAL'S OFFICE, PHILADELPHIA, *November* 14, 1822.

All the statements required by your letter of the 6th instant have been prepared, and I have now the honor of enclosing them to you, viz:

No. 1. Statement of moneys drawn from the appropriation for clothing, (1822,) up to the 12th November, 1822.

No. 2. Statement of moneys received and disbursed during the first three quarters of 1822.

Nos. 3 and 4. Summary statement for the month of October, and part of November, and estimate of moneys required to 31st December, 1822, say $20,008 54, for which sum you will please to cause a warrant to issue in my favor, as usual.

No. 5. Comparative statement, showing the cost of clothing, &c. during the years 1817, and 1822 and 1823; and in addition,

No. 6. A statement of the cost of clothing for the army during the year 1823.

With great respect, I am, sir, your most obedient servant,

CALLENDER IRVINE, *Commissary General of Purchases.*

Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

Statement of moneys drawn from the appropriation for clothing, (1822,) *up to the present period.*

Sums received during the first three quarters of the year 1822, viz:		
1822.		
Feb. 11, Received Treasurer's draft for	$24,700	
April 1, Received Treasurer's draft for	9,700	
" 18, Received Treasurer's draft for	18,100	
May 16, Received Treasurer's draft for	19,500	
June 19, Received Treasurer's draft for	20,200	
July 22, Received Treasurer's draft for	14,480	
Sept. 23, Received Treasurer's draft for	14,000	
Total received up to 30th September, 1822,	-	$120,680
To the above may be added:		
1822.—Oct. 15, Received Treasurer's draft for	$17,500	
And the amount *required* to pay for goods to be delivered under existing contracts, to settle bills on file, &c. &c.	20,000	
		37,500
		$158,180

COMMISSARY GENERAL'S OFFICE, PHILADELPHIA, *November* 12, 1822.

CALLENDER IRVINE, *Comm'y. Gen. of Purchases.*

Hon. J. C. CALHOUN, *Secretary of War.*

No. 2.

Estimate of moneys received and disbursed by Callender Irvine, Commissary General, during the first three quarters of the year 1822, *on account of the Purchasing Department.*

To amount of warrants issued by the Secretary of the Treasury in favor of Callender Irvine, commissary general, to the 30th September, 1822, as per statement No. 1,		$120,680 00
By amount of purchases during the 1st quarter of 1822, passed to the credit of C. Irvine, commissary general, by William Lee, Second Auditor Treasury Department,	$27,387 68	
By amount of purchases during the 2d quarter of 1822,	60,577 91

Comparative statement, showing the cost of clothing, &c. for the army of the United States, during the years 1817, 1822, *and* 1823.

ARTICLES.	Price in 1817.	Price in 1822.	REMARKS.
Forage cap,	-	$ 40	Not allowed in 1817.
Leather cap,	$1 95	1 50	
Oilcloth cover for cap,	-	45	Not allowed in 1817.
Pompon,	20	20	
Band and tassel,	7	12	Cotton in 1817. Worsted in 1823.
Cockade and eagle,	8½	6¼	
Cap plate for artillery and infantry,	20	8	
Cap scales for artillery and infantry, sets,	-	60	Not allowed in 1817.
Worsted wings, per pair,	60	55½	
Grey woollen overalls for sergeants,	2 76	2 27	For both sergeants and privates.
Grey woollen overalls for privates,	2 44		
Drilling overalls for privates,	1 22	87	
Drilling overalls, for sergeants,	1 34	1 01	
Cotton jackets with sleeves, infan. privates,	-	1 05	Not allowed in 1817.
Cotton jackets with sleeves, infan. sergeants,	-	1 22	Not allowed in 1817.
Cotton jackets with sleeves, artil. privates,	-	1 11	Not allowed in 1817.
Cotton jackets with sleeves, artil. sergeants,	-	1 28	Not allowed in 1817.
Woollen jackets with sleeves, for artillery,	3 22	2 93	
Woollen jackets with sleeves, for infantry,		2 82	
Cotton shirts for privates,	1 08	72	
Cotton shirts for sergeants,	1 16	75	
Flannel shirts,	1 68	1 27½	
Fatigue frocks,	1 28	1 10	
Fatigue trowsers,	1 11	78¾	
Laced bootees, per pair,	-	1 62	Not allowed in 1817.
Shoes, per pair,	1 49	1 25	
Stockings, per pair,	49	40	
Socks, per pair,	10	25	In 1817, *flannel* socks were provided. In 1823, they are of a quality equal to the stockings. Germantown manufacture.
Leather stocks,	12½	14½	Very superior to those provided in 1817.
Blankets,	2 90	2 70	The last contract price for domestic blankets was $2 90; since which, blankets have been procured at $2 70, of the best quality.
Great coats,	9 51	7 00	
Infantry privates' coats,	5 40	5 81	More cloth is now used for fixing the wings on the coats than was in 1817; and being braided on the breasts, cuffs, and skirts, the price of making up is considerably advanced; add to which the cost of the braid.
Infantry sergeants' coats,	6 15	5 81	
Infantry music coats,	6 90	7 53	
Artillery privates' coats,	5 40	6 00	
Artillery sergeants' coats,	6 15	6 00	
Artillery music coats,	6 90	7 72	
Knapsacks, Glengary,	1 62	1 50	
Haversacks, linen,	48	46	
Mess pans, iron,	80	68	
Camp kettles, iron,	1 36	95	
Tents of various kinds,	-	-	No tents of any description have been purchased since the war.
Bedsacks, single,	2 50	2 20	
Bedsacks, double,	-	2 57	No double bedsacks made in 1817.

Hon. J. C. CALHOUN, *Secretary of War.*

17th CONGRESS.] No. 236. [2d SESSION.

EXPENSES OF THE ORDNANCE DEPARTMENT, ARMORIES, ARSENALS, AND MAGAZINES, FROM THE YEAR 1816.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 6, 1823.

To the House of Representatives of the United States: WASHINGTON, *January* 3, 1823.

In compliance with the resolutions of the House of Representatives of the 8th January, 7th May, and 17th December, 1822, requesting the President of the United States to cause to be laid before that House a detailed statement of the current expenses of the Ordnance Department for the years 1817, '18, '19, '20, and '21, and as much as can be shown for the year 1822; and also the number and local position of each of the armories, arsenals, and magazines of the United States; the total expense of constructing and repairing the same, up to the year 1821; the number of cannon and other arms annually made at each; and the expenses of each armory and arsenal for each year, from 1816 to 1821, inclusive; I herewith transmit a report from the Secretary of War, accompanied by such documents as will be found to contain the desired information.

JAMES MONROE.

DEPARTMENT OF WAR, *December* 30, 1822.

The Secretary of War, to whom was referred the resolution of the House of Representatives of the 8th of January, 1822, requesting the President of the United States "to cause to be laid before the House a statement, showing the amount expended for the current expenses of the Ordnance Department during the years 1817, 1818, 1819, and 1820, and as much as can be shown of said expenditures for the year 1821; with the particular items for which the money was expended, the place where, and the persons to whom paid; what quantity of timber has been procured for gun-carriages and caissons, its cost annually, and where deposited; the quantity of ordnance of every kind that has been provided during those years, or paid for; the sums expended in the purchase of sites for arsenals since the peace; the cost of the buildings erected thereon; and whether all those arsenals are necessary for the service of the United States;" and that of the 7th of May, 1822, requesting the President of the United States "to cause to be laid before the House a report, showing the number and local position of each of the armories, arsenals, and

magazines of the United States; the time at which each was established, and the total expense of constructing and repairing the same, up to the end of the year 1821; also, the whole number of cannon and other arms made annually at each armory and arsenal, from its establishment to the end of the said year; also, an exhibit, in detail, of the expenses of each armory and arsenal, for each year, from 1816 to 1821, inclusive, showing, first, the gross amount of money expended at each, within each year; second, the separate object to which the expenditure was applied; third, the contracts and purchases made at each within each year, by whom and with whom, whether publicly or privately, with or without public notice, for what articles or materials, the amount of each contract for all purchases and the amount given therefor, the names of all concerned as principals, agents, and securities, their places of residence, and the failures which may have occurred in any contract; fourth, the whole number of arms and equipments transmitted to each State and Territory in the Union, under the act of Congress for arming the whole body of the militia of the United States; fifth, the whole number of cannon, arms, equipments, and munitions of war of every kind, distinguishing the different kinds, now belonging to the United States, and where placed; sixth, the annual expense of transporting ordnance and ordnance stores from the places at which they were made or purchased, in the Atlantic States, to the places at which they were to be delivered or used, in the Western States or Territories, specifying the several descriptions of arms and munitions so transported, and the cost thereof when purchased; the whole so arranged as to exhibit clearly the annual expenditure of the annual appropriation for each specific object;" as well as the resolution of the 17th of December, 1822, requesting the President of the United States "to cause to be laid before this House a statement, showing the amount expended for the current expenses of the Ordnance Department during the years 1817, 1818, 1819, 1820, and 1821, and as much as can be shown of said expenditure for the year 1822; with the particular items for which the money was expended, the place where, and the persons to whom paid; what quantity of timber has been procured for gun-carriages and caissons, its cost annually, and where deposited; the quantity of ordnance of every kind that has been procured during those years, or paid for; and the whole amount of the arms of every description, now belonging to the United States; the sums expended in the purchase of sites for arsenals since the peace; the cost of the buildings erected thereon; and whether all those arsenals are necessary for the service of the United States," has the honor to transmit herewith the report of the lieutenant colonel of ordnance, and those of the Second and Third Auditors of the Treasury, which contain the information required, with the exception of the "expenditure of the Ordnance Department for the year 1822," which will be transmitted as soon as prepared.

All which is respectfully submitted:

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ORDNANCE DEPARTMENT, *December* 30, 1822.

In answer to the resolution of the House of Representatives of the 17th instant, I have the honor to report that a statement of "the whole amount of the arms of every description now belonging to the United States," is contained in the papers marked H and I, which were communicated with my report of the 27th instant, and that all other statements required by the resolution which appertains to this department to furnish, is contained in my report of the 28th instant, and the papers therein mentioned; to which reports and statements I beg leave to refer, as containing all the information in possession of this department which is required by the resolution.

I have the honor to be, sir, very respectfully, your obedient servant,

G. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. J. C. CALHOUN.

SIR: ORDNANCE DEPARTMENT, *December* 27, 1822.

I have the honor to communicate herewith sundry statements which contain the information required by the resolution of the House of Representatives of the 7th of May last, as far as the same can be furnished by this department.

Statement A shows the number and local position of each of the arsenals and magazines of the United States, the time at which each was established, and the total expense of constructing and repairing the same up to the close of the year 1821; also, the sums expended in the purchase of sites for arsenals since the peace, and the cost of the buildings erected thereon.

The sums expended in the construction and repairs of arsenals from 1799 to the close of the late war amount to - - - - -	$275,787 78
The sums expended in the purchase of sites for arsenals since the peace amount to -	26,201 33
And the cost of the buildings erected since the peace amounts to - -	974,782 95
Total amount expended in building and repairing arsenals from 1799 to 1821, inclusive, and in purchasing sites for arsenals since the peace, - - -	$1,276,772 06

This statement has been prepared from the separate reports of the Second and Third Auditors. It is considered better thus to blend in one statement these separate reports, as the information required can by this means be presented at one view and in a more condensed form.

Statement B exhibits the annual expenditures at the armory at Springfield, Massachusetts, for the purchase of land, the construction and repair of buildings, the manufacture and repair of arms, and for miscellaneous purposes, from the year 1795 to 1821, inclusive; also, the number of arms made and repaired therein during the same period.

Statement C is an appendage to the foregoing, and exhibits the present state of the Springfield armory, the value of the land, the number and value of the buildings, and other permanent improvements erected thereon; also, the value of the machinery, tools, and materials on hand.

The total amount expended at this armory from 1795 to 1821, on account of permanent improvements, is - - - - - -	$134,623 69
On account of the manufacture and repair of arms, - - -	2,335,160 95
On account of miscellaneous objects, - - - - -	29,094 54
Total amount expended, - - - -	$2,498,879 18

The number of arms made and repaired at this armory during the same period is as follows, viz:	
New muskets manufactured, - - - - -	178,759
New rifles and carbines manufactured, - - - -	2,452
Damaged muskets repaired, - - - - -	46,325
Total made and repaired, - - - -	227,536

The total value of arms made and repaired is estimated to be equal to the manufacture of 192,751 new muskets.

Statements D and E contain information similar to the foregoing respecting the armory at Harper's Ferry, Virginia.

The total amount expended at this armory from 1796 to 1821, inclusive, on account of permanent improvements, is - - - - -	$366,180 01
On account of the manufacture and repair of arms, - - -	2,171,490 85
For miscellaneous objects, - - - - -	63,438 49
Total amount expended, - - - -	$2,601,109 35

The number of arms made and repaired at this armory during the same period is as follows, viz:	
New muskets manufactured, - - - - -	119,911
New rifles, pistols, and other arms manufactured, - - - -	23,884
Damaged arms repaired, - - - - -	12,830
Total made and repaired, - - - -	156,625

The total value of arms made and repaired at this armory is estimated to be equal to the manufacture of 151,550 new muskets.

The present value of the armory at Springfield, including, with the land and sixty-six buildings, the machinery, tools, and stock on hand, is estimated at - -	$251,857 50
The armory at Harper's Ferry, consisting of one hundred and thirteen buildings, estimated as above, is valued at - - - - -	539,442 79
Total value of the two armories, - - -	$791,300 29

The armory at Harper's Ferry is more extensive than that at Springfield. The former could employ about one hundred more workmen than the latter. The number employed at each at present is, however, about the same, viz. 260.

The report of the Third Auditor embraces a part of the details given in the foregoing statements relative to the armories. By the same report it appears that the data upon which its accompanying statements were founded were very defective. Recourse was therefore had by this department to the books and papers at the armories; and the statements accompanying this report have been prepared from documents furnished by the superintendents of the armories, and are believed to be more accurate than any which could have been prepared from other sources.

No cannon have been made at the armories; those establishments are employed in the manufacture and repair of small arms only. No cannon or other arms have been made at the arsenals. The arsenals are used as depots for the collection and preservation of artillery, arms, ammunition, and military supplies generally, and for the fabrication of gun-carriages and other artillery equipments, for the preparation of ammunition, and for the repair of arms.

An exhibit, in detail, of the expenses of each armory for "each year, from 1816 to 1821, inclusive, showing the gross amount of money expended at each within each year, and the separate object to which the expenditure was applied," is contained in the statements B and D above mentioned. A similar exhibit in relation to each arsenal is contained in the report of the Second Auditor.

In answer to the third head of inquiry, requiring an exhibit of "the contracts and purchases made at each within each year, by whom, with whom," &c., I have to state that the materials and supplies for the armories and arsenals are generally procured in small quantities, under the direction of their respective superintendents or commanding officers, by open purchase or by special contract, as the exigencies of the service require. The quantities of supplies purchased, the amount paid therefor, and the names of the persons from whom purchased, are stated in the report of the Second Auditor.

A greater quantity of supplies is required at the armories than at the arsenals, and the articles required are of a more fixed and uniform character; engagements for regular supplies are therefore made at the armories to a greater extent than at the arsenals. I communicate herewith a report of the superintendent of the armory at Springfield, (marked F,) which contains the details required under this head. The superintendent of the armory at Harper's Ferry reports that the supplies required at that armory have been procured on contracts made by him; and as no advances have been made on any contracts, no securities have been required; and as the articles were never paid for until they were delivered at the armory, no losses have been sustained by the United States.

The paper marked G contains a statement of the "number of arms and equipments transmitted to each State and Territory in the Union, under the act of Congress for arming the whole body of the militia," since the 1st of January, 1816.

Statements H and I exhibit "the whole number of cannon, arms, equipments, and munitions of war of every kind now belonging to the United States, and where placed," taken from the latest returns on file in this department. Statement H contains the returns from the fortifications, and statement I the returns from the arsenals and depots, with a recapitulation showing the total number or quantity of each article on hand in the United States.

The annual expense of transporting "ordnance and ordnance stores from the places at which they were made or purchased, in the Atlantic States, to the places at which they were to be delivered or used, in the Western States or Territories, specifying the several descriptions of arms and munitions so transported, and the cost thereof where purchased," it was supposed would be furnished by the Auditors in whose offices the accounts for such expenditures are settled. But it appears by the report of the Third Auditor that a correct statement cannot be prepared, owing to the loss of accounts, which were burned by the enemy, and to other causes which are specified in his report. It was therefore considered proper, under these circumstances, to have recourse to the quarterly returns of military stores received and issued, although those returns furnish no data for ascertaining the cost of transporting the stores.

The returns referred to are from the arsenal at Pittsburg, through which place most of the military supplies for the western country have passed; and they embrace the period from 1813 to 1821, inclusive. From these data two

statements (marked K and L) have been prepared, which specify the different kinds of articles transported, and the places from and to which they were sent.

From these statements, and from one for the year 1812, prepared by the Third Auditor, it appears that, from the commencement of the late war up to the close of the last year, there have been transported from the seaboard (including those sent from Harper's Ferry) to Pittsburg 49,500 muskets, 6,098 rifles, and other small arms, amounting to 12,940, making the total of small arms 68,538; and that there have been transported in like manner to the same place 14 pieces of artillery mounted complete, 2,500 sets of accoutrements, 381,400 flints, and 141,000 pounds of powder.

It appears also that, during the same period, the following articles were transported from Pittsburg to the Western States and Territories, viz: 36,687 muskets, 2,429 rifles, 4,570 pistols, sabres, &c., making a total of small arms of 43,686; also, 5,770 sets of accoutrements, 117,200 flints, 3,445,700 musket cartridges, and 165,333 pounds of powder; also, 108 cannon and howitzers, with 99 field artillery carriages, 29,079 cannon balls and shells, weighing about 174 tons, and 8,500 rounds of fixed ammunition for artillery.

All the cannon, artillery carriages, and cannon balls, except a small quantity forwarded at the commencement of the war, were manufactured at Pittsburg. All the powder, with the same exception, and all the lead, were procured in Kentucky and Missouri. All the small arms and flints required for the public service in the western country have been forwarded from the Atlantic States.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lt. Col. on ordnance duty.*

Hon. J. C. CALHOUN.

SIR: ORDNANCE DEPARTMENT, *December* 28, 1822.

In answer to that part of the resolution of the House of Representatives of the 8th of January last, which inquires "whether all the arsenals erected on sites purchased since the peace are necessary for the service of the United States," I have the honor to report that all those arsenals are deemed necessary and indispensable for the safe keeping and proper preservation of the arms and other military stores now on hand. Most of those arsenals already contain as great a quantity of military stores as they are capable of containing, consistent with such an order of arrangement as is indispensable for their examination and preservation.

All other information required by the resolution, and which appertains to this department to furnish, is contained in the statements which accompanied my report of the 27th instant, made in pursuance of the resolution of the 7th of May last, viz: Statement I "shows the quantity of timber for gun-carriages and caissons on hand, and the places where deposited." Statement A, which has been prepared from the reports made by the Second and Third Auditors, shows "the sums expended in the purchase of sites for arsenals since the peace, and the cost of the buildings erected thereon;" to which report and statements I beg leave respectfully to refer.

All the statements required by that resolution relative to expenditures must necessarily be prepared from the individual accounts of the disbursing officers, and which can be done only by the Auditor in whose office those accounts are settled and filed.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lt. Col. on ordnance duty.*

The Hon. JOHN C. CALHOUN.

A.

Statement of the number and local position of the arsenals and magazines of the United States, the time at which each was established, and the annual expense of constructing and repairing the same, up to the end of the year 1821; *also, of the sums expended in the purchase of sites for arsenals since the peace.*

RECAPITULATION.

Expended in the construction and repairs of arsenals from 1799 to 1814, inclusive,	$275,787 78
Expended in the construction and repairs of arsenals from 1815 to 1821, inclusive,	974,782 95
Expended in the purchase of sites for arsenals since the peace,	26,201 33
	$1,276,772 06

ORDNANCE DEPARTMENT, *December* 26, 1822.

GEORGE BOMFORD, *Lieutenant Colonel on ordnance duty.*

B.

Statement of the expenditures of the United States' Armory at Springfield, Massachusetts, and of the arms made and repaired therein, from its establishment to the close of the year 1821.

YEARS.	AMOUNT EXPENDED.							ARMS MADE AND REPAIRED.										REMARKS.
								MADE.							REPAIRED.			
	For land, including mill seats.	Buildings, mill-dams, canals, and other permanent improvements.	Repairs of buildings, mill-dams, &c.	Total for land, buildings, &c.	For the manufacture and repair of arms.	Miscellaneous expenses, not included in the foregoing.	Total amount expended.	Muskets.	Rifles.	Pistols.	Carbines.	Ball screws.	Screw drivers.	Spring vices.	Muskets.	Value of repaired arms in new muskets.	Total value of arms made and repaired, estimated in new muskets.	
1795	400 00	-	25 00	425 00	4,070 75	-	4,495 75	245										The item of "Miscellaneous expenses" is for disbursements made at the armory, for purposes not connected with the product of the establishment, viz:
1796	-	-	100 00	100 00	15,298 25	-	15,398 25	838										
1797	-	-	120 00	120 00	18,743 80	-	18,863 80	1,028										
1798	343 33	1,934 88	125 00	2,403 21	16,754 19	-	19,157 40	1,044										
1799	-	2,395 62	514 00	2,909 62	81,389 61	-	84,299 23	4,595										
1800	-	328 95	360 00	688 95	64,240 49	-	64,929 44	4,862										
1801	509 00	1,627 25	300 00	2,436 25	47,892 69	-	50,328 94	3,205										Value of parts of work, tools, &c. prepared and sent to distant arsenals for repairing arms, - $20,985 83
1802	-	-	390 89	390 89	29,751 66	-	30,142 55	4,358										
1803	-	1,157 18	185 00	1,342 18	31,098 23	-	32,440 41	4,775										
1804	-	2,275 29	240 00	2,515 29	40,741 22	-	43,256 51	3,566										
1805	-	4,325 79	245 00	4,570 79	41,376 32	-	45,947 11	3,535										
1806	-	7,562 50	240 00	7,802 50	34,803 44	-	42,605 94	2,018										Amount paid to inspectors while employed in inspecting arms made by private contract, and other expenses connected therewith, - - - - 5,106 71
1807	300 00	9,461 49	300 00	10,061 49	45,269 89	-	55,331 38	5,692										
1808	-	31,084 09	600 00	31,684 09	71,490 62	-	103,174 71	5,870										Amount paid for arm chests, and for the transportation of arms, 3,002 00
1809	2,153 08	14,916 72	620 00	17,689 80	104,779 51	-	122,469 31	7,070	-	-	600	-	-	-	1,086			
1810	-	1,175 37	680 00	1,855 37	129,715 10	-	131,570 47	9,700	-	-	602	-	-	-	1,406			Total, $29,094 54
1811	200 00	-	618 86	818 86	113,685 00	-	114,503 86	12,020										
1812	2,050 00	9,071 64	690 00	11,811 64	128,166 39	-	139,978 03	10,140										
1813	-	993 71	602 00	1,595 71	113,890 32	-	115,486 03	6,920	-	-	-	-	-	-	11,105			In some of the years the expenditures and the products of the armory appear to be disproportionate. This has arisen partly by the purchase of a greater or a less quantity of stock and materials in a year than was consumed within it, and partly by the payment of debts in one year, which had been contracted in the year preceding.
1814	-	-	544 30	544 30	101,771 42	-	102,315 72	9,585	-	-	-	-	-	-	5,475

G. BOMFORD, *Lieut. Colonel on ordnance duty.*

C.

Statement of the number and dimensions of the buildings at the United States' Armory at Springfield, Massachusetts, together with the materials of which they are built, and their estimated value.

Number of buildings.	For what purpose built, or how occupied.	Dimensions in feet.	Number of stories.	Of what built.	Estimated value.
1	Dwelling house,	45 by 40	2	Brick,	
	Kitchen,	35 20	1	Brick,	$3,500
	Wood house,	30 17	1	Wood,	
1	Stable,	40 30	-	Wood,	200
2	Dwelling houses,	38 31	1	Wood,	1,300
1	Dwelling house,	60 21	1	Wood,	
	Wood house,	14 16	1	Wood,	850
1	Dwelling house,	43 34	2	Wood,	
	Wing,	20 16	1	Wood,	2,000
	Wood house,	44 18	1	Wood,	
1	Stable,	26 20	-	Wood,	200
1	Dwelling house,	60 30	2	Wood,	
	Kitchen,	28 24	1	Wood,	2,450
	Wood house,	48 14	1	Wood,	
1	Dwelling house,	68 34	2	Wood,	
	Shed,	26 18	1	Wood,	2,100
1	Dwelling house,	36 17	1	Wood,	250
1	Dwelling house,	38 32	1	Wood,	
	Shed,	22 9	-	Wood,	750
1	Dwelling house,	25 25	1	Wood,	450
1	Dwelling house,	20 14	1	Wood,	225
1	Dwelling house,	33 26	2	Wood,	
	L part,	24 19	2	Wood,	1,600
	Wood house,	24 20	1	Wood,	
1	Stable,	24 20	-	Wood,	50
1	Dwelling house,	35 30	2	Wood,	
	Wood house,	20 10	1	Wood,	675
1	Dwelling house,	37 28	2	Wood,	
	Kitchen,	24 15	1	Wood,	1,800
	Wood house,	30 17	-	Wood,	
1	Stable,	30 20	-	Wood,	125
1	Dwelling house,	32 18	2	Wood,	
	Kitchen,	24 23	1	Wood,	500
1	Stable,	24 20	-	Wood,	75
1	School house and shed,	24 18	1	Wood,	225
1	Dwelling house,	111 20	1	Wood,	550
1	Dwelling house,	110 20	1	Wood,	540
1	Store, (for provisions,)	40 18	2	Wood,	690
1	Dwelling house,	43 36	2	Wood,	2,500
1	Dwelling house,	38 32	2	Wood,	1,900
1	Dwelling house,	33 29	1	Wood,	
	Sheds,	33 10	-	Wood,	383
1	Dwelling house,	38 32	1	Wood,	250
1	Stable,	22 20	-	Wood,	60
1	Store room, offices, &c.	60 30	2	Brick,	4,500
1	Filing and stocking shop,	204 30	2	Brick,	16,560
1	Forging shop,	130 33	1	Brick,	6,186
1	Furnace,	32 16	1	Brick,	900
1	Coal house,	142 34	1	Wood,	500
1	File cutters' shop,	20 16	1	Wood,	150
1	Iron storehouse,	33 23	1	Wood,	275
1	Proof house, for proof barrels,	20 16	1	Wood,	510
1	Block house,	18 18	2	Wood,	500
1	Engine house,	24 16	1	Wood,	175
1	Work shop,	70 35	2	Brick,	3,500
1	Coal house,	70 30	2	Wood,	1,000
1	Coal house,	60 30	2	Wood,	1,500
1	Work shop,	65 32	2	Brick,	3,400
1	Case hardening shop,	30 16	1	Brick,	
	Store, for old shoes,	20 14	-	Wood,	800
1	Stone coal house,	23 25	1	Wood,	100
1	Iron store house,	29 16	1	Wood,	250
1	Welding shop,	78 49	1	Stone,	2,700
1	Trip hammer shop,	50 25	1	Stone,	1,225
1	Coal house,	70 35	1	Wood,	850
	Coal bin,	30 19	-	Wood,	190
1	Carpenters' shop,	26 18	1	Wood,	200
1	Iron store house,	41 18	1	Wood,	450
1	Work shop,	54 32	2	Brick,	2,400
1	Coal house,	40 25	-	Wood,	450
1	Iron store house,	24 20	1	Wood,	350
1	Stocking shop,	45 24	-	Wood,	
1	Forge,	30 30	-	Brick,	1,600
1	Coal house,	30 24	-	Wood,	500
1	Wood house,	50 10	-	Wood,	75
	Coal bin,	17 14	-	Wood,	125
1	Bridge with roof,	45 17	-	Wood,	175
1	Saw mill,	52 17	-	Wood,	200

C.—Continued.

Number of buildings.	For what purpose built, or how occupied.	Dimensions in feet.	Number of stories.	Of what built.	Estimated value.
1	Arsenal,	100 by 45	2	Wood,	$2,500
1	Arsenal,	100 34	2	Brick,	7,300
1	Arsenal,	100 28	2	Wood,	3,000
1	Pay office,	22 18	1	Wood,	300
1	Wood house,	11 10	1	Wood,	50
1	Ordnance yard,	166 102	1½	Wood,	1,500
	Roof inside with brick pillars,	102 21	1	Wood,	
1	Magazine,	83 22	1½	Brick,	5,500
					$98,644

RECAPITULATION.

Dwelling houses and out-buildings,	$26,198 00
Workshops and appendages,	52,296 00
Arsenals and magazine,	20,150 00
	$98,644 00

Statement of the estimated value of the United States' Armory at Springfield, Mass., on the 31st December, 1821.

For 102½ acres of land, with water privilege,	$9,630 41		
For 66 buildings, as per annexed statement,	98,644 00		
For mill-dams, flumes, and other permanent improvements,	9,276 00		
		$117,550 41	
For machinery, &c.,	9,170 62		
For tools, horses, wagons, &c.,	8,642 11		
		17,812 73	
For component parts of arms in progress,	38,454 98		
For unwrought materials on hand,	78,039 38		
		116,494 36	
Amount,			$251,857 50

ORDNANCE DEPARTMENT, *November* 30, 1822.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Remarks.—In some of the years the expenditures and products of the armory appear to be disproportionate. This has arisen partly by the purchase of a greater or less quantity of stock and materials in a year than was consumed within it, and partly by the payments of debts in one year which had been contracted in the year preceding.

Note.—The item of "Miscellaneous expenses" is for disbursements made at the armory for purposes not connected with the product of the establishment, viz:

Amount paid for the transportation of arms,	$21,568 44
Amount paid the workmen employed in the arsenals in cleaning and preserving the arms,	11,750 00
Cost of arm chests for packing 120,000 stands of arms,	18,000 00
Value of parts of work and tools sent to distant arsenals for repairing arms,	12,120 05
	$63,438 49

ORDNANCE DEPARTMENT, *November* 30, 1822.

G. BOMFORD.
Lieut. Col. on ordnance duty.

E.

Statement of the estimated value of the United States' Armory at Harper's Ferry, Virginia, on the 31st of December, 1821.

For 1890 acres of land, including the ferry across the Shenandoah, -	$42,877 28	
For 113 buildings, as per annexed statement, - - - -	150,650 00	
For mill-dams, canals, bridges, and other permanent improvements, -	105,000 00	
		$298,527 28
For machinery, &c., - - - - - -	40,000 00	
For tools, horses, wagons, boats, &c., - - - -	20,000 00	
		60,000 00
For component parts of arms in progress, - - - -	50,000 00	
For unwrought materials on hand, - - - - -	108,000 00	
		158,000 00
For tools and machinery for making patent rifles, - - -	12,247 44	
For component parts of patent rifles in progress, - - -	10,668 07	
		22,915 51
Amount, - - - - -	-	$539,442 79

3 arsenals and magazine,	20,150
113	$150,650

F.

[F being a statement, in detail, of contracts for stock, tools, and materials, for the armory at Springfield, Massachusetts, from January 1, 1816, to December, 1821, has been omitted as unimportant. The aggregate amount paid for those articles for six years is $59,653 22.]

NOTE TO F.

The contracts have generally been made at the superintendent's office, without public notice, except for coal. For this article, proposals have been publicly requested by notice in the papers. Relative to imported articles, I have made it a point to inquire of the most respectable hardware importers in New York and Boston, and request their prices for such articles as were wanted in the armory, and have made their lowest prices the standard for making the contract, taking into consideration the quality of the materials and the time of payment, and have generally procured them at the New York and Boston prices, delivered at the armory, and warranted. I have generally made the purchases with the stipulation that, if the articles did not prove good, they were to be returned. This is particularly the case with iron, steel, files, coal, and gun stocks, and all the heavy materials used in this establishment.

It has been an object to keep so large a supply of those articles on hand, that it might not be in the power of the sellers to impose on us an unreasonable price. By this management we have reduced the prices of most of the articles, viz. iron from $10 to $7 per cwt., charcoal from eight and nine cents to five and six cents per bushel, pit coal from fifty to forty cents per bushel, &c. &c.

It may be proper here to remark that, at the close of the year 1815, the armory was in debt $50,000, and but very little stock on hand. This debt has been paid, and the quantity of stock increased to a considerable amount, so that the establishment, at the close of 1821, it may be safely calculated, was in a better situation than in 1815, including debts and stock and materials, to the amount of more than $100,000, without taking into view the improvements made and labor performed during that time.

Relative to the contracts, as we have never made any payments in advance, and being careful to contract with responsible men, no bonds or sureties have been required; nor is it recollected that a single person has failed to fulfil the terms of his contract.

For the purpose of exhibiting the mode of transacting business at this armory, the following extract from the local regulations is respectfully submitted:

1. All the stock, tools, and materials, purchased by the superintendent, are delivered to the master armorer, who gives receipts therefor, one of which will accompany the bill, and be filed in the superintendent's office, and bear corresponding numbers and marks with the account.

2. The master armorer is to be held strictly responsible for all articles put under his charge, and deliver, at the beginning of every month, to the assistant master armorers and foremen, on their returns or requisitions, and the order of the superintendent, such articles as may be necessary in their respective departments, taking their receipts therefor, a duplicate of which will be handed to the superintendent.

3. The assistants and foremen will severally be held responsible for all articles received by them, and will deliver to the individual workmen under their charge such articles as may be necessary for their branches of work, who will be held strictly accountable for every article of public property delivered them.

4. Regular and accurate returns will be made, monthly, by the assistants and foremen, of all work executed by the men under their charge, and forwarded to the superintendent's office as soon after the close of the month as practicable, noting particularly, against each man's name, the quantity of work condemned, and the causes.

5. The assistants and foremen will make to the master armorer daily and monthly returns of all stock, tools, and materials received, and quarterly returns of all articles received, expended, and on hand; and semi-annual statements exhibiting the kind and quantity of labor performed by each individual, the amount of stock, tools, &c. on hand, showing the component parts of the musket executed under their direction, and how disposed of.

6. The master armorer will cause to be made to the superintendent consolidated returns and statements, immediately on the receipt of those above mentioned, keeping them distinct, that all articles on the hill, upper, middle, and lower water shops may be separately exhibited, including, in his return, all articles received by himself. He will also report, monthly, in writing, the quantity of work finished, and the number of arms, &c. delivered to the storekeeper.

7. Settlements of accounts will be made semi-yearly, in the following order: 1. Between the superintendent and master armorer; the vouchers for the latter will be the superintendent's order, and an assistant or foreman's receipt. 2. Between the master armorer and the assistants and foremen; the vouchers for the latter shall be receipts from the individual workmen, and parts of work corresponding with the property issued. 3. Between the assistants and foremen, and the individual workmen, in their respective departments; the vouchers for the latter shall be the parts of work executed by them, inspected, and approved, making the usual allowance for waste, scraps, &c.

8. It is to be understood that there is an assistant master armorer or foreman to each principal branch of the work, viz: one foreman of the forges; one foreman of the barrel welders, grinders and mounting forgers, and filers; one foreman of the lock filers; one foreman of the stockers, and one of the finishers. These men are held accountable for all stock, tools, &c. delivered them, (as stated in the foregoing,) and are responsible for the faithful and correct performance of the work. Each individual puts on the work he executes his own private mark; also the inspectors put on their mark when they examine and approve of the various parts of the musket, that, in case a defect is discovered, the delinquent may readily be found. The men to warrant their work.

All accounts are made out at the superintendent's office on the receipt of the master armorer, and accepted by him (the superintendent.) The disbursements are all made by the paymaster.

G.

Statement of the number of arms and equipments transmitted to each State and Territory in the Union, under the act of Congress for arming the whole body of the militia of the United States, from January 1, 1816, to December 31, 1821.

NOTE.—Arms and accoutrements, equivalent to about 2,000 muskets, have been issued during the present year, and about 54,000 remain ready for delivery. It was contemplated to complete the issues to the several States and Territories, up to the close of the last year, early in the present season; but the distribution has been delayed in consequence of being unable to ascertain the quota of each State. The militia returns are yet incomplete. Circular letters were addressed to the respective Governors in June last, requesting returns of their militia. Many have complied with the request, but there still remain several States from which no returns have been received.

ORDNANCE DEPARTMENT, *November* 30, 1822.

GEO. BOMFORD, *Lieut. Colonel on ordnance duty.*

H.

Statement of the number of cannon, arms, equipments, and munitions of war, of every kind, on hand at the several fortifications of the U. States, from the latest returns on file in this Department.

ORDNANCE DEPARTMENT, *December* 18, 1822.

GEORGE BOMFORD, *Lieutenant Colonel on ordnance duty.*

SIR: TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE, *December*, 1822.

By the resolution of the House of Representatives, dated the 8th of January, 1822, the President of the United States was requested to cause to be laid before the House "a statement showing the amount expended for the current expenses of the Ordnance Department during the years 1817, 1818, 1819, and 1820, and as much as can be shown of said expenditures for the year 1821, with the particular items for which the money was expended, the place where, and the persons to whom paid; what quantity of timber has been procured for gun-carriages and caissons, its cost annually, and where deposited; the quantity of ordnance of every kind that has been procured during those years, or paid for; the sums expended in the purchase of sites for arsenals since the peace, the cost of the buildings erected thereon, and whether all those arsenals are necessary for the service of the United States;" by that of the 7th of May, 1822, the President was requested to cause to be laid before the House "a report showing the number and local position of each of the armories, arsenals, and magazines of the United States, the time at which each was established, and the total expense of constructing and repairing the same up to the end of the year 1821; also, the whole number of cannon, and other arms, made annually at each armory and arsenal, from its establishment to the end of the said year; also, an exhibit, in detail, of the expenses of each armory and arsenal, for each year, from 1816 to 1821, inclusive, showing, first, the gross amount of money expended at each within each year; second, the separate object to which the expenditure was applied; third, the contracts and purchases made at each within each year, by whom, and with whom, whether publicly or privately, with or without public notice, for what articles or materials, the amount of each contract for all purchases, and the amount given therefor, the names of all concerned as principals, agents, and securities, their places of residence, and the failures which may have occurred in any contract; fourth, the whole number of arms and equipments transmitted to each State and Territory in the Union, under the act of Congress for arming the whole body of the militia of the United States; fifth, the whole number of cannon, arms, equipments, and munitions of war, of every kind, distinguishing the different kinds now belonging to the United States, and where placed; sixth, the annual expense of transporting ordnance and ordnance stores from the places at which they were made or purchased in the Atlantic States to the places at which they were to be delivered or used in the Western States or Territories, specifying the several descriptions of arms and munitions so transported, and the cost thereof where purchased; the whole so arranged as to exhibit clearly the annual expenditure of the annual appropriation for each specific object:" and, by a similar resolution, passed on the 17th of this month, the above request was repeated, embracing, in addition thereto, as much as can be ascertained of the same expenditures during the year 1822.

In conformity with the first and second resolutions, I have the honor to transmit to you, herewith, the several statements, exhibiting,

No. 1. The current expenses of the Ordnance Department during the years 1817, 1818, 1819, 1820, and 1821.

No. 2. The expenses of each armory and arsenal during the year 1816; the expenditures at the same places during the years 1817, 1818, 1819, 1820, and 1821, are embraced in the preceding statement.

No. 3. The amount expended in the purchase of sites, and in the erection and repairs of arsenals, from 1816 to 1821, inclusive.

No. 4. The expense of transporting ordnance and ordnance stores from the Atlantic States to the Western States and Territories.

No. 5. The quantity of ordnance, of every kind, that has been procured, or paid for, during the years 1817, 1818, 1819, 1820, and 1821.

No. 6. The quantity of timber procured for gun-carriages and caissons during the same period, its annual cost, and where deposited.

The whole compiled and digested from the accounts on file in this office.

In accounting for the delay in the completion of this exhibit, I beg leave to call to your recollection what I stated to you, when you referred the first of the above resolutions to this office, in January last, "that such was the extent of the call, and the mass of accounts to be examined, that it would be impossible to meet the resolution before the commencement of the present session."

In respect to the additional information called for in the last resolution, viz: "the expenditure of the Ordnance Department for the present year, as far as it can be ascertained," I beg leave to state, that the same shall be completed, and laid before you, as early as possible.

I have the honor to be, most respectfully, your most obedient servant,

WM. LEE.

The Hon. J. C. CALHOUN.

TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE. WM. LEE.

SIR: TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *September* 7, 1822.

Agreeably to your request, accompanied by a resolution of the House of Representatives, dated 7th May, 1822, to furnish a report on so much of said resolution as refers to this office, I have the honor to hand you, herewith, statements of the expenditures made on account of buildings and repairs at the following armories and arsenals, so far as the same can be ascertained from the books and accounts in this office.

Abstract A exhibits a statement of the annual expenditures for buildings, canals, and repairs, at the armory at Harper's Ferry, between the years 1798 and 1815, amounting to - - - - $204,700 77

And for expenditures at the armory at Springfield, Massachusetts, from the year 1798, to include the first quarter of the year 1815, - - - - - 105,254 31

Abstract B exhibits the annual expenditures for buildings and repairs at the following arsenals, viz:

Arsenal at Schuylkill, from the year 1799, to include the year 1813, - -	148,665 76
Arsenal at Pittsburg, Penn. for the year 1814, and first three quarters of 1815, - -	66,436 47
Arsenal at Rome, New York, for the years 1813, 1814, and 1815, - -	17,399 36
Arsenal at Watervliet, New York, for the years 1814 and 1815, - - -	76,516 20
Arsenal at Newport, Ky. from 1803 to 1811, - - - -	31,427 32

Abstract A also exhibits a statement of the expenses attending the transportation of ordnance and ordnance stores from the Atlantic to the Western States, so far as the same could be collected from the accounts on file in this office. No distinct account having been kept for the transportation of ordnance to the Western States, nor, indeed, generally, the expenditure could only be ascertained by reference to the accounts of such disbursing officers as were known likely to have made payments for this purpose; and in this reference the data are extremely defective and uncertain, because the article transported is often not mentioned in the account paid for the transportation, and consequently cannot be ascertained; and as the accounts settled prior to the year 1813 were destroyed by the enemy, it will readily be conceived that the statement, in this respect, contains but a part of the expenses incurred for transportation. I deem it also proper to remark, that, as separate and distinct accounts for the armories and arsenals were kept only for a part of the periods included in the abstract, and the accounts settled prior to the year 1813 having been destroyed, the statements are necessarily made from the entries on the books, so far as they specifically designate the purpose, and the residue extracted from such accounts of the disbursing officers as recourse could be had to. The statements, therefore, although not embracing the full amount of expenditures for buildings and repairs at each of the armories and arsenals, are as perfect as the documents in this office enable me to make. The accounts for expenditures at the armories and arsenals, subsequent to the war, were adjusted in the office of the Second Auditor.

With great respect, your obedient servant,

PETER HAGNER, *Auditor.*

Hon. J. C. CALHOUN, *Secretary of War.*

A.

Abstract of expenditures at the following armories for constructing and repairing the same, and for canals.

At Harper's Ferry.	
1798, - - - - - - - - - -	$3,000 00
1799, - - - - - - - - - -	18,392 62
1800, The entries on the books for this year do not designate the sums expended for the above purposes; and the accounts having been burnt, the sum is not ascertainable.	
1801, - - - - - - - - - -	2,556 98
1802, - - - - - - - - - -	6,211 59
1803, - - - - - - - - - -	6,619 37
1804, - - - - - - - - - -	6,783 81
1805, - - - - - - - - - -	4,813 32
1806, - - - - - - - - - -	14,183 63
1807, - - - - - - - - - -	10,049 26
1808, - - - - - - - - - -	43,018 08
1809, - - - - - - - - - -	31,611 98
1810, - - - - - - - - - -	16,498 36
1811, - - - - - - - - - -	12,158 42
1812, - - - - - - - - - -	18,502 54
1813, - - - - - - - - - -	8,834 61
1814, - - - - - - - - - -	1,466 20
1815, None to the end of the third quarter; thereafter the accounts settled in the office of the Second Auditor.	
Buildings, canals, and repairs, - - - - - - -	$204,700 77
Armory at Springfield.	
1798, - - - - - - - - - -	$3,167 30
1799, - - - - - - - - - -	2,819 04
1800, - - - - - - - - - -	19,698 10
1801, The journal entries for this year and a part of 1800 not designating the sums expended for building or repairs, and the accounts being burnt, the amount is not ascertainable.	
1802, - - - - - - - - - -	451 11
1803, - - - - - - - - - -	425 74
1804, - - - - - - - - - -	2,514 84
1805, - - - - - - - - - -	5,541 55
1806, - - - - - - - - - -	6,971 37
1807, - - - - - - - - - -	9,579 95
1808, - - - - - - - - - -	31,684 09
1809, - - - - - - - - - -	15,718 04
1810, - - - - - - - - - -	1,855 37
1811, - - - - - - - - - -	555 25
1812, - - - - - - - - - -	2,120 13
1813, - - - - - - - - - -	1,595 71
1814, - - - - - - - - - -	544 30
1815, First and second quarters, - - - - - - -	12 42
The disbursements subsequently made at this arsenal were accounted for at the office of the Second Auditor.	
Building and repairs, - - - - - - - - -	$105,254 31

Statement of moneys expended for the transportation of ordnance and ordnance stores from the places at which they were made or purchased in the Atlantic States, to the places at which they were to be delivered or used in the Western States, as far as the same is ascertainable from the books of the Third Auditor of the Treasury.

Year.	Muskets and bayonets.	Rifles.	Cartridge boxes.	Cartridges.	Flints.	Pistols.	Horsemen's swords.	Carbines.		Dolls. Cts.
1812	1,000	-	500	30,000	10,000	-	-	-	Harper's Ferry to Knoxville, Tennessee, -	1,982 29
	20,500	1,000	-	-	-	500	100	500	Harper's Ferry, as far as Pittsburg, Penn., -	12,442 88
1814	6,000	-	-	-	-	-	-	-	Harper's Ferry, as far as Pittsburg, Penn., -	4,295 65

TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *September* 7, 1822.

PETER HAGNER, *Auditor.*

Note by the Ordnance Department.—It appears by the arsenal returns that the arms above mentioned as having been forwarded in the year 1812, were all forwarded from Pittsburg during the same year, except 4,000 muskets.

DECEMBER 18, 1822.

B.

Abstract of expenditures made on account of buildings and repairs at the following arsenals, ascertained from the books and accounts in the office of the Third Auditor of the Treasury.

	Amount.
Schuylkill, Pennsylvania.	
1799, - - - - - - - - - -	$12,695 60
1800, - - - - - - - - - -	94,709 24
1801, - - - - - - - - - -	32,324 37
1802, - - - - - - - - - -	6,615 55
From 1803, to include the first quarter of 1812, the entries on the books do not designate any sums paid for repairs; and the accounts for that period having been burnt, if any repairs were made, the amount cannot be ascertained.	
1812, in the last three quarters, - - - - - - - -	1,796 76
1813, - - - - - - - - - -	524 24
Subsequent to 1813, to include the first quarter of 1816, the accounts exhibit no expenditures for buildings and repairs, other than small contingent repairs, such as repairing glass, pumps, pavements, &c. After this period the accounts for expenditures at this arsenal were settled in the office of the Second Auditor.	
Amount, - - -	$148,665 76
Pittsburg, Pennsylvania.	
1814, - - - - - - - - - -	$22,226 90
1815, three quarters of this year, - - - - - - - -	44,209 57
Subsequent to the third quarter of 1815, the accounts for expenditures at this arsenal were settled in the office of the Second Auditor.	
Amount, - - -	$66,436 47
Rome, New York.	
1813, - - - - - - - - - -	$755 91
1814, - - - - - - - - - -	1,347 95
1815, - - - - - - - - - -	15,295 50
Amount, - - -	$17,399 36
Watervliet, New York.	
1814, - - - - - - - - - -	$71,363 94
1815, - - - - - - - - - -	5,152 26
Amount, - - -	$76,516 20
Newport, Kentucky.	
1803 and 1804, - - - - - - - - - -	$10,722 35
1805 to 1808, - - - - - - - - - -	15,874 72
1809, - - - - - - - - - -	4,696 89
1810 and 1811, - - - - - - - - - -	133 36
The accounts of the disbursing officer at Newport for expenditures at this arsenal subsequent to 1811 were adjusted in the office of the Second Auditor.	
Amount, - - -	$31,427 32

Arsenal near New York.

The expenditures for this arsenal not having been separately kept or designated in the accounts of the disbursing officers, but appearing to be included generally as expenses on the fortifications in the harbor of New York, the sums expended for buildings and repairs are, therefore, not ascertainable.

Arsenal at Greenleaf's Point.

The expenditures for the erection of this arsenal and for repairs were made subsequent to the war, the former buildings having been destroyed by the enemy; the accounts are to be found in the office of the Second Auditor.

TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *September* 7, 1822.

PETER HAGNER, *Auditor.*

17th Congress.] No. 237. [2d Session.

ARMY REGISTER FOR THE YEAR 1823.

COMMUNICATED TO THE SENATE, JANUARY 13, 1823.

SIR: WAR DEPARTMENT, *January* 10, 1823.

Conformably to a resolution of December 13, 1815, I have the honor to transmit forty-eight copies of the last Army Register of the United States, for the use of the members of the Senate.

I have the honor to be, sir, with perfect respect, your obedient servant,

J. C. CALHOUN.

To the PRESIDENT OF THE SENATE U. S.

The following list of Cadets is attached to the Army Register, conformably to a regulation for the government of the Military Academy, requiring the names of the most distinguished Cadets, not exceeding five in each class, to be reported for this purpose at each annual examination.

REPORTED AT THE EXAMINATION IN JUNE, 1822.

Names.	Studies in which each Cadet particularly excels.
First Class.	
George Dutton,	Mathematics, natural philosophy, engineering, chemistry and mineralogy, history and moral science, drawing, French language, and tactics.
Joseph Mansfield,	Mathematics, natural philosophy, engineering, chemistry and mineralogy, history and moral science, drawing and tactics.
Charles G. Smith,	Natural philosophy, engineering, history and moral science, drawing, and tactics.
Thomas R. Ingalls,	Mathematics, natural philosophy, chemistry and mineralogy, history and moral science, and French language.
Horace Bliss,	Natural philosophy, engineering, chemistry and mineralogy, and tactics.
Second Class.	
Alfred Mordecai,	Natural and experimental philosophy and chemistry.
Reuben Holmes,	Natural and experimental philosophy, chemistry, and drawing.
George C. Richards,	Natural and experimental philosophy and chemistry.
George S. Green,	Natural and experimental philosophy and chemistry.
Samuel U. Sutherland,	Natural and experimental philosophy.

ARMY REGISTER—Continued.

Names.	Studies in which each Cadet particularly excels.
Third Class.	
Dennis H. Mahon,	Mathematics and French language
Robert P. Parrott,	Mathematics and French language.
John B. Findlay,	Mathematics and French language.
John W. A. Smith,	Mathematics.
Napoleon B. Bennett,	Mathematics and French language.
Fourth Class.	
Alexander D. Bache,	Mathematics and French language.
Horace Smith,	Mathematics and French language.
Matthew R. T. Harrison,	Mathematics and French language.
Peter McMartin,	Mathematics and French language.
Thompson S. Brown,	Mathematics.

The Western Department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of lake Superior, taking in the whole of Tennessee and Kentucky; and the Eastern Department all east of such line.

The head-quarters of the general-in-chief is in the District of Columbia.

The head-quarters of the commanding general of the Western Department is at Louisville, Kentucky; and the head-quarters of the commanding general of the Eastern Department is at Governor's Island, New York.

Cadets, acting as supernumerary officers in the army, by brevet commissions, will be promoted successively to vacancies which may occur in the lowest grade of the arm to which they may be attached, conformably to the rank held by each on the merit roll when recommended for promotion.

Those officers, whose stations are changed by transfers and promotions, will report for duty accordingly.

17th CONGRESS.] No. 238. [2d SESSION.

ARMORY ON THE WESTERN WATERS.

COMMUNICATED TO THE SENATE BY THE PRESIDENT OF THE UNITED STATES, JANUARY 13, 1823.

SIR: ORDNANCE DEPARTMENT, *January* 8, 1823.

In answer to the resolution of the Senate, of the 23d ultimo, I have the honor to report, that "the number of arms required annually to supply the militia of the West is estimated at 3,500 muskets. This estimate is founded upon the following considerations, viz: The annual appropriation of $200,000 for arming and equipping the militia, it is estimated, will insure a product of 14,000 muskets annually, and defray all the incidental expenses of inspecting, packing boxes, carriage to the arsenals, and transportation to the respective States and Territories. That number of muskets, or other arms equivalent thereto, is therefore required for annual distribution to the whole body of the militia of the United States; and it is estimated that one-fourth of that number (3,500) will be required for the militia of the West. This proportion is founded upon the consideration that such of the western States and Territories which would be supplied from the western armory contain one-fourth of the entire population of the United States.

To ascertain "the probable number of arms necessary to be placed in the military deposites located on the western waters," the following facts and views are respectfully submitted.

The total number of arms, in good order for service, now deposited in the several depots of the United States, is as follows, viz:

Muskets,	268,890
Rifles,	20,689
Pistols,	34,859
Cavalry sabres,	25,062
Artillery swords,	7,762
Total number in all the depots,	357,262

Of the foregoing, the following are deposited in the depots of the West, including Pittsburg, viz:

Muskets,	35,968
Rifles,	6,201
Pistols,	10,654
Cavalry sabres,	10,567
Artillery swords,	2,464
Total number in the western depots,	65,854

If the principle assumed with respect to arms for the militia be taken in this case also, viz: that the general stock of arms in the country should be distributed to the principal sections of it, in a ratio proportionate to the popu-

lation of each, it will appear that the western depots now require about 23,500 stands to give them a due proportion of the general stock. If this calculation be applied to muskets alone, which are the principal arms, the deficiency in the western depots will appear to be about 31,000.

The average number of arms which are manufactured annually, under the provisions of existing laws, may be estimated as follows, viz:

The product of the two national armories,	24,000
Made by individuals, on contracts for supplying the militia, under the law of 1808,	14,000
Total number now made annually,	38,000

one-fourth of which is 9,500; which number, it is conceived, should be transported to the West, and deposited in the western depots, annually.

There has been transported, from the Atlantic States to the western States and Territories, from 1812 to 1822, both years inclusive, the following number and description of arms, viz:

Muskets,	49,500
Rifles,	6,878
Pistols,	13,990
Cavalry sabres,	12,200
Artillery swords,	2,350
Carbines,	500
Total number transported to the West, during eleven years,	85,418

equal to an annual average number of 7,765.

From the foregoing statements, it results that between seven and eight thousand stands of arms have been annually transported to the West, since the commencement of the late war; that about 25,000 stands are now necessary to be transported thither, in order to give the western depots a due supply; and that, to keep up that supply, nearly 10,000 stands must be annually sent there hereafter.

The amount which has been paid for transporting arms to the West cannot be accurately ascertained. Heretofore, the cost of transportation has been estimated at one dollar per stand, which was probably correct. But it is believed that, owing to the present improved state of the roads, and the general reduction of prices, arms can now be transported for seventy-five cents each.

"The probable cost of manufacturing arms in the West" may be stated to be the same as the cost of the arms made at the armories now established. Iron from the same works which supply the armory at Harper's Ferry can be delivered at any point on the Ohio for the same prices which are paid at Harper's Ferry. Pit coal, charcoal, and gun stocks, can be procured in the West upon much better terms than at either of the present armories. Other articles would cost more in the West than in the Atlantic States.

The wages of workmen, which form about two-thirds of the cost of the arms, may be stated to be as low, at least, in the West as on the seaboard; for it may be presumed that labor will eventually be cheapest where subsistence is most abundant and cheapest.

The probable cost of erecting, at this time, on the "western waters, such an armory as that at Harper's Ferry or Springfield," may be estimated at $200,000, including the purchase of sites, mill-seats, and the erection of mill-dams, buildings, and machinery. This cost, however, will depend materially upon the convenience and fitness of the sites which may be selected.

It would require about three years to erect such an establishment. During the first year, little more could be done than to select the position, and to make preparatory arrangements for a supply of building materials. The sites could not be examined advantageously until late in the summer, when the waters are low; the season would then be too far advanced to commence building. It is estimated that $30,000 would be sufficient for the expenditures of the first year.

In reference to the expediency or inexpediency of establishing an additional armory, it may be proper to state, that muskets belonging to the United States, at the commencement of the late war, have been estimated at upwards of 200,000 stands; and that the number of muskets manufactured during the war was about 60,000. At the close of the year 1814 scarcely 20,000 stands remained in the arsenals, and great efforts were made to procure an additional supply. Had the war continued another year, the deficiency of arms would have occasioned the most embarrassing consequences.

From this statement, it appears that at least 240,000 muskets were expended during the late war, a quantity nearly approaching the number now on hand, as stated in a former part of this report. Thus, it is seen that nearly eight years of peace have been required to make good losses occasioned by a war of less than three years' duration.

The great extent of seacoast and inland frontier necessary to be defended in time of war will render large distributions of arms to the militia and other newly raised troops indispensable; and it is reasonable to presume, as well from past experience as from the nature of the case, that our resources will sooner fail in this respect than in any other of our military supplies. And as so much time is required to put into full operation an establishment for the manufacture of arms upon a large scale, it will not be in the power of the Government, on a sudden emergency, to increase very materially the supply.

If it should be decided to establish an armory in the western country, it would be advisable to advance it gradually, until it reached the extent of the present national armories. Five or six years would be required for this purpose, because a sufficient number of experienced workmen could not be procured in a shorter period, without materially deranging the operations of the armories now established.

The total annual product of arms, with an additional armory upon a scale equal to the present, may be estimated as follows, viz:

Three national armories, 12,000 each,	36,000
The appropriation for arming and equipping the militia,	14,000
Total,	50,000

I have the honor to be, sir, very respectfully, your obedient servant,

GEORGE BOMFORD, *Lt. Col. on ordnance duty.*

The Hon. J. C. CALHOUN.

17th Congress.] No. 239. [2d Session.

LOANS OF GUNPOWDER AND LEAD.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 21, 1823.

Mr. EUSTIS made the following report:

The Committee on Military Affairs report the following additional information on the subject of certain loans of gunpowder and lead, made by officers of the United States to individuals, obtained since the last session of Congress:

It appears, by the report of Lieutenant Colonel Bomford, of the Ordnance Department, submitted herewith, that the loan of three hundred and fifty barrels of gunpowder, made by the late Captain Rees to John R. Mifflin, which was supposed by the committee at the last session to be a total loss, in consequence of the insolvency of the borrower, has, since that time, been assumed by Daniel Bussard, and its return fully secured by a mortgage on his real estate. It also appears that, since January, 1822, there have been received from Daniel Bussard, on account of the loan to Stull & Williams, one hundred and fourteen barrels of gunpowder, and that he has the balance due on account of that loan now ready for delivery at his powder works, waiting for suitable weather to have it proved.

Of the loan made to Dupont de Nemours & Co., no part has been returned since the last session; but it is stated by Lieutenant Colonel Bomford that five hundred barrels of gunpowder will be delivered by them in the month of February next, and five hundred more during the present year.

That George W. Murray has proposed a return of the lead loaned to him by Captain Tyler; and the Fifth Auditor of the Treasury has directed a suspension of legal proceedings against him, to enable him to comply with the terms of his proposition.

And in the remaining case, of the loan to M. Baudry, no further information has been received to induce the committee to suppose there is any prospect of its being returned.

SIR: DEPARTMENT OF WAR, *January* 11, 1823.

In answer to the call of the Military Committee of the 4th instant, I have the honor to communicate herewith a report from the Ordnance Department, containing the information required.

Respectfully, your obedient servant,

J. C. CALHOUN.

To the Hon. W. EUSTIS, *Chairman of the Military Committee, H. R.*

SIR: ORDNANCE DEPARTMENT, *January* 11, 1823.

In reply to the call of the honorable the committee of the House of Representatives, under date of the 4th instant, and referred by you to this department, I have the honor to report as follows:

That, since the last report from this office, rendered in January last, there have been received from Daniel Bussard one hundred and fourteen barrels of gunpowder; and that, from his statement of the 7th instant, (upon which every reliance may be placed,) a copy of which accompanies this, it appears that he has the balance remaining due from him to the Government at his powder works, and only requiring suitable weather for its proof, to be thereafter immediately delivered.

That an arrangement has been made with Dupont de Nemours & Co., by which five hundred barrels more will be delivered on the loan made to them in the month of February next, and, in the course of the present year, five hundred in addition; being a quantity as great as can well or securely be disposed of in the public magazines within the time proposed.

That the return of the unauthorized loan (by a former officer of this department) to John R. Mifflin has been assumed by Daniel Bussard, by an agreement with him, fully secured by a mortgage on his real estate; a copy of which agreement also accompanies this report.

That, in an application to the Fifth Auditor of the Treasury, G. W. Murray has proposed to return the Government loan of lead to him; and that he requests the suspension of the suit against him for three months, to enable him to comply therewith.

That in the only case remaining, (that of M. Baudry,) no returns have been made; the bonds of surety remain with the Fifth Auditor for legal prosecution, or such other measures as the public interest may require.

I beg leave to take this occasion to repeat, and further to explain, what was advanced in my former reports respecting the gain to the United States from the loans or exchanges of inferior or damaged powder for that of the first quality, by stating that it arises principally from the circumstance that the saltpetre which can be extracted from three barrels of damaged powder (the only advantage to be derived) is not, after deducting the expense of the process, equal in value to one barrel of the best quality.

As additional evidence that the above rate of exchange has been considered correct in other instances, a communication from the superintendent of the national armory at Springfield, Massachusetts, is on record in this office, which goes to prove that the best terms he could ascertain for an exchange was at the rate of one pound of good powder for two pounds six ounces of the inferior or damaged kind.

And it appears, from recent proposals of powder manufacturers in other cases, that they offered to receive damaged powder at the rate of seven dollars per hundredweight, provided Government would take that of good quality at the rate of twenty dollars.

It may also be observed that, from the foregoing facts, the amount of surety taken to secure the return of the loans in question were, therefore, calculated at little or nothing less than three times the value of the powder delivered, and, in some of the latest transactions, exceeded five or six times that value; as the sums inserted in the bonds were generally calculated upon the highest rates or prices given at the time for that article of the best quality.

To conclude: As the loans or exchanges in question may have excited impressions unfavorable to this department, (although made under the express sanction and direction of the Government,) I deem it proper to take the further liberty of adding one fact, which, as evincing the integrity and faithfulness with which its affairs have been

managed, requires little or no comment; namely, that, since its first establishment, the sum of seven millions of dollars has been appropriated for the expenditures to be made under the direction of the department, twelve thousand dollars of which amount only remain to be accounted for.

Very respectfully submitted by, sir, your most obedient servant,

GEO. BOMFORD, *Lt. Col. on ordnance duty.*

Hon. J. C. CALHOUN, *Department of War.*

Be it remembered that, on this thirtieth day of August, in the year of our Lord one thousand eight hundred and twenty-two, it is agreed, between Daniel Bussard, of Georgetown, Washington county, District of Columbia, of the one part, and George Bomford, lieutenant colonel of ordnance, acting by consent and under the direction of the Hon. John C. Calhoun, Secretary of War, in behalf of the United States, of the other part, as followeth:

That, whereas John R. Mifflin, now or late of the city of Philadelphia, merchant, is indebted to the United States in the full and just quantity of three hundred and fifty barrels, or thirty-five thousand pounds of gunpowder, of the United States' standard proof and quality, and the said Daniel Bussard has assumed, and does hereby assume and take upon himself the payment of the said powder, the same shall be delivered and received on the following terms, to wit: The said Daniel Bussard will deliver to the United States, or its agent duly empowered, the said three hundred and fifty barrels of powder, at the city of Washington, District of Columbia, at the town or city of Baltimore, Maryland, at the cities of Philadelphia and New York, or either of those places, at the option of the said Bussard, in one, two, and three years, in three equal parts; the powder to be inspected as is usual by the United States, at the places of delivery; the said Bussard to be allowed and paid at the rate of fifty cents for each cask containing the powder, being the difference in the value of casks as now made, and when the original loan was made to the aforesaid Mifflin. It is further understood between the parties aforesaid to this agreement, that the said Daniel Bussard secures to the United States the faithful performance of this agreement on his part, by a mortgage on part of his real estate in Georgetown aforesaid; further binding himself, his heirs, executors, and administrators, for the due delivery of the powder as aforesaid, in the penal sum of six thousand dollars, lawful money of the United States.

And it is also hereby understood that, on the faithful performance by the said Bussard of the aforesaid agreement on his part, by ratifying and securing the same, the aforenamed John R. Mifflin be, and shall be thereby, discharged from the debt due by him as herein stated.

In testimony of this agreement, the parties thereunto have interchangeably signed their names and affixed their seals, the day and year first within written.

DANIEL BUSSARD,
GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Signed, sealed, and delivered, in the presence of

JOHN MORTON.

[NOTE.—The original contract, with the mortgage, deposited in the Second Comptroller's office, the 2d September, 1822.]

SIR: NEW YORK, *July* 10, 1822.

I was arrested two days since, at the suit of the United States, and, as I understand, in pursuance of instructions from you.

I consider this arrest as a harsh proceeding against me; and I persuade myself that, if you had been acquainted with the circumstances, it would not have been directed.

The United States brought an action against me a considerable time since, which was tried on the 21st of March of this year, when the United States were nonsuited. Immediately after which, (and notwithstanding I was legally discharged by the result of the suit,) I made a proposal to Mr. Tillotson for the return of the lead due by me to the Government, and my proposal was (I understood) perfectly satisfactory to Mr. Tillotson; but I have been prevented from executing it by the unavoidable absence of a friend, who was to aid me with his resources, and who is now shortly expected.

Under these circumstances, I trust it will not be considered by you as unreasonable in me to ask you to have the suit countermanded or suspended, until such time as I may be enabled to carry my proposals into effect, which will be done as soon as possible after the return of my friend, and which I hope to be enabled to do in less than three months from this date.

I request the favor of an answer, and remain, sir, your obedient servant,

GEORGE W. MURRAY.

S. PLEASONTON, Esq., *Washington City.*

SIR: TREASURY DEPARTMENT, FIFTH AUDITOR'S OFFICE, *July* 15, 1822.

I have this day received a letter from George W. Murray, of your city, stating that, in consequence of the absence of a friend, he has hitherto been unable to comply with his agreement to return the lead borrowed of the United States, and, consequently, that suit had been instituted against him; that his friend is shortly expected at New York, when he will be able to discharge his obligation to the United States; and he solicits, in the mean time, a stay of judicial proceedings. Under these circumstances, you will stay proceedings in his case for the space of three months from this date.

Respectfully, I am, sir, your obedient servant,

S. PLEASONTON, *Agent of the Treasury.*

ROBERT TILLOTSON, Esq.,
United States' Attorney, New York.

Extract of a letter from Daniel Bussard, of Georgetown, to Lieutenant Colonel George Bomford, dated

JANUARY 7, 1823.

In answer to the letter received by me, I beg leave to state that I have sent to Greenleaf's Point one hundred and forty-three barrels, say fourteen thousand three hundred pounds of powder, during the year 1822, a part of which is not yet proved; the balance is at the works, to the full amount of the old loan to Stull & Williams,

and the materials for and on account of the loan to Mifflin; the whole of which will be completed according to my engagements, and thereby secure to the Government not only the full amount of the old and doubtful debts, but the improved quality of the powder now delivered is from twenty to thirty per cent. better than the standard proof; and thereby a gain to the United States of many dollars has been secured.

The weather is unfavorable for proving powder. I wish you to store it, at the risk of the Government, till it can be proved according to my first agreement with Colonel Wadsworth.

[NOTE.—See No. 233.]

17th CONGRESS.] No. 240. [2d SESSION.

MILITIA FINES IN VIRGINIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 25, 1823.

SIR: TREASURY DEPARTMENT, *January* 23, 1823.

In obedience to a resolution of the House of Representatives of the 7th instant, directing the Secretary of the Treasury to report to the House "the amount of all fines assessed upon citizens of the State of Virginia for the non-performance of militia duty during the late war with Great Britain; designating the amount assessed in each county and regiment; as, also, what expense, if any, the United States have incurred in the assessment of said fines; and what amount of said fines has been collected by the marshals and paid into the Treasury of the United States, or otherwise accounted for;" I have the honor to submit the enclosed report from the First Comptroller of the Treasury, and the documents by which it is accompanied.

I remain, with respect, your most obedient servant,

WILLIAM H. CRAWFORD.

Hon. P. P. BARBOUR, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *January* 10, 1823.

In compliance with a resolution of the House of Representatives of the 7th instant, which you have referred to me, "that the Secretary of the Treasury be directed to report to this House the amount of all fines assessed upon citizens of the State of Virginia for the non-performance of militia duty during the late war with Great Britain; designating the amount assessed in each county and regiment; as, also, what expense, if any, the United States have incurred in the assessment of said fines; and what amount of said fines has been collected by the marshals and paid into the Treasury of the United States, or otherwise accounted for;" I have the honor to present the following statement, which comprehends the whole amount of militia fines reported to this office by the courts-martial of Virginia, viz:

Rockingham county, 58th regiment,	$2,095
Rockingham county, 116th regiment,	440
Montgomery county, 75th regiment,	302
Bedford county, 10th regiment,	608
Rockbridge county, 8th regiment,	264
Pendleton county, 46th regiment,	364
Loudoun county, 57th regiment,	10,688
Fauquier county, 85th regiment,	176
Bedford county, 91st regiment,	440
Amount assessed,	$15,377

I have also to state that this Department is not in possession of any information as to any expenses having been incurred by the United States in the assessment of said fines; and that it does not appear that any moneys have been paid into the Treasury, by the marshals of the State of Virginia, on account of militia fines, nor that they compl' d with the requisitions of this Department to render an account of the fines collected by them.

I take leave to enclose copies of several letters upon the subject of these fines.

With considerations of high respect, I have the honor to be, your obedient servant,

JOSEPH ANDERSON, *Comptroller.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

SIR: MARSHAL'S OFFICE, RICHMOND, *April* 30, 1815.

I find myself involved in difficulties, by attempting to carry into execution the laws directing the collection of fines imposed by courts-martial for militia failing to attend the call of the President of the United States.

When the first reports were made to me of fines imposed by courts-martial, I consulted the attorney for the United States, and also the attorney for the State. Both were decidedly of opinion that it was the duty of the marshal to collect them. No evidence of any illegality in the proceedings of the court appeared on the face of the record.

Being advised that the collection by the marshal was legal, I directed one of my deputies to make the collection in Loudoun county. He was soon arrested on three writs; more were threatened: measures were then taken

to obtain a decision on the case, which, after being long unavoidably postponed, has been obtained. The judge has decided that the fines were illegally imposed, and the collection by the marshal illegal. The fines are now collected in four counties, nearly all of which have been returned to me. I believe the collection in all was illegal. I have incurred an expense and loss of time in making the collections, for which the per cent. allowed by the law is wholly inadequate, and am subject to whatever damages may be assessed in the suits which have or may be instituted. I am advised that I ought immediately to refund the money. Your instructions in the business will oblige, sir,

Your obedient servant,

ANDREW MOORE,
Marshal E. D. Virginia.

The Secretary of the Treasury.

Sir: Treasury Department, Comptroller's Office, *May* 6, 1815.

Your letter of the 30th ultimo to the Secretary of the Treasury has been referred to me.

This Department has no doubt but that the fines imposed by courts-martial may be lawfully collected by the marshals, if the regular course of proceeding, under the several acts of Congress, have been complied with in calling out the militia, and in forming the courts-martial.

I wish you to inform me in what court the judgments you mention were given against you; and, if convenient, on what points did the court ground its decision? Was the decision made by a State judge or one of the United States' judges?

With due respect,

JOSEPH ANDERSON, *Comptroller.*

Andrew Moore, Esq., *Marshal of Virginia, Richmond.*

Sir: Treasury Department, Comptroller's Office, *June* 14, 1815.

After a consultation with the President and the Secretary of War, and a deliberate consideration of the subject of militia fines, &c., I have to advise you that, where the opinion of Judge Marshall, as stated in the case of William Meade, applies, you will suspend the collection of fines; but, where they have been regularly imposed in the course suggested by the Chief Justice, they may be collected.

I have written to Mr. Hay, the district attorney, somewhat more fully. You will be pleased to consult with him in your further proceedings in this business.

As it will be convenient for you to obtain a copy of the opinion in the case of Meade, I have declined enclosing one.

With due respect,

JOSEPH ANDERSON, *Comptroller.*

Andrew Moore, Esq., *Marshal of Virginia, Richmond.*

Sir: Treasury Department, Comptroller's Office, *June* 14, 1815.

The subject of fines imposed on the militia for disobedience to calls to muster in the service of the United States, made during the late war, which have been returned to this office by the marshals of the different districts, as also by the officers of the courts-martial, have been seriously taken into consideration by this Department. I have consulted with both the President and the Secretary of War as to the most proper course to be pursued in relation to the difficulties which have hitherto attended the collection of these fines, and it has been deemed advisable to write to the district attorneys and marshals in those States where exceptions have been taken to the assessment of fines by the courts-martial.

A certain William Meade, who was discharged lately on motion, having been brought before Judge Marshall, at Richmond, on a writ of *habeas corpus*, has furnished an important decision on this matter.

You are requested to examine the opinion of Judge Marshall, and if, upon examination, you think it practicable and advisable to bring the decision in that case into review before the Supreme Court, you will please to proceed accordingly.

In the mean time, you will be pleased to give your advice to the marshal in his attempts to collect these fines, conforming to the principles stated by the Chief Justice, where they may apply.

Although the Chief Justice decides the case of Meade on its own particular circumstances, his opinion may embrace the principles which apply to all the other cases in Virginia, as well as in other States. I would have sent you a copy of Judge Marshall's opinion above alluded to, but, the decision being made in Richmond, I presume you can easily procure it.

With due respect,

JOSEPH ANDERSON, *Comptroller.*

George Hay, Esq., *Attorney United States, Richmond, Virginia.*

[CIRCULAR TO THE MARSHALS UNDER NAMED.]

Sir: Treasury Department, Comptroller's Office, *March* 20, 1816.

I am informed by a letter of the 2d ultimo from the Secretary of War, that, on the subject of militia fines, new courts-martial will be instituted where the sentences have been declared illegal; and that the President is of opinion that the marshals in all such cases ought to be directed to refund the money already collected, upon application by the parties. As soon as the names, &c. of the militia officers who were called into service can be ascertained, courts-martial will be constituted for the trial of all who take advantage of any real or alleged irregularity of the proceedings of the courts-martial which have already passed upon their cases. You will therefore govern yourself accordingly. You had best apply to the Secretary of War as to the expenses of the courts-martial.

I would further remark, with a view of impressing it particularly on your recollection, that, under the 2d section of the act of 2d February, 1813, entitled "An act supplementary to an act entitled 'An act to provide for calling forth the militia to execute the laws, suppress insurrections, and repel invasions,' and to repeal the act now

in force for those purposes, and to increase the pay of militia and volunteer corps," the only duty imposed upon the Comptroller is to give notice to the district attorney of the United States to proceed against the marshals in case of failure to pay over fines into the Treasury as therein directed. The Comptroller has nothing to do with the preliminary steps of ordering and organizing the courts-martial, &c. Indeed, I conceive that all information to be sought for on this subject is most properly to be looked for from the Department of War. You will, therefore, be pleased, for any directions which you may require on the subject of courts-martial, to apply to that Department.

Very respectfully,

JOSEPH ANDERSON, *Comptroller.*

ANDREW MOORE, *Virginia.*
ROBERT CROCKETT, *Kentucky.*
CHARLES T. PORTER, *E. Tennessee.*
JOHN CHILDRESS, *W. Tennessee.*
JOHN HAMM, *Ohio.*
JOHN SMITH, *Southern District New York.*
JOHN W. LIVINGSTON, *Northern District New York.*
THOMAS RUTTER, *Maryland.*
JOHN SMITH, *Pennsylvania.*

CIRCULAR TO MARSHALS.

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *August* 13, 1817.

It being deemed expedient by the administration that the fines which have been imposed upon delinquent militia who were called into service of the Government during the late war should be collected, it becomes my duty to direct that you will, without delay, proceed to collect the fines which have been thus imposed.

In making these collections, it is deemed proper to advise that no person be committed to close confinement, or taken into custody, for want of property out of which to make the money for payment of the fine.

Where cases of this kind occur, you will please to remark, in writing, whether the party upon whom the fine has been imposed was, at the time he was called into service, single or married; and whether single or married at the time of making your remark. You will please to make out a special list of such delinquents, and report to this Department, together with whatever you may do in making the general collection.

Out of the moneys which you may receive for the fines you are authorized to apply so much thereof as may be necessary for the payment of the members of the several courts-martial who may not have been paid, taking proper receipts therefor, which you will, of course, transmit with your accounts under this head.

Respectfully, &c.,

JOSEPH ANDERSON, *Comptroller.*

17th CONGRESS.] **No. 241.** [2d SESSION.

SALARIES TO OFFICERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 28, 1823.

Mr. WALWORTH, from the Committee on Military Affairs, who were instructed to inquire into the expediency of allowing to officers of the army a salary or stated sum of money per year instead of pay and emoluments as now allowed by law, reported:

That the committee consider it inexpedient to make the proposed change in the mode of paying the officers of the army, and they ask to be discharged from the further consideration of the subject.

17th CONGRESS.] **No. 242.** [2d SESSION.

ARMAMENT OF FORTIFICATIONS.

COMMUNICATED TO THE SENATE, BY THE CHAIRMAN OF THE COMMITTEE ON MILITARY AFFAIRS, FEBRUARY 7, 1823.

SIR: DEPARTMENT OF WAR, *February* 6, 1823.

I have examined the bill which accompanied your letter of the 3d instant, and, in compliance with your request, have the honor to state, that, in the opinion of this Department, the public interest will be promoted by the passage of this bill, or one containing similar provisions, at this time.

The permanent fortifications which have been commenced since the late war, some of which are completed, will require large additional supplies of cannon, carriages, shot, &c. to place them in a proper state. Statements and estimates, in detail, of the quantity and cost of the ordnance required for the armament of those fortifications

were communicated to the House of Representatives, in a report from this Department, dated 31st January, 1822, to which report I beg leave to refer the committee for more particular information upon the subject.—[Vide No. 212.]

Some of the fortresses are now prepared to receive their armaments, and it is presumed that all of them will be so within the period embraced by the bill; and there is no doubt but all the ordnance for which provision is made in the bill will be required within the same period.

The plan, which the bill contemplates, of procuring the necessary supplies gradually, is considered the best which could be adopted. Under the authority of a specific annual appropriation for a term of years, contracts can be made upon better terms than in any other manner. Foundries require very expensive additions to be made to them to fit them for the fabrication of cannon, and much experience is requisite to enable the founder to succeed. For these reasons, the proprietors of foundries are unwilling to embark, at moderate prices, in the casting of cannon, unless assured of continued employment.

The present is believed to be the proper time to commence procuring the armaments for the new fortresses. The present reduced prices of labor and materials, and the general circumstances of the times, warrant the belief that engagements for the supply of ordnance can now be made upon very advantageous terms to the Government.

I observe that the bill provides only for cannon, mortars, howitzers, shot, and shells. If it be the intention of the committee to confine the appropriation to the procurement of these articles only, about one-half the sum mentioned in the bill will be sufficient, as will appear by reference to the report above mentioned. I would, however, respectfully suggest, for the consideration of the committee, whether it would not be advisable to make provision for *carriages* also, or at least for the purchase of the materials of timber and iron necessary for their construction. This would enable the Government to complete the armament of any of the fortresses which the public safety might require.

Plans for the construction of all the various descriptions of carriages which the service may require have been definitely fixed by a board of officers; and, as the present supply is very limited, it would seem, as the times are favorable, that their construction should proceed in proportion as the quantity of ordnance may be increased. The objection which might be urged, on account of their want of durability will be obviated, as it is proposed to construct those for the batteries almost entirely of cast iron, which will render them as durable as the cannon themselves.

The sum proposed to be appropriated by the bill is about the same as that estimated to be necessary for procuring the armaments of the fortresses, (carriages included,) in the report before mentioned, and is deemed sufficient for the purpose. Should the committee deem it proper to make provision for procuring carriages, it will, therefore, only be necessary to amend the bill, by inserting the word *carriages* among the other articles enumerated.

I have the honor to be, sir, very respectfully, your obedient servant,

J. C. CALHOUN.

The Hon. JOHN WILLIAMS, *Chairman of the Military Committee of the Senate.*

17th CONGRESS.] **No. 243.** [2d SESSION.

OPERATIONS OF THE ARMORIES FOR THE YEAR 1822.

COMMUNICATED TO CONGRESS, FEBRUARY 15, 1823.

SIR: DEPARTMENT OF WAR, *February* 14, 1823.

In pursuance of an act concerning arsenals and armories, passed April 2, 1794, I have the honor to transmit to Congress a statement of the expenditures at the national armories, and of the arms made and repaired therein, during the year 1822.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

Hon. PHILIP P. BARBOUR, *Speaker of the House of Representatives.*

Statement of the expenditures at the national armories, and of the arms made and repaired therein, during the year 1822.

	EXPENDITURES.				
	For land, buildings, canals, repairs, and other permanent improvements.	For the manufacture and repair of arms.	For miscellaneous purposes, not embraced in the foregoing.	On account of 1000 patent rifles in progress, but not yet completed.	Total am't expended.
Springfield, Massachusetts, -	$7,801 68	$174,033 49	$305 99	-	$182,141 16
Harper's Ferry, Virginia, - -	5,484 75	148,615 84	1,086 00	$8,010 73	163,197 32
Total, -	$13,286 43	$322,649 33	$1,391 99	$8,010 73	$345,338 48

STATEMENT—Continued.

	ARMS, &c. MADE AND REPAIRED.								
	MADE.								REPAIRED.
	Muskets.	Ball screws.	Wipers.	Screw drivers.	Spring vices.	Pattern musk's.	Sets of verifying instruments, for pattern muskets.	Arm chests.	Muskets.

ORDNANCE DEPARTMENT, *February* 13, 1823.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

17th CONGRESS.] No. 244. [2d SESSION.

EXPENDITURES UNDER THE ACT FOR ARMING AND EQUIPPING THE WHOLE BODY OF THE MILITIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 18, 1823.

SIR: DEPARTMENT OF WAR, *February* 11, 1823.

In answer to your letter of the 6th instant, I have the honor to transmit, herewith, a report, and accompanying documents, of the Ordnance Office, which furnish the information requested by the committee.

I have the honor to be, sir, your obedient servant,

J. C. CALHOUN.

Hon. WILLIAM EUSTIS, *Chairman of the Military Committee.*

SIR: ORDNANCE DEPARTMENT, *February* 11, 1823.

In answer to the communication of the chairman of the Military Committee of the House of Representatives, of the 6th instant, I have the honor to transmit, herewith, two statements, marked A and B, which contain all the information requested.

Very respectfully, I am, sir, your most obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

The Hon. J. C. CALHOUN.

A.—*Statement of the expenditures made from the appropriation for arming and equipping the whole body of the militia for the year* 1822; *showing in what manner and on what objects expended.*

McClurgs and McKnight,	Pennsylvania,	-	-	-	-	51	20	-	-	-	6,000 00	-	6,000 00	
M. McLaughlin, - -	Maryland, -	-	-	-	-	1	-	1	-	-	400 00	-	400 00	Delivered to the State of Maryland.
U. S. arsenal, Pittsburg, -	Pennsylvania,	-	-	-	-	1	-	1	-	-	372 00	-	372 00	Delivered to the State of Kentucky.
Wickham and Co., -	Pennsylvania,	-	-	-	-	-	-	-	-	1,200,000	3,500 00	-	3,500 00	1,000,000 musket flints, at $3 per M.; 200,000 rifles, at $2 50 per M.
C. Irvine, - - -	Pennsylvania,	-	-	-	-	-	-	-	12	-	101 00	-	101 00	Delivered to the Territory of Arkansas.
Remitted to sundry persons, - -		-	-	-	-	-	-	-	-	-	-	6,047 45	6,047 45	Of this sum, $1,355 65 remains unexpended in the several officers' hands.
	Total, -	10,810	2,340	8,000	2,250	53	20	2	12	1,200,000	$243,172 14	$7,748 37	$250,920 51	

Balance of appropriation on hand January 1, 1822, - - - - - - - -	$48,508 18
Amount of sundry settlements at the Treasury during the year 1822, and brought to the credit of this appropriation, -	5,568 30
Annual appropriation for 1822, - - - - - - - - -	200,000 00
Total amount applicable to the year 1822, - - - - - - - -	$254,076 48
Amount expended during the year 1822, per the above statement, - - - - - - -	250,920 51
Balance unexpended December 31, 1822, and applicable to the year 1823, - - - - -	$3,155 97

NOTE.—The balance in the Treasury, unexpended, reported to Congress, was $13,312 22, of which sum, $10,156 25 was drawn from the Treasury early in January, to pay for 200 rifles and 1,000 pistols, which had been delivered early in December, the vouchers for which had been accidentally delayed in transmission.

The variation in the contract prices for the same articles has arisen from the several contracts having been made at different periods, from 1812 to 1822. The contracts of most recent date are at the lowest prices.

ORDNANCE DEPARTMENT, *February* 11, 1823.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

B.

Statement of existing engagements for supplying arms, &c. under the law for arming and equipping the whole body of the militia, with an estimate of the amount required by each, during the year 1823.

NAMES OF CONTRACTORS.	RESIDENCE.	Muskets.	Rifles.	Pistols.	6 pounder iron cannon.	24 pounder iron howitzers.	Flints.	Estimated amount to be paid for arms, &c.	Estimated am't to be paid for boxes, cartage, storage, inspection, transportation, &c.	Total estimated amount to be paid to each.	REMARKS.
Alexander McRae, per John Rogers,	Pennsylvania,	2,500	-	-	-	-	-	$28,483 75	$285 63	$28,769 38	Contract price $14; deduct $2 50 on each on account of advances; and $266 25 on account of transportation.
Simeon North,	Connecticut,	-	-	3,000	-	-	-	21,000 00	105 00	21,105 00	Contract price $8; deduct $1 on each on account of advances.
Asa Waters,	Massachusetts,	2,000	-	-	-	-	-	26,000 00	320 00	26,320 00	Contract price $14; deduct $1 on each on acc't of advances.
Henry Deringer,	Pennsylvania,	-	1,000	-	-	-	-	15,500 00	116 25	15,616 25	Contract price $15 50.
Robert Johnson,	Connecticut,	-	1,000	-	-	-	-	16,000 00	75 00	16,075 00	Contract price $17; deduct $1 on each on acc't of advances.
Lemuel Pomeroy,	Massachusetts,	1,660	-	-	-	-	-	18,260 00	311 25	18,571 25	Contract price $14; deduct $1 on each on acc't of advances.
M. T. Wickham,	Pennsylvania,	2,000	-	-	-	-	-	24,000 00	228 50	24,228 50	Contract price $12.
Eli Whitney,	Connecticut,	1,500	-	-	-	-	-	19,500 00	962 50	32,462 50	Contract price $13.
Eli Whitney,	Connecticut,	1,000	-	-	-	-	-	12,000 00			Contract price $12.
McClurgs and McKnight,	Pennsylvania,	-	-	-	49	10	-	4,725 00	-	4,725 00	
Wickham and Co.,	Pennsylvania,	-	-	-	-	-	2,400,000	7,000 00	-	7,000 00	
To be remitted to sundry persons,	- -	-	-	-	-	-	-	-	3,799 55	3,799 55	
Total for arms, &c.	- -	10,660	2,000	3,000	49	10	2,400,000	$192,468 75	$6,203 68	$198,672 43	
For the distribution of arms to the several States and Territories, during the year 1823,										12,000 00	
Total,										$210,672 43	

About 54,000 stands of arms were due to the several States and Territories up to the close of the year 1821, and about 14,000 stands are due for the year 1822; making, together, about 68,000 stands, which it is contemplated to transmit to the several States during the ensuing summer; the transportation of which, it is estimated, will cost about $12,000.

Balance unexpended on the 31st December, 1822, and applicable to the year 1823,	$3,155 97
Annual appropriation for the year 1823,	200,000 00
	$203,155 97
Estimated amount of expenditures for the year 1823,	210,672 43
Excess of estimated expenditures beyond the appropriation for the year 1823,	$7,516 46

In the estimate, the *probable* number of arms which will be manufactured and delivered is given. The *exact* number cannot be stated, for this must depend upon the efforts and success of the several contractors, who are themselves frequently disappointed. In most of the contracts, provision is made for a deviation from the stipulated number to be delivered annually; and, in all of them, a moderate variation is allowed.

The aggregate of the variations which may occur during the year, from the numbers stated in the above estimate, it is believed will augment, rather than diminish, the amount of the estimate.

ORDNANCE DEPARTMENT, *February* 11, 1823.

GEORGE BOMFORD, *Lieut. Col. on ordnance duty.*

17th CONGRESS.] No. 245. [2d SESSION.

MILITIA RETURNS.

COMMUNICATED TO CONGRESS, FEBRUARY 25, 1823.

To the Congress of the United States: FEBRUARY 25, 1823.

I transmit to Congress the general returns of the militia of the several States and Territories for the year 1822, with an account of the arms, accoutrements, ammunition, ordnance, &c. belonging to each, as far as the returns have been received, in compliance with the provisions of the act of 1803.

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *February* 21, 1823.

I have the honor to enclose annual returns of the militia of the United States, together with an exhibit of the arms, accoutrements, and ammunition of the several States and Territories, prepared by the adjutant general, conformably to the militia laws on that subject.

I have the honor to be, your most obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *February* 20, 1823.

I have the honor to lay before you the annual abstract of the general returns of the militia of the several States and Territories for the year 1822, with an account of arms, accoutrements, ammunition, ordnance, &c. belonging to each, as far as the returns for that year have been received at this office. The dates of the returns show how far the provisions of the act of the 2d March, 1803, have been complied with by the adjutants general of the several States and Territories.

I have the honor to be, sir, your obedient servant,

CHAS. J. NOURSE, *Acting Adjutant General.*

To the SECRETARY OF WAR.

Abstract of the annual general returns of the militia of the United States, by States and Territories, taken from the latest returns received at this office.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *February* 20, 1823.

CHAS. J. NOURSE, *Acting Adj. Gen.*

17th Congress.] No. 246. [2d Session.

ARMORY AT SPRINGFIELD.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, BY THE COMMITTEE ON MILITARY AFFAIRS, MARCH 3, 1823.

A description of the United States' Armory at Springfield, Massachusetts, with a statement exhibiting the number of arms manufactured and repaired, and the amount of expenditures annually, from the commencement of the establishment in 1795, *to the close of the year* 1817.

At Springfield, in the county of Hampden, and commonwealth of Massachusetts, the United States have an extensive establishment for the manufacture of arms. "The original site of this manufactory is also a military post, which is a perfectly level elevated plat, situated about half a mile east of the village, from which there is a gradual ascent, flanked on the north by a deep ravine, and on the south by a less considerable one, with an extensive plain spreading in the rear, the adjacent parts being uncovered, fronting on the brow of the declivity, and commanding an extensive and beautifully variegated landscape."

At the armory on the hill "there is one brick building, 204 by 32 feet, two stories high, divided into eight rooms, occupied by lock filers, stockers, and finishers. One brick forging shop, 130 by 32 feet, of one story, containing eleven double forges, used for forging the limbs of locks," breech pins, screw pins, ramrods, "and repairing tools." One brick building, 60 by 32 feet, two stories high, with a paved cellar under the whole, used for storing iron, steel, oil, &c.; the first story is occupied as offices for superintendent, master armorer, and clerks; the second story, forming a large and spacious hall, is devoted to religious worship, and as a chapel was dedicated to the service of God, on the 13th day of May, 1817, by the Rev. Titus Strong, of Greenfield. One building, 100 by 40 feet, two stories high, also of brick, for the deposite of arms; two military stores; a carpenter's shop; a file cutter's shop; a coal and proof house; one brick shop, fire proof, 32 by 16 feet, with three furnaces, one for hardening ramrods, one for nealing work, and one for a brass foundry; two stores for forged work, one for files, and seventeen dwelling houses. One pay office, ordnance yard, magazine, block house, and lumber yard. On the large shop first mentioned is a handsome cupola and bell, from which is an interesting view of Connecticut river and the surrounding country.

The aforesaid buildings are arranged northerly of the great State road leading to Boston, bordering on a large flat square piece of ground, fenced and set out with trees, around which is a road about 60 feet wide, leading to the several dwelling houses occupied by the officers and workmen; the whole assuming a handsome and regular appearance.

"The water works are situated about one mile southerly of the arsenal, in three different sites, denominated the upper, middle, and lower water shops, on an excellent stream, called Mill river, which falls into the Connecticut, and exhibits in a little distance the greatest assemblage of mills and other waterworks to be found in the State."

The whole comprises five workshops, twenty-eight forges, ten trip hammers, eighteen water wheels, nine coal houses, three stores, and five dwelling houses.

The upper works have one shop, 65 by 32 feet, two stories high, built of stone and brick; the lower story contains three water wheels, one for polishing and boring and milling bayonets, and two for grinding barrels, lock plates, mounting, and bayonets. The upper story contains two rooms, one for polishers of locks, barrels, mounting rods, and finish boring, &c.; the other for drilling locks, barrels, &c., milling and slitting screw pins, making screws and swivels, milling tumblers, turning bayonet sockets, &c. One stone shop, 75 by 30 feet, one story, containing one trip hammer and ten forges, (bellows blown by water,) eight of which are used for welding barrels; three dwelling houses, a store, four coal houses, and one case-hardening shop, 26 by 18 feet, one story.

The middle works have one stone shop, 84 by 45 feet, one story high, which contains six water wheels; attached to one are three trip hammers for welding barrels, which will strike four hundred blows in a minute each; the whole three may go at the same time, and each one may be stopped at pleasure; two wheels for trip hammers, one for grinding barrels, one for rough and smooth boring barrels, one for smooth boring barrels, nine forges (bellows blown by water) used for trip hammers, barrel welding, forging bayonets, and repairing tools. One stone shop, 50 by 23 feet, of one story, which also contains three water wheels for three trip hammers, and five forges, three for trip hammers and two for forging bayonets. One dwelling house, one store, four coal houses, and a carpenter's shop.

At the lower works, there is one shop, 55 by 32 feet, two stories high, the lower of hewn stone, the upper of brick; the lower story contains three water wheels and four forges, one wheel for trip hammer, one for grinding ramrods and mounting, and one for polishing; the forges are occupied for trip hammer and by mounting forges. The upper room is used by mounting filers, polishers, and for trimming, punching, and drilling. One dwelling house, store, and coal house. The United States also own a valuable mill-seat near the last mentioned works, with a saw mill, where may be erected two large water shops if necessary.

In this establishment are employed from 240 to 250 workmen, who complete on an average about forty-five muskets daily. The works may be increased to almost any extent. The water privileges already owned by the United States will warrant the extension to thirty thousand stands annually.

This extensive manufactory is under the direction of a principal, who is styled superintendent, who has the chief management of the business of the armory; provides, contracts for, and purchases all stock, tools, and materials necessary for manufacturing arms; engages the workmen, determines their wages, and prescribes the necessary regulations for the local government of the establishment. To aid him in the important duties of the armory, there are allowed a master armorer, who manages the mechanical operations, and is held accountable for all stock, tools, and materials put under his charge for the use of the armory, and for the correct workmanship of the muskets, and a paymaster and storekeeper, whose duty it is to liquidate and pay all debts contracted by the superintendent for the armory, and receive the finished arms, for which he is held accountable, as well as for all other public property delivered him. Each of the above officers is allowed a clerk, to aid in keeping his accounts. There is also a foreman, or assistant master armorer, to each principal branch of the work, viz: one of forged work, one inspector of welded, bored, and ground barrels, mounting bayonets and ramrods; one of the lock filers; one of the stockers; and one of the finishers. They are severally held accountable for all stock, tools, and parts of work, delivered them for their respective departments, who severally hold the individual workmen responsible for all stock, tools, or parts of work delivered to them. Each assistant master armorer, or foreman, is inspector in their several branches, and is responsible for the faithful and correct performance of the work. Each individual puts on the work he executes his own private mark, as do the inspectors, when they examine and approve of the various parts of the musket. Thus, in case of any defect, the delinquent may readily be found. Monthly returns of work are made to the superintendent, from which the monthly pay-roll is made.

The establishment of this armory was by an act of Congress passed in 1794, and in 1795 the work commenced with about forty hands. At the end of December, 1817, there had been completed in this manufactory 128,559 new muskets, and 1,202 new carbines, and 45,790 repaired muskets, equal to 12,000 new muskets. Calculating the carbines to be equal to the same number of new muskets, (they cost much more, on account of the small number made,) makes the aggregate equal in labor and expense to 141,761 new muskets. The amount of purchase money for land, mill-seats, and for erecting water shops, machinery, workshops, stores, and buildings of every description, and repairs, is estimated at $155,500. The other expenses for the above period, exclusive of stock and parts of work on hand, amount to $1,553,100. Amount of stock, and parts of the muskets and pistols on hand, December 31, 1817, $111,545. Total amount of expenditures, from the commencement of the works, to December 31, 1817, is $1,820,120 18.

The situation of this establishment is remarkably pleasant and healthy; being sixty miles from the nearest seaport, in a thickly inhabited country, it is perfectly safe from an invading foe, and still has water communication to within a few rods of the armory. Materials for the manufacturing of arms may be obtained in great abundance, and on reasonable terms. The number of arms completed in the year 1817 exceeded 13,000, with an increase of the several parts of the musket; and the works are so arranged, that in the year 1818 15,000 stands may be made by the same number of hands, (250, including officers,) and for about the same expense. Good professional armorers, in considerable numbers, can at any time be added to the works, if necessary, for reasonable wages. The necessaries of life are abundant, and can at all times be procured at a moderate price.

On the whole, it is believed that there is not a situation in the United States where arms can be made for a less sum, and where so many important advantages combine, as renders this station eligible for a grand national establishment.

Statement of arms made and repaired at the United States' Armory, Springfield, Massachusetts, from the first establishment of the armory, in 1795, *to the* 31*st December*, 1817, *inclusive; exhibiting the amount of expenditures for the same period, with the amount of stock and parts of work on hand at the close of the year* 1817.

SIR: U. S. ARSENAL, WATERVLIET, (N. Y.,) *November* 5, 1819.

In obedience to your command, I proceeded to the United States' armory at Springfield, Massachusetts, on the 12th of October, for the purpose of investigating the state and condition of that establishment; and, having completed that object, I returned to this post on the 26th of the same month. As the result of that investigation, I now beg leave to lay before you the following report:

After taking a general view of the place and works, I settled upon a plan of investigation in detail, which was, to separate the different subjects that required my attention into classes, and then to proceed to examine the subjects under each class distinctly. The whole subject appeared naturally to fall under the following twenty-four heads, viz:

1. General police of the post, and cleanliness of the shops.
2. Number of officers, under officers, clerks, duties, and pay.
3. Number of workmen, and prices paid for work.
4. General arrangement of workmen to the several branches of business.
5. Hours of work for jobbers and day laborers each day.
6. Process and method of executing the work generally.
7. Proof of barrels, whether according to regulations.
8. Quality of work, and of the arms when finished.
9. Number of arms manufactured per month.
10. Marking and packing the arms, whether according to regulations.
11. Preservation and condition of the arms, and of the ordnance and stores in charge of the storekeeper.
12. Method of purchasing stock and supplies, and prices paid for the same.
13. Economy in preserving, using, and expending the same.
14. Method of keeping and rendering the accounts for the same, by the superintendent, master armorer, assistant master armorers, foremen of shops, and workmen.
15. State and condition of the books, returns and papers of the same, and also of the storekeeper and paymaster.
16. State of the debts of the armory, and punctuality of payment.
17. Regulations for the government of the men, and the good order of the same; also, their general character.
18. Occupancy of the public houses and gardens.
19. Number of public teams and carriages employed or kept.
20. Condition of the public buildings, fences, &c.
21. Arrangement of the shops and machinery.
22. Improvements made since 1815 in the establishment, under the present superintendent.
23. Improvements contemplated, and within the power of the superintendent, without any special appropriation.
24. Improvements contemplated by the superintendent, requiring special appropriation of funds.

SUBJECT 1.

General police of the post, and cleanliness of the shops.

The police of the establishment is universally good; and, considering the nature of the business, (manufacturing,) much better than I had anticipated.

The general appearance is pleasing; and by the removal of some old buildings which were originally located without taste, and without a view to their proper position when the place should be enlarged to its present size, and by some further improvements in the fences, and painting, the main establishment, on the hill, will be beautiful and attractive to strangers.

The police generally, in and about the shops, is as good as the nature of the business will admit of. A further attention to that point I consider would be unprofitable.

SUBJECT 2.

Number of officers, under officers, clerks, duties, and pay.

The number of principal officers employed is three, agreeably to the regulations of the Ordnance Department, sanctioned by the Secretary of War, viz:

1. One superintendent, Lieutenant Colonel Roswell Lee, late of the army. Pay one hundred dollars per month, and four rations per day, equal to $1,429 per annum. He is drawing forage for one horse, which he says is understood by the colonel of ordnance and by the Government. He is further allowed and occupies public quarters, a public office, and draws fuel for his office, and occupies a public garden. Estimating his forage at eight dollars per month, his quarters and garden at one hundred dollars per annum, his place is worth $1,688 a year. His office, and fuel for the same, cannot be considered an emolument, any more than the stationary for the same. His duties are explained by his title, and also in the regulations before mentioned.

2. One paymaster and storekeeper, Mr. John Chaffee. He has filled the office many years. Pay $62½ per month, equal to $750 per annum; and no other emolument. He occupies a public office, and draws fuel for the same, and also his stationary. His duties are pointed out in the regulations before mentioned.

3. One master armorer, whose duties are also pointed out in the regulations. Mr. Adonijah Foot now occupies the place. Pay $50 per month, and two rations per day, equal to $746 per annum; and no other emolument except quarters and a garden, equal, perhaps, to $56, making about $800 per annum. He occupies a public office, and draws fuel and stationary for the same.

The storekeeper and paymaster has been offered public quarters and a garden, but prefers living in the village and paying his own rent to living on the public ground. Neither of the above named officers draws fuel for his quarters. The allowance of such fuel is recommended to the consideration of Government.

It is also recommended to the consideration of Government whether the salaries of these officers should not be raised. It will be seen that their pay is not equal to that of the clerks in the several offices at Washington; and there is scarcely a boy who writes in these offices that does not receive more than the storekeeper and master armorer. Scarcely a more important office has been created, under those of the heads of departments and chiefs of corps, than those of the superintendents of the national armories; and those offices ought to be filled by men whose talents and conduct would secure them a genteel living in any business.

The pay of the master armorer is far less equal to his services than that of the paymaster. His duties are very arduous. Those of the paymaster, under the present regulations, are comparatively easy and light.

It is the opinion of the superintendent, and it is also my opinion, that the salaries of those officers should be increased—say to $2,000 a year, including all emoluments, for the superintendent; $1,000 for the storekeeper, and $1,200 for the master armorer.

There are now employed five assistant master armorers and inspectors of work, three foremen of shops or branches, who are not inspectors of work, and two inspectors of contract arms; making a total of ten, viz:

1. Jacob Perkins, foreman of lock filers, and inspector of their work.
2. John Stebbins, foreman of stockers, and inspector of their work.
3. Elisha Toby, foreman of finishers, and inspector of their work.
4. Joseph Lombard, foreman of barrel welders and mounting forgers, and inspector of their work.
5. Justin Murphy, foreman of lock forgers, and inspector of their work. Murphy is sometimes employed to inspect contract arms. The pay of these men is $48 per month, equal to $576 per annum, and no other emolument.
6. Lewis Foster, foreman of the upper water shop, not inspector.
7. Diah Allen, foreman of the middle water shop, not inspector.
8. Levi Dart, foreman of the lower water shop, not inspector. The pay of these men is also $48 per month, equal to $576 per annum, and no other emolument.
9. John Newbury, inspector of contract arms.
10. Luther Sage, inspector of contract arms.

By "inspector of contract arms," will be understood men furnished by the superintendent at Springfield to inspect the arms made on contract in the New England States; that duty having been allotted to that officer. These men receive also $48 per month, and no other emolument, except when *travelling* and employed at distant factories; their bills of actual expenses are then paid by the superintendent.

The duties of the assistant master armorers and foremen of shops are pointed out in the regulations before specified. They are arduous and incessant. It is considered their wages are low: $60 per month would not be too much.

The number of clerks allowed by the regulations is three, one for the superintendent, paymaster, and master armorer, each. There are now employed four, viz:

William F. Wolcott, } for the superintendent.
Elizur Warner, }
Ethan A. Clary, for the master armorer.
Eldad Stebbins, for the paymaster and storekeeper.

Wolcott receives $50 pay per month; the other three $45 per month each.

The superintendent found it necessary to employ a second clerk, and I understood him to say that he had been authorized so to do by the colonel of ordnance. From the investigation of his books, returns, and accounts, I am satisfied that two clerks are required for his office, and ought to be employed.

I am convinced that no greater number of the before-mentioned officers, under officers, and clerks, is employed than the several duties actually require, and that the *foremen* must still be increased if there should be any considerable increase of workmen. The two inspectors of contract arms, when not on that duty, are employed as assistant inspectors at Springfield.

Subject 3.

Number of workmen, and prices paid for work.

The number of workmen now employed is 244, viz:

7 Barrel welders, who work by the piece.
7 Barrel borers, who work by the piece.
5 Lock forgers, who work by the piece.
2 Bayonet forgers, who work by the piece.
8 Mounting forgers, who work by the piece.
2 Gun rod forgers, who work by the piece.
6 Trip hammer's men, who work by the piece.
18 Forgemen and trip hammer men's assistants, who work by the piece.
10 Grinders, who work by the piece.
10 Polishers, who work by the piece.
9 Drillers, millers, and turners, who work by the piece.
5 Barrel finishers, who work by the piece.
42 Lock filers, who work by the piece.
12 Mounting filers, who work by the piece.
35 Stockers, who work by the piece.
14 Finishers, who work by the piece.
52 Jobbers, or those men who work by the day, including carpenters and millwrights.

The number of jobbers ordinarily employed is forty; it being now increased, in consequence of the building of a forge for making bar iron from the scraps, &c. made at the works.

The price paid for the working of each piece have been settled by the superintendent, upon the result of much experiment. It is calculated that good industrious men will be able to earn $1 40 per day. Upon this basis the prices have been established. The workmen earn now from $20 to $60 per month; such is the difference in the skill, industry, and ambition of men of the same trade. There are, however, but three or four in the 244 who come up to $60 per month. The average price paid is about $35 per month, or about $1 35 per day, allowing that they work twenty-five days in the month.

The jobbers are men who work by the day, and are paid $1 to $1 75 per day when they work. The usual price given to all sorts of mechanics is $1 40 per day.

The prices paid to the workmen, on the whole, are not high. "The times are hard," and the wages of mechanics are now generally high in every part of the Northern States. The prices paid to ordinary mechanics in the State of New York for the two past years is $1 37½ per day; to first rate workmen $1 50; and to some few of known skill and smartness $1 75; to master workmen, to direct and oversee, $2 per day; and to master builders from $3 to $5 per day. So that by comparison, considering the mechanics at Springfield are generally first rate workmen and respectable citizens, the prices now given appear to be rather under those ordinarily paid to mechanics in this part of the United States.

I obtained a table of prices paid for working each piece, in part, or in whole, as the piece is either worked in part or wholly by the same man; but as it is lengthy, and as it can be obtained at any time of the superintendent, if required, I think it not worth while to embrace it in this report. There are a hundred and forty things to be done by the workmen by the piece, and as many prices for doing them.

The plan of having the work done by the piece is, undoubtedly, the best of all possible plans, provided there is a strict attention paid to the inspection of the several parts, before they pass from one workman to another. It gives this advantage, that every man is paid according to his merit; it excites ambition and industry, and brings into

operation and usefulness the otherwise dormant powers of the mind. It has a moral, good tendency upon the workmen, and at the same, or a far less price, gives annually to the Government a much greater number of arms. Where it is practicable, this plan is pursued; but there are some kinds of the work that cannot be done by the piece.

SUBJECT 4.

General arrangement of workmen to the several branches of business.

The general arrangement of the workmen to their work is the best that can be adopted for the United States, but not so for the interest of the workmen; that is, each man is kept at one particular kind of work, and is not shifted. For instance, one man is always kept at forging locks, another at filing them, and so on for the other parts. One man is kept at putting the parts of the lock together, and finishing them; another at drilling them; another at milling the pins; another at slitting the heads; another at polishing the parts of the lock. One is kept grinding barrels; another at turning; another at sighting, and another at breeching them, &c.

By this arrangement, it will readily be perceived that each workman becomes an adept at his part. He works with greater facility, and *does the work much better* than one *could* who worked at all the parts. This is undoubtedly the best method for Government. The consequence, however, to the workmen is, that not one of them becomes a finished armorer. If he is always employed at the Government factories, it is no matter for him; he is, in fact, the better for it, for he does more work, and gets more money; but if he wishes to set up business for himself, he has got no trade; he cannot make a fire-arm.

SUBJECT 5.

Hours of work established for those who work by the piece, and those who work by the day.

From the 1st of April to the 1st of November, the shops are opened at sunrise, and closed at sunset. During this part of the year, the men who work by the piece remain in the shops as many hours as they choose between those periods. Those who work by the day commence at 7 A. M., and leave off at 6 P. M., having one hour for dinner. They work ten hours. From the 1st of November to the 1st of April, the shops are opened at daylight, and closed at 6 P. M. During this part of the year, those who work by the piece have the same privileges as in the other part, while the shops are open; and those who work by the day commence at sunrise, having taken their breakfast, and leave off at sunset; one hour for dinner.

It is considered that as much time is occupied in the winter season as is either profitable or desirable. No more could be done without working altogether by candle-light. The work is of that nature that it cannot be done well by fire-light; besides, there would be much danger from fire, and the men could not feel so well for work in the morning.

In the summer season, the jobbers might work more than ten hours; but the custom has been long established to work but ten, and the superintendent has not thought it advisable yet to change it. Mechanics ordinarily in the Northern States work twelve hours each day. Whether it shall be done in the national armories, is a subject submitted to the colonel of ordnance.

SUBJECT 6.

Process and method of executing the work generally.

It has already been observed, that each part of the work is done by particular men, and, in addition to the advantages there stated to be derived from this method, it will be proper further to remark, that the great desideratum, uniformity of work, is thus more nearly obtained. To obtain continually from the United States' armories, and from contractors, arms made precisely to one pattern in all the detail of parts, is very desirable; but it is believed that perfection in this subject is not attainable. One thing, I believe, is most clear to all those officers who have turned their attention to this point, that we ought to arrive as *near* to perfection as time, money, the want of arms, reason, and good sense will allow. To what extent shall we try? and when shall we be satisfied? are, it is thought, the proper questions to be decided. That a few pieces might be made so perfect, that if they were taken to pieces, and the several parts of the locks, the stocks, barrels, and mounting thrown into a pile promiscuously, they might again be put together when the parts should be alternately changed, is believed, provided each similar part was made by the same man; but if the similar parts were made by different men, which must always be the case where a great number are made even at one factory, it is not believed practicable even to make a small number perfect; and as the parts must be made by different men where the arms are made at different factories, and as the United States have, and will have, different factories employed, it is believed to be impossible to attain universal perfection. Different men have different visions; they do not see alike, and they do not feel alike; and, as the accuracy of parts depends upon the vision and feeling of the workmen, the parts made by them must vary. Admitting that arms to any extent could be made perfectly alike in all their parts, would it be advisable? Being governed in this decision, as we must be, by the before-mentioned considerations, of money, time, want of arms, and reason, it is believed it would not be advisable. Why? Because the muskets would cost at least $30 each, instead of $12 50; and because about three years instead of one would be required to make an equal number of arms; and because the country wants arms as fast as they can be made; and lastly, because, if perfection were attained in the muskets, the real advantage gained to the country would be proportionably very far short of the expense. What is the advantage of having all the similar parts precisely alike? This: that when they are damaged, the several parts that remain good can be put together, and good arms be made out of bad ones. *In practice*, what parts would be thus put together, if they were perfectly alike? and who would do it? Let us see, and then we can judge of the advantage. Arms damaged in service would be turned over to, or collected by the quartermaster, or some other proper officer of the army. Arms are wanted; new ones cannot be obtained; some officer or soldier of the army would be directed to overhaul the damaged arms *in possession of that army*, and make out as many good ones as he could. What parts, if damaged, would he, with his *skill and tools*, replace? If other parts would fit, he can exchange and replace bayonets, ramrods, barrels, stocks, cocks, and whole locks—nothing more. He can never replace the parts of locks or mounting, except bands, which are seldom damaged or lost. Then it follows that locks and mounting must go to the repairing shops to be repaired, if they are all alike. The workmen in the repairing shops are armorers, and have tools. If the parts requiring to be changed want a little altering or filing, they are able to do it, to make them fit; so that, if the parts of the locks and mounting are so nearly alike that the repairer is able to make them fit with his tools, it is all that is required. The following objects, then, only seem necessary to be attained in the manufacture of small arms, viz: that the barrels, stocks, whole locks, cocks, bayonets, and

ramrods should each fit every musket; and that the several parts of the locks and mounting should be made so nearly alike, that they could be fitted at the repairing shops. Consequently, when this is attained, we shall have done all we ought to wish for. This is not yet done, but it is believed *to be practicable.* The most important of the individual objects is to have the bayonets all fit every musket. Bayonets are more likely to get lost or broken than any other parts of the musket, and hence much difficulty has been experienced. This is proved by the result of repairing arms damaged in the last war. Last year I had at this post, Rome, and Vergennes, six thousand stands of repaired arms, in every other way complete but wanting bayonets and ramrods, and only about three thousand wanted the rods. There were probably about thirty thousand stands repaired, and about five hundred stands condemned altogether. From this it appears that about one-fifth of the whole wanted the bayonets, either by loss or not fitting, about one-tenth the rods, and only about one-sixtieth the other parts altogether. This deficiency of bayonets was made up by getting six thousand made at Springfield, and sent to the repairing shops. In this great difficulty was experienced, on account of the different sizes of sockets required. Twelve different sizes of patterns were sent to the forgers, and then each class of sizes had to be altered individually at the repairing shops, to fit the barrels. Hence it appears evident, that the first and most important object in the manufacture of muskets is, to cause all the bayonets to fit the same gun, and all the barrels to fit the same bayonets.

In order to attain this grand object of uniformity of parts, the only method which can accomplish it has been adopted at Springfield, but it requires to be perfected, viz: making each part to fit a standard gauge. The master armorer has a set of standard patterns and gauges. The foremen of shops and branches and inspectors have each a set for the parts formed in their respective shops; and each workman has those that are required for the particular part at which he is at work. These are all made to correspond with the original set, and are tried by them occasionally, in order to discover any variation that may have taken place in using. They are made of hardened steel. The workman makes every similar piece to fit the same gauge, and, consequently, every similar piece must be nearly of the same size and form. If this method is continued, and the closest attention paid to it by the master workmen, inspectors, workmen, and superintendent, the desired object will finally be attained. The method practised at Springfield, of inspecting each part before the parts are put together, or before it goes to another workman, to be put through another process, has a great influence on the workman; it does much towards improving the work generally, and towards obtaining a uniformity of parts, and consequently a uniformity of muskets, and is undoubtedly the best possible method. If a part does not pass inspection, it goes back to the workman, either to be improved, or deducted from his wages. His interest compels him to do it well. It is on account of this method that the arms made at the national armories are, and will be, superior to those made on contract. In the latter case, the arm is finished before inspection, and, if a part is condemned, the whole piece, valued at $13 or $14, is condemned. The inspector cannot, from this cause, avoid feeling a reluctance in condemning the arms he is sent to inspect; his feeling will be towards the contractor; and, from a slight neglect in one particular part, he will seldom condemn the musket; and thus he will receive arms, among which, perhaps, there is not one without some defect; whereas, if the same inspector were to inspect the same parts as they were made, he would condemn them, because he would think that the loss would be but trifling, and it would be incurred by the workman, who ought to bear the loss of his own bad work; and if all the parts of a musket were to be condemned in this way, the loss would be divided between, perhaps, a dozen or fifteen men, instead of falling upon one. An inspector is more likely to condemn a trifling thing than a valuable one, for a small defect.

In the method and process of executing the work at Springfield, I have reason to believe, both from inquiry and a comparison of the arms now made with those made before the late war, that great improvements have been made. How much credit is due for this to the superintendent, and how much to the colonel of ordnance, I have not the means of judging; but there is a credit due somewhere.

To give in detail the process of each part of the musket, from the raw material to the finishing shop, would occupy too much room to be embraced in this report. I shall, therefore, not attempt it. I will only observe that, as far as I can judge, the arrangements are good, and, with some intended changes in the shops, cannot probably be bettered. There must necessarily be in such establishments a good deal of passing of parts of muskets from one shop to another; but the whole is accomplished at Springfield by one two-horse team, which passes round to the different shops but twice in each day.

On the subject of uniformity of arms I will make one more remark: that, in order to accomplish this object throughout the Union, it will be necessary to have a set of original patterns and gauges of each and every part of the musket, sealed and kept in the Ordnance Office at Washington, and to cause those of the superintendent of each factory to be sent occasionally to that office, to be compared with them, and fitted anew, if required. This remark will hold good with every thing else in the Union that requires uniformity of construction. Hence, we may, by fair inference, deduce the great importance of the present organization and arrangement of the Ordnance Department to the country. The great advantage of placing the armories under the direction of such a permanent corps and such a head is already felt and acknowledged at Springfield, both by the officers and citizens.

Subject 7.

Proof of barrels, whether according to regulations.

When I was at the factory, the superintendent had directed that the barrels should be proved temporarily, at the first charge, with one-sixteenth instead of one-eighteenth of a pound of powder, in consequence of having no powder that was full proof. All the powder at Springfield (and there is a large quantity) has been found to be under proof. Colonel Lee had sent to Middletown for a temporary supply of the best powder. He intended to use no more under proof. It is very important that a full supply of the best powder should be kept on hand at the armory. It was understood that the colonel of ordnance had made an arrangement for such a supply in future from Dupont's works. Colonel Lee informed me that, on proving the barrels that were on hand when he took charge of the armory, many hundred of them burst that had before stood the proof given them. They had, undoubtedly, been proved with poor powder. I discovered a deficiency at the armory in the want of a standard powder proof, or eprouvette, and nothing by which to compare it. It was recommended to the superintendent to obtain for the present a howitzer and ball, by which to compare his triangular eprouvette occasionally, in order to be sure of the strength of the powder used in proving musket barrels. I have before communicated with you on the subject of an improved eprouvette for the United States.

Subject 8.

Quality of the work and arms when finished.

The quality of the workmanship of the arms is, in my opinion, comparatively excellent; and it is believed to be superior to that in any of the national armories in Europe. The plan adopted by the superintendent, if closely pursued, cannot fail to produce good work.

SUBJECT 9.

Number of arms manufactured per month.

The average number per month during this year has been eleven hundred stands, equal to thirteen thousand two hundred in the year. The superintendent states that, if he should be directed, he can make in 1820 fifteen thousand stands. It will only require an increase of hands; the present machinery is sufficient for it.

SUBJECT 10.

Lettering and boxing the arms, whether according to regulations.

The lettering of the arms, according to the series, established in the regulations, must be done by the storekeeper, after they are turned over to him, and placed in his arsenal. If it were to be done in the shops by the workmen, the arms would get so mixed up that it would be very difficult to separate them for boxing and labelling. As none of the arms made since the series was established have been sent away from Springfield, very few of them have as yet been lettered and boxed for transportation; but it is intended to be done before they shall be wanted. The storekeeper appeared to be laboring under difficulties about it, for want of method in the process. The difficulty was this: as the arms have been turned into the arsenal, they have been put loose, twenty in a box, without being lettered, &c.; the box labelled 20 muskets, from B 1 to B 20; no other attention being paid to the pieces put in but to have those in one box all made in the same year. The boxes were then piled up in the arsenal, and so they have been done from the commencement of the plan. Now the storekeeper wishes to go on and take the arms out of the boxes, letter them according to the labels on the boxes, respectively, and pack them for transportation. But the boxes first put up require to be first lettered, and, being at the bottom of the piles he cannot get at them without great labor; and upon that plan this difficulty would always continue. It would be impossible so to arrange the boxes in the arsenal that the first put in should be the first out. I therefore recommended to him to pursue the following method, which, in the end, will be seen to have many advantages, viz:

Let the storekeeper put the arms as they come in into boxes, loose as now, but not label the boxes; let him only put the year in which they were made, with chalk, on the ends of the boxes; and let him put all those made in each year in piles of boxes by themselves; let him commence lettering the arms in the pile of boxes longest made, and let him commence the series for that year, or where he last left off, as the case may be, and go on until he has completed the arms made in that year, and label the boxes as the arms in them are labelled, and then commence on the pile made in the next following years, and so on.

In order that the storekeeper may know what he is about, and to insure accuracy in the series, let him keep a book in his office, in which he shall enter the lettering, boxing, and labelling the arms. He will enter on his book the part of the series last put upon the muskets of a given year, and the corresponding labels on the boxes. When he wishes to box and letter more, he will turn to his book, and see what letter was last put on in the series for the year in which the arms were made which he wishes now to letter, and note on a piece of paper the letter and number to be commenced with, and give this to the workman who is to oversee the lettering and boxing, and also to give him the corresponding labels from his office, where they should be kept, of the part of the series he wishes at that time to have put upon the muskets, according to the number he wishes put up at that time for transportation. When the lettering is done for that time, let the workman give to the storekeeper the account of what he has done, and where he left off, and let the storekeeper enter it on his book; and so on. It will be remembered that a portion of the arms, the parts of which are finished and dated in one year, will not be finished and turned over to the storekeeper until the following year, and that the labels on the boxes will express the year in which those parts were made and *dated*, as the *date* of the labels must correspond with the *year* stamped on the lock and heel plates, so that the labels on the boxes will never show the *year* in which the arms were *finished*, but that in which the *parts were made*. But in the method of lettering which I have proposed, the series will always in the end come out accurately. It will make no difference whether the arms made in 1817 or 1819 are first lettered and boxed, as the parts of the series already taken up in each year will at all times be found on book. In this way the arms in the store of the oldest dates can always be first sent away, if desired, as the boxes for each year will be piled separately, and not be mixed.

The storekeeper has been advised always to enter on his book of deliveries, or issues of arms to be taken from the place, the part of the series or letters and year of fabrication then sent away, and always to send them away according to the series, so as always to be able to know the particular arms sent away at any one time, and to any place, by the letters and by a reference to the book of the armory.

Thus the arms belonging to the United States, and to particular States, could always be distinguished when mixed in service. This was undoubtedly the object of the colonel of ordnance when he established the plan of lettering the arms by a series. The only thing that required my attention was, to assist the storekeeper in adopting a method for himself of carrying that plan into execution.

SUBJECT 11.

Preservation and condition of the arms, and of the ordnance and stores in charge of the storekeeper.

The condition of the arms, ordnance, and stores in charge of the storekeeper is very good, and every proper attention appears to have been paid to them.

The arms are principally kept in boxes. It is believed by the storekeeper, from his own experience, that, for any length of time they will probably be kept there, they will not be injured by rust, as they are perfectly dry when taken into the arsenal. I am also of opinion that, for the time the arms will remain at Springfield, it would not be worth while to make a display of them in the arsenal. It would cost too much time and trouble to justify the measure. But, to speak a little further on this subject generally, I am of opinion that the best method of preserving the arms in the arsenal, after they have been removed from the armories, is to keep them displayed, and in the open air, having the rooms of the arsenal cieled, and made light and clean. 1st. That after arms have been transported they must always be taken out of the boxes and wiped and oiled anew, or they will rust. I have never opened a box that had been transported, and lain three years in store afterwards, that the arms were not more or less damaged, and frequently they have to be taken to the repairing shops before being fit to issue. 2d. That, by the method I have lately adopted for putting up arms in the arsenal, which is very cheap, as great a number can be put in a given space as if they were in boxes. 3d. That if the arms were repacked in boxes after being wiped and oiled, and the boxes put up in the arsenal, there would be a time when they would begin to rust, and when they should be overhauled; but from their situation they cannot be seen, and the time when they require overhauling can only be

guessed at. To overhaul them in this situation requires the boxes all to be taken down, and every musket to be taken out of the boxes to see whether they are rusting or not. This would require more labor than would be necessary to actually rub and oil them over if they stood in racks in the arsenal as I have them; and to be sure that none of them are rusting, it would be necessary to overhaul and examine them at least once in two years. I know, from actual experiment, that if they are put up in the racks of the arsenal, they will be kept in perfect order by being rubbed and oiled over every other year; and then I always know they are not injured, but are always in order, and spend no more time upon them than would be required to examine them in the other case; and if they are boxed, there is always an uncertainty about their condition. Supposing, as has often been the case, that they were left too long in boxes before being examined, and they should be found badly rusted, it will then cost from one to two dollars each to repair, clean, and polish them. But if they are displayed in the arsenal, the storekeeper can every day pass among them, and see the first appearance of rust, and have them immediately rubbed over. I am satisfied that two laborers will keep in perfect order thirty thousand stands for any length of time, if they are put up in racks, which is certainly a very trifling expense. From all this, I am fully settled in the opinion that the best method of preserving arms for a great length of time is to display them in the open air in well finished arsenals, and keep men, according to the number of arms, always at work among them.

I recommended to the storekeeper to let Colonel Lee use the old accoutrements of the revolution, which are completely worthless, for case-hardening the parts of muskets. They are in the way, and can never be of the least use for service; also, to let him use the old paper cartridges, made in the revolutionary war, for wadding to prove barrels, as they are as useless as the accoutrements; and also improve his police, by burning a quantity of old barrels and other lumber that disfigure the places where they are deposited, and are not worth altogether one farthing except for fuel.

Subject 12.

Method of purchasing stock and materials generally, and the prices paid for the same.

Imported articles, such as steel, files, emery, glue, wire, stockers' tools, and some smiths' tools, such as anvils, vices, &c., have been, heretofore, principally furnished in large quantities by importing merchants of New York, Philadelphia, Boston, and Springfield, upon the orders of the superintendent, and paid for as soon after delivery as the funds would admit of. Two importations since 1815 have, however, been made by Boyd, of New York, and Neilson, of Baltimore, upon the orders of the Ordnance Department, or, as it is understood by Lieutenant Colonel Bomford, for the national armories, a part of which has been sent to Springfield armory. The Messrs. Dwight, of Springfield, made one importation in 1817, and have made another the present year for the year 1820; the articles are now on delivery to a pretty large amount at the armory. It is calculated that the present supply will be sufficient for four years, (except the article of files,) and perhaps five. It is intended to keep on hand at least three years' supply, that, in case of a war, there should be no failure of stock. The present time is also considered favorable to purchase, as the articles are low in England. It is very difficult for any one who is not an importing merchant to know precisely at what prices the articles could be afforded. The only point of attention seemed to be, from a comparison of the several bills, who has furnished the cheapest? and, from thence, what method of obtaining this class of supplies appears to be the best? In order to judge of this, I shall here give a comparative view of the prices paid upon the several importations since the last war.

Extracts from the bills on file at the armory at Springfield, Massachusetts, October, 1819.	Imported by Thomas Richards, New York; transportation paid from New York to Springfield by the United States, 1817.	Imported by J. & E. Dwight, Springfield, and delivered by them at the armory storehouse, 1817.	Imported by T. Wickham, Philadelphia; transportation paid from Philadelphia by the United States, 1818.	Imported by Boyd, of New York, London (1817) bills, without packing, cordage, importation, or transportation bills, and without duties.	Imported by J. C. Neilson, Baltimore, London bills as the last, 1818; no duties; importation, transportation, packing, &c. added.
English blistered steel, per pound, -	$0 16	$0 18	$0 20	$0 18½	$0 10 7/10
German blistered steel, do. - -	-	-	-	16 2/3	11½
English emery, do. - -	-	13½	15	-	6
Twelve inch flat rough files, per dozen, -	3 18	3 83	3 50	2 25	4 89
Twelve inch 2d cut rough files, do. -	4 58	4 58	-	-	4 48
Thirteen inch flat rough files, do. -	4 66	4 66⅔	4 25	3 16½	5 78
Ten inch flat rough files, do. -	2 66	-	2 50	-	3 22
Ten inch smooth files, do. -	3 75	3 89	3 75	-	3 78
Eight inch smooth files, do. -	2 33	2 33	2 12½	-	2 66
Eight inch bastard files, do. -	2 16	1 67	1 62½	-	2 11

From a view of the foregoing table, it will be seen that there is not much difference in the average of prices given to Richards, Dwight, and Wickham; Richards's charge on blistered steel is lowest; Dwight's nearly splits between them. But when it is considered that Dwight delivers at the works, and the others in New York and Philadelphia, the purchase from Dwight is the best, if the articles are as good. Of this I can know nothing but from the superintendent and other officers. They declare his articles the best. The articles of the present importation, I am informed, will come a little lower; best English blistered steel seventeen cents per pound.

The calculation is, that 50 per cent. added to London bills of hardware will cover the duties, importation, and all other expense attending it, until delivered in one of the towns on the seaboard. The goods are marked at that rate, and the profit of the importer arises from his getting a deduction of 20 per cent. for paying ready cash in London. Those who buy on credit must sell higher. Allowing that the steel imported by Boyd and Neilson costs the Government at that rate for duties, importation, &c., it came at the same rate as that purchased by other importers, unless Government allowed them a per centage for agency beyond this; if so, their steel was highest. The files imported by Boyd appear to come at about the same rate. Not having seen the bills upon which Boyd and Neilson were paid, I do not know what they received; but the files imported by Neilson must have been a bad bargain to Government. It will be seen that the London prices are considerably more than the prices of the same kind of articles delivered at the armory in Springfield. There must be deducted from these prices 20 per cent., (for ready pay by Government, so say the bills,) and then added to that remainder 2½ per cent. to the London mer-

chant for collecting the articles, 50 per cent. for importation and duties, and then probably a commission to Neilson, which must have brought the prices given for the articles from 30 to 40 per cent. above the other importatinos.

The final inference from all this is, that there is no advantage as yet gained by Government in importing hardware for the armories, but an actual loss; and that if the articles can be and are delivered at the works at as low a rate as they can be obtained in any other way, that method is the best.

I was the more particular in this part of my investigation, in consequence of its having been reported here, by Colonel Prescott, I believe, that the Dwights were furnishing the armory pretty much at their own prices, and that they had obtained a complete ascendancy over Colonel Lee, and made him do as they wished him; but nothing could have been more unfounded, and, I believe, more false. Colonel Prescott must have been misinformed, and I have told him so since my return.

The article of iron is obtained from the Salisbury and Winchester iron works. It is delivered by the proprietors at the armory. The price now paid for warranted bar iron, thus delivered and drawn, is $7 50 per hundredweight. This price is from $1 50 to $2 per hundredweight higher than European bar iron; but its quality is superior, and it brings that price in any market. Charcoal of hard wood is delivered at the works for $6 50 per 100 bushels; that is low, and $1 50 cheaper than the price upon the Hudson river. Pit-coal is obtained at the works from Richmond at fifty cents per bushel; that is the price I now give at Albany, although I think it rather high. It can be afforded at a far lower price in Albany than at Springfield.

Brass and copper for pans are bought of pedlars, or obtained at Hartford. Musket stocks, from Pennsylvania, are delivered at Hartford at thirty cents each, warranted; those that do not work are returned to the contractor at the armory. They can be obtained without warranting for twenty-five cents; but it is found much cheaper to give thirty cents for those warranted. Sometimes thirty are condemned out of a hundred.

Grindstones are obtained from Nova Scotia, and from Long Meadow, the adjoining town. The Long Meadow stones are delivered at the works for one cent per pound; (very cheap.)

Generally every thing is purchased warranted that can be; the part not used is returned to the furnisher. This is by far the best way and the cheapest. The articles nominally cost more, but, in fact, not so much; besides, in this way, none but the best materials are used. The Messrs. Dwight warrant steel and other articles of that nature, when furnished by them, which is of very great importance. A bad lot of steel can be returned, and poor steel cannot be used; and it is a very heavy article of expense. On the whole, the best arrangements appear to have been made by the superintendent to supply the armory with stock and materials, and they are obtained at a very fair price.

Subject 13.

Economy in preserving, using, and expending the stock and materials.

The arrangements made by the superintendent to insure economy in the stock, materials, and tools, are good, and appear to be strictly enforced. The method of accountability established and enforced is such that no unnecessary loss or waste can well take place without the amount being deducted from the wages of the workmen, or others who have the property in charge. I was much pleased with this arrangement, and found the actual economy throughout to be much greater than I had anticipated, and equal to any thing I have ever seen in any private manufactory; there is, in fact, nothing lost. I dwell upon this point, because its importance in such an establishment can scarcely be calculated. The method adopted will be explained under the next head.

Subject 14.

Method of keeping and rendering the accounts of stock, materials, &c., from the superintendent down to individual workmen.

Receipts of stock and materials.

All stock, tools, and materials for the work, except coal and bar iron, are received at the large new store on the hill (or at the principal establishment) by the master armorer, and receipted for by him to the persons from whom they are received, or to the superintendent; and the articles, with dates, and from whom received, are immediately entered on his book. The articles of coal and bar iron are delivered to the assistant master armorers, and to the foremen of the forging shops, by the persons who bring them, and are receipted for by them to such persons, and entered on their day-books. Returns of stock, &c. thus received by them are made weekly and monthly to the master armorer, who then enters the receipts of the articles upon his own book, the same as those received directly by him. Thus the master armorer has an account of all articles received for the armory.

At the close of each month, the master armorer adds up all the several articles entered on his day-book of receipts during the month, and transfers them to a book of monthly abstracts, and enters them alphabetically in a tabular form. At the end of each quarter the whole receipts are added up on the last mentioned book, and the amount stands ready to be carried into the quarterly return for the superintendent, and through him to the Treasury Department.

Issues of stock and materials to assistant master armorers and foremen.

A day-book is kept, in which the master armorer enters all articles delivered by him to the assistant master armorers and foremen of branches: 1st. Articles delivered them from his store, such as steel, files, emery, sandpaper, &c.; 2d. Articles received by them from abroad, such as iron, coal, &c.; 3d. All parts of muskets delivered them to be further worked; 4th. All articles received by each from other assistant master armorers and foremen.

At the end of each month the articles charged in the before-mentioned day-book are added up severally, and transferred to a monthly abstract book, and entered in a tabular form. This forms the account of debtor to each of them, respectively.

The assistant master armorers and foremen are credited by the master armorer on a book: 1st. By all the parts produced by manufacturing, where the materials are not expended agreeably to the receipts of the master armorer from them; 2d. Actual expenditures, such as coal, &c., according to their monthly returns; 3d. With parts of muskets, where such parts are delivered them by the master armorer to be further worked upon; 4th. All articles delivered by them to other assistant master armorers and foremen; 5th. With all scraps, &c. made in working stock. These form the account of their credit.

To enable the master armorer to know what articles have been received and delivered from one assistant master armorer to another, receipts are given by them in all such cases, specifying the articles, which receipts accompany their monthly returns made to the master armorer, from which he enters the amount of each receipt and delivery respectively.

Each assistant master armorer and foreman keeps a day-book, on which the amount of all articles received by them from all sources is entered; from which they make up their weekly and monthly returns in part to the master armorer; also, the amount of all articles delivered by them to the master armorer and to other assistant master armorers and foremen.

Books are also kept by them, on which are entered *all articles* delivered by them to each workman under their respective commands, that is, all articles not consumable in working, such as iron, steel, tools, &c., and likewise parts of arms to be further worked upon. This forms the debtor to each workman.

Each workman is credited by them for all articles returned to them; 1st. All articles produced from the stock, such as parts of muskets forged, &c.; 2d. Tools returned, either good or worn out; 3d. Parts of muskets received by them for working upon, and again returned when such process has been completed; 4th. Is credited to them the necessary waste of stock in working, such as waste of iron, steel, &c. in forging; 5th. All articles returned, such as scraps of iron, steel, &c. necessarily made in working. All these must equal each workman's debtor, or he is made to pay for the deficiency.

All articles consumed in working, such as coal, emery, &c., are not charged to the workmen, but, when delivered for use, are entered by the assistant master armorers and foremen on their books of debtor and creditor with the master armorer as expended.

All articles of stock and materials, as fast as they are worked up and credit given to the workmen for them, are entered by the assistant master armorers and foremen as expended on their books of debtor and creditor with the master armorer, in this way: The assistant master armorers, &c. are charged with 500 pounds of bar iron by the master armorer. The assistant charges himself with the same on his own book, as before stated. It is known by experiment how many articles of any one kind, such as barrels, lock plates, &c., 100 pounds of iron will make, or nearly. The assistant master armorer (for instance, the foreman of the upper water shop) counts the pieces forged from that iron as turned over to him by the forger of barrel plates, and credits on his own book of debtor and creditor with the master armorer the number made, and calculates the iron which should have been used in making them, and carries out the credit to himself of that amount of iron, as follows:

Dr.	*Master armorer with L. Foster, foreman of the upper water shop.*	Cr.
To 71 barrel plates, at 7 pounds each, 479 lbs. iron. To scraps, - - - - 3 lbs. iron.	By bar iron, - - - 500 pounds.	

And so on for other articles made from stock.

In the accounts of the assistant master armorers and foremen, with each workman the credits are made in the same way.

If at any time a man is discharged, his accounts are closed; and if there is a balance found against him not accounted for, the amount is deducted from his pay.

It will be seen, by the foregoing regulations for the accounts of the armory, that complete accountability is established and enforced throughout; and if there is any error committed, it will be discovered on a comparison with the books, and it can be traced to its source. The workmen having to pay for what they do not regularly account for, causes them to work every thing close, and to have each a box or boxes, into which all the scraps are carefully put, which gives to the shops a clean appearance, and the evidence of great economy.

In the accounts between the foremen of the finishing shop, the foreman is charged with parts, and credited with arms complete, and carried out equal to so many parts. At the end of each month the master armorer turns over to the storekeeper the finished arms, with screw-drivers and gun-boxes for the same, for which he takes duplicate receipts, one on a book for that purpose, and one on loose paper, which last he hands over to the superintendent's office; at the same time he enters the amount of the arms thus delivered to the storekeeper on a book for that purpose, in a tabular form.

As the regulations for the armory do not point out the particular method in which the books, returns, &c. shall be kept at the armory, and as such information may be interesting to you, I shall continue the report on this point a little further.

Besides the books before mentioned kept by the master armorer, books are also kept which exhibit the amount of all the work performed in each month in all the branches, entered in a tabular form, from the monthly returns of the assistant master armorers and foremen; and also an account of all articles condemned during the same month; also a book in which an account of the purchases is abstracted, showing all that is delivered by each individual with prices, &c. for any length of time.

Returns.

Returns are made weekly by the assistant master armorers and foremen to the master armorer of all articles received by purchase, which were delivered at their shops and to them; also monthly returns of the same articles, by consolidating the weekly returns, which are consolidated by the master armorer, and added to those received by him at his store, and the whole received in the month, abstracted upon his book kept for that purpose. From this book of abstracts the master armorer makes out a monthly abstract or return for the superintendent, from which he makes out his estimate of funds for stock, &c. for that month, which he presents to the paymaster of the armory.

Monthly returns are made by the assistant master armorers and foremen to the master armorer of all property (without prices) received, expended, and remaining on hand in that month; and the master armorer, by consolidating them, and from his own books, makes out a similar one for the superintendent.

The assistant master armorers and foremen make each a quarterly return of property (without prices) received, expended, and remaining on hand at the close of the quarter, by consolidating the monthly returns.

The master armorer, from the last returns, and from his own books, makes up a similar return for the superintendent, who makes a copy of it for the Treasury Department in his own name.

The assistant master armorers and foremen make monthly returns of all work executed in the month, likewise of all articles consumed; the first to the superintendent, and the latter to the master armorer. Upon the first, the superintendent makes out the muster and pay-rolls of the men, which are presented to the paymaster, and upon which the workmen are paid monthly. The master armorer abstracts both returns upon his books.

Monthly returns of arms finished and turned over to the storekeeper are made by the superintendent to the Ordnance Department, embracing also the number of workmen employed in the month, of each trade or branch, accompanied by the storekeeper's receipts for the arms. Monthly estimates of funds required are made to the same department.

Monthly muster-rolls of the officers and workmen are likewise made to the same department, showing their employments, and amount of pay due them.

Quarterly returns or abstracts of all purchases, embracing the items and amount, are made by the superintendent to the Second Auditor of the Treasury Department, in the form of an account of debtor and creditor. He debits himself with the articles purchased, and forwards the master armorer's receipts for the same as vouchers. On the opposite side of the account he credits to himself the same amount, and the proprietors' or contractors' names on the back of the receipts of the master armorer just mentioned (which signifies that he has received an accepted account or order on the paymaster for the same) are vouchers to his items of credit. Copies of these account returns are kept on book by the superintendent. I do not see the necessity of these returns. The same articles of property are embraced in the superintendent's quarterly returns to the office before mentioned; and if the master armorer's receipts were to accompany that return, they would be as good a voucher to the accuracy of the property therein declared to be received as the same acknowledgment in the other. The Second Auditor does not want to know whether Colonel Lee has given the contractor an accepted account and order on the paymaster or not. It does not prove that the account has been paid, for that accepted account may lie in the hands of the contractor for months before it is presented to the paymaster; and, if presented, it may not have been paid, and of course cannot be embraced in the paymaster's accounts for that quarter, so as to form a check upon the returns of the superintendent. The paymaster's accounts would show if Colonel Lee had embraced all the property paid for, but could not show that he had not received some that had not been paid for, which ought to have been embraced in his return, but which was not. I conceive that all the Auditor wants to know is, the articles actually purchased and received in that quarter by the superintendent, and that he has embraced them in his quarterly return of property received, expended, and remaining on hand. The master armorer's receipts would show that he had delivered over all that he had embraced in his return. But with both the returns now made for the same thing, it is not shown that Colonel Lee has not received more property than he has acknowledged; and that he has not even given orders for the payment of it on the storekeeper, which orders have not been paid. Therefore, I do not see the use of this second return to the Second Auditor.

A better plan would be this, which I explained to the officers: Let the superintendent make but the first mentioned quarterly return of property, and send on the master armorer's receipts for the same received. Let the paymaster have a book, on which the accepted accounts given by the superintendent shall be entered, whether paid or not. Let the superintendent daily give the paymaster a statement of the accounts accepted, to enable him to enter them. Let the paymaster's abstract of payment or cash account be so made out as to show the articles purchased, and the amount in the footing of articles, as well as of cash, (which would be very little more labor;) then let him enter below that the amount of articles purchased, for which orders had been given on him for payment by the superintendent and not paid, and add up these columns; the total amount would be what the superintendent should embrace in his quarterly returns. This would form a complete check upon him, and a good voucher, and also save him the labor of making a large return quarterly. The paymaster, in his next quarterly account and abstract, would not add in the articles contained in the vouchers paid in that quarter, but which articles were returned in the previous quarter, but only the amount of cash paid.

There is another reason why this method of keeping the accounts of accepted accounts and orders on the paymaster should be adopted, which will be mentioned in speaking of the paymaster's books.

Books kept by the superintendent.

1st. A day-book, in which is entered the work done by each workman, and wages due, and deductions made, from the monthly returns of the same made by the assistant master armorers and foremen.

2d. A leger, in which the account with each individual is entered—1st, Cr. by work; 2d, Dr. by pay.

3d. A book, in which are entered the monthly returns of arms finished and of men employed, and the quarterly returns to the Second Auditor of property received, expended, and on hand.

4th. A book, in which are entered the second quarterly returns of property received, and balanced by orders sent to the Second Auditor.

5th. A book, in which is entered the amount of stock and materials received, from whom, and the amount, taken from the monthly returns of the master armorer.

6th. A book, in which the monthly estimates of funds are entered; also, the annual estimates for the armory.

7th. A book, in which the accepted accounts and orders on the paymaster are entered when signed, which is a counterpart to book No. 5.

8th. A leger, in which the contents of books Nos. 5 and 7 are consolidated in the form of Dr. and Cr., with each individual of whom purchases are made.

9th. A book, in which the orders of the superintendent on the master armorer for issues to his assistants are entered, by which he tests the monthly returns of the master armorer.

10th. A book, in which the monthly returns of the master armorer are entered: 1st, returns of stock, &c. received; 2d, of receipts, expenditures, and balances on hand.

11th. A book of debt and credit with the master armorer, for all supplies and expenditures.

12th. A book, in which the amount of parts of muskets are entered semi-annually, which are found to be on hand by actual count. This, with the parts put together into muskets, added to the condemned parts, must equal the amount of work done in that time, as shown by the book of the master armorer, if correct. This is a method of testing the accuracy of the accounts generally of materials and work.

13th. A book, in which are entered abstracts of letters received, with an index.

14th. A book, in which all receipts taken by the superintendent for property delivered are entered.

15th. A book, in which are entered all orders given by the superintendent for furnishing stock, &c. for the armory.

16th. Invoice book of property sent away.

17th. Letter book.

Books and papers of the storekeeper and paymaster.

His duties being common, the forms of his books and papers are also common, and need no explanation. One or two remarks only are necessary.

His cash vouchers are registered and abstracted according to the dates of the accounts, and no dates put to the receipts to show when the money was paid; which I conceive is not the proper way. Again, the accounts, when liquidated by the superintendent, are not registered according to the regulations of the Ordnance Department for the armory; they are only registered when paid. Payments are made when accounts and orders are presented, without knowing what accounts, or how many, are outstanding or of an older date.

It was recommended that these errors should be corrected. The fault is not owing to inattention in the paymaster, (he appears very desirous of doing his duty strictly correct,) but owing to a misconstruction of the regulations.

It will be seen, by a perusal of the foregoing statement on the subject of accounts, books, and returns, that every *transaction* at and relating to the establishment, of any consequence to the public or to individuals, is registered and fairly kept; and every such transaction can be examined, if desired, at any future time.

All invoices of stock and other loose papers are neatly filed, and put up in the superintendent's office. In short, a thorough examination of the *contents of his office* will at all times enable the department or Government to take a full review of all transactions, occurrences, and conduct of the superintendent, relative to the armory, since the time he took the charge of it in 1815; and every person who takes the trouble, which I have done, to go into that examination, will be satisfied of the integrity, industry, and ability with which that establishment has been superintended.

SUBJECT 15.

State and condition of the books, returns, and papers of the officers of the armory.

The condition of the books of the assistant master armorers and foremen are as good as their situation and business will admit of.

The books of the superintendent, master armorer, and paymaster and storekeeper, are in the best condition. The forms are excellent; they are very neat, and the entries clear and legible.

All loose papers are handsomely filed, and properly laid away.

SUBJECT 16.

State of the debts of the armory, and punctuality of payment.

There are no debts against the armory contracted previously to the 30th September, 1819, except that of Messrs. Dwight, for importations for 1820, which is not yet due.

The payments are punctually made by the paymaster.

SUBJECT 17.

Regulations for the government of the men, and the good order of the same; also, their general character.

The regulations for the government of the men, for the good order of the same, and of the shops, and the post generally, are good, and well calculated to produce peace and harmony among themselves, and respectability with the surrounding citizens.

One great point has been gained by the superintendent—that of prohibiting the use of ardent spirits in and about the works. This, above all other things, will have a good tendency; but, owing to the effect of custom and habit, it was a difficult one to establish.

The character of the workmen generally, and almost universally, is good, and much better than is usual with mechanics employed at large manufactories. There is not one drunkard, or otherwise vicious man, at the armory; or none that are habitually so. They are mostly very respectable, and some of them wealthy citizens, and almost all natives of New England.

SUBJECT 18.

Occupancy of the public houses and gardens.

There are belonging to the United States, connected with the armory, twenty-two dwelling-houses.

The superintendent and master armorer, each, occupy a public house and a garden, free of expense.

The storekeeper and paymaster has been offered the use of one, but chooses not to accept of it.

Twenty houses, with small gardens, are occupied by forty-two of the workmen with their families. They each pay a small rent, which is deducted from their pay, of from sixteen to thirty dollars a year. The rooms occupied by each are generally one sitting room, one kitchen, and one bed room, with some out-houses. The average rent of each house is $39 35 per annum. The rents are generally very low, probably not more than sufficient to keep the buildings and garden fences in repair; whether the rents shall be raised, is a subject for consideration.

SUBJECT 19.

Number of public teams and carriages kept, and in use.

Only one two-horse team is kept at the armory, and two wagons and one sleigh in use. No more are usually required. It is cheaper occasionally to hire a team than to keep any more.

The quantity of forage used is about ten tons of hay and one hundred bushels of corn annually. From this quantity the superintendent takes the forage for his own horse. The forage is not limited in quantity. It is purchased by the superintendent. The quantity of hay is above the ordinary allowance, but the grain much below; so that the amount expended for forage is considerably under the usual allowance for three horses.

SUBJECT 20.

Condition of the public buildings and fences.

The condition of the public buildings, so far as depends on police, and being taken care of, and well used, is good, generally.

The workshops of the whole establishment are in excellent condition and repair, being all built of brick and stone, and some fire-proof, the carpenters' shops excepted. Those buildings are of wood, and one of them is not very good.

The arsenal, master armorer's storehouse, public offices, and chapel (the three last being in one building) are likewise excellent buildings, and in good order and repair.

The magazine is a good building, and in good condition and repair. The surrounding fence is of wood, founded on a stone basement, but is painted and new.

The block house is in pretty good repair, and is used as a school house.

The coal houses are all in good repair and condition, several of them being new.

The several small iron and other stores near the forging shops are all in good repair and condition.

The two large wooden store houses for ordnance stores are in pretty good condition, but rather ancient, having been long built.

The ordnance yard and sheds are all in good condition.

The proving house is new and in good repair

The several dams and flumes are mostly in good repair; some of them new.

The twenty-two dwelling houses before mentioned are:
Five wood houses, two stories each, in good repair and condition.
One wood house, one story and a half, in good repair and condition.
One wood house, three stories, in good condition and repair.
Six wood houses, one story each, in good condition and repair.
One brick house, two stories, in good condition and repair.
Eight wood houses, one story each, old, poor, and worth but little.
The nealing, case-hardening, and casting houses are all in good condition and repair.
The saw-mill is in pretty good repair, also the bridges and stone walls about the water shops.
On the whole, all the important buildings of the establishment are in excellent repair and condition.

The fences are all good. Those around the public square and about the shops, at the main establishment, are all newly painted and in good repair.

The fence surrounding the public ground on the hill, and the several garden fences, are poor, and require to be built anew.

I consider it unnecessary, in this report, to give a particular description of the several buildings, although I have it in my minutes, as they are already known to the colonel of ordnance, and as this report is already drawn to a length which I fear will be tedious.

Subject 21.

Arrangements of the shops and machinery.

I shall also abridge very materially the remarks under this head from what I at first intended, for the reason before mentioned. I at first intended to have given a statement of all the machines and apparatus in use at the works, and their several uses. The principal part of them may be seen in a pamphlet printed at Springfield about the beginning of the year. I presume you have one; if not, it can be obtained from the superintendent. Some additions have been since made to the works.

The arrangements of the shops, and machinery in the same, considering the necessary localities of the former, or such of them as require water power, appear to be as good as is practicable, with a very few exceptions. A few changes of small machines, by the removal of them to other shops, and the workmen of them, so as to save the transporting of the parts of muskets from one shop to another, are all the improvements that appear practicable in this part of the works; and this change is intended to be made by the superintendent as soon as time will admit.

Very considerable improvements have been made since the last war in the machinery, particularly by the introduction of several new machines; and the whole appear to operate with great efficacy. It is, indeed, pleasing to observe throughout the work the immense saving of manual labor by the introduction of water power and other machinery and apparatus, and also to reflect upon the ingenuity of our countrymen in the conception. The fact that there are in use between fourteen and fifteen thousand tools in this establishment could scarcely be credited by any one who had not been through the works. In short, no man will have a just conception of the extent and importance of the works at our national armory at Springfield who has not seen them for himself in their present condition. I shall make some remarks upon the new machines under the head of "improvements made."

Subject 22.

Improvements made in the establishment since 1815, *under the present superintendent.*

First.—At the main establishment, on the hill.

1. A stone floor made in the forging shop.
2. The magazine fence made new, and painted.
3. Magazine roof painted, and body whitewashed.
4. Cupola and bell put upon the roof of the main armory shop.
5. All the shops newly painted over.
6. Lumber yard built.
7. Two cisterns made to hold water for the fire engine.
8. A small magazine built for proof powder.
9. One two story brick building erected for master armorer's storehouse, for offices, and chapel.
10. One brick building erected for casting shop.
11. One house for proving barrels, rebuilt.
12. One old block house (military) moved off from the public square.
13. Several fences about the square, and buildings, made new and painted.
14. Trees set out in the square.

Secondly.—At the upper water shops.

1. Introduced a draw grinding stone machine, which goes by water, and facilitates the draw grinding of musket barrels, and does them better than in the old way.
2. Four drilling and milling machines (perpendicular) have been made upon an improved plan, which greatly facilitates the drilling generally of the parts of muskets, but particularly the lock plates, and drills every one precisely similar.
3. Several hand machines, for cutting small screws and pins, made.
4. The machines for milling and slitting heads of pins extended.
5. Machines for turning bayonet sockets and for boring pans made.
6. In progress, new flumes and a new water wheel (horizontal) to use less water.
7. Four machines introduced and made for turning the exterior of the musket barrels, forming, at the same time, the flats and ovals of the breech. The introduction of these ingenious and excellent machines is of great importance. It not only facilitates the manufacture of barrels, but it brings them to an equal thickness in the same circle throughout, and consequently greatly improves their quality. In this point, we have gone before the English manufacturers of arms.
8. Machines made for milling cock pins and rammer heads.
9. In progress, a new invented machine for turning musket stocks, and letting in the locks, by water—a process very difficult to conceive. This ingenious machine will lessen very considerably the expense of stocking guns, as well as facilitate the process.

10. Built one coal house, 30 by 60 feet, two stories.
11. One shop for case-hardening and nealing, extended and new covered.
12. Built one double forge, for four fires, with the apparatus complete.
13. Added one story to one of the principal water shops, and new covered the same.
14. Built a new bridge to connect the upper stories of two shops across the stream.

Thirdly.—Middle water shops.

1. The principal shop has been newly covered with tin plate, and thoroughly repaired throughout, and painted.
2. Three new water wheels built, (1st shop.)
3. Three trip hammers for welding barrels, with three new forges.
4. Three new water wheels and three flumes built, (2d shop.)
5. One dwelling house thoroughly repaired and painted.
6. One carpenter's shop built and painted.
7. One large coal house built.
8. One small one in progress.
9. Iron store extended and painted.
10. Some walls built, and some fences built and painted.
11. In progress, two forges and four trip hammers for welding barrels, with appendages, nearly done. These, together with the four already in operation, will make eight trip hammers for welding barrels, which will entirely do away the method of welding by hand hammers. This is a good improvement, and is also humane in its effects, as the welding of barrels by hand will wear out the constitutions of any workmen in a few years.

Fourthly.—Lower water shops.

1. Two water wheels built new.
2. The flume built new.
3. Roof of the main shop put on new, and painted.
4. Introduced and made new one machine (water power) for striking out of rolled iron upper and lower bands, side plates, guards, and triggers; also, for trimming butt plates, guards, and triggers. These are all struck out at one stroke each. It is intended to strike out lock plates in the same machine. This machine saves much labor, and produces similar parts alike.
5. In progress, one shop (new) to contain one forge and appendages for making bar iron out of scraps, &c. made at the works, and an additional number of polishing wheels for work generally. Also, in progress, a new bridge across the stream, with stone abutments.

In addition to the improvements detailed, there are many small ones, in and about the works; to which must be added *the general improvement* adopted of making standard gauges, to which to work all the parts of muskets, and the *execution* of the work upon that system.

The improvements made in the method of accountability, and in keeping and rendering the accounts, must not be overlooked.

SUBJECT 23.

Improvements contemplated, and within the power of the superintendent, without any special appropriation of funds.

1. The removal of the ordnance yard and sheds from the square where they now stand to a place near the magazine.
2. Removal of the two large wood shops (store houses) on the Boston road into a line with the arsenal.
3. Removal of the old wood shops standing eastwardly of the new store house and offices; and, also, the dwelling houses and stables standing on the Boston road, into a line eastwardly of that on which are the brick shops and offices, &c., so as to form with them and the houses already in that direction a second square, between the large square and the magazine lot.

The above removal of buildings was proposed by me, and approved by the superintendent, who is, with your approbation, very desirous of doing it.

I strongly recommend that it may be done, as it will cost very little. They can all be removed by the workmen in a short time, and it would add much to the beauty of the establishment. Those buildings are all of long standing, and were located where they ought not to have been, not knowing at the time what the place would become, without a view to the general plan of the present establishment. On first arriving at the place, I was struck with the awkward appearance of those buildings on the main road, and in front of the square.

SUBJECT 24.

Improvements contemplated by the superintendent, which would require a special appropriation of funds.

1. Erection of one brick dwelling house on the west side of the great square, and opposite to the present building, or store house, offices, &c.
2. Erection of another brick armorer's shop, between the offices and Boston road, to complete the side of the square, of the size and form of the present one, on the other side of the offices, 204 by 30 feet, two stories high, for filers, stockers, and finishers.
3. Painting over with one color all the good dwelling houses already built.
4. One common dwelling house at the lower water shops.
5. One common dwelling house at the upper water shops.

The erection of the above buildings, and particularly the armorer's shop and brick dwelling house, would undoubtedly be very useful, and highly ornamental.

GENERAL REMARKS.

Finally, the armory bears inspection remarkably well; it bears a close and scrutinizing examination quite as well as a cursory view, and in fact better; for it is only when it is thus scrupulously investigated, that all its good arrangements and excellent operations can be discovered; and it is only upon such an examination that we can learn how much credit is due to the superintendent, and how much integrity, skill, and talents has been exercised, and how much attention and time has been devoted to its interests by him. I am fully convinced of the excellency of his character and conduct so far; and if he should continue in the same course, under the same, or a similar head

in the Ordnance Department, the armory at Springfield will, if proper funds are granted to it by Government, become what it ought to be—a credit to the Government and an ornament to the nation, and highly beneficial to both.

I cannot but remark how detrimental to the establishment, and how expensive to Government, would be a change in the pattern musket. The effect cannot be realized by any one who has not paid particular attention to it, and who has not seen something of the method and process of the work, and the extent of the tools and apparatus adapted to a particular pattern. It is the easiest thing in the world to change the pattern at Washington, and to make, in imagination, thousands of arms upon the new pattern; but it is far otherwise in the practice. The same remark will hold good with respect to a change of the pattern of any other material article which constitutes a part of the equipments of the nation for war, in a certain degree proportionate to the tools, machinery, apparatus, labor, and expense requisite in the fabrication, and proportionate to the necessity or utility of a uniformity of the articles produced.

The importance of these subjects certainly could not have been understood by this nation formerly, or they would not have changed the plan and patterns for military weapons and appendages, with the seasons, or with the admission of new men to office, from the revolution to the late war; for which reasons the millions were lost which were devoted to the expense, and a heterogeneous mass of them created, which was thrown aside on the commencement of the war, either for bad construction or workmanship, or for the want of uniformity.

Stability of things, and stability of mind, are indispensable in the Ordnance Department, and particularly at its head.

To arrive at that height of excellence in the military preparation for war in this country to which the warlike nations of Europe have attained, permanency of men and measures and uniformity of construction must exist.

By permanency of men, I mean those men on whom depend, principally, the plans and execution of the means of national defence.

I do not mean that I wish for any change in our constitution and Government, for these I admire, and hope never to see materially altered—an elective Government by the people, and temporary power of individuals; but I do wish for, and hope to see, more permanency in the subordinate branches, or appendages of the Government, which our constitution does not require to be changed during good behavior, than did exist under former administrations; because I am satisfied, from observing the operations and effects of such changes, that the good of the people requires more permanency, when the men who fill the places are properly and fully qualified for their stations. The men engaged in the execution of the preparations for war, together with the systems and methods pursued, should form a machine which should be kept in motion by any power the people choose to apply, but which should move in the same manner during the operations of the same power. It is pleasing to observe that the prospects are now good towards the attainment of this grand object. The operation of things at the present time seems to be very favorable to its accomplishment.

The following tables show the present cost of the musket at Springfield, which is about $1 50 lower than they were previously to the present organization of the armory, or $10,500 per annum.

Cost of the workmanship of a musket complete, in 1819.

Cost of musket barrel complete,	$1 31
Cost of musket lock complete,	2 10
Cost of mounting, including rod and bayonet, complete,	1 50
Cost of stocking and finishing the musket,	1 66
Total amount,	$6 57

Expense of workmanship and materials, or musket complete.

Twenty pounds of iron, at eight cents,	$1 60
Three pounds of steel, at sixteen cents,	48
Rough stock,	30
Coal,	1 00
Files,	20
Labor,	6 57
Contingencies,	1 00
Wear of tools and machinery,	25
Loss,	1 00
Cost of musket complete,	$12 40

It is believed that a further reduction in the cost is practicable, and that in one or two years from this the cost will not exceed $12.

Col. Decius Wadsworth, *U. S. Ordnance.*

[N. B. The above report was made by Major James Dalliba, of the Ordnance Department, in October, 1819.]

18th Congress.] No. 247. [1st Session.

CONDITION OF THE MILITARY ESTABLISHMENT AND THE FORTIFICATIONS, AND RETURNS OF THE MILITIA.

COMMUNICATED TO CONGRESS, DECEMBER 2, 1823, BY THE PRESIDENT OF THE UNITED STATES.

SIR: DEPARTMENT OF WAR, *November* 29, 1823.

In compliance with your directions, I herewith transmit statements from the major general of the army, and the several subordinate branches of this Department, lettered from A to M, which contain, in detail, a view of the administration for the first three quarters of the year, of the various branches of the public service intrusted to this Department, comprising the army, Military Academy, fortifications, ordnance, including the armories, military pensions, bounty lands, and Indian affairs.

The statements afford satisfactory proof that order, accuracy, economy, and accountability have been introduced into every branch of the military service. It will be seen by them that the money appropriated by Congress has been applied with economy to effect the objects of appropriation; that the accounts have been made up with accuracy, and transmitted with promptitude to the proper departments for settlement, and have there been settled without delay. These observations are true, with scarcely a single exception; and the result has been, that of the entire amount of money drawn from the Treasury in the year 1822 for military service, including the pensions, amounting to $4,571,961 94, although it passed through the hands of no less than two hundred and ninety-one disbursing agents, there has not been a single defalcation, nor the loss of a cent to the Government; and that the whole has been accounted for at the Treasury, except a small amount which remains in the hands of the disbursing agents ready to be applied to the objects for which it was drawn. The disbursements of the first three quarters of this year have been equally satisfactory, and there is every reason to believe that no defalcation nor any loss will occur in the year. The administration in relation to Indian affairs, though greatly improved, and the expenditure reduced fully one-half, is not as perfect as that of the military branch of the department; nor can it be made so, unless rendered equally perfect in its organization. It is impossible, under the present arrangement, that the minute and constant attention to its details which is indispensable to a perfect administration can be bestowed.

But it is not only in its disbursements that the military service has attained a high perfection. The condition of the army in every branch, both of the line and staff, in its material and personal, and in its discipline and administration, is highly respectable. If there is any exception, it is in the discipline of the artillery. Though the officers of that branch of service are equal in skill to any other, and are distinguished for their attention to their duty, yet it is found impracticable, dispersed as the artillery is in commands of single companies, to render the discipline of the corps as perfect as is desirable. It is contemplated, during the next year, to concentrate a sufficient number of artillerists for discipline at some proper point, and, by rendering their discipline perfect, gradually extend the perfection thus acquired to the whole corps. It can be effected without additional expense to the public, and, it is believed, without material inconvenience to the service.

Of the Military Academy, it may with confidence be said that it has attained a state of perfection as great as is practicable under the existing legal provisions, and that it is not inferior to any similar institution in any country.

Under the appropriations of the last session, Forts Washington, Delaware, and the one at the Rigolets, will be completed; and it is contemplated, should appropriations be granted, to commence, in the next year, the works projected at New Utrecht, which is intended to cover Fort Lafayette, which commands the Narrows at New York, and those at Brenton's Point, for the defence of Narraganset bay.

The board of engineers, besides its ordinary duties, were, during the last summer, engaged in executing several special orders; and, among others, in projecting a breakwater at the mouth of the Delaware, under the act of the 7th May, 1820, and in forming a plan for the improvement of the entrance into the harbor of Presque Isle, on lake Erie. In relation to both of these important subjects, it made very interesting reports, with plans and estimates, which accompany the statement from the Engineer Department, herewith transmitted.

The completion of the new fortresses, and those to be erected, will require an appropriation in order to fabricate the cannon and carriages necessary for their armament. It is estimated that an annual appropriation of $100,000 will, in ten years, furnish a sufficient number for all of the works contemplated for the defence of the coast. There would, undoubtedly, be great economy in granting a permanent appropriation, instead of an annual one, as contractors would vest their capital at much less profit, under the assurance which would be afforded by the former.

Under the appropriation to fix on a site for a national armory on the western waters, made the last session, a commission consisting of Colonel McRee, Colonel Lee, and Captain Talcott was constituted, which has been incessantly engaged in exploring the country on the western waters, in order to make the location. It has not yet reported, but it is expected that it will make its report in the early part of the session of Congress.

In the month of June last, the Ricaree Indians, who inhabit the country on the Missouri, a little below the Mandan village, attacked General Ashley with his party, while peaceably engaged in trading with them, at their request, under license from the Government, and killed and wounded several of his party. Colonel Leavenworth, who commanded Fort Atkinson, at the Council Bluffs, adopted immediate measures of redress. With a part of his command, he made a successful attack on the village, and compelled the Ricarees, after a considerable loss on their part, to sue for peace. Statement marked L contains the correspondence in relation to the transaction, and exhibits a full view of the facts.

The report from the adjutant general's office, marked M, contains the returns of the militia according to the latest reports to that office. Returns from only three of the States have been received in the course of the year, though every effort has been used to insure punctuality in making them.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

To the PRESIDENT OF THE UNITED STATES.

List of documents transmitted from the War Department to the President, to accompany his message to Congress.

A. Report of Major General Brown, concerning the organization, distribution, and disbursement of the army, from A No. 1 to A No. 5.

B. Report of the quartermaster general, with accompanying statements, B No. 1, and B No. 2.

C. Report of the commissary general of subsistence, with statements, C No. 1, and C No. 2.
D. Report of paymaster general.
E. Report of surgeon general.
F. Statements of the commissary general of purchases, F No. 1, F No. 2, and F No. 3.
G. Report of the Engineer Department, with tables, G No. 1, G No. 2, and G No. 3.
H. Report of Ordnance Department, with statements, from H No. 1 to H No. 5.
I. Statement concerning pensions.
J. Statements of bounty lands.
K. Statement of Indian affairs, [See Indian Affairs, No. 200.]
L. Correspondence relative to hostilities of the Rickaree Indians.
M. Return of the militia of the United States.

A.

SIR: HEAD-QUARTERS OF THE ARMY, WASHINGTON, *November* 22, 1823.

In obedience to your order of the 5th instant, I have the honor to submit to you the following returns and statements, viz:

A No. 1. A statement of the organization of the army, agreeably to the act of Congress of the 2d March, 1821.

A No. 2. A return of the strength of the army, from the last regimental and other returns received at head-quarters.

A No. 3. A statement of the distribution of the troops in the eastern department.

A No. 4. A statement of the distribution of the troops in the western department.

A No. 5. A statement showing the number of men enlisted; the amount of money advanced for the purposes of recruiting; and the amount for which recruiting accounts have been rendered for settlement from 1st January to 1st October, 1823.

It will be perceived, from the last mentioned statement, that $7,653 99 remains unapplied in the hands of recruiting officers. This sum is actually employed in the recruiting service, and will be embraced by returns not yet due. The uniform punctuality of the recruiting officers in rendering their accounts justifies the belief that it will, at the proper time, be regularly accounted for.

The tours of inspection prescribed by the army regulations to the commanding generals of departments have been prevented by unavoidable circumstances. In the early part of the year a change of commands was arranged between these two officers; but, on the point of executing the arrangement, their movements were suspended by a rupture with the Indians on the Missouri, and they were both kept under orders at their respective head-quarters, awaiting the issue of the military operations, which were performed during the summer and autumn. They are now engaged in making the contemplated change of commands, but will not have time to comply with the regulations on the subject of inspections before the close of the year.

Colonel Wool has performed a course of inspections extending from Fort McHenry, Baltimore, by the way of the North river and the lakes, to Green bay and St. Mary's, and embracing the intermediate positions. His first inspection was made on the 26th April, and the last, included in his report, during the month of October. He is now on a short tour to the New England States.

Colonel Archer commenced his tour of inspection on the 3d of April at Norfolk, Virginia, and has inspected the posts on the Atlantic coast from East Florida to the State of Maine. Since my report of November last, he has also performed a rigid inspection of the national armory and works of construction at Harper's Ferry. He is now engaged in a tour of inspection to the extreme southern posts.

As far as my information extends, the commanding officers of the artillery regiments have regularly performed the duties of inspection required of them. Their official returns are not yet due; and I have, consequently, no certain basis for a report in relation to the execution of this part of their duty.

The inspectors speak favorably of the condition of the army, in all that relates to its discipline, instruction, service, and administration; and it affords me pleasure to state, from their observations as well as my own, that there is a progressive amelioration, throughout the different departments of the army, in every thing connected with its military character.

I have the honor to be, most respectfully, sir, your obedient servant,

JACOB BROWN.

Hon. J. C. CALHOUN, *Secretary of War.*

JACOB BROWN.

B.

SIR: QUARTERMASTER GENERAL'S OFFICE, *November* 22, 1823.

In compliance with your instructions, I have the honor to submit the accompanying statements, B No. 1, and B No. 2. The former exhibits the amount of money drawn from the Treasury, and received from other sources, by the officers of the Quartermaster's Department during the year 1822, with the amount disbursed during that year. The latter exhibits the amount drawn and received by them prior to the 30th of September of the present year, with the amount disbursed, so far as accounts have been received.

As this is an office not of settlement, but of administration, it does not afford the data on which a statement can be made which shall be strictly correct in all its details. Those can be furnished only at the office where accounts are finally adjusted; but it is believed the statements submitted are so near the truth, that the only difference which shall be found between them and the detailed accounts of the Treasury will consist of the amount suspended or disallowed at the Treasury during the period which they embrace. The best test of the efficiency of a department is to be found not in minor details but in general results; and if we compare the expenditures of the present year with those for the same objects in corresponding periods of preceding years, the result will be found much in favor of the present, though during the year nearly two regiments have been cantoned, and many changes have been made in the station of troops; besides, an expedition has been carried on against the Indians of the Missouri, in which the troops engaged moved upwards of fifteen hundred miles, and the sustaining corps more than one thousand.

On the subject of accountability, I think I am warranted in saying that as much perfection has been attained as possible without further legislative provision; and I feel confident that every cent placed at the disposal of the officers of the department during the whole period embraced by the statements B No. 1 and B No. 2, either has been disbursed, or is actually in their hands, applicable to the public service, and will be accounted for during the year.

I feel it to be my duty, before closing my report, to point out briefly some of the defects in the organization of the department, and to suggest such changes as experience has shown to be necessary.

In 1820, when the military frontier was not so extensive as at present, there were attached to the department, in addition to the quartermaster general and two deputies, sixteen assistants, besides eighteen regimental and battalion quartermasters. The act of Congress of March, 1821, reorganizing the army, abolished the regimental and battalion quartermasters, and reduced the number of assistants from sixteen to ten; so that, of thirty-seven officers, thirteen only were retained. The same act reduced the purchasing department to one commissary general and two storekeepers; and the duties relative to the administration and accountability of army clothing were necessarily transferred to the Quartermaster's Department; thus nearly doubling its labors and responsibility, though its force had been reduced nearly two-thirds. The law, it is true, authorized the employment of subsistence commissaries in the Quartermaster's Department, but they have the duties of their own department to perform, which, at stations where their services are most necessary, give them sufficient employment. Besides, the experience of every department proves that the only way to insure strict accountability is to confine officers to the duties of their own branches of service; to compel them to perform them, and positively to prohibit their interference with those of others.

The reduction of the rank and file of the army from ten to six thousand men by no means warranted a corresponding reduction in the disbursing departments, for it is well known to every intelligent military man that the labors of most branches of the staff, and particularly of the Quartermaster's Department, depend not on the number of troops in service, but on the number and remoteness of the posts occupied, the extent of the frontiers, and the dispersed state of the military resources of the nation.

The officers at present attached to the department are entirely inadequate to the proper and efficient discharge of the duties required of them; and the compensation of the assistants, on whom necessarily devolves most of the laborious details of the department, does not bear a just proportion to their duties and responsibility. The officers of that grade now in the department are equal in capacity and intelligence to those of any other grade or corps in the army; but I fear that, unless measures be adopted to render their situation more desirable, they will for the most part abandon their stations and return to their companies. They should be allowed a compensation, which would not only afford them a competent support, but be an equivalent for the talents and labor required in the discharge of their duties. But, it may be said, let those who are dissatisfied retire; there are others who would gladly fill their places. True, there are; and if the importance of a station depended upon the number of applicants to fill it, and the merit of those applicants upon the clamorous assertion of their pretensions, this might be good reasoning. But every day's experience proves that the number of applicants does not depend upon the value of the station sought; reduce the compensation one-half, and they would not be diminished. The difference would then consist in the character, and not in the number; for even if an office be set up to the *lowest bidder*, there will always be bidders enough.

I would, therefore, propose that, in addition to the officers now attached to the department, there be authorized three quartermasters and eight assistants, to be taken from the line of the army. This change, with an allowance of forage to the assistants, by presenting sufficient inducements to men of character to enter and remain in the department, would better secure a strict accountability than all the restrictive laws on the statute book. It is called for by every consideration of policy as well as economy; for the best guaranty the nation can have for the proper application of its funds will be found in the honor, intelligence, and abilities of its officers. Let it not be said that the system of bonding affords this guaranty. Experience proves the contrary. It may secure the payment of duties at the custom-house, or afford ultimate security against defaulters, but can never insure good faith in the public expenditures.

I have the honor to be, sir, very respectfully, your most obedient servant,

THOMAS S. JESUP,
Brigadier General and Quartermaster General of the Army.

To the Hon. J. C. CALHOUN, *Secretary of War.*

B No. 1.

Statement showing the amount of funds remitted to officers of the Quartermaster's Department in the year 1822, *and the amount for which accounts were rendered for that year.*

Amount remitted in the first quarter of the year,	$56,655	
second quarter of the year,	148,418	
third quarter of the year,	81,334	
fourth quarter of the year,	79,608	
	366,015	
Amount received by officers from the sales of public property authorized during the year,	9,168	
		$375,183
Amount disbursed per accounts rendered for the first quarter,	60,683	
second quarter,	117,426	
third quarter,	77,838	
fourth quarter,	92,542	
		348,489
Excess of remittances, &c. beyond the actual disbursements of the year,	-	$26,694

NOTE.—In consequence of the short appropriation for 1821, there were no funds of consequence in the hands of officers at the close of that year to be taken into view in this statement. The above excess was in the hands of the officers of the department at the expiration of the year 1822, and was carried to the service of the year 1823. The public property noticed above as sold, consisted of various small articles of supplies, which had become damaged from unavoidable casualties, or of no further use.

B No. 2.

Statement showing the amount of funds remitted to the officers of the Quartermaster's Department in the first three quarters of the year 1823, *and the amount for which accounts have been rendered for the same period.*

Amount in the hands of the several officers from the year 1822,	$26,694 00	
Amount remitted in the first quarter of 1823,	52,570 00	
second quarter of 1823,	71,450 00	
third quarter of 1823,	98,648 00	
Amount received by officers from the sales of public property, authorized during the period embraced above,	2,122 00	
		$251,484 00
Amount disbursed per accounts rendered for the first quarter,	61,617 02	
second quarter,	89,161 93	
third quarter,	79,112 36	
		229,891 00
Excess of remittances,	-	$21,593 00

NOTE.—The above excess is made up of small unexpended balances on the accounts of the several officers at the close of the third quarter, which have been carried to the service of the succeeding quarter. The amount was, on the 30th September, chiefly deposited in the various banks designated for the reception of public funds. The residue was in the hands of officers, stationed remote from those institutions.

C.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE,
WASHINGTON, *November* 22, 1823.

SIR:

In obedience to your orders of 7th April last, and 5th instant, I have the honor of presenting to your view two statements; the one marked C No. 1 exhibiting the expenditures in this department for the entire year 1822; and that marked C No. 2 showing the disbursements in the first three quarters of 1823.

The whole amount remitted and charged in the year 1822 is $284,764 11; the amount disbursed and accounted for $270,850 46, leaving a balance of $13,913 65, from which the following sums are to be deducted, viz: $73 83 in the hands of the assistant commissary at Fort Osage, received by him in paper of the Edwardsville Bank; $6,500 remitted to the assistant commissary at New Orleans, on the 28th of December, 1822, only three days previous to the expiration of the year, and intended to meet the expenditures of the first quarter of 1823; $861 69 the amount of provisions actually purchased, and issued to the troops, but for which purchase the vouchers have been lost on their route from Arkansas to this place.

These three sums, collectively, deducted from $13,913 65, will leave a balance of $6,478 13 to be accounted for in the first quarter of 1823; and the whole of which, including the $6,500 remitted to the assistant commissary at New Orleans, on the 28th of December, 1822, has been accounted for in the first quarter of the present year.

The whole amount remitted and charged in the first three quarters of 1823 is $276,519 70, the amount disbursed and settled $254,278 93, leaving a balance of $22,240 77.

It may not be improper for me to remark, that, owing to the great distance which the military stations on the upper lakes, Upper Mississippi, and Red river are from any post route, the accounts for the third quarter of the year have not yet been received from those posts; it is, however, justly due to the assistant commissaries and agents of the department to state, that their accounts and returns are promptly and regularly rendered; and that of the moneys charged and disbursed in 1822, the loss of one cent has not accrued to the United States; and there is every reason to believe that the same will be the result of the disbursements for 1823.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Com. Gen. Sub.*

The Hon. J. C. CALHOUN, *Secretary of War.*

C No. 1.

Statement exhibiting the moneys remitted to contractors in 1822, *and the amounts accounted for by them; the moneys remitted to the assistant and acting assistant commissaries of subsistence, for the same period; the charges against them for sales of provisions at auction to officers on the frontier posts, or otherwise, including the outstanding balances* 31*st December*, 1821, *and the amount accounted for by them in* 1822.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, WASHINGTON, *Nov.* 22, 1823.

GEO. GIBSON, *Com. Gen. of Subsistence.*

D.

SIR: PAYMASTER GENERAL'S OFFICE, WAR DEPARTMENT, *November* 20, 1823.

In obedience to your instructions, I have the honor to report, that, in the year 1822, there was drawn from the Treasury, on warrants in favor of paymasters of the army of the United States, the sum of nine hundred and eighteen thousand two hundred and seventy-five dollars and seventy-four cents; the whole of which was expended in paying the troops, and has been accounted for.

I have also the honor to submit a statement of the sums received by the several paymasters in the first three quarters of the present year; the amount unexpended and applicable to the payments of the fourth quarter; and the balance not yet accounted for.

I am confident, from the reports of the paymasters, that, by this time, all the troops have been paid to the 1st of September; the officers generally, and several companies, to the 1st of November; and that the accounts will be received before the close of the year.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Statement of the amount of money drawn from the appropriation for the Pay Department, and remitted to the disbursing officers on account of payments for the first three quarters of the year 1823; *the amount unexpended and deducted from the estimates for the fourth quarter; the balance to be accounted for, and the periods to which the troops have been paid, and accounts rendered.*

Names of Paymasters.	Amount of funds remitted in the first three quarters of the year.	Amou't unexpended and deducted from the estimates for fourth quarter.	Balance remaining to be accounted for.	Periods to which the troops have been paid, and accounts rendered.	Remarks.
David S. Townsend,	$48,600 00	None	None	September 1, 1823,	Balance of $1 56 due paymaster.
Satterlee Clark,	43,200 00	None	$11,448 00	July 1, 1823.	
Thomas J. Leslie,	130,100 00	None	None	September 1, 1823,	Balance of $440 99 due paymaster.
Chs. B. Tallmadge,	87,000 00	$9,154 39	None	September 1, 1823.	
Jacob W. Albright,	3,200 00	None	965 58		Resigned; since dead. His estate is solvent, and it is believed the balance will be paid without suit.
Timothy P. Andrews,	100,000 00	None	None	November 1, 1823.	
Charles H. Smith,	26,700 00	191 77	None	September 1, officers generally to Nov'r 1, 1823.	
Abraham A. Massias,	26,000 00	150 87	None	September 1, officers generally to October 1, 1823.	
Thomas Wright,	33,500 00	None	4,999 21	July 1, officers generally to September 1, 1823.	
Daniel Randall,	56,000 00	5,000 00	540 23	September 1, except one company at Sulphur Fork, Red river, which is paid to July 1, 1823.	The amount to be accounted for is reserved for the payment of the company at Sulphur Fork.
Asher Phillips,	21,500 00	None	2,703 12	May 1, officers generally to September 1, 1823.	Five companies stationed at Fort Smith, Arkansas, receive two payments in the year. Funds for the last payment are not furnished until after the expiration of the first three quarters, and the accounts are not expected before Decem'r.
Thomas Biddle,	58,300 00	None	None	September 1, officers generally to October 1, 1823.	
Alphonso Wetmore,	30,000 00	4,490 68	None	September 1, officers generally to October 1, 1823.	
David Gwynne,	61,800 00	4,324 49	4,396 20	Sept'r 1, except two companies at Saganaw, from which no accounts are received since May 1, 1823.	The paymaster reports the companies at Saganaw paid to Nov'r, 1823; but the accounts are not yet received.
George A. Bebley,	35,000 00	None	None	September 1, officers to 1st October, 1823.	
	$760,900 00	$23,312 20	$24,152 34		

PAYMASTER GENERAL'S OFFICE, WAR DEPARTMENT, *November* 20, 1823.

N. TOWSON, *Paymaster Gen.*

E.

SIR: SURGEON GENERAL'S OFFICE, *November* 24, 1823.

In compliance with your orders, I have the honor to state, that the amount disbursed on account of the Medical Department in the first three quarters of the present year was $15,056. All the bills presented during this period have been paid; all moneys advanced have been expended, and were regularly and satisfactorily accounted for, without loss to the United States; and but $200 have been advanced during the present quarter.

The supplies for the year were forwarded to the several posts at an early period; and were, in general, reported to have been received in good order, and to be of a good quality. They also appear to have been abundant in quantity, an extra requisition having been made at but few posts, in consequence of an unexpected increase of the number of troops, or unusual expenditure from the prevalence of summer complaints.

Nearly all the surgeons have been constantly on duty during the year, with the exception of those confined by sickness; and the furloughs granted have been for short periods. Returns have regularly been made of every article of public property under their charge, and on examination have been found strictly correct, and the quantity expended to be duly proportionate to the reports of sick.

With the exception of those stationed at Baton Rouge, the troops have in general been healthy. The number of deaths reported at all other posts, during the first two quarters of the year, was but forty-three, of which seven were from casualties.

From the returns and reports of the surgeons, as well as from other sources of information, it appears that the hospitals are well furnished with every thing necessary to the comfort and recovery of the sick; and from the talents, acquirements, and industry of the medical attendants, it is confidently believed that the soldier has now a much better opportunity for a speedy and perfect recovery than he could have in any other situation in which he would probably be placed.

Very respectfully, your obedient servant,

JOS: LOVELL, *Surgeon General.*

Hon. J. C. CALHOUN, *Secretary of War.*

F No. 1.

G.

SIR: ENGINEER DEPARTMENT, *November* 20, 1823.

In pursuance of your order of the 5th instant, I have the honor to report the application of the appropriations of this year, referring to the several fortifications and the Military Academy; the works projected by the board of engineers, which have not been commenced, and the estimates of their cost; the present state of the fortifications under construction; the duties upon which the board of engineers and the topographical engineers have been employed during this year; and the condition of the Military Academy.

The accompanying tables, G No. 1, G No. 2, G No. 3, and reports A and B, afford part of the information proposed above to be furnished by this report.

Table G No. 1 exhibits the application of the sums appropriated this year for the several fortifications.

Table G No. 2 exhibits the amount drawn for the first three quarters of this year, and the amount of accounts rendered for settlement under the respective appropriations.

Table G No. 3 exhibits the works projected by the board of engineers which have not been commenced, and the estimates of their cost. The projects of a number of works, in addition to those contained in this table, have been completed by the board of engineers; but their report of them not having been received, they could not be included in the table, which, as it now stands, does not differ from that reported last year.

Report A, of the board of engineers, in conjunction with Commodore Bainbridge of the navy, relates to the practicability and utility of establishing a breakwater at the mouth of Delaware bay, near Cape Henlopen, to form a harbor for the protection of vessels against floating ice and heavy gales. The report submits two projects, illustrated by drawings, and contains a detailed estimate of the expense for each.

Report B, of the board of engineers, exhibits the result of its examination of the harbor of Presque Isle on Lake Erie, and furnishes a project for the removal of the bar obstructing its entrance, illustrated by drawings, and a detailed estimate of the expense of effecting it.

The drawings above referred to are on file in this department.

The appropriations of the year 1823 for the several fortifications, amounting to $370,000, and for the Military Academy, amounting to $13,979, have been expended upon the objects to which they were respectively applicable, and the accounts for the same have been rendered and settled.

All of the amounts drawn in the first three quarters of the year 1823 will have been satisfactorily accounted for, when a small portion of the accounts, not yet rendered for settlement, but daily expected, shall have been received. There has been no defalcation in any of the agents under the Engineer Department; the delay in the rendition of the small portion of accounts not received having been produced, with respect to those for the Rigolets and Chef Menteur, by the failure of the department to transmit the requisite funds in season; and, with respect to the others, by causes which have been satisfactorily explained.

The several fortifications under construction, and those which have been, since the last annual report, commenced, have progressed in as satisfactory a manner as circumstances would permit. The workmanship, in every instance, is of the most respectable character, and the materials all of the best kind and most durable nature.

Fort Delaware is so far completed that it will be ready to receive its guns and a garrison in the ensuing spring. An unusual degree of sickness prevailed in the Delaware the last fall, whereby the engineers and men employed at the fort suffered very much, and had for a time to discontinue the works, otherwise this fort would have been completed within this year; however, its present state is such as, with no great exertions, it might be rendered immediately a formidable defence to the river Delaware. It will be completed in the course of the ensuing season, with the remainder of the appropriation applicable to that purpose.

Fort Washington is completed, with the exception of some objects of minor consideration, which the residue of the appropriation is adequate to effect.

Fortress Monroe begins to present a formidable appearance: the exterior wall, ten feet thick at its base, is carried on an average all round the place to the height of twelve feet, and a wet ditch surrounds the whole work. A battery on the covert-way is constructed, capable of receiving forty-two pieces, and in the three fronts of the fortress on the sea side embrasures are partly constructed for eighty-four guns; so that, in case of necessity, a battery of one hundred and twenty-six heavy guns might readily be mounted for the protection of Hampton Roads.

The mole on the Rip Rap shoals, on which Fort Calhoun is to be erected, has progressed very satisfactorily also; the mole is now about six feet above the water, and has withstood the violence of the sea in such a manner as to prove its solidity and the permanency of the foundation; it already exhibits to the eye the advantages which this position, in connexion with Fortress Monroe, on Old Point Comfort, possesses in defending Hampton Roads. Great care has been manifested by the engineers in carrying on these works, and the execution of the workmanship is creditable to the superintending officer.

The work at Mobile Point progresses slowly, but satisfactorily; a large quantity of materials is collected there under the late appropriation.

The works at the Rigolets and Chef Menteur have been prosecuted with all the vigor which the circumstances of the climate would admit. The fort at the Rigolets is nearly completed, and that at Chef Menteur commenced and well advanced.

The new work at Plaquemine Bend, on the right bank of the Mississippi, opposite to Fort St. Philip, called *Fort Jackson*, has been located, the land around it cleared and drained, and a number of materials collected: this work was also retarded by the sickness which prevailed there last season; but, notwithstanding, the local engineer reports that the whole of the sums appropriated to that work will be applied in the course of the month of January next.

The repairs contemplated by the act of Congress of last session on Fort Jackson, at Five Fathom Hole, in the Savannah river, below the city, have been completed.

The progress of the board of engineers in its labors, comprehending the topographical engineers, from the commencement of this year, has been extensive and important. The board of engineers has been engaged in the course of the year on projects for the defence of Boston, Salem, and Marblehead, in Massachusetts; Portsmouth, in New Hampshire; Portland, in Maine; and the mouths of Cape Fear river and harbor of Beaufort, in North Carolina; in which period all the plans and estimates for the first three places have been completed; those for Portsmouth carried as far as possible without further surveys; those for House Island and Fort Preble Point, Portland harbor, completed; there being a little more levelling necessary before the other defences of the harbor could be begun; the plans and estimates for the defence of Cape Fear river completed, with the exception of a small work on Federal Point; and those for a work for the defence of Beaufort harbor nearly finished.

The board, in conjunction with Commodore Bainbridge of the navy, visited the capes of the Delaware to examine the practicability of establishing a breakwater there for the protection of vessels from ice and tempests; and pro-

jected plans and estimates for that purpose. In the course of the summer the board examined the harbor of Erie, on Lake Erie, in Pennsylvania, with a view to its improvement, and furnished a project and estimate for that purpose. The board examined the proposed canal from the mouth of the Lehigh river, in Pennsylvania, to the tide-water of the Passaic in New Jersey, and made a report in detail on the practicability, expense, and advantages of the canal, in a local and national point of view. The board also entered upon an examination of the proposed canal between the Delaware and Chesapeake in the course of the summer, and are now engaged on the same project.

The topographical engineers have been engaged as follows: In surveying Portsmouth harbor, in New Hampshire; the Patuxent river; the St. Mary's river and harbor; surveying and levelling Hawkins' Point and its vicinities, in Maryland; the harbor of Charleston, in South Carolina; in locating the lead mines on the Mississippi, leased to individuals under the law; in ascertaining the practicability of opening a communication between the turnpikes in the rear of West Point and the Putnam turnpike, which terminates at Cold Spring, on the left bank of the Hudson, opposite to West Point; in assisting to ascertain the practicability of opening a communication by canals between the Conewago falls on the Susquehannah and Baltimore, and between the Conewago falls and tide-water of the Susquehannah; and in plattings and drawings relating to the surveys above mentioned, and of others previously made; and, also, in exploring a part of East Florida, and the western waters, by the St. Peter's, to the forty-ninth degree of north latitude, thence to Lake Superior and the Sault de St Marie; and in preparing for publication an account of the last mentioned expedition.

The Military Academy, although in a respectable state last year, has since evidently improved in every respect; the regulations, which had been under experiment, have been fairly tested as to their efficiency, and have, with some additions and modifications, been approved and printed for the use of the institution; so that each individual possessing a copy may conform, with exactness and readiness, to their injunctions. The number of cadets at this time attached to the academy amounts to two hundred and fifty-three, and the number which has been graduated and attached to the army this year amounts to thirty-six.

Respectfully submitted:

ALEXANDER MACOMB, *Maj. Gen., Chief Engineer.*

G No. 1.

Exhibiting the application of the sums appropriated in the year 1823 *for the several fortifications designated.*

DESIGNATION OF THE SEVERAL FORTIFICATIONS.	APPLICATION OF THE SUMS APPROPRIATED IN THE YEAR 1823.			
	Amount appropriated.	Amount issued from the Treasury in the first three quarters.	Amount expended in the first three quarters.	Amount applicable to the fourth quarter.
Fort Delaware, - - -	$58,000 00	$31,500 00	$29,646 20	$28,353 80
Fort Washington, - - -	46,000 00	23,300 00	19,751 14	26,248 86
Fort Monroe, - - -	100,000 00	78,300 00	73,954 25	26,045 75
Fort Calhoun, - - -	80,000 00	77,900 00	71,812 68	6,087 32
Fort at Mobile Point, for collecting materials, - - - -	50,000 00	33,500 00	64,153 99	16,500 00
Fort at Rigolets and Chef Menteur, -	100,000 00	75,000 00	67,273 40	32,726 60
Fort on the right bank of the Mississippi, opposite Fort St. Philip, for collecting materials, &c., - - -	40,000 00	15,000 00	8,371 87	31,628 13
Fort Jackson, for repairing, - -	8,000 00	4,000 00	3,856 30	Completed.
	$482,000 00	$338,500 00	$338,819 83	$167,590 46

Remarks.—On account of the unhealthiness of the climate, the operations at Plaquemine Turn were suspended early in the summer, and were not resumed until about a month ago; but, notwithstanding this interruption, the residue of the appropriation will be absorbed in the course of the ensuing month of January. The operations at the other fortifications have progressed successfully and satisfactorily.

The excess of expenditure at Mobile Point resulted from the application of part of the appropriation for 1822.

The sum of $50,000, issued on the 7th of October, for Rigolets and Chef Menteur, is included in the $75,000 stated.

G No. 2.

Exhibiting the amounts drawn for the first three quarters of the year 1823, *and the amount of accounts rendered for settlement during the same period, under the respective appropriations designated.*

DESIGNATIONS OF APPROPRIATIONS.	Amount drawn for the first three quarters of the year 1823.	Amount of accounts rendered for settlement in the same period.
Fort Delaware,	$31,500 00	$31,950 79
Fort Washington,	24,971 73	22,565 96
Fort Monroe,	84,598 44	65,616 40
Fort Calhoun,	78,343 59	71,815 46
Fort at Mobile Point, for collecting materials,	63,500 00	41,933 42
Rigolets and Chef Menteur,	75,000 00	60,906 00
Fort on the right bank of the Mississippi, opposite Fort St. Philip,	16,372 99	35,398 66
Repairing Fort Jackson, on Savannah river,	4,000 00	3,856 30
Fortifications,	306 42	7,109 19
Repairs and contingencies of fortifications,	19,283 98	13,286 36
Military Academy,	9,371 76	1,568 62
	$407,248 91	$356,007 16

Remarks.—The appropriations of the year 1822 for the several fortifications, amounting to $370,000, and for the Military Academy, amounting to $13,979, have been expended upon the objects to which they were respectively applicable, and the amounts for the same have been rendered and settled.

All of the amounts drawn in the first three quarters of the year 1823 will have been satisfactorily accounted for when a small portion of the accounts not yet rendered for settlement, but daily expected, shall have been received.

There has been no defalcation in any of the agents under the Engineer Department; the delay in the rendition of the small portion of accounts not received having been produced, with respect to those for Rigolets and Chef Menteur, by the failure of the department to transmit the requisite funds in season; and, with respect to the others, by causes which have been satisfactorily explained.

G No. 3.

Exhibiting the works projected by the Board of Engineers which have not been commenced, and the estimates of their cost.

DESIGNATION OF THE WORKS.	Estimate of their cost.
First Class.—*To be commenced as soon as possible.*	
Fort St. Philip, Louisiana,	$77,810 79
Battery at Bayou Bienvenue,	94,582 30
Fort at Soller's Point flats, Patapsco river,	673,205 44
Fort at New Utrecht Point, Narrows, New York harbor,	371,970 60
Redoubt in advance of ditto,	53,094 72
Fort Tompkins, New York,	420,826 14
Redoubt in advance of ditto,	65,162 44
Fort at Wilkins' Point, New York,	456,845 51
Fort at Throg's Point, do.	471,181 53
Fort at Brenton's Point, Rhode Island,	575,514 10

Fort on Middle Ground, outer harbor, New York,	1,681,411 66
Fort on East Bank, New York,	1,681,411 66
Fort Hale, Connecticut,	31,815 83
Fort Wooster, do.	27,793 34
Fort Trumbull, do.	77,445 21
Fort Griswold, do.	132,930 41
	$4,727,177 63
Third Class.—*To be commenced at a remote period.*	
The rafts to obstruct the channel between Forts Monroe and Calhoun,	$240,568 00
Fort on Crany Island flats,	258,465 00
Fort at Newport News,	244,337 14
Fort on Naseway shoals,	673,205 44
	$1,416,575 58

RECAPITULATION.

First class, fourteen works,	$4,282,134 30
Second class, twelve works,	4,727,177 63
Third class, four works,	1,416,575 58
	$10,425,887 51

REMARK.—The classification in this table, distinguishing three periods, exhibits the works enumerated, in the order of their efficiency to meet the earliest probable emergency.

ALEXANDER MACOMB, *Maj. Gen., Chief Engineer.*

H.

SIR: ORDNANCE DEPARTMENT, *November* 21, 1823.

In compliance with your instructions, of the 7th of April last, and of the 5th instant, I have the honor to communicate, herewith, the papers marked H No. 1, H No. 2, H No. 3, H No. 4, and H No. 5, containing the statements required, viz:

Statement H No. 1 exhibits an account of the remittances, through this department, in the year 1822, showing the amount, under each head of appropriation, received by each disbursing officer; the amount of the accounts rendered by them; and the balances remaining in the hands of each, at the close of the year.

By this statement, it appears that the total amount of money expended through this department, in the year 1822, was	$698,467 16
The amount of accounts rendered and settled in the same time was	643,418 60
The balance remaining in the hands of disbursing officers, at the close of the year, was	$55,048 56

and that the whole of this balance has been since accounted for, no instance of defalcation having occurred.

Statement H No. 2 exhibits an account of the moneys transmitted to the several disbursing officers at the armories and arsenals, during the first three quarters of the present year; the amount of the accounts rendered by them during the same period; and the balances remaining unexpended, in the hands of each, at the close of the third quarter.

By this statement, it appears that the total amount of moneys transmitted was	$346,217 68
The amount of accounts rendered,	339,983 93
The balances remaining unexpended, at the close of the third quarter, in the hands of disbursing officers,	$6,233 75

The accounts of all the disbursing officers and agents of this department have been rendered up to the 30th of September last, and have been deposited in the Auditor's Office for settlement.

Statement H No. 3 shows the number and description of arms and accoutrements procured, and of the expenditures made under the act for arming and equipping the militia, during the first, second, and third quarters of the present year.

The arms procured under this act are as follows, viz:

Muskets,	9,240
Rifles,	1,542
Pistols,	3,400
Total	14,182

The amount drawn from the Treasury on this account is	$171,845 92
Amount collected on account of advances,	13,682 00
	$185,527 92

The amount collected on account of advances is a reimbursement of a part of the sums advanced to contractors, several years past. No advances have been made upon any contracts made by this department since the year 1819.

In July last an apportionment was made of the arms due to the several States and Territories, under the above-mentioned act, up to the close of the year 1822. The arms apportioned were those procured during the last seven years, and amounted to ninety-four thousand stands. After deducting the partial deliveries which had been made on account, there remained due to the several States and Territories about sixty-six thousand eight hundred stands, of which about thirty-six thousand have been transported and delivered: the remainder have either been delivered, or are in due course of transmission; the reports of which have not yet been received. A doubt has arisen whether the terms of the act authorized a distribution to the militia of the District of Columbia. The third section provides that the arms shall be transmitted to the several States and Territories, in proportions corresponding with the number of effective militia in each respectively, and that they shall be distributed under such rules and regulations as shall be prescribed by their respective Legislatures. No such regulations have been established for the distribution of arms to the militia of the District; nor is there any executive officer designated by law to whom this department can deliver them.

Under these circumstances, the delivery has been suspended; and I take the liberty respectfully to suggest that provision may be made by law for furnishing to the militia of the District the quota of arms which shall be due thereto.

Statement H No. 4 exhibits an account of the work done, and supplies procured, at the several armories and arsenals, from the 1st October, 1822, to the 30th September, 1823. In addition to the particulars shown in this statement, much other business has been done, which cannot be exhibited in a tabular form; such as the repairs and preservation of the arsenals, workshops, and wharves; the enclosures and improvements of the public grounds; and the preservation and improvement of the establishments, generally.

Those objects have received due attention, and the condition of all the public buildings, and other property under the control of this department, has been much improved; and they are, generally, in a good state of preservation.

The work done under the appropriation for arsenals, and which is not embraced in the statement, is the following:

At Frankford, Pennsylvania.—An arsenal 100 by 36 feet, three stories high; a store-house, 60 by 26 feet, two stories high; and two workshops, 45 by 26 feet, one story high; all of stone, with slate roofs, have been commenced; of which, the store-house and workshops have been completed, and the arsenal nearly finished. The interior of a building for officers' quarters, formerly commenced, has also been completed.

At Greenleaf's Point, District of Columbia.—Two workshops of brick, each 100 by 25 feet, one story high, have been commenced and completed. A substantial wall, 260 feet in length, connecting the buildings, has also been erected; and 6,000 cubic yards of earth have been removed; 1,400 feet of stone fence, enclosing the magazine, has also been built.

At Baton Rouge.—The arsenal formerly commenced at that place has been entirely completed; and a substantial gun-house, 110 by 45 feet, of brick, has been commenced, and some progress made. The establishment at that place has been so far completed, that the ordnance and ordnance stores, hitherto at New Orleans, (a considerable part of which was deposited in rented warehouses) have been removed to it.

At Watervliet, New York.—Five and three-quarters acres of land adjoining the public ground, and the New York canal, have been purchased; and a substantial shed, 100 by 28 feet, has been erected.

Statement H No. 5 shows the quantity of ordnance and ordnance stores issued from the arsenals and depots, for the supply of the army and military posts, from the 1st January to the 30th September, 1823.

In conclusion, I beg leave to observe, that, upon a review of the preceding statements, it will be seen that about $700,000 was drawn from the Treasury and remitted to the disbursing officers of this department, and to contractors, during the year 1822; and that the whole amount has been regularly and promptly accounted for; and that about $518,000 has been remitted in like manner, during the first three quarters of the present year; and that the accounts of all the disbursing officers have been rendered up to the close of the third quarter, which account for the expenditure of about $512,000, leaving a balance of only $6,000 unexpended, which is applicable to the expenses of the present quarter; no instance of defalcation or failure to render accounts promptly having occurred during the period embraced by the statements. These satisfactory results show that the present system of accountability has attained a high degree of perfection, and that it has answered the fullest expectations.

It may not be irrelevant to add, that there has been a steady progressive improvement, as respects both the number and quality of the arms procured. The product of the national armories will this year exceed by two thousand stands that of any former year, and of a quality equal to any that have been manufactured in the country.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. J. C. CALHOUN.

H No. 1.

Statement of the money expended through the Ordnance Department in the year 1822.

Officers' names and stations.	Amount of sums remitted, including the balances in the hands of agents on the 1st January, 1822. APPROPRIATIONS. For national armories.	For the current expenses of the ordnance service.	For arsenals.	For cannon, shot, shells, &c.	For arming and equipping the militia, &c.	Total amount remitted.	Amount expended and accounted for in 1822.	Balances remaining unexpended in the hands of disbursing officers, 31st Dec. 1822.	Remarks.
John Chaffee, armory, Springfield, Mass.,	$192,937 42	-	-	-	$1,530 58	$194,468 00	$183,321 66	$11,146 34	Balance accounted for in first quarter of 1823.

ORDNANCE DEPARTMENT, *November* 21, 1823.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

H No. 3.

Statement of the arms and accoutrements procured, and of the expenditures made, under the act of 1808, *for arming and equipping the militia; from* 1st *of January to the* 30th *of September*, 1823.

Arms and accoutrements procured.

Muskets,	9,240
Rifles,	1,542
Pistols,	3,400
Flints,	24,000
24 pdr. spherical case shot,	2,717
12 pdr. do.	1,472
Rifle accoutrements, complete,	600
Sabre belts,	823
Rifle accoutrements, without flasks,	550

Expenditures, viz:

Amount paid for the arms and accoutrements procured,	$166,307 13
Amount paid for inspection, packing boxes, storage, and distribution to the respective States,	5,538 79
Total amount drawn from the Treasury,	$171,845 92
Amount collected from contractors, on account of former advances,	13,682 00
Total value of arms and accoutrements procured, at contract price,	$185,527 92

ORDNANCE DEPARTMENT, *November* 21, 1823.

GEORGE BOMFORD, *Lieutenant Colonel on ordnance duty.*

H. No. 5.

Statement of the artillery, small arms, and accoutrements, and other ordnance stores, issued to the troops of the United States from January 1 to September 30, 1823.

Muskets, complete,	1,041	Brooms,	12
Cartridge boxes,	990	Wheelbarrows,	6
Cartridge box belts,	990	Iron crowbars,	2
Bayonet scabbards,	900	Axes, assorted,	4
Bayonet belts,	990	Hatchets,	5
Breastplates,	540	Wedges and froes,	6
Sergeants' swords,	10	Saws, assorted,	15
Sword belts,	10	Adzes,	2
Brushes and wires,	255	Iron squares,	2
Screw drivers,	79	Compasses, pairs,	5
Ball screws,	42	Drawing knives,	2
Spring vices,	6	Hammers, assorted,	10
Musket cartridges,	125,606	Spoke shaves,	2
Flints,	23,740	Gimlets, assorted,	54
6 pounder iron cannon,	6	Planes, assorted,	26
6 pounder travelling carriages,	6	Augers, assorted,	27
12 pounder iron cannon, mounted on fixed carriages,	2	Chisels, assorted,	60
		Gouges, sets, assorted,	13
12 pounder iron cannon,	2	Screw drivers,	2
12 pounder travelling carriages, with implements complete,	2	Saw sets,	4
		Oilstones,	4
6 pounder case shot,	636	Chalk lines,	6
6 pounder round shot,	700	Two feet rules,	4
12 pounder round shot,	100	Grindstones,	2
12 pounder strap shot,	200	Files, assorted,	183
12 pounder case shot,	200	Rasps, assorted,	7
24 pounder shells,	200	Vices, (hand and smiths',)	7
6 pounder flannel cartridges,	710	Screw plates,	2
12 pounder flannel cartridges,	200	Braces and bits,	5
24 pounder flannel cartridges,	300	Shears, pairs,	3
Cannon powder, pounds,	3,300	Needles,	25
Musket powder, pounds,	310	Scissors, pair,	1
Cartridge paper, reams,	8½	Knives,	2
Fusees filled,	350	Tacks, sponge,	7,000
Portfires,	135	Chalk, pounds,	14
Tubes,	2,065	Glue,	8
Sponges and rammers,	41	Steel,	24
Lead aprons,	10	Bar iron,	50
Tamkins,	8	Pit coal, chaldrons,	2
Gunners' haversacks,	46	Soldering irons,	1
Linstocks,	7	Trying squares,	2
Portfire stocks,	6	Solder, pounds,	2
Bricoles,	48	Borax, pound,	1
Buckets, tar and sponge,	8	Sheet lead, pounds,	40
Powder horns,	13	Sand paper, quires,	2
Priming wires,	6	Twine, pounds,	2
Ammunition boxes,	6	Tacks, large, pounds,	4
Slow match, pounds,	60	Sides of leather,	2
Thumb stalls,	20	Anvils,	1
Prolonges,	6	Smiths' bellows,	1
Portfire cases,	7	Smiths' tongs, pairs,	4
Tube boxes,	2	Litharge, pounds,	2
Cartridge thread, pounds,	11	Putty, pounds,	4
Sponge skins,	6	Hogs' lard, pounds,	20
Portfire cutters,	2	White lead ground in oil, pounds,	700
Lanterns,	6	Lampblack, pounds,	60
Handspikes,	8	Whiting, pounds,	30
Gunner's belts, complete,	1	Linseed oil, gallons,	86
Powder funnels,	2	Spirits turpentine, gallons,	13
Worms and ladles,	2	Lacker, gallons,	40
Budge barrels,	2	Sperm oil, gallons,	10
Powder measures,	3	Olive oil, gallons,	½
Axes, felling,	214	Neatsfoot oil, gallons,	6
Axes, pick,	6	Paint brushes, assorted,	18
Hoes,	6	Plank, feet,	1,620
Spades,	196	Scantling, feet,	380
Shovels,	18

	246	394	59	2	12,961	394	3,870	214

The following is the total amount of funds transmitted to the agents for paying pensioners for the year 1823, viz:

To pay revolutionary pensioners,	$1,339,178 38
To pay invalid pensioners,	301,015 15
To pay pensioners who receive half-pay in lieu of bounty land,	8,994 00
Aggregate,	$1,649.187 53

The foregoing statement is correct, and is respectfully submitted to the Secretary of War by his obedient servant,

J. L. EDWARDS.

WAR DEPARTMENT, PENSION OFFICE, *November* 25, 1823.

J.

Abstract of the number of warrants for military bounty lands, in virtue of service in the late war, issued under authority of the several laws to that effect, up to the 30*th September*, 1823, *inclusive, viz:*

1. Acts of December 24, 1811, and January 11, 1812,	160 acres each,		25,145
2. Act of December 10, 1814,	320 acres each,		1,009
3. Act of February 6, 1812, (volunteers,)	160 acres each,		127
4. Act of March 5, 1816, (Canadian volunteers,)	Different proportions, according to grade,		268
	Total,		26,549
Whereof, 25,272, (1st and 3d classes,) at 160 acres each, amount to		Acres,	4,043,520
And 1,009, (2d class,) at 320 acres each, amount to			322,880
	Total acres,		4,366,400
N. B. In the class of "Canadian volunteers," bounty land was granted to *officers* as well as privates, and in different portions. The aggregate quantity granted to this class (No. 4) amounts to			74,032
	Total acres,		4,440,432

Return of claims included in the above statement, which have been deposited in the "Section of Bounty Lands, War Department," within the three quarters of the present year, viz. from January 1, 1823, to the 30th of September, inclusive, viz:

At the termination of the preceding quarter, there remained on file, awaiting further evidence, -		616
New cases entered between January 1st and September 30, 1823, inclusive, - - -		320
Aggregate number of cases, -		936
Whereof, the number admitted, for which warrants immediately issued, - -	164	
The number returned to the applicants for further evidence, or rejected, - -	165	
The number remaining to be acted on, - - - -	1	
There still remain on file, suspended, awaiting further evidence, - -	606	
		936

During the same three quarters, *i. e.* from January 1st to September 30, 1823, inclusive, the class of claims for military bounty land, on account of services in the revolutionary war, stands thus, viz:

At the termination of the preceding quarter, the number of cases on file, awaiting investigation, was -		101
Number of new applications during these three quarters, - - - - -		294
Total, -		395
Whereof, the number found satisfied long since, - - - - -	60	
The number found admissible, - - - - -	36	
The number found inadmissible, and definitively rejected, - - -	176	
The number found deficient in some points, and requiring further evidence, and are suspended until an examination of locations, now in progress at the General Land Office, shall have been completed, - - - - -	123	
		395

The class of "Canadian volunteer" claims remains *in statu quo*, excepting that of the 169 cases, so long since suspended; the Hon. Mr. Chandler has acquired satisfactory evidence that 35 claimants from the State of Maine were fraudulent.

All which is respectfully submitted.

NAT. CUTTING, *Clerk.*

War Department, Section of Bounty Lands, *October* 1, 1823.

L.

Head-quarters, Western Department,
Louisville, Kentucky, *July* 28, 1823.

Sir:

By the last mail I reported to the general-in-chief the information which I had received since the date of General Atkinson's communications upon the subject of the late hostilities of the Ricarees and other Indian nations up the Missouri river; together with the measures which I had taken to support the sixth infantry, and to restore peace.

Deeming it very important to the service that the subject should be submitted to you without delay, I take this occasion (to guard against a failure, such as appears to have attended two of my letters to the general-in-chief, one of March 13, and the other of May 15) to enclose herewith copies of my letters and instructions upon the subject of these hostilities, viz:

No. 1. Letter to Major General Brown, with two enclosures from Major O'Fallon, and one from Major Foster, marked A No. 1, A No. 2, and B No. 1.

No. 2. Letter of instructions to General Atkinson.

No. 3. Letter of instructions to Colonel Chambers.

Should many of the Upper Missouri Indians unite with the Ricarees, (and there is reason to apprehend that their old friends and allies the Pawnees, and other nations, or at least the disorderly warriors of other nations, will unite against us, in the event of their being able to compel Colonel Leavenworth to retrace his steps without inflicting on them the chastisement which they merit,) it may in that case be necessary to order up the fourth infantry, and to unite with it two or three battalions of volunteer mounted riflemen, which I have no doubt could be promptly obtained in this State or in Tennessee, or perhaps in Missouri. Upon this subject I have to request provisional instructions, in time to enable me to profit by the mild season of October and November, to move the fourth infantry to Council Bluffs, or at least to Fort Osage, for the winter; and to assemble the remaining part of the proposed force in time to commence active operations against the Indians as soon in the spring as the weather will permit. In this case, I shall take the immediate charge of the expedition.

I feel persuaded, however, that should the Ricarees venture to remain within their fortified village until the arrival of Colonel Leavenworth, he will with his artillery dislodge them; and he may in this case occasion a panic which may tend to disperse their allies, and to reduce them to submission. The supposed strength and fidelity of the Sioux, who were expected to accompany Colonel Leavenworth, afford some ground to anticipate this favorable result. But auxiliaries of this description are but little to be relied on, without they are accompanied by a force sufficient to restrain, or, if necessary, to coerce them; and without ample supplies of subsistence, and of clothing, blankets, &c. to present to them.

The fourth infantry being more entirely a disposable corps, and at this time the most efficient, I should have ordered it to Council Bluffs instead of the first, had it been a few weeks earlier in the season. But it is already too late even for the first to be pushed far beyond the Bluffs before the approach of winter. Nor is it intended to send the disposable force placed under General Atkinson beyond the Bluffs in the present year, unless some unforeseen casualty or disaster on the part of Colonel Leavenworth's command should require a rapid movement to sustain or relieve him, or unless the spirit of hostility should have extended itself to the Pawnees, or to some other tribes near to the Bluffs. In either of these events General Atkinson will be actively employed against the enemy during the the month of November next; and should the early part of the winter be mild, as it sometimes has been, even in that region of open prairie, wind, and frost, he will have it in his power to give to his hostile neighbors sufficient annoyance at least to keep them on the alert, and deprive them of the comforts of permanent winter quarters.

I am convinced, from what you have repeatedly said and written upon the subject of our western Indian relations, that I need not point out to you the evils that must inevitably result from our being compelled to recede from the position we have taken, and give up our trade and intercourse with those numerous nations. The trade itself, however valuable, is relatively little or nothing when compared with the decided advantages of that harmonious influence and control which is acquired and preserved, in a great degree, if not wholly, by the constant friendly intercourse which the trade necessarily affords, and by which it is principally cherished and preserved. If we quietly give up this trade, we shall at once throw it, and with it the friendship and physical power of near 30,000 efficient warriors, into the arms of England, who has taught us in letters of blood (which we have had the magnanimity to forgive, but which it would be treason to forget) that this trade forms the rein and curb by which the turbulent and towering spirit of these lords of the forest can alone be governed. I say *alone*, because I am decidedly of the opinion that if there existed no such rivalship in the trade as that of the English, with which we have always been obliged to contend under the disadvantage of restrictions such as have never been imposed upon our rival adversary, we should, with one-tenth of the force and expense to which we have been subjected, preserve the relations of peace with these Indians more effectually than they have been at any former period. But to suffer outrages such as have been perpetrated by the Ricarees and Blackfoot Indians to go unpunished, would be to surrender the trade, and with it our strong hold upon the Indians, to England.

I have but recently recovered from an attack of bilious fever; and my hand is not yet steady enough to write with ease, or very legibly.

With great respect, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, commanding.*

The Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

Major General Gaines to Major General Brown.

HEAD-QUARTERS, WESTERN DEPARTMENT,
LOUISVILLE, KENTUCKY, *July* 26, 1823.

GENERAL:

The report made to you the 12th instant, by General Atkinson, that General Ashley with his trading company had been attacked by the Ricaree Indians and defeated, with the loss of fourteen killed and nine wounded, is confirmed by letters received last night from Major O'Fallon and Major Foster; of which I enclose herewith copies. [A No. 1, A No. 2, and B No. 1.] From Major O'Fallon's letter you will perceive that other outrages of a similar character have been committed by the Blackfoot Indians, who have killed Messrs. Jones and Immel (late an officer of the army) with five other persons.

It appears that on the 22d of last month Colonel Leavenworth marched with two hundred and twenty regular troops, and eighty men of the trading companies, to be joined by a large party of Sioux warriors, against the Ricarees; who being strongly fortified, the colonel took with him some cannon.

The Ricaree villages are situated about seven hundred miles above Council Bluffs, and are supposed to contain about six or seven hundred warriors. Should they be able to turn out six hundred warriors, well armed and united as they are reported to be, the movement of Colonel Leavenworth, taking into view the great distance, and the several intermediate nations near which he must necessarily pass, cannot but be considered as very hazardous; and as any disaster on our part would be witnessed or very soon heard of by the numerous adjacent nations of Indians, a repulse attended with the loss of but a few lives would be to us a serious disaster, as it would tend to undo most of what has been done by the United States on the minds of the Indians, since the first occupancy of the posts up the Missouri.

The unprovoked outrages of the Ricarees call for exemplary punishment, but a premature effort on our part will but widen the breach between us, and enhance the evil we thus attempt to correct. I trust the report of Colonel Leavenworth, which is not yet received, will give a more satisfactory view of his measures and prospects of success than I am at present able to afford.

I have, however, great confidence in the discretion and conduct of that officer, and I am persuaded that the circumstances of the case justified the step which he has taken. But, be this as it may, the step is taken, and therefore the force engaged must be supported.

For this purpose I have ordered General Atkinson to repair to the Missouri, where I have directed six companies of the first and four of the seventh infantry to be placed under his orders, with which, and the disposable part of the sixth, he will be able not only to support Colonel Leavenworth, but to punish the Ricarees and arrest the progress of Indian hostilities in that quarter, or at least to prevent their extension to the Pawnees (said to be nearly allied to the Ricarees) and other nations east and south thereof.

Two steamboats are employed to transport the six companies of the first regiment from Baton Rouge to St. Louis; this will occasion an expense of about $4,000. For the payment of this sum, and to meet the expenses of the transportation, &c. of these companies from St. Louis, and the four companies of the seventh from Arkansas to Council Bluffs, I have to request that the quartermaster general may be instructed to forward to the assistant quartermaster at St. Louis the sum of $12,000, which is deemed to be necessary to meet the expenses of transportation &c. which will be incurred in the movements to Council Bluffs.

Very respectfully, I have the honor, &c.

E. P. GAINES, *Major General by brevet, commanding.*

To Maj. Gen. BROWN, *Commanding U. S. Army, Washington City.*

A No. 1.

Major O'Fallon to General Atkinson.

DEAR GENERAL:

FORT ATKINSON, *July* 3, 1823.

How painful it is for me to tell, and you to hear, of the barbarity of the Indians! They continue to deceive and murder the most enterprising of our people; and if we continue to forbear, if we do not discover a greater spirit of resentment, this river will be discolored with our blood.

The defeat of General Ashley by the Ricarees, and departure of the troops to his relief, had scarcely gone to you, when an express arrived announcing the defeat by the Blackfoot Indians, near the Yellow Stone river, of the Missouri Fur Company's Yellow Stone or Mountain expedition, commanded by Messrs. Jones and Immel, both of whom, with five of their men, are among the slain. All their property, to the amount of $15,000, fell into

the hands of the enemy. To add to General Ashley's catalogue of misfortunes, the Blackfoot Indians have recently defeated a party of eleven, and killed four of Major Henry's men near his establishment, at the mouth of the Yellow Stone.

The express goes to state that many circumstances, of which I shall be officially informed in a few days, have transpired to induce a belief that the British traders (Hudson's Bay Company) are exciting the Indians against us, either to drive us from that quarter, or reap with the Indians the fruits of our labor. I was in hopes that the British Indian traders had some bounds to their rapacity. I was in hopes, during the late Indian war, in which they were so instrumental in the indiscriminate massacre of our people, that they were completely satiated with our blood; but it appears not to have been the case; like the greedy wolf, not satisfied with the flesh, they quarrel over the bones. They ravage our fields, and are unwilling that we should glean them. Although barred by the treaty of Ghent from participating in our Indian trade, they presume; and are not satisfied to do so, but, becoming alarmed at the individual enterprise of our people, they are exciting the Indians against them. They furnish them with * * * * * * * * the instruments of death, and a passport to our bosoms. Immel had great experience of the Indian character, but (poor fellow!) with a British passport they at last deceived him, and he fell a victim to his own credulity; and his scalp, and those of his comrades, are now bleeding on their way to the British trading establishments. Another of General Ashley's wounded is dead, making fifteen men killed by the Ricarees, and eleven by the Blackfeet—in all known to be killed by the Indians, within the last two or three months, twenty-six effective men, and I estimate the amount of property lost in those conflicts at $20,000, besides a number of horses, &c.

The Ottoes, and Missouries, and * * * have been to see me, and, as usual, profess great friendship, &c., but, with the rest of the neighboring tribes, are anxiously looking and listening to know how we, the whites, are going to get out of this scrape. I am still much indisposed, and cannot enjoy health here. Just as I am concluding this letter to you, I am interrupted by an express with a letter from Mr. Pilcher, in which he says, "I have but a moment to write; I met an express from the Mandans, giving me very unpleasant news. The flower of my business is gone; my mountaineers have been defeated, and the chiefs of the party both slain. I will write you more fully between this and the Sioux. The party was attacked by three or four hundred Blackfoot Indians, in a position on the Yellow Stone river, where nothing but defeat could be expected. Jones and Immel and five other men were killed. The former, it is said, fought most desperately. Jones killed two Indians, and, as he was drawing his pistol to kill the third, received two spears in his breast. Immel was in front; he killed one Indian, and was cut to pieces. I think we lose at least $15,000."

The express left the military expedition on the 1st instant, when it was progressing rapidly.

I have the honor to be, &c.,

B. O'FALLON, *U. S. Agent Indian Affairs.*

Gen. ATKINSON.

A. No. 2.

Major O'Fallon to General Atkinson.

DEAR GENERAL: FORT ATKINSON, *July* 7, 1823.

Before an opportunity offered to forward my letter of the 3d inst., and which I herewith enclose, an express arrived with a few lines to Major Foster, mentioning the loss of Lieutenant Wickliff's boat, and seven soldiers drowned. We have no particulars, except that most of the property was saved, and that the expedition was going on as usual, and expected to reach the *Grand Bend* against the 15th inst. At this post, every thing goes on as well as could be expected.

Yours, &c., BENJAMIN O'FALLON.

Gen. ATKINSON, *Louisville, Kentucky.*

Major Foster to General Atkinson.

B. No. 1.

SIR: FORT ATKINSON, *July* 8, 1823.

Since I wrote you at the end of last month, I have received a letter from Colonel Leavenworth, dated on the 4th inst., two miles above Cabal Bluffs, informing me that he had the misfortune to lose Lieutenant Wickliff's boat, Sergeant Stackpole and six privates drowned; he writes in haste, giving no particulars, but says that the principal part of the cargo was saved; that he was under way, and all well. He put that part of the cargo saved on board of the other boats and those of Mr. Pilcher.

I learned from the two men who were the bearers of the colonel's letter that the boat broke in two across a snag; of course, she must have swung. The men were from Major Henry, and informed me that General Ashley was upon an island about one hundred miles below the Ricaree villages. I write hastily; the boat which leaves here this day, * * * * erroneous report should reach you.

WM. S. FOSTER, *Major U. S. Army.*

Gen. ATKINSON.

No. 2.

Major General E. P. Gaines to Brigadier General Atkinson.

HEAD-QUARTERS, WESTERN DEPARTMENT,

GENERAL: LOUISVILLE, KY., *July* 26, 1823.

You will repair to the Missouri, and assume the command assigned you by my department order of this date.

The immediate object of this command is to support the detachment under Colonel Leavenworth, and to give a timely check to the hostile spirit which has recently manifested itself among the Indians of the Upper Missouri, and at the same time to arrest or punish the Ricarees and other warriors, by whom thirty-three of our citizens have been killed and wounded.

Six companies of the first infantry, under Colonel Chambers, are this day instructed to join you at St. Louis, to act under your orders; to which will be added, should it be advisable, four companies of the seventh infantry. These will be directed to be held in readiness subject to your orders, to join you at such time and place as you may find it necessary to direct.

Should the information which may reach you at or beyond St. Louis in your judgment suggest the propriety of your being supported by an additional force, you will in this event make application to the Governor of the State of Missouri for a few companies, or, if necessary, a battalion of volunteer mounted riflemen. But it is not expected that this force will be required without satisfactory evidence should meet you of some new act of hostility on the part of the Indians below the Ricaree villages.

You will order from St. Louis to Fort Atkinson a supply of subsistence and ordnance stores, which, added to those now at that post, shall be sufficient for the regular troops destined for that post, during a period of nine months from the 15th October next, at which time the first infantry should reach that post; and should it become necessary to obtain volunteers, you will in that event order up additional supplies, sufficient for such additional force during the time for which they may be employed, which should be for nine months, unless sooner discharged. And you will order the purchase of whatever subsistence may be necessary (to supply any deficiency that may be found in the subsistence department at St. Louis) to enable you to carry these measures into effect.

In the discharge of these duties you will exercise a sound discretion, governing your movements and measures by the facts and circumstances that may be disclosed to you as you proceed, and by the instructions heretofore addressed to you, and in obedience to the "general regulations of the army."

You will keep me advised of your measures and of the occurrences that you may deem interesting connected with the command assigned you. With respect, &c.

E. P. GAINES,
Major General by brevet, commanding.

To Brig. Gen. H. ATKINSON, *U. S. Army.*

No. 3.

Major General E. P. Gaines to Colonel Chambers.

HEAD-QUARTERS, WESTERN DEPARTMENT,
LOUISVILLE, KY., *July* 27, 1823.

SIR:

Accompanying this you will receive orders to repair with six companies of your regiment to St. Louis, on board the steamboats the *Favorite* and *Magnet*, to report to General Atkinson.

The recent hostilities of the Ricarees and other nations of Indians up the Missouri have rendered it necessary to assemble a force on that river to support the sixth infantry; the disposable part of that regiment having marched a month since against the Ricarees.

Should the spirit of hostility, as there is reason to apprehend, extend itself to some of the neighboring tribes, the remaining part of your regiment will in that case, after receiving recruits for completing the regiment, be ordered to follow you. For the present, however, you will leave Lieutenant Colonel Taylor in command, who will probably be joined by two companies of the fourth infantry.

General Atkinson will enclose to you the agreement made by him with the steamboats for your transportation, to which you will require particular attention on the part of the commanders, as well as on the part of the troops.

I regret to find that the principal part of your subsistence has been hauled out of your summer cantonment. You will, not, however, delay your movement so long as to bring back any part of that supply, as most of it will be wanted out there; and as subsistence can be obtained on the lowest terms at St. Louis, it is not desirable that you should take the quantity mentioned in my order of yesterday's date. You need not take with you more than a supply for one month or six weeks.

Wishing health, &c., I have the honor to be,

E. P. GAINES,
Major General by brevet, commanding.

Colonel CHAMBERS, *First U. S. Infantry.*

The Secretary of War to Major General E. P. Gaines.

DEPARTMENT OF WAR, *August* 14, 1823.

SIR:

I have received your letter of the 28th ultimo, with the accompanying enclosures, and have submitted them to the President, who directs me to acquaint you that he approves of the measures which you have adopted.

Although the command of Colonel Leavenworth is small, yet, from his known courage and enterprise, I feel great confidence that his movement will be successful, and that the chastisement of the Ricarees will give peace and security to the frontier. Should such be the fact, you will halt the detachment you have ordered from the 1st and 7th regiments of infantry at Belle Fontaine, until further orders. Should, however, the movement of Colonel Leavenworth not be attended with the favorable result expected, or should the Indians continue to exhibit a hostile disposition, you will exercise a sound discretion in pushing forward the necessary force to such points on the Missouri as you may deem best calculated to maintain peace and to protect our citizens.

It is desirable that the disposable force of the army under your command only should be employed on this service. In the event of a failure of Colonel Leavenworth's movement, you will add to the reinforcement already ordered to General Atkinson's command such other troops under your orders as you may judge requisite.

I am, &c. J. C. CALHOUN.

General E. P. GAINES, *Louisville, Ky.*

General E. P. Gaines to the Secretary of War.

HEAD-QUARTERS, WESTERN DEPARTMENT,
LOUISVILLE, KENTUCKY, *August* 16, 1823.

SIR:

I received not till last night the report of Colonel Leavenworth, announcing his intention to visit the Ricaree Indians, dated 18th June, 1823.

That report, which accompanies this,* contains no material fact differing from those transmitted by General Clark, Major Foster, and Major O'Fallon, referred to in my letter of the 28th of last month, except that the force intended to be taken by the colonel is something less than that reported to have accompanied him.

He states that his party will be about two hundred strong in rank and file; and he adds that, "if necessary, it is expected that we can raise a considerable auxiliary force amongst the Sioux."

As Colonel Leavenworth will probably report, by express, the result of his movements, I have reason to expect his report in the course of the next two weeks.

Very respectfully, I have the honor to be,

E. P. GAINES,
Major General by brevet, commanding.

Hon. J. C. CALHOUN, *Secretary of War.*

* Enclosed to the general-in-chief.

General E. P. Gaines to the Hon. J. C. Calhoun.

HEAD-QUARTERS, WESTERN DEPARTMENT,
NEAR LOUISVILLE, KENTUCKY, *August* 30, 1823.

SIR:

I received yesterday your letter of the 14th instant, by which I am gratified to learn that the measures adopted by me to strengthen the Missouri frontier were approved by the President of the United States.

By letters just now received from General Atkinson, with the enclosures to which he refers from Colonel Leavenworth and Mr. Pilcher, copies of which I enclose herewith, numbered 1, 2, and 3, it appears probable that the Mandan nation has determined to afford protection to the Ricarees. The distance between them is about one hundred and thirty miles; the former occupying the country on the Missouri river W. N. W. of the latter. It is, moreover, rumored that the Blackfoot Indians and the Sioux of the Missouri will likewise unite with the Ricarees against us. Should these rumors prove to be well founded, even as to any two of those nations, another season, with all the disposable force of the army, will be required for their chastisement. Upon this subject, however, the next report from Colonel Leavenworth will, I trust, afford satisfactory information. Until the receipt of that report no additional arrangements are deemed necessary for the supply of subsistence, or the concentration of force beyond that which is now in motion.

The fourth infantry, at Pensacola, with the four companies of the first, now at Baton Rouge, is the only part of the troops in this department that can safely be added to the force already ordered to march under General Atkinson; for such is the number and questionable character of the Sioux on the Mississippi, with some other Indians in that quarter, that not a company of the fifth infantry can properly be considered as disposable beyond the immediate vicinity of its position; and I am of opinion that the frontiers of Louisiana and Arkansas require a force at least equal to the six companies of the seventh infantry posted in that quarter. One of these companies, however, might be sent to Baton Rouge, and the four companies of the first infantry now there detached up the Missouri, to join that part of the regiment heretofore ordered thither, and which is presumed to be now at St. Louis.

With great respect, I have, &c.,

E. P. GAINES, *Maj. Gen. by brevet, commanding.*

Hon. J. C. CALHOUN.

No. 1.

General Atkinson to General Gaines.

HEAD-QUARTERS, RIGHT WING, WESTERN DEPARTMENT,
ST. LOUIS, *August* 19, 1823.

SIR:

I have the honor to enclose herewith the copy of a letter from Colonel Leavenworth to Major O'Fallon, and the copy of a letter from Mr. Pilcher, acting partner of the Missouri Fur Company, to the same gentleman, containing extracts of letters from Messrs. Keemly and Gordon, traders attached to that firm. These letters give the latest information from the expedition under Colonel Leavenworth, and the most direct of the attack of the Blackfoot Indians upon Immel and Jones.

Notwithstanding the opinion of Mr. Pilcher, as well as most persons here, that the Ricaree Indians will await in their village the arrival of the troops under Colonel Leavenworth, and there give battle, I cannot bring myself to believe so. They, very early after their attack on General Ashley's party, made arrangements with the Mandan Indians to take refuge with them. This step shows, certainly, a determination on their part to flee before any formidable white force; and I therefore conclude it will require at least another season to chastise them effectually.

Under the most favorable aspect of affairs on the Upper Missouri, I am of opinion it will require an effective disposable force of some six or seven hundred regular troops to operate decisively in that quarter, and to preserve tranquillity in future. The whole of the first regiment added to the sixth, and both being filled to the establishment, will, I presume, be ample for the object. With these corps, after leaving four companies of the sixth at Council Bluffs, sixteen companies may move up the Missouri, and effect every practicable object, establish the first regiment at the Yellow Stone or Mandans, and let the six companies of the sixth regiment fall back to its present position. Every year afterwards, several companies of the sixth might ascend the river, and, in conjunction with the first regiment, explore all the upper country intersected by streams navigable for keel-boats, and consequently hold intercourse with all the upper Indians.

There is no indication of a disposition on the part of any of the tribes that have intercourse with the post at Council Bluffs of hostility. It is said, however, that part of the band of Scione Sioux (the tribe next to the Ricarees) show some inclination to join their hostile neighbors. If so, this spirit of disaffection may extend to more or all the Sioux.

I have advised Colonel Snelling to have a watchful eye towards the Sioux of the St. Peter's, for the reasons above stated.

I sent by express, a few days since, an order to the commandant at Council Bluffs to advise me, by express, of the result of the enterprise under Colonel Leavenworth, as soon as it was known. I look for some such information in two weeks more.

As it is highly important that the detachment of the first regiment should carry up transport boats sufficient for its own operations, I shall send it in that way, should not circumstances above render a prompt movement by land necessary.

I will keep you advised of every circumstance worthy of note, as they come to my knowledge.

With great respect, &c.,

H. ATKINSON, *Brig. Gen. U. S. Army.*

P. S. I have had the honor to receive your letter of the 8th instant.

Maj. Gen. GAINES, *Commanding Western Department, Louisville, Kentucky.*

No. 2.

Colonel H. Leavenworth to Major O'Fallon.

DEAR MAJOR: FORT RECOVERY, *July* 21, 1823.

Your favor of the 10th instant I have this minute received, and I assure you with great pleasure; I was also highly gratified that Majors Woolley and Ketchum came on to join us.

Mr. Pilcher I have requested to write you fully as to Indian affairs; and he is so much better informed than myself, that I shall leave that subject principally to him. He is, I find, very efficient, and has conducted greatly to my satisfaction.

These Yantons appear to be zealously determined to co-operate with us, but I have some doubts as to the continuance of their ardor. We have been obliged to make a halt here of three days, to wait for Mr. Pilcher, and to repair damages sustained from wind and water. After so many disasters, I am happy to inform you that we are yet efficient, perhaps as much so as when we set out. Our powder was *miraculously* preserved; several casks which were under water all night were entirely uninjured. I have borrowed ten rifles of Mr. Pilcher, and can have twenty-three more of General Ashley, but eight only are necessary to complete. Powder and lead I can obtain in ample quantities. If the Ricarees and Mandans unite, I shall proceed to the Mandans, and, if they keep the Ricarees in their village, shall attack them. We shall do our best to obtain a victory. The honor of the American arms must be supported at all events; but I can plainly perceive that our force is not sufficient to inspire that degree of awe and respect amongst the Indians which I would wish. We make but a small show, on a large prairie, by the side of four or five hundred mounted Indians. If we can obtain a fair fight, our superiority will probably be more apparent.

As I have to write on the ground, in a heavy wind, I fear you will not be able to read my letter. You will, however, have the goodness to excuse inaccuracies, and my want of time and means to send you a fair copy.

H. LEAVENWORTH, *Col. U. S. A.*

Major O'Fallon.

No. 3.

Mr. Pilcher to Major B. O'Fallon.

Dear Sir: Fort Recovery, Upper Missouri, *July* 23, 1823.

From the following extract of a letter from Mr. William Gordon, a young gentleman in the service of the Missouri Fur Company, and attached to our mountaineers, you will see that they have been defeated, and the chiefs of the expedition, Mr. Immel and Mr. Jones, have both been slain. The extracts from Mr. Keemly's letters will show the disposition and feelings of the Mandans and Grosventres produced by the late success of the Ricarees against General Ashley; and the whole will, I hope, tend to show the importance of Colonel Leavenworth's expedition against the Ricarees. If protection to the commerce of the Missouri be the object of our Government, this would seem to be the accepted time; a decisive blow is indispensable for the safety of every white man on the river above the Council Bluffs, and even to the troops stationed at that post; but I need not dwell on this subject; you know too well the importance of the movement.

The following is an extract from Mr. Gordon's letter, dated

"Dear Sir: "Fort Vanderburgh, Mandan and Grosventres Villages, *June* 15, 1823.

"It becomes my unpleasant duty to inform you of the defeat of our party by the Blackfoot Indians, and of the dire consequences of the same. After penetrating to the three forks of the Missouri, early in the spring, although we found that country almost entirely trapped out by the Indians, we had succeeded, by the greatest perseverance, in taking about —— packs of beaver. On the 16th day of May, having reached the upper three forks of Jefferson river, and finding no beaver in that quarter, we commenced a retrograde march for the Yellow Stone. On the second day we fell in with a party of thirty-eight Blackfoot Indians; they came up boldly, and smoked, and remained with us during that night, making every profession of friendship; and in the morning, after making them presents of such articles as we could spare, they parted with us, apparently well satisfied, having first invited us to come and establish at the mouth of the Maria river, as they said they had been informed was our intention. They were in possession of every information in regard to the two boats being at the mouth of the Yellow Stone, and of their determination to ascend the Missouri to the falls. This information must have been derived from the British traders, who have most probably instigated them to commit this outrage, and by them, no doubt, from some faithful correspondent at St. Louis. We did not suffer ourselves, however, to be lulled into false ideas of security by their friendly professions, but commenced a direct and precipitate retreat from the country, keeping out a strict guard every night, and using every possible vigilance at all times. This party of thirty-eight had returned to their village, which was very close, and recruited to the number of between three and four hundred men; these had intercepted us on the Yellow Stone, where they arrived two days before us. They lay in ambush for us on the side of a steep hill, the base of which was washed by the river, along which we had to pursue the intricate windings of a buffalo track, among rocks, trees, &c., by means of which they had secreted themselves. At this place the men were of course much scattered for a considerable distance, as two horses could not pass abreast. At this unfortunate moment, and under circumstances so disadvantageous, they rushed upon us with the whole force, pouring down from every quarter. Messrs. Immel and Jones both fell early in the engagement. A conflict thus unequal could not be long maintained. The result was the loss of five other men killed, four wounded, the entire loss of all our horses and equipage, traps, beaver, and every thing. The balance of the party succeeded in escaping, by making a raft and crossing the Yellow Stone. This took place on the 31st of May, just below the mountains on the Yellow Stone. Not knowing to what extent the loss of the horses, traps, &c., might effect [affect] any future plan of operation, I came with all possible expedition to this place to acquaint you with the circumstance. I left Mr. Keemly and the party near the mouth of Pryor's fork, making skin canoes to bring down the falls hunt, amounting to about ——. Four of Major Henry's men have also been killed near the falls. It appears from information derived from the Blackfeet themselves, that the British have two trading houses in their country, on the American territory; and from some Snake Indians, we learn that they have several on the south fork of the Columbia. Something decisive should be done.

"Believe me to be your sincere friend,

"WM. GORDON."

From the foregoing letter you will perceive that the commerce of the Missouri, under existing circumstances, however valuable, is truly precarious. This, our second adventure to the mountains, had surpassed my most sanguine expectations: success had been complete, and my views fulfilled in every respect. Mr. Immel and Mr. Jones had conducted those expeditions with the greatest skill and ability, and proved themselves worthy of my confidence. The loss of property is severely felt, yet it is little compared to the loss of those valuable men to whom I stand indebted for the accomplishment of my views. In consequence of their late departure last summer from the Council Bluffs, it became necessary for them to confine their operations last fall to the Yellow Stone and its tributary waters, and winter at the mouth of the Big Horn. The party originally consisted of forty-three persons, including themselves and Messrs. Gordon and Keemly, two young gentlemen attached to the expedition, and to whom I am much indebted for their activity in bringing off the remainder of the party, and securing the property of the expedi-

tion which had been left on the Yellow Stone at the time the expedition moved to the three forks, early in the spring. The party had been reduced to thirty, including all; a part of the men having deserted from their wintering post at the Big Horn. With these they penetrated the country, as mentioned in Mr. Gordon's letter. I am happy to say their defeat is not to be attributed to negligence, mistaken confidence of their own ability or the good will of the Indians. Three hours more would have taken them to the Crow nation, where they would have been perfectly secure; this tribe being at war with the Blackfeet, and much attached to the whites. But the Blackfeet had marked their route. They knew the country and advantages of the position selected by them for the attack. There they intercepted them, and awaited their arrival. Nothing but defeat could be expected under such circumstances; and it is wonderful how any should escape from such an overwhelming force, when attacked in such an unfavorable position. Many circumstances justify the opinions expressed in Mr. Gordon's letter, which I will hereafter relate; time will not allow me to do so at present. Mr. Keemly arrived at the Mandans in a short time after Mr. Gordon left him on the Yellow Stone; and in a letter to me under date of the 10th of the present month, which met me at this place, he expresses himself as follows: "Permit me, sir, here to remark, that the present affair with the Ricarees is the subject of daily conversation with the Grosventres and Mandans; and I am of opinion, from many remarks made by the principal men of both nations, that much of the future welfare and interest of persons engaged in the business of the Missouri depends upon the course of conduct pursued towards that band of savage villains." In another letter from him of the 11th instant, conveyed by the same hand, he gives me the following information: "A council was held by the Mandans on the 10th instant, in which they have determined to send for the Ricarees to enter their village, in order to protect them (as they say) from the whites. A singular [similar] proposition was made to the Grosventres by the former nation, but they shut their ears against it." The Ricarees opened a fire on the men who came express with those letters, and continued it until they had got beyond their reach, though they did not succeed in hurting either of them. From these circumstances you may suppose that the future conduct and disposition of all those upper tribes, even the Sioux, depend much on the steps taken in relation to the Ricarees. There are many opinions respecting the course the Ricarees will take. My own impressions are, that they will not abandon their villages, but will await the arrival of the expedition, and give us battle. Many things induce a belief that they will not attempt to go to the Mandans for protection. About twelve days will decide it. The expedition left this place early this morning.

The foregoing circumstances, together with many other causes, will induce me to change the destination of our mountain men this fall. If time would justify the attempt, I would endeavor to push the expedition across the mountains to some of the southern branches of the Columbia, but the season is too far advanced.

I am, dear sir, &c.,

JOSHUA PILCHER,
Acting Partner Missouri Fur Company.

Major B. O'FALLON, *United States' Agent for Indian Affairs.*

General Gaines to the Secretary of War.

HEAD-QUARTERS, WESTERN DEPARTMENT,
NEAR LOUISVILLE, KENTUCKY, *September* 8, 1823.

SIR:

The last mail from St. Louis arrived without bringing the looked-for report of Colonel Leavenworth, or any information whatever from the Missouri frontier.

Respectfully, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, comd'g.*

The Hon. J. C. CALHOUN, *Secretary of War.*

General Gaines to the Secretary of War.

HEAD-QUARTERS, WESTERN DEPARTMENT,
NEAR LOUISVILLE, KENTUCKY, *September* 13, 1823.

SIR:

A letter from General Atkinson dated at St. Louis, the 5th instant, a copy of which I enclose herewith, reports the arrival at that place of the six companies of the 1st infantry ordered up the Missouri.

From Colonel Leavenworth I have received nothing since the date of his letter referred to in mine of the 30th ultimo.

I have the honor to be, &c.,

E. P. GAINES, *Maj. Gen. by brevet.*

The Hon. J. C. CALHOUN, *Secretary of War.*

General Atkinson to General Gaines.

HEAD-QUARTERS, RIGHT WING, WESTERN DEPARTMENT,
ST. LOUIS, *September* 5, 1823.

SIR:

I have the honor to inform you that two companies of the 1st regiment, under Major Wbartenby, arrived at this place from Baton Rouge, on Friday evening last, and that four companies came up on Tuesday, under Colonel Chambers. The whole are now encamped a short distance above the city, where they will remain for three days more, when they will take up their movement for Council Bluffs.

I have not heard of Colonel Leavenworth since I addressed you on the 19th ultimo, enclosing copies of letters from him and from Mr. Pilcher to Major O'Fallon; I calculate, however, on hearing, in less than a week, the result of his enterprise against the Ricaree Indians, which will determine me with regard to pushing Colonel Chambers's detachment through by land. In the mean time I have prepared transport boats, and shall send off the detachment, with their provisions and stores, by water, as I shall have it in my power to detach at any time a command from the boats to be pushed on by land, should circumstances above render it necessary. I have adopted this mode, because, if the troops transport their own supplies, it will save the United States some six thousand dollars; and the fact of their setting out by water will retard their arrival at the Bluffs but a little, should the state of affairs in the upper country make it necessary that they should ultimately go by land, as all they progress by water will so much shorten the distance.

The detachment, as you will see by the enclosed report, is weaker than you anticipated; forty-five are reported sick, but none are seriously indisposed, except the adjutant; all the men will be able to move with the detachment.

The detachment is deficient in many articles of clothing, particularly shoes, a supply of which, I fear, must be purchased here, as the men cannot ascend the river bare-footed.

Every thing justifies the belief that Colonel Chambers's movement will be as prompt and successful as you anticipate. Late advices from the Upper Mississippi represent every thing to be tranquil in that quarter; some letters and returns from thence, addressed to me, are sent to you, under cover, by Lieutenant Russell, who will deliver this communication.

I will avail myself of every opportunity to keep you advised of every circumstance of interest within my command.

With very great respect, sir, I have the honor to be, your obedient servant,

H. ATKINSON, *Brig. Gen. U. S. A.*

Major General E. P. GAINES, *United States' Army, Louisville.*

Brigadier General Atkinson to Major General Brown.

HEAD-QUARTERS, WESTERN DEPARTMENT,

SIR: LOUISVILLE, KY., *July* 12, 1823.

I have this moment received from Governor Clark a letter, of which the enclosed is a copy.

I have but little doubt the force which Colonel Leavenworth has taken with him for the purpose of chastising the Ricarees, for the outrage committed on General Ashley's party, will be ample for the object.

Two hundred and twenty soldiers, eighty men of the traders, with thirty men under General Ashley, and, perhaps, two to three thousand Sioux Indians, are sufficient to destroy any Indian force that the upper tribes can bring against them.

Until the result of the expedition under Colonel Leavenworth is known, it is unnecessary to give any orders touching the matter, particularly as the contest will be long over before reinforcements could reach the scene of action. Besides, the garrisons on the Upper Mississippi are too weak, at present, to draw detachments from them, only in cases of great necessity; and the detachments of recruits under Captain Fowle will reach the Bluffs in August.

Should Colonel Leavenworth fail, measures shall be promptly taken to meet occurrences.

In the mean time, I shall be glad to receive from you such instructions touching the matter as may be deemed advisable.

With great respect, sir, I have the honor to be, your most obedient servant,

H. ATKINSON,

Brig. Gen. U. S. Army, commanding Western Department.

Maj. Gen. BROWN, *Commander-in-chief, Washington City.*

Governor Clark to General Atkinson.

DEAR GENERAL: ST. LOUIS, *July* 4, 1823.

I have merely time to say to you that I have received, this day, a letter from Major O'Fallon, stating that General Ashley was attacked by the Ricarees, on the morning of the 2d of June, (after a friendly intercourse of two days,) and defeated with the loss of fourteen men killed and nine wounded. The general retreated down about twenty-five or thirty miles, and remained with thirty men in one boat; sent his other boat and the disaffected and wounded to Fort Atkinson, with a statement of his situation to Colonel Leavenworth and Major O'Fallon. On the 22d, Colonel Leavenworth set out up to the Ricarees, with two hundred and twenty regular troops, and about eighty men of the companies, to be joined by a large party of Sioux. The colonel has taken with him cannon, as the Ricarees are strongly fortified. I have but little doubt of the success of our troops, if the Indians remain in their towns to fight, which is very doubtful if they discover the strength of the force.

WM. CLARK.

Gen. H. ATKINSON.

Brigadier General Atkinson to Major General Brown.

HEAD-QUARTERS, WESTERN DEPARTMENT,

SIR: LOUISVILLE, KY., *July* 13, 1823.

Since addressing you, yesterday, on the subject of Governor Clark's letter, relative to the attack of the Ricaree Indians on General Ashley's party, I have, on reflection, ordered Captain Fowle to march across the country to Council Bluffs, with one hundred men of the detachment of recruits of the 6th regiment. I think the state of affairs on the Upper Missouri calls for the measure; not that I think there is much to be apprehended as to the failure of Colonel Leavenworth in the object of his march, or of hostile movements on the part of other tribes; yet an early addition of one hundred men to the remaining garrison at Council Bluffs will give complete security to the post; and the promptness with which they will be marched across the country will impress the Indians in that quarter with a just idea of our capacity to chastise every outrage they may commit.

I have directed that the detachment be provided with pack-horse transportation, as that mode will greatly facilitate their movement, and be much less expensive than employing wagons. The horses may be purchased for from thirty to fifty dollars each, and, after performing the trip, be on hand as public property.

Enclosed is a copy of my order to Captain Fowle, which will give you a full knowledge of the measures I have taken. The order will reach Captain Fowle in five or six days. It was sent by an officer of the 5th regiment, who went in a steamboat that sailed to-day for St. Louis, at about which time the detachment will also reach there.

I shall pay due attention to every thing relating to affairs on the Missouri, and take prompt steps to meet exigencies. For the present, I deem it unnecessary to do more than I have ordered.

With great respect, sir, I have the honor to be, your most obedient servant,

H. ATKINSON,

Brig. Gen. U. S. Army, commanding Western Department.

Maj. Gen. BROWN, *Commander-in-chief, Washington City.*

General Atkinson to Captain Fowle.

SIR: HEAD-QUARTERS, WESTERN DEPARTMENT, LOUISVILLE, *July* 13, 1823.

In consequence of Col. Leavenworth having moved with the principal part of the 6th regiment against the Ricaree Indians, who have lately committed an outrage on General Ashley's party, it is very important that you should reach Council Bluffs with the detachment of recruits of the 6th regiment under your command as early as possible.

As the voyage by water to your point of destination is tedious, and will necessarily protract your arrival, you will march from St. Louis, by the way of Clay court-house, and thence along Gray's Trace, with one hundred picked men of the detachment, for Council Bluffs. The residue of the detachment you will leave under an officer or two, to ascend the Missouri, with one or two of the transport boats, and the whole of the baggage of the detachment.

Captain Brant, assistant quartermaster general at St. Louis, is ordered to furnish the necessary transportation for your march, which should be as limited as possible; as pack-horse transportation will both facilitate your movements and curtail expenses, you will adopt that mode. Eighteen or twenty horses, I presume, will be ample, as you will find at the Bluffs all necessary supplies, and you will want to take little else with you from the upper settlements han some eight or ten days' provisions.

Lieut. Brown, assistant commissary, is instructed to furnish provisions for the land detachment, both at St. Louis and at the upper settlements.

Depending on your promptness and energy for the execution of the objects above stated,

I am &c.,

H. ATKINSON,

Brig. Gen. U. S. A. commanding Western Department.

Capt. FOWLE, *5th reg't. infantry, Missouri.*

General Gaines to General Brown.

HEAD-QUARTERS, WESTERN DEPARTMENT,

GENERAL: LOUISVILLE, KENTUCKY, *August* 16, 1823.

I received last night the report of Colonel Leavenworth, announcing his intention to visit the Ricaree Indians, dated June 18, 1823.

This report, which I enclose herewith, contains no material fact differing from those transmitted by General Clark, Major Foster, and Major O'Fallon, referred to in my letter to you of the 26th of last month, excepting only that the force intended to be sent by the colonel is something less than that reported to have accompanied him.

He states that his party will be about two hundred strong in rank and file, and adds, "if necessary, it is expected that we can raise a considerable auxiliary force amongst the Sioux."

As Colonel Leavenworth will probably report by express the result of his movement, I have reason to expect it in the course of the next two weeks.

Very respectfully, I have the honor to be,

E. P. GAINES, *Major General by brevet.*

To Major General JACOB BROWN, *General-in-chief.*

Colonel Leavenworth to General Atkinson.

DEAR SIR: FORT ATKINSON, *June* 18, 1823.

I have just received a letter from General Ashley, giving information of an attack upon his party by the Ricaree Indians, by which it appears that not only the survivors of his party, but many other American citizens, are in the most imminent danger. A copy of the general's letter I herewith enclose, and also a copy of an order which I have issued on the subject. I can only add that we shall leave here for our destination as soon as possible, which, I hope, will be to-morrow or next day. We shall take two six pounders and small swivels, and perhaps a howitzer. My party will be about two hundred strong in rank and file. If necessary, it is expected that we can raise a considerable auxiliary force amongst the Sioux. We shall do all we can to support the honor of our regiment, and hope, with the blessing of Heaven, to meet the approbation of our superiors and of our country. We go to secure the lives and property of our citizens, and to chastise and correct those who have committed outrages upon them. It will be our endeavor to do this as peaceably as the nature of the circumstances which may occur will admit.

I have the honor to be, with perfect regard, your obedient servant,

H. LEAVENWORTH, *6th regiment.*

Brigadier General H. ATKINSON, *Comd'g Western Department, Louisville, Ky.*

General Ashley to Major B. O'Fallon.

ON BOARD THE KEEL-BOAT YELLOW STONE,

DEAR SIR: *(twenty-five miles below the Ricaree towns,) June* 4, 1823.

On the morning of the 2d instant, I was attacked by the Ricaree Indians, which terminated with great loss on my part. On my arrival there (the 30th May) I was met very friendly by some of the chiefs, who expressed a great wish that I would stop and trade with them. Wishing to purchase horses to take a party of men to the Yellow Stone river, I agreed to comply with their request, and proposed that the chiefs of the two towns would meet me that afternoon on the sand beach, when the price of horses should be agreed upon. After a long consultation among them-

selves, they made their appearance at the place proposed. I made them a small present, and proposed to purchase forty or fifty horses. They appeared much pleased, and expressed much regret that a difference had taken place between some of their nation and the Americans—alluding to the fray which recently took place with a party of their men and some of the Missouri Fur Company, which terminated in the loss of two of the Ricarees, one of whom was the son of the principal chief of one of the two towns. They, however, said that all the angry feelings occasioned by that affray had vanished, and that they considered the Americans as friends, and would treat them as such; that the number of horses I wanted would be furnished me for the price offered.

The next morning we commenced trading, which continued until the evening of the 1st instant, when preparations were made for my departure early the next morning. My party consisted of ninety men, forty of whom were selected to take charge of the horses, and cross the country by land to the Yellow Stone. They were encamped on the bank, within forty yards of the boats. About half-past three o'clock in the morning I was informed that one of my men had been killed, and, in all probability, the boats would be immediately attacked. The men were all under arms, and so continued until sunrise, when the Indians commenced a heavy and well directed fire from a line extending along the picketing of their towns, and some broken grounds adjoining, about six hundred yards in length. Their shot were principally directed at the men on the beach, who were making use of the horses as a breastwork. We returned the fire, but, from the advantageous situation of the Indians, did but little execution. Finding their fire very destructive, I ordered the steersmen to weigh their anchors and lay to shore, for the purpose of embarking the men; but, notwithstanding I used every measure in my power to have the order executed, I could not effect it. Two skiffs which would carry thirty men were taken ashore; but, in consequence of a predetermination on the part of the men on land not to give way to the Indians as long as they could possibly do otherwise, they (with the exception of seven or eight) would not make use of the skiffs when they had an opportunity of doing so: in about fifteen minutes from the time the firing commenced, the surviving part of the men were embarked; nearly all the horses killed or wounded. One of the anchors had been weighed, the cable of the other cut, and the boats dropping down the stream.

The boatmen, with but few exceptions, were so panic struck, that it was impossible to get them to expose themselves to the least danger—indeed, for some time, to move from their seats; I ordered the boat landed at the first timber, for the purpose of putting the men and boats in a better situation to pass the villages in safety; when my intentions were made known, to my surprise and mortification, I was told by the men (with but few exceptions) that, under no circumstances, would they make a second attempt to pass without a large reinforcement. Finding no arguments that I could use would cause them to change their resolutions, I commenced making arrangements for the security of my property. The men proposed, if I would descend the river to this place, fortify the boats, or make any other defence for their security, that they would remain with me until I could receive aid from Major Henry, or from some other quarter. I was compelled to agree to the proposition. On my arrival here, I found them as much determined to go lower. A resolution had been formed by most of them to desert. I called for volunteers to remain with me, under any circumstances, until I should receive the expected aid. Thirty only volunteered; among them were but five boatmen. Consequently, I am compelled to send one boat back; after taking a part of her cargo on board on this boat, the balance will be stored at the first fort below.

My loss in killed and wounded is as follows:

Killed.	*Wounded.*
John Matthews,	Reece Gibson, (since dead.)
John Collins,	Joseph Monse,
Aaron Steevens, (killed at night in the fort.)	John Lawson,
James McDaniel,	Abm. Ricketts,
Westley Piper,	Robt. Tucker,
George Flagen,	Joseph Thompson,
Benjn. F. Sweed,	Jacob Miller,
James Penn, Jr.,	Danl. McClain,
John Miller,	Hugh Glass,
John S. Gardner,	Augustus Dufien,
Ellis Ogle,	Willis, (black man.)
David Howard.	

I do not conceive but two of the wounded in danger. How many of the Indians were killed, I am at a loss to say; I think not more than seven or eight; four or five were seen to fall on the beach. I have thought proper to communicate this affair as early as an opportunity offered, believing that you would feel disposed to make these people account to Government for the outrage committed. Should that be the case, and a force sent for that purpose in a short time, you will oblige me much if you will send me an express, at my own expense, if one can be procured, that I may meet and co-operate with you. From the situation of the Indian towns, it will be difficult for a small force to oust them without a six pounder. The towns are newly picketed in with timber, from six to eight inches thick, twelve to fifteen feet high; dirt in the inside thrown up about eighteen inches. They front the river, and immediately in front of them is a large sand-bar, forming nearly two-thirds of a circle, at the head of which (where the river is very narrow) they have a breastwork made of dry wood; the ground on the opposite side of the river is high and commanding. They have about six hundred warriors, I suppose; three-fourths of them armed with London fusees; others with bows and arrows, war axes, &c.

I expect to hear from Major Henry (to whom I sent an express) in twelve or fifteen days; during that time I shall remain between this place and the Ricaree towns, not remaining any length of time in one place, as my force is small—not more than twenty-three effective men.

Your friend and obedient servant,

WM. H. ASHLEY.

On board the boat that descends are five wounded men; any assistance that you can afford them I will feel under obligations for.

Directed to Major B. O'Fallon, *Indian Agent; or to the commanding officer at Fort Atkinson.*

HEAD-QUARTERS, SIXTH INFANTRY, FORT ATKINSON, *June* 18, 1823.

ORDERS.

The colonel commanding has to announce to his command that the Ricaree Indians have attacked a party of Americans under the command of General William H. Ashley, Lieutenant Governor of the State of Missouri, who had a regular license from the Government of the United States, agreeably to the laws of Congress for regulating trade and intercourse with the Indians. Fourteen of General Ashley's party have been killed, and nine wounded. The lives of more than one hundred American citizens, now in the Indian country, are in the most imminent danger. General Ashley and about thirty men of his party still bravely remain in the face of their savage enemy, and the general asks for assistance. The colonel commanding deems it his duty to afford assistance to the survivors, and to chastise those Indians for the outrage which they have committed; and on this subject there is the most perfect coincidence of opinion between the colonel commanding and Major Benjamin O'Fallon, the United States' agent for Indian affairs on the river Missouri. The colonel commanding is sure of the zealous co-operation and efficient support of Major O'Fallon, and the officers of the regiment generally which he has the honor to command.

Companies A, B, D, E, F, and G will be prepared, as soon as possible, to march at a moment's warning. After the departure of the colonel commanding, the command of the residue of the regiment of the post will devolve upon Major Foster. It is hoped and expected that the most zealous exertions will be made by every individual of the regiment left here to save the crops, and preserve the public property. In Major Foster's zeal and efficiency, and those generally who will remain, the colonel commanding has the fullest confidence. He is aware that their duties will be arduous, perhaps more so than those who will ascend the river. If any glory should be acquired, the regiment generally will share it. If those who ascend the river are unfortunate, they must bear it alone.

The acting post quartermaster will immediately engage the keel-boat called the Yellow Stone Packet, and her patroon, and as many of the efficient men with her as practicable. In case he succeeds in engaging the boat, her cargo will be immediately stored. One of the public boats will be selected, and immediately put in good order to ascend the river. A future order will be given on the subject of ammunition and subsistence.

H. LEAVENWORTH, *Colonel commanding.*

General E. P. Gaines to Major General Jacob Brown.

HEAD-QUARTERS, WESTERN DEPARTMENT,

NEAR LOUISVILLE, KENTUCKY, *August* 24, 1823.

GENERAL:

I have the pleasure to transmit herewith a copy of a letter from General Atkinson, with an extract from General Ashley's, affording more satisfactory information as to the probable strength of the auxiliary force expected to join Colonel Leavenworth, and of the prospect of success against the Ricarees, than I have heretofore had it in my power to obtain.

Judging from my recollection of the reputed distances of the several places mentioned by General Ashley, I infer that, at the date of his letter, (19th July, 1823,) the force under Colonel Leavenworth was within two hundred miles of the Ricarees; allowing him, therefore, twelve days for the accomplishment of his movement, there is reason to believe that he must have given them a trial of his strength about the 1st of the present month. Should his white and red auxiliaries have proved to be firm and faithful, there is much reason to hope for the most favorable result.

With great respect, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, com'dg.*

Maj. Gen. JACOB BROWN, *General-in-chief, Washington City.*

Brigadier General Atkinson to Major General Gaines.

HEAD-QUARTERS, RIGHT WING, WESTERN DEPARTMENT,

ST. LOUIS, *August* 15, 1823.

SIR:

I have received some unofficial information from the expedition under Colonel Leavenworth, as late as the 19th ultimo, by a letter addressed to Major O'Fallon from General Ashley, an extract of which is enclosed herewith.

A Mr. Smith, who came down with the proceeds of the trappers and hunters of General Ashley, from the mouth of the Yellow Stone, gives also some verbal news to the following effect, viz: he left the Yellow Stone with Major Henry, who, with all the party under him, except twenty men, left in the fort at the mouth of the Yellow Stone, proceeded to join General Ashley at the mouth of the Chienne river. On passing the Ricaree village, the Ricarees came down on the beach, and invited them, in a friendly manner, by signs, with buffalo robes, to land. Major Henry, knowing the deception they were attempting to practise upon him, for the purpose of getting him into their power, proceeded down the river, without holding any intercourse with them.

Mr. Smith informs me that Colonel Leavenworth was progressing on very well, and expected to accomplish the object of his movement. I, however, think that the Ricarees will, on hearing of his approach, move off to the Mandans, or some distant point. I have no idea they will remain in their villages for the purpose of defending themselves there; consequently, it will require another season to bring those Indians to a proper account for their transgressions.

I shall be prepared to push the first regiment on, upon its arrival here.

I have, &c.,

H. ATKINSON, *Brig. Gen. U. S. Army.*

Maj. Gen. GAINES, &c.

Extract of a letter from General Ashley to Major O'Fallon, dated

FORT BRASSAUX, *July* 19, 1823.

I remained at and in the neighborhood of the Chienne river until Major Henry joined me. We then concluded that, should troops be sent up the river this year to fight the Ricarees, they would not ascend until fall,

when it would be too late to do any thing in our business this year. Accordingly we concluded to drop down to the mouth of the Yeton river, and, if possible, purchase as many horses as would enable us to fit out the party intended to be sent to the Columbia. Understanding that the Sioux Indians were in the neighborhood, I came here a few days since to get horses from them. To my great satisfaction, on my arrival I was informed of the approach of Colonel Leavenworth with two hundred men. He will pass this place to-day with his command. I leave here this evening for my camp, which is about one hundred and twenty miles above, and will have things ready to join him with eighty men by the time he reaches that point. Some of the gentlemen of the Missouri Fur Company have joined him with forty men; from four to five hundred Sioux Indians are encamped about twenty miles above this place, waiting the colonel's arrival, and intend co-operating with him. Our whole force will be about eight hundred men, which will be sufficient to destroy the greater part of the Ricarees in a very short time after reaching their towns, should they not escape before that time. It is said that they have proposed to the Mandans to permit them to move up and live with them, which it is supposed the Mandans will consent to; but, if so, very contrary to the wishes of the Grosventres.

W. H. ASHLEY.

To Major O'Fallon.

General Gaines to the Acting Adjutant General.

Head-quarters, Western Department,

Sir: Near Louisville, Kentucky, *September* 1, 1823.

Accompanying this, you will receive, for the information of the general-in-chief, the copy of a letter from Colonel Leavenworth to Major O'Fallon, dated at Fort Recovery, 21st of July, 1823.

The letter referred to by Colonel Leavenworth from Mr. Pilcher was transmitted to the Department of War by the last mail. It contains a detailed account of the attack by the Blackfoot Indians on the trading and hunting parties under Messrs. Immel and Jones; and a report that the Mandans had invited the Ricarees to their nation, one hundred and thirty miles above the Ricarees, and had promised to protect them against us. Colonel Leavenworth's position at the date of his letter is not described in any paper in my possession; but I judge it to be within one hundred and fifty miles of the Ricarees. I am persuaded, therefore, that his report of the result of his movement may reach this place by the latter end of next week, as arrangements are made to convey it from Fort Atkinson by express. Until the receipt of that report, no other measures than those which I have heretofore adopted and reported are deemed necessary for the concentration of supplies, or of force, beyond that which is already in motion.

Should Colonel Leavenworth fail to restore peace with the Ricarees, or should he meet with any serious check from the Ricarees or their allies, the detachment of the 1st and 7th infantry, under General Atkinson, will immediately be pushed up the Missouri as far as the season will permit and the service may require, and may ultimately return to and winter at Council Bluffs. And as he will stand in need of several boats to aid him in his operations against the Indians, he will obtain a supply at St. Louis, and go from thence by water with the whole or principal part of his force, taking with him, and affording protection to, the subsistence and other supplies necessary for his command.

Should the Blackfoot Indians, with the Mandans and the Sioux of the Missouri, or either of the two last-mentioned nations, unite with the Ricarees, as it is rumored they will, I shall, in this case, order the 4th infantry to Pensacola, and the four companies of the 1st infantry near Baton Rouge, (after posting a company of the 7th from Cantonment Jesup at Baton Rouge,) in October, or early in November next, in order to enable them to put themselves in temporary huts at Fort Osage for the winter, or, if necessary, to profit by the ice and snow of February and March, to proceed in sleighs to the Bluffs in time for the whole force to leave that place by the middle of April.

On the subject of rations, I have only to remark that, with an assistant commissary possessing the zeal and ability of Captain Brown, and in a country abounding in provisions as the State of Missouri is known to be, and of the cheapest and best kind, I feel convinced that the requisite supplies will be, as they have been, obtained whenever called for.

With respect, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, comd'g.*

To the Acting Adjutant General, *Washington City.*

Colonel Leavenworth to Major O'Fallon.

Dear Major: Fort Recovery, *July* 21, 1823.

Your favor of the 10th instant I have this minute received, and I assure you with great pleasure; I was also highly gratified that Majors Woolley and Ketchum came on to join us.

Mr. Pilcher I have requested to write you fully as to Indian affairs; and he is so much better informed than myself, that I shall leave that subject principally to him. He is, I find, very efficient, and has conducted greatly to my satisfaction.

These Yantons appear to be zealously determined to co-operate with us, but I have some doubts as to the continuance of their ardor. We have been obliged to make a halt here of three days, to wait for Mr. Pilcher, and to repair damages sustained from wind and water. After so many disasters, I am happy to inform you that we are yet efficient; perhaps as much so as when we set out. Our powder was *miraculously* preserved; several casks, which were under water all night, were entirely uninjured. I have borrowed ten rifles of Mr. Pilcher, and can have twenty-three more of General Ashley, but eight only are necessary to complete. Powder and lead I can obtain in ample quantities. If the Ricarees and Mandans unite, I shall proceed to the Mandans, and, if they keep the Ricarees in their village, shall attack them. We shall do our best to obtain a victory. The honor of the American arms must be supported at all events; but I can plainly perceive our force is not sufficient to inspire that degree of awe and respect amongst the Indians which I would wish. We make but a small show on a large prairie, by the side of four or five hundred mounted Indians. If we can obtain a fair fight, our superiority will probably be more apparent.

As I have to write on the ground, in a heavy wind, I fear you will not be able to read my letter. You will, however, have the goodness to excuse inaccuracies, and my want of time and means to send you a fair copy.

I am, dear sir, truly, your friend and servant,

To Major B. O'Fallon. H. LEAVENWORTH, *Col. U. S. A.*

Brevet Major General E. P. Gaines to Major General Brown.

GENERAL: HEAD-QUARTERS, WESTERN DEPARTMENT, *September* 9, 1823.

I have received, through your aid-de-camp, Lieutenant E. Kirby, your letter of the 25th, in reply to mine of the 10th of last month.

Not having received an acknowledgment of the receipt of mine of the 26th July, I was induced to make inquiry at the post office; where I found that the mail, robbed near Lexington, in this State, about the 28th July, (an account of which, I presume, you have seen in the newspapers,) must have contained the letter in question. Apprehending, therefore, that it was purloined by Mr. Hanover, *alias* Rees, I send herewith a duplicate, omitting the copy of a letter from Major O'Fallon, and that from Major Foster; the former having passed through the newspapers, with the substance of the latter.

Deeming the subject to be an important one, I fortunately transmitted to the Department of War on the 28th July, copies of my letter and its enclosures; the receipt of which has been acknowledged. I therefore send you the enclosed, merely to assure you that I had not omitted to give you early information of my measures.

Very respectfully, I have the honor to be,

E. P. GAINES,

To Maj. Gen. BROWN, *Washington.* *Major General by brevet, commanding, &c.*

General Gaines to General Brown.

HEAD-QUARTERS, WESTERN DEPARTMENT,

GENERAL: LOUISVILLE, KENTUCKY, *July* 26, 1823.

The report made to you the 12th instant by General Atkinson, that General Ashley with his trading company had been attacked by the Ricaree Indians, and defeated, with the loss of fourteen killed and nine wounded, is confirmed by letters received last night from Major O'Fallon and Major Foster, of which I enclose herewith copies (numbered 1 and 2,*) with copies of instructions to General Atkinson and Colonel Chambers (Nos. 3 and 4.)

From Major O'Fallon's letter you will perceive that other outrages of a similar character have been committed by the Blackfoot Indians, who have killed Messrs. Jones and Immel, (the latter late of the army of the United States,) with five other persons.

It appears that on the 22d of last month Colonel Leavenworth marched with two hundred and twenty men, regular troops, and eighty men of the trading companies, to be joined by a large party of Sioux warriors, against the Ricarees; who being strongly fortified, the colonel took with him some cannon.

The Ricaree villages are situated about seven hundred miles above Council Bluffs, and are supposed to contain between six and seven hundred warriors. Should they be able to turn out six hundred warriors, well armed and united as they are reported to be, the movement of Colonel Leavenworth, taking into view the great distance, and the several intermediate nations near which he must necessarily pass, cannot but be considered as very hazardous, as any disaster on our part would be witnessed or very soon heard of by the numerous adjacent nations of Indians; and a repulse, attended with the loss of but few lives, would be to us a serious disaster, as it would tend to undo most of what has been done by the United States on the minds of the Indians, since the first occupancy of the post up the Missouri.

The unprovoked outrages of the Ricarees call for exemplary punishment; but a premature effort on our part will but widen the breach between us, and enhance the evil we thus attempt to correct. I trust the report of Colonel Leavenworth, which is not yet received, will give a more satisfactory view of his measures and prospects of success than I am at present able to afford. I have, however, great confidence in the discretion and conduct of that officer; and I am persuaded that the circumstances of the case justified the step which he has taken. But, be this as it may, the step is taken, and the force engaged must be supported.

For this purpose I have ordered General Atkinson to repair to the Missouri, where I have directed six companies of the 1st and four of the 7th infantry to be placed under his orders; with which, and the disposable part of the 6th, he will be able not only to support Colonel Leavenworth, but to punish the Ricarees, and arrest the progress of Indian hostility in that quarter, or at least to prevent its extension to the Pawnees (said to be nearly allied to the Ricarees) and other nations east and south thereof.

Two steamboats are employed to transport the six companies of the 1st regiment from Baton Rouge to St. Louis. This will occasion an expense of about $4,000. For the payment of this sum, and to meet the expense of transportation, &c. of these companies from St. Louis, and the four companies of the 7th from Arkansas to Council Bluffs, I have to request that the quartermaster general may be instructed to forward to the assistant quartermaster at St. Louis the sum of $12,000, which is deemed to be necessary to meet the expense of transportation, &c. which will be incurred in the movement to Council Bluffs.

Very respectfully, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, comd'g.*

To Maj. Gen. JACOB BROWN, *General-in-chief, Washington.*

No. 3.

General Gaines to General Atkinson.

HEAD-QUARTERS, WESTERN DEPARTMENT,

GENERAL: LOUISVILLE, KENTUCKY, *July* 26, 1823.

You will repair to the Missouri, and assume the command assigned you by my department order of this date,

The immediate object of this command is to support the detachment under Colonel Leavenworth, and to give a timely check to the hostile spirit which has recently manifested itself among the Indians of the Upper Missouri, and at the same time to arrest or punish the Ricarees and other warriors by whom thirty-three of our citizens have recently been killed or wounded.

Six companies of the 1st infantry, under Colonel Chambers, are this day instructed to join you at St. Louis, to act under your orders; to which will be added, should it be advisable, four companies of the 7th infantry. These will be directed to be held in readiness subject to your orders, to join you at such time and place as you may find it necessary to direct.

* See ante pages, 579 580.

Should the information which may reach you at or beyond St. Louis, in your judgment, suggest the propriety of your being supported by an additional force, you will, in this event, make application to the Governor of the State of Missouri for a few companies, or, if necessary, a battalion of volunteer mounted riflemen. But it is not expected that this force will be required without satisfactory evidence should meet you of some new act of hostility on the part of the Indians *below the Ricaree villages.*

You will order from St. Louis to Fort Atkinson a supply of subsistence and ordnance stores, which, added to those now at that post, shall be sufficient for the regular troops destined for that post, during a period of nine months from the 15th of October next, at which time the 1st infantry should reach that post. And should it become necessary to obtain volunteers, you will in that event order up additional supplies, sufficient for such additional force during the time for which they may be employed, which should be for nine months, unless sooner discharged. And you will order the purchase of whatever subsistence may be necessary to supply any deficiency that may be found in the subsistence department at St. Louis, to enable you to carry these measures into effect.

In the discharge of these duties you will exercise a sound discretion, governing your movements and measures by the facts and circumstances that may be disclosed to you as you proceed, and by the instructions heretofore addressed to you, and in obedience to the "general regulations for the army."

You will keep me advised of your measures, and of the occurrences that you may deem interesting, connected with the command assigned you.

With great respect, I have the honor to be,

E. P. GAINES, *Major General by brevet, comd'g.*

To Brigadier General H. ATKINSON, *U. S. Army.*

No. 4.

General Gaines to Colonel Chambers.

HEAD-QUARTERS, WESTERN DEPARTMENT,

SIR: LOUISVILLE, KENTUCKY, *July* 27, 1823.

Accompanying this you will receive orders to repair, with six companies of your regiment, to St. Louis, on board of the steamboats the *Favorite* and *Magnet*, to report to General Atkinson.

The recent hostility of the Ricarees, and other nations of Indians up the Missouri, has rendered it necessary to assemble a force on that river to support the 6th infantry; the disposable part of that regiment having marched a month since against the Ricarees. Should the spirit of hostility, as there is reason to apprehend, extend itself to some of the neighboring tribes, the remaining part of your regiment will, in that case, after receiving recruits for completing the regiment, be ordered to follow you. For the present, however, you will leave Lieutenant Colonel Taylor in command, who will probably be joined by two companies of the 4th infantry.

General Atkinson will enclose to you the agreements made by him with the steamboats for your transportation, to which you will require particular attention on the part of the commanders, as well as on the part of the troops.

I regret to find that the principal part of your subsistence has been hauled out to your summer cantonment. You will not, however, delay your movement so long as to bring back any part of that supply, as most of it will be wanted out there; and as subsistence can be obtained on the lowest terms at St. Louis, it is not desirable that you should take with you the quantity mentioned in my order of yesterday's date. You need not take with you more than a supply for one month or six weeks.

Wishing you health, &c., I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, comd'g.*

Colonel CHAMBERS, *1st United States Infantry.*

General Gaines to the Adjutant General.

HEAD-QUARTERS, WESTERN DEPARTMENT,

SIR: NEAR LOUISVILLE, KENTUCKY, *September* 13, 1823.

You will receive, herewith, for the information of the general-in-chief, a copy of a letter from General Atkinson, dated at St. Louis, the 5th instant, reporting the arrival at that place of the six companies of the 1st infantry, destined for the Upper Missouri.

I regret that it is not yet in my power to communicate the result of the expedition under Colonel Leavenworth, nothing having been received by me from that officer since the date of the letter referred to in mine of the 30th of last month.

Respectfully, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, comd'g.*

To the ADJUTANT GENERAL U. S. ARMY, *Washington City.*

General Gaines to General Atkinson.

HEAD-QUARTERS, RIGHT WING, WESTERN DEPARTMENT,

SIR: ST. LOUIS, *September* 5, 1823.

I have the honor to inform you that two companies of the 1st regiment, under Major Whartenby, arrived at this place from Baton Rouge on Friday evening last, and that four companies came up on Tuesday, under Colonel Chambers.

The whole are now encamped a short distance above the city, where they will remain for three days more, when they will take up their movement for Council Bluffs.

I have not heard of Colonel Leavenworth since I addressed you on the 19th ultimo, enclosing copies of letters from him and from Mr. Pilcher to Major O'Fallon. I calculate, however, on hearing in less than a week the result of his enterprise against the Ricaree Indians, which will determine me with regard to pushing Colonel Chambers's detachment through by land. In the mean time, I have prepared transport boats, and shall send off the detachment with their provision and stores by water, as I shall have it in my power to detach at any time a command from the boats to be pushed on by land, should circumstances above render it necessary. I have adopted this mode, because if the troops transport their own supplies, it will save the United States some $6,000; and the fact of

their setting out by water will retard their arrival at the Bluffs but a little, should the state of affairs in the upper country make it necessary that they should ultimately go by land, as all they progress by water will so much shorten the distance.

The detachment, as you will see by the enclosed report, is weaker than you anticipated. Forty-five are reported sick, but none are seriously indisposed except the adjutant. All the men will be able to move with the detachment.

Every thing justifies a belief that Colonel Chambers's movement will be as prompt and successful as you anticipated. Late advices from the Upper Mississippi represent every thing to be tranquil in that quarter. Some letters and returns from thence addressed to me are sent to you under cover by Lieutenant Russell, who will deliver this communication.

I will avail myself of every opportunity to keep you advised of every circumstance of interest within my command.

With very great respect, &c.,

H. ATKINSON, *Brig. Gen. U. S. Army.*

Major General E. P. GAINES, &c.

Major General Gaines to the Secretary of War.

SIR: HEAD-QUARTERS, WESTERN DEPARTMENT, *September* 22, 1823.

By yesterday's mail I forwarded to the adjutant general's office a copy of Colonel Leavenworth's report of the satisfactory result of his expedition against the Ricarees; intending to transmit to you by the same conveyance the original articles of a treaty of peace entered into by him with that nation: but I had omitted to allow myself time, prior to the departure of the mail, to prepare or obtain copies of the papers which it appeared to be proper should accompany the treaty: and I have now the honor to enclose them herewith, viz:

No. 1. The report of Colonel Leavenworth.

No. 2. The treaty with the Ricarees.*

No. 3. The order of Colonel Leavenworth, noticing the conduct of the officers and men of his command on the expedition.

No. 4. Letter addressed by Colonel Leavenworth to the Ricarees, after they had abandoned their villages.

No. 5. Letter from General Atkinson, dated September 13, 1823.

I have directed General Atkinson to take measures to ascertain the temper and views of the Sioux, and their motives for abandoning our troops at the time when their presence and aid were most wanted; and to keep an eye upon the Mandans and Ricarees. I have also directed him to make his arrangements with a view to the chastisement of the Blackfoot Indians in the course of the ensuing season—a measure which appears to me to be essentially necessary for the protection of our citizens engaged in the Indian trade, as well as our exploring parties in that quarter. Should this measure be approved, I cannot but think it proper that the 1st regiment of infantry should take post at Council Bluffs for the winter.

Abundant supplies of beef and pork may be driven to that place in the month of November, and there salted and dried for the expedition; and a sufficient quantity of corn may at the same time be kiln-dried or parched, to supply any deficiency in the article, even should the river freeze up before the supply now in possession of the troops at Belle Fontaine should reach the Bluffs, which is doubtful. But of this article, the present year's crop of wheat at the Bluffs is reported to be sufficient for two hundred barrels of flour. Hence the actual deficit to be supplied by corn raised at the place (of which there is a promising crop) will be inconsiderable. The troops being thus enabled to leave the Bluffs at the first approach of good weather, after the breaking up of the ice in the spring, will have full time to effect the objects of the expedition before the return of cold weather. They can, moreover, attend better to every preparation for the expedition at the Bluffs than at Belle Fontaine, where the evils of grog-shops, desertions, &c. will lessen the efficiency of the troops, and retard every measure of preparation.

With the greatest respect, I have the honor to be,

E. P. GAINES, *Maj. Gen. by brevet, commanding.*

The Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

SIR: HEAD-QUARTERS, SIXTH REGIMENT, FORT ATKINSON, *August* 30, 1823.

I have the honor to inform you that the troops who lately visited the Ricaree towns returned to this post on the 27th instant.

We arrived before the Ricaree towns on the 9th of the present month. The Sioux Indians, who were with us, were met by the Ricarees a short distance from their towns, and a skirmish took place between them. The Ricarees maintained their ground, or rather drove the Sioux back, until the regular troops and General Ashley's men arrived and formed their line. The Ricarees were then immediately driven into their towns. The Sioux were so much scattered in front of the troops, that the latter were unable to deliver their fire without killing some of the Sioux, and therefore did not fire.

Our boats arrived subsequently, during the evening of the 9th, and our artillery was disembarked.

On the morning of the 10th, Captain Riley, with a company of riflemen, and Lieutenant Bradley, with a company of infantry, were ordered to take possession of a hill above the upper village. They immediately took a position there, within one hundred steps from the town, and in a position which screened them from the fire of the enemy from the towns. At the same moment Lieutenant Morris, with one six pounder and a 5½ inch brass howitzer, commenced an attack on the lower town. Sergeant Perkins, with one six pounder, was sent to report to Mr. Vanderburgh of the Missouri Fur Company. This six pounder was placed above the upper village. A brisk fire was continued upon the towns until three o'clock in the afternoon. The Sioux were in the mean time busily engaged in gathering and carrying off the corn of the Ricarees.

At eight o'clock Major Ketchum was also ordered to the upper village with his company. Between three and four o'clock the six pounder and the troops opposed to the upper village were withdrawn, and our whole force concentrated below the lower village, and the troops ordered to form for the purpose of collecting corn for their own use, as General Ashley's men had then been destitute of provisions for two days.

* Since writing this letter, I regret to find that I have either mislaid, or, in the hurry of preparing for the last mail, enclosed the original, in place of a copy of the Ricaree treaty, to the adjutant general's office.

E. P. G.

NOTE.—The treaty referred to above was not sent to Congress with this letter.

At this time a party of Sioux and a party of Ricarees, both on horseback, were discovered holding a parley on the hill beyond the upper town. It was also discovered that the Sioux were going off, though they had given no intimation of an intention to do so. The Ricarees sent out and begged for peace. They said that the first shot from our cannon had killed the celebrated chief called "Grey Eyes," who caused all the mischief, and that we had killed a great many of their people and of their horses. They were evidently very much terrified, and completely humbled. Being convinced of this, and supposing that the Government would be better pleased to have those Indians corrected than exterminated, and as the Sioux, amounting to about seven or eight hundred warriors, had left us in a very strange and unaccountable manner, it was thought best, under all the circumstances of the case, to listen to the solicitations of the Ricarees for peace, especially as it was understood that our round shot were nearly all expended; consequently, a treaty was made with them, a copy of which is enclosed. In making this treaty, I met with every possible difficulty which it was in the power of the Missouri Fur Company to throw in my way; and as Mr. Pilcher, their acting partner, had been appointed a special sub-agent to raise the Sioux against the Ricarees, he was able to give me great trouble.

In restoring to General Ashley the property taken, it was thought that the Indians did not perform their engagements on that subject as well as they were able to do, and they were threatened with an attack. Their principal chief (the Little Soldier) came to us and begged permission to withdraw his family from the village before we attacked, and he gave us the most conclusive evidence of his friendly disposition towards us. It was now late in the afternoon of the 12th; the 10th and 11th having been spent in action, and in negotiation and interchanging visits; our men frequenting the towns, for the purpose of trading for moccasins, &c.; and the Indians manifesting every symptom of having been thoroughly brought to a sense of their interest and duty, it was concluded to postpone the attack until morning, and the troops were dismissed from parade.

It had been ascertained by me that the Indians were so much alarmed by our threatening to again attack them, that they would probably run away and leave their villages. This, it was thought, would have an unfortunate effect upon the Indians, and make them more inclined to commit depredations upon the traders; and as the Little Soldier soon after sent out for General Ashley a few more buffalo robes, with a message that he could not possibly do more, and begging that we would have pity on them, I sent him word that I would not attack them; that it was not their property that we wanted; to make his people feel safe, and conduct themselves well, and they should not be hurt.

Early on the morning of the 13th we found the Ricarees had left their towns during the night. Major Ketchum, with his company, and company E, commanded by Lieutenant Bradley and Lieutenant Morris, with one six pounder, were ordered to take possession of the towns, and to suffer not the least article to be taken away, or the towns to be injured. A message was sent to call back the Indians, if possible, and to induce them to take possession of their towns; but they could not be found. It was evident that our artillery had been served with very great effect. The towns had been completely riddled. We found thirty-one new graves, and we found that several old ones had been opened, and the surface set thick with prickly pears to conceal the new dirt. We know that ten men, who were killed by the Sioux in the skirmish on the 9th, were buried in five graves; and we know, also, that more than one were buried in several of the other graves. From the best evidence which we could collect, it is supposed that more than fifty of their people were killed, and a great number wounded. Our messengers returned on the evening of the 14th, without having been able to find the Ricarees.

On the morning of the 15th we placed the mother of the late chief, Grey Eyes, (an aged and infirm woman, whom they had left in their flight,) in one of the principal lodges of the lower village; gave her plenty of provisions and water, and left her in the quiet possession of the towns and the property left by the Indians, except some corn which had been taken for the subsistence of the men. At about ten o'clock on the morning of the 15th the troops were embarked to descend the river, and our guard withdrawn, and every soul removed from the villages, except the woman before mentioned. All the boats were got under way nearly at the same time.

Before we were out of sight of the towns, we had the mortification to discover them to be on fire. There is no doubt but they have been consumed to ashes. Nor is there any doubt but that they were set on fire by one Mc Donald, a partner, and one Gordon, a clerk of the Missouri Fur Company.

If the nation has been deprived of the advantages which might have resulted from the magnanimity of her troops towards a fallen and an humbled enemy, it is chargeable to that company, or to those individuals who set those towns on fire. Had not this been done, there is no room to doubt but that the Ricaree Indians would in future have behaved as well towards our countrymen as any other Indians on the river. It is now my deliberate opinion that those Indians will be excited to further hostilities, if in the power of the Missouri Fur Company to effect it. It is understood that this company have withdrawn their trade from above the Sioux country. Not so with Messrs. Ashley and Henry; they have a small number of men and a large amount of property at the mouth of the Yellow Stone river, and they were deeply interested in the correction and pacification of the Ricarees. Their zeal and efficiency in aiding to chastise those Indians were conspicuous and highly honorable, and could have been excelled by nothing but the zeal of the Missouri Fur Company to prevent a pacification of them, after they were chastised and humbled into the dust.

We found the Ricaree Indians in two villages; the lower one containing seventy-one dirt lodges, and the upper village seventy dirt lodges; each village was enclosed with palisades or pickets and a ditch, and the greater part of the lodges had a ditch around the bottom, on the inside. These works, however, had been represented to be much stronger than what we found them to be.

During our operations we sustained no loss in men, and had but two wounded—Hugh Johnson, of General Ashley's command, and Smith, a private of Major Ketchum's company.

Our officers and men have returned in fine health and spirits, and it is well; for those left here are nearly all sick. Captain Fowle arrived here with eighty-five men (recruits) on the 28th instant.

Our spring wheat has done well, and all our crops are very good. No material losses will be sustained by our absence. In ascending the river we lost one boat and seven men drowned, and had another boat sunk by a storm. We lost one swivel and some ammunition and some provisions; a particular account of all which shall be soon forwarded, together with a statement of every item of expense.

I have been highly gratified with the officers and men of the regiment, and also with General Ashley and his command of eighty men, and intend to do myself the honor to make a more detailed and circumstantial account of all our proceedings, and of what was done by each; and hope that what has been done will meet the approbation of our superior officers and of the Government.

I have the honor to be, very respectfully, your obedient servant,

H. LEAVENWORTH, *Colonel, commanding 6th regiment.*

No. 3.

HEAD-QUARTERS, SIXTH INFANTRY, FORT ATKINSON, *August* 29, 1823.

ORDERS.

The colonel commanding is happy to announce to his command that the objects of the late expedition against the Ricaree Indians have been effected. The blood of our countrymen has been honorably avenged, the Ricarees humbled, and in such a manner as will teach them and other Indian tribes to respect the American name and character.

In effecting these objects, the duties which have been performed by every part of the regiment, as well those left at this post as those who ascended the river, have been arduous in the extreme; but those duties have been performed with a zeal, cheerfulness, and efficiency which is highly honorable to them, and which entitles them to the approbation of their country.

Where all have done well, and all have been zealous to contribute their whole and entire power to promote the public service, it is as delicate as it is difficult to mention individual instances; but that the combination of circumstances had enabled some to perform more than others, cannot be doubted. The colonel commanding has been highly gratified with the promptness and alacrity manifested by Major Woolley and Brevet Major Ketchum in joining the expedition, and equally so with their subsequent conduct. The efficiency of Captain Armstrong's company and the energies of his men have been preserved in an eminent degree. The captain has manifested his usual skill in the management of his company, and has given every reason to place the greatest confidence in the physical strength and force of his company; in this respect he has satisfied his commanding officer.

With Captain Riley the colonel commanding has been highly pleased; he has been skillful, discreet, and successful in the management of his men, and the boat, and the public property committed to his charge; his efficiency and promptness in the execution of orders have been conspicuous, and highly honorable to him.

Doctor Gale has not only performed his duty to the entire satisfaction of the commandant, but he has done more; he has frequently volunteered his services to perform important duties, and particularly in saving the property in the large boat, when she was sunk by a severe storm at night, he effected much, and in a manner highly gratifying to all who knew the circumstances. Although Lieutenant Wickliffe had the misfortune to lose the boat which was committed to his charge, it has been evident that his zeal for the good of the public service has been equal to that of any other gentleman with the expedition.

In every situation in which Lieutenant Bradley has been placed, he has given entire satisfaction, and would, no doubt, had he been put to a more severe trial.

To the gentlemen of the staff, generally, the commandant returns his thanks. Lieutenant Cruger has performed the duties of quartermaster and assistant commissary in the most correct and acceptable manner, and, in addition, rendered important service by volunteering his services as an extra adjutant to the Missouri legion during our operations.

Lieutenant Noel, in discharging the duties of adjutant, has given the most entire satisfaction and the fullest evidence of his abilities to perform still more important service.

It has fallen to the lot of Lieutenant Morris to perform the most important duties, and he has done so in a manner which cannot be too highly commended. When our boats were lost, and much of our ammunition either lost or damaged in a great degree, we found it replaced and well prepared by the activity and attention of Lieutenant Morris, and that, too, without delaying the expedition a single hour. The Lieutenant's management and direction of the artillery would have done honor to a master of the trade.

The men who were attached to the artillery have deserved notice and the approbation of their country. They have that of the colonel commanding in a high degree, particularly Sergeants Lathrop and Perkins; the former of whom, with one of the six pounders, made very superior shots.

The colonel commanding cannot dismiss this subject without again mentioning his very great satisfaction with the gallant and honorable conduct of General Ashley and his brave and hardy little corps of mountaineers; although for several days entirely destitute of subsistence, they persevered in "noble daring," without a murmur. The colonel commanding only regrets that he can offer them nothing more substantial than his thanks.

H. LEAVENWORTH, *Colonel commanding.*

No. 4.

Colonel Leavenworth, commanding the 6th regiment, to the chiefs and warriors of the Ricaree nation of Indians, greeting:

RICAREES: HEAD-QUARTERS, MISSOURI LEGION, RICAREE TOWNS, *August* 14, 1823.

You see the pipe of peace which you gave to me in the hands of Mr. Charlennou, and the flag of the United States.

These will convince you that my heart is not bad. Your villages are in my possession; come back, and take them in peace, and you will find every thing as you left them; you shall not be hurt if you do not obstruct the roads, or molest the traders. If you do not come back, there are some bad men and bad Indians who will burn your villages. Come back, and come quickly. Be assured that what I say is the truth.

H. LEAVENWORTH, *Col. U. S. Army.*

No. 5.

General Atkinson to Major General E. P. Gaines.

HEAD-QUARTERS, RIGHT WING, WESTERN DEPARTMENT,

GENERAL: ST. LOUIS, *September* 13, 1823.

I have the honor to inform you that an express reached me this morning from Colonel Leavenworth, who returned to Council Bluffs on the 27th ultimo from his expedition against the Ricaree Indians. I send to you by express his report and the articles of a treaty made with the Ricarees. These papers contain all the official information that has come to hand.

Although the Ricarees have been severely punished, and have sued for peace, I am of opinion that they are decidedly averse to such a measure, and will no doubt on the first occasion re-commence hostilities, as their conduct subsequently to the treaty plainly shows.

The Sioux appear also to be highly displeased, owing, I understand, to Colonel Leavenworth's not prosecuting hostilities against the Ricarees till they were all exterminated, which the Sioux expected, (and were possibly prom-

ised,) with possession of the villages, scalps, horses, &c. They at any rate deserted Colonel Leavenworth at a critical moment, without giving any reason, and in a bad humor. They may not commence a war with us, yet such a course is not altogether improbable. We must at least watch them narrowly.

I have no idea that hostility will reach our frontier settlements, but I am clearly of opinion that the Missouri will be shut against us, from the Ricarees up, and possibly even by the Sioux, if an imposing military force does not visit that country the next season. Therefore, I would suggest that at least another regiment should be sent to join the 6th early in the spring, with recruits to fill both corps, with a view to detaching six or seven hundred men to ascend as far as the Yellow Stone. They may return the same season, or establish themselves above, as circumstances may dictate.

Upon the receipt of the communications from Colonel Leavenworth, I have, in conformity with your orders and the instructions of the Secretary of War, ordered the detachment of the 1st regiment to halt at Belle Fontaine, where the barracks will be repaired, and the troops quartered for the winter. Although I think their presence at the Bluffs this fall would have a good effect, yet I do not deem it indispensable, for they can arrive as early in the spring as supplies can for them, and until the arrival of which they could not move up the river. Besides, the 6th regiment is already strengthened by Captain Fowle's land detachment, and the recruits that ascend the river will also join it; making a force sufficient for the defence of the post at Council Bluffs, and to overawe the neighboring tribes. I shall, however, upon any case of emergency, be able to march with great promptness the detachment of the 1st to the upper country, where, from the product of our crops, they can be provisioned till spring.

I shall remain at this place till the return of the express from Louisville—say twelve days; when I propose, by your advice, to set out for Council Bluffs. I shall be able, by visiting that post, to acquire the best information relative to the feelings and views of the Indians, and can return to this place in December to attend to any preparations for operations in the spring that circumstances may require.

I am so deeply impressed with a conviction of an unfriendly and unsettled state of feeling among the upper tribes, that I can but repeat my opinion of the necessity of sending an imposing force into that quarter the ensuing spring.

With very great respect, sir, I have the honor to be, your most obedient servant,

H. ATKINSON, *Brig. Gen. U. S. Army.*

Maj. Gen. E. P. GAINES, *Commanding Western Department, Louisville.*

HEAD-QUARTERS, WESTERN DEPARTMENT,

LOUISVILLE, KY., *September* 21, 1823.

ORDERS.

The commanding general takes great pleasure in announcing to the troops of his department the handsome and honorable result of the late expedition, under Colonel H. Leavenworth, against the Ricaree nation of Indians.

These Indians, occupying a strong position on the Missouri river, near seven hundred miles above the Council Bluffs, with their three principal villages fortified and defended by upwards of six hundred warriors, "well armed with British fusees," having in the month of June last made an unprovoked and wanton attack on the trading company under General Ashley, in which they killed and wounded twenty-three American citizens, peaceably employed in an authorized trade; leaving their surviving associates nine hundred miles distant from the inhabited part of the United States, destitute of every prospect of timely succor, robbed of the proceeds of a year's peril, labor, and enterprise, and exposed to the horrors of famine and additional savage outrage.

Under all these untoward circumstances, the distinguished Colonel Leavenworth, then in command of Fort Atkinson, on hearing of the disaster of his countrymen, without pausing to count the numbers opposed to him, or to calculate the various obstacles that so wide a range of dreary wilderness presented, immediately embarked for the scene of action, with the disposable force of the 6th infantry, consisting of but two hundred and twenty officers and men. After a toilsome movement of forty-five days, against the rapid current of the Missouri, he arrived on the 9th ultimo before the enemy's villages, each of which he found to be enclosed with palisades and ditches. A few days prior to his arrival he was joined by General Ashley with the remnant of his party, amounting to eighty men, and by Mr. Pilcher with forty men of the trading companies, together with near six hundred Sioux, who professed to be friendly. With these volunteers, aided by his little band of regulars, Colonel Leavenworth, soon after his arrival, commenced his operations against the enemy. In approaching the villages, with the Sioux in advance, they were met by the Ricarees a short distance below their works, where a skirmish ensued, in which the enemy sustained his position and forced the Sioux back, until the regular troops, aided by General Ashley's volunteers, arrived and formed the line of battle, when the Ricarees were immediately driven into their villages. During the evening of the 9th, the boats arrived and the artillery was disembarked. On the morning of the 10th, Captain Riley, with a company acting as riflemen, and Lieutenant Bradley, with a company of infantry, were posted on a hill within one hundred yards of the upper village, where they were enabled to annoy the enemy without being exposed to his fire. At the same moment Lieutenant Morris, with one six pounder and a 5½ inch howitzer, commenced an attack on the lower town. Sergeant Perkins, with a six pounder, was ordered to co-operate with Major Vanderburgh, of the volunteers. This six pounder was placed above the upper village. At eight o'clock Major Ketchum was also ordered to the upper village. These arrangements resulted in the severe chastisement of the enemy, who, after having their palisades and houses literally *riddled*, and suffering a loss which the colonel estimates at "fifty killed and a great number wounded," they, at four o'clock in the afternoon of the 10th, begged for peace; which was granted, on condition that they would restore the whole of the property taken from the traders, and in future conduct themselves peaceably and correctly. They, however, complied but in part with their promise to restore the plundered property, and, fearing additional punishment, or desirous of obtaining succor from the neighboring tribes above them, they availed themselves of the darkness of the night of the 12th to desert their villages; nor were they again seen during the two following days in which the troops remained on the ground.

Of the regular forces under Colonel Leavenworth, he reports Sergeant Stackpole, (a brave and experienced soldier of Chippewa, Niagara, and Fort Erie,) with six privates, drowned, and one private wounded in action; of General Ashley's volunteers, Hugh Johnson was wounded.

The friendly Sioux took no part in the action of the 10th; but, to their shame and disgrace, occupied themselves during the time in plundering the enemy's corn-fields; and before the close of the action, a party of them were seen in conference with a party of the enemy. They soon after abandoned our troops, without assigning any reason for their conduct. Such auxiliaries are not to be trusted, without a regular force of superior numbers sufficient to restrain and coerce them.

The commanding general takes this occasion to tender his thanks to Colonel Leavenworth, his officers, and men, and to General Ashley and his volunteers, for the promptitude, sound discretion, skill, and gallantry with

which the expedition was conducted and executed. The officers employed on the expedition, and particularly noticed by Colonel Leavenworth, were, Major Woolley, Brevet Major Ketchum, Captains Armstrong and Riley, Doctor Gale, Lieutenants Wickliffe, Bradley, Cruger, Noel, and Morris,with Sergeants Lathrop and Perkins.

The general directs that in all cases where an enlisted soldier hereafter falls in action, is wounded, or dies in the honorable discharge of his duty, his Christian name, former place of residence, age, and general character as a soldier, shall be reported to the general by the captain or commanding officer of the company to which such soldier belongs.

By order of Major General Gaines. R. LOWNDES, *Aid-de camp.*

Major General Gaines to the Secretary of War.

SIR: HEAD-QUARTERS, WESTERN DEPARTMENT, *October* 16, 1823.

In compliance with the wishes of General Atkinson and Colonel Leavenworth, I have to request your attention to the communication of the letter enclosed herewith.

I am decidedly of the opinion that the conduct of the colonel, with that of his officers and men, was such as to merit marked applause; and that if the President of the United States should be pleased to confer any token of his approbation on either of the officers engaged in the expedition, Colonel Leavenworth himself has a well-founded claim to the first notice.

It is reported that Mr. Pilcher, agent to one of the Missouri trading companies, and at the same time sub-agent for Indian affairs, has undertaken to censure Colonel Leavenworth, upon the ground of his having made a treaty with the Ricarees before they had been properly chastised.

Upon this subject it may be remarked, that Colonel Leavenworth, by virtue of his command, and pursuant to the law of nature and of nations, had a right to decide as to the measure of punishment due to the enemy, and to dictate to him the terms of capitulation; subject, of course, to the approval or disapproval of the proper authorities above him. Nor is it to be apprehended that his Government or country will be likely to blame him for having abstained from a sanguinary measure: the victory most acceptable to an enlightened and virtuous nation is, doubtless, that which is obtained at the least expense of blood.

With great respect, I have the honor to be,

E. P. GAINES, *Major General by brevet, commanding.*

The Hon. J. C. CALHOUN, *Secretary of War.*

Colonel Leavenworth to Brigadier General Atkinson.

SIR: FORT ATKINSON, *September* 7, 1823.

I feel it to be a duty to recommend to the particular notice of the Government Captain Riley and First Lieutenant W. W. Morris, for their good conduct and efficiency during the late expedition against the Ricarees.

Captain Riley has done all that any man can do, and by his skill and good management saved much of the public property. He has performed every duty in that prompt and soldierlike manner which is so well calculated to insure success and honor to our arms, and which has greatly contributed to our success.

His conduct was also highly distinguished for gallantry and correctness during our late war with Great Britain, and undoubtedly merited the approbation of his country. It is hoped and believed that the Government will be happy to take this opportunity to do him justice, in manifesting their approbation of his good conduct, by conferring on him the brevet rank of major in their army.

The services of Lieutenant Morris were highly important, and they were performed in the best possible manner. His activity and cleverness in preparing our ammunition greatly contributed to the success of the expedition. In the management of our artillery he was extremely fortunate. His shots were made with the greatest effect and accuracy. His first shot killed the celebrated and mischievous chief of the Ricaree nation, called "Grey Eyes;" and his second shot cut down the flag of that nation, which they called their "medicine" flag, and in which they had great confidence. This had the happiest effect.

The whole of the lieutenant's conduct during the expedition was marked by the greatest skill, promptness, and efficiency; and I hope most sincerely that he may receive evidence of the approbation of his country in the brevet rank of captain in the army.

Lieutenants Bradley, Cruger, and Noel have deserved well of their country, and it would afford me great pleasure to have them also receive evidence of the approbation of the Government; but it was not their good fortune to have an opportunity to render as important services as either Captain Riley or Lieutenant Morris.

I have to request that you will be pleased to forward this communication, through the proper channel, to the honorable the Secretary of War.

Should my intermediate superiors think proper to express their approbation of the measures herein recommended, it would afford me great pleasure to have them do so.

I have the honor to be, sir, with great respect, your obedient servant,

H. LEAVENWORTH, *Colonel, commanding 6th regiment.*

To Brig. Gen. H. ATKINSON, *Commanding right wing, Western Department.*

Lieutenant Kirby to Brigadier General Atkinson.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *July* 26, 1823.

I am directed by Major General Brown to acknowledge the receipt of your letters of the 12th and 13th instant, reporting the attack of the Ricaree Indians on General Ashley's trading party, &c. These letters have been submitted to the President, and he instructs the general to express his entire approbation of the measures taken in consequence of these hostilities. This outrage is much to be regretted, but an Indian war is not expected to ensue, and the general has no doubt that Colonel Leavenworth's movement will entirely dissipate this body of misguided savages, and restore tranquillity to that frontier. Should these anticipations be disappointed, and hostilities be persevered in, he relies upon you to take such prompt and energetic measures as the nature of the case may require.

I have the honor to be, sir, with great respect, your obedient servant,

E. KIRBY, *Aid-de-camp.*

Brig. Gen. H. ATKINSON, *Commanding Western Department U. S. A., Louisville, Ky.*

Lieutenant E. Kirby to General Gaines.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *August* 25, 1823.

I am directed by Major General Brown to acknowledge the receipt of your letter of the 15th instant, reporting that you have deemed it proper to suspend your movement to Washington, &c. In reply, the general directs me to say that the measures you have taken in relation to the Indian hostilities within your department, so far as they have come to his knowledge, meet his approbation; and he submits it to yourself to fix upon the time when you will avail yourself of his orders of the 24th of July to repair to Washington.

I have the honor to be, sir, with great respect, your obedient servant,

E. KIRBY, *Aid-de-camp.*

Major General GAINES, *Comd'g Western Department, Louisville, Ky.*

General Brown to General Gaines.

SIR: PHILADELPHIA, *September* 24, 1823.

I received at New York, on my return from a tour to the North, your communication of the 24th of August, together with a letter to the adjutant general of the 1st of September, and their several enclosures.

I approve entirely of the measures which you have adopted in relation to the prosecution of hostilities with the Indians. The position which you occupy gives you a view of the whole ground, and enables you to judge better than any other person of the course necessary to be pursued. You are, I know, aware how much this species of warfare is to be deprecated, and will use every expedient to terminate it with as little delay and expense as possible.

With great respect, I am, your obedient servant,

JACOB BROWN.

Major General GAINES, *Commanding Western Department.*

Lieutenant E. Kirby to General Gaines.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *October* 10, 1823.

I have the honor to acknowledge the receipt of your communication of the 21st ultimo and its enclosures, detailing the operations of Colonel Leavenworth's party against the Ricaree Indians.

These papers have been submitted to the general-in-chief, who directs me to express to you his high satisfaction with the success of the expedition, and his approbation of the conduct of Colonel Leavenworth and his officers, to whom he desires you to convey his thanks for the zeal and activity which they have displayed upon this occasion.

The destruction of the Ricaree village is very much to be regretted, as tending to counteract the good effect of the expedition, and on many other accounts; but the general is happy to observe that neither the commanding officer nor any part of the troops of the United States is liable to censure for that occurrence, as it appears to have been the act of the agent of the Missouri Fur Company, who, he is sorry to perceive, so ill seconded the efforts of Colonel Leavenworth to bring the affair to a successful and amicable termination. He is at the same time pleased to notice the good understanding and co-operation which existed between General Ashley's party and the troops, which contributed to the successful result.

It is deemed unadvisable to take any further steps, at present, towards chastising the Blackfoot Indians for the outrages which they have committed. The general therefore directs that, if the six companies of the 1st infantry on the Missouri have not yet ascended the river, they be posted at Belle Fontaine until further orders, and that the four companies of that regiment at Baton Rouge remain where they are.

Should Colonel Chambers have proceeded to Council Bluffs, he will remain there through the winter.

I have the honor to be, &c.,

E. KIRBY, *Aid-de-camp.*

NOTE.—Your communication to the War Department of the 22d ultimo has been referred to the major general, who directs me to say the views contained in the foregoing letter have the sanction of the President.

E. KIRBY.

Major General GAINES, *Commanding Western Department, &c.*

Lieutenant E. Kirby to General Gaines.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *November* 8, 1823.

I am directed by the general-in-chief to inform you that your communication to the War Department of the 16th ultimo has been submitted to the President, who has decided that though he highly appreciates the meritorious conduct of the officers engaged in the expedition against the Ricaree Indians, yet, for various considerations, he deems it inexpedient to confer any brevets for services rendered upon that occasion.

I have the honor to be, sir, very respectfully, your obedient servant,

E. KIRBY, *Aid-de-camp.*

Major General GAINES, *Commanding Western Department, &c.*

M.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *November* 28, 1823.

Agreeably to your directions, I have the honor of handing you, herewith, an abstract of the general returns of the militia of the United States, by States and Territories, taken from the latest returns on file in this office.

I would take the liberty, at the same time, of remarking the great neglect by the adjutants general of many of the States and Territories of the act of Congress of March 2, 1803, as well as of the several communications addressed to them from this office by your authority; no returns having been received from several of the States since the year 1814.

With the greatest respect, I have, &c.

CHAS. J. NOURSE, *Acting Adjutant General.*

To the Hon. SECRETARY OF WAR.

Abstract of the general annual returns of the militia of the United States by States and Territories, taken from the latest returns received at this office.

STATES AND TERRITORIES.	Returns.		Infantry, grenadiers, light infantry, and riflemen.							Cavalry.					Artillery.					Aggregate.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *November* 28, 1823.

CHAS. J. NOURSE, *Acting Adjutant General.*

18th Congress.] No. 248. [1st Session.

CONTRACTS MADE SINCE JANUARY 1, 1820, FOR CANNON, CANNON SHOT, MUSKETS, AND OTHER SMALL ARMS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 6, 1824.

To the House of Representatives of the United States: WASHINGTON, *January* 5, 1824.

In compliance with a resolution of the House of Representatives of the 18th of December last, requesting copies of contracts for cannon, cannon shot, muskets, and other small arms, which have been entered into since the 1st of January, 1820, and for other detailed information therein specified, I herewith transmit a report, with accompanying documents, from the Department of War.

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *December* 31, 1823.

In compliance with a resolution of the House of Representatives of the 18th instant, "that the President of the United States be requested to communicate to this House copies of all contracts for cannon, cannon shot, muskets, and other small arms, for the use of the United States, which have been entered into since the 1st of January, 1820; and that he state whether notice for proposals was given for each contract in any newspaper; if so, in what paper, and how long before the contract was concluded; who are the persons with whom such contracts were made, and whether there are any other persons beneficially interested therein; if so, who they are, and in what cases, so far as he may be informed;" I have the honor to transmit a report and documents from the Ordnance Department, which furnish the information required.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ORDNANCE DEPARTMENT, *December* 31, 1823.

In compliance with the resolution of the House of Representatives of the 18th instant, I have the honor to state, that no contracts for cannon or small arms, other than renewals of old contracts, have been made through this department since the 1st of January, 1820. Since that date the following renewals have taken place, viz:

McClurgs & McKnight, for cannon, entered into 3d February, 1821.
Henry Deringer, for rifles, entered into 3d April, 1821.
M. T. Wickham, for muskets, entered into 19th July, 1822.
Eli Whitney, for muskets, entered into 1st August, 1822.
Eli Whitney, for muskets, entered into 15th August, 1822.
Lemuel Pomeroy, for muskets, entered into 17th May, 1823.
Henry Deringer, for rifles, entered into 28th August, 1823.
Asa Waters, for muskets, entered into 16th October, 1823.
M. T. Wickham, for muskets, entered into 6th December, 1823.
Nathan Starr, for rifles, entered into 9th December, 1823.
R. & J. D. Johnson, for rifles, entered into 10th December, 1823.
Simeon North, for rifles, entered into 10th December, 1823.

Copies of these renewed agreements are herewith communicated.

It may be proper to remark, that the contract with Alexander McRae, of Virginia, made on the 28th of July, 1817, under the direction of the acting Secretary of War, George Graham, has been, with the consent of the department, transferred to John Rogers and Brooke Evans, of Pennsylvania. The contractor having failed to deliver arms, according to the terms of his contract, a suit was instituted against him and his sureties, in July, 1820. Pending the suit, he made a proposition to transfer his interest to the parties mentioned, who offered to fulfil the contract, according to its original terms, and without loss to the Government.

The solvency of the contractor and his sureties being considered doubtful, and the parties who offered to substitute themselves for him being already extensively engaged in manufactories, they were considered entirely competent to fulfil the contracts. The transfer was therefore assented to on the part of Government, and the suit was suspended, but without releasing the contractor and his sureties from their obligations. A copy of the agreement, transferring this contract, is communicated herewith.

Under this agreement, five thousand seven hundred and thirty muskets, of approved quality, have been delivered; and no doubt is entertained of its being satisfactorily fulfilled within a short period.

Notice for proposals has not been given in the newspapers for these contracts, as they were all renewals of former contracts, made with persons who were at the time engaged in the business of manufacturing arms for the United States, and who have been thus engaged for many years past, some of them since the year 1798. It has been the general practice to renew the contracts for small arms in all cases where the former contract had been satisfactorily executed, provided the terms offered were as favorable as could be obtained from other persons. Assurances to this effect were given when the first contracts were entered into, and they doubtless formed strong inducements to the contractors to embark in the business. Without such inducements, contracts upon reasonable terms could not have been obtained; because the United States were the only customers the contractors could have, and mere temporary engagements would not indemnify the expenses of providing the requisite machinery and tools, amounting, generally, to twenty or thirty thousand dollars, and which, for any other purpose, would be useless.

Much difficulty was experienced in establishing the manufacture of small arms. In 1798, when the first attempt was made, there were but few persons in the country acquainted with the business; and but one of those (Mr. Whitney, of Connecticut,) who embarked in it succeeded; all the rest were either ruined by the attempt, or found the business so unprofitable and hazardous as to induce them to relinquish it. In 1808, after the passage of the law making a permanent appropriation, a renewed attempt was made, and many of the contractors who were then engaged in the business have also failed. The steady support and patronage given by the Government since that time to the contractors, whose skill, perseverance, and capital saved them from an early failure, has resulted in

the firm establishment of several manufactories of arms, and preserved to the country establishments of great importance to its security and defence.

These manufactories are now so well established, that their annual product could, in a short time, be doubled, should the exigencies of the country require it.

In renewing the contracts, the prices have been regulated by the cost of the arms at the national armories. Within the last five years, the contract price of muskets has been reduced from fourteen to twelve dollars; rifles, from seventeen to fourteen dollars and fifty cents; and cavalry sabres, from eight to five dollars each. And the arms now manufactured are nearly equal in quality to those made at the national armories, and greatly superior to those formerly made under contracts.

All the agreements recently entered into refer to established regulations for the inspection of arms; which, therefore, virtually become a part of them. It is considered proper, therefore, to annex a copy of them to the agreements herewith communicated.

With respect to the contract for cannon, it may be proper to remark, that it was made with persons, who had constructed works for the fabrication of cannon under contracts made during the late war; and that the supply was required to meet the demands of the western States for artillery, under the act for arming the militia.

This cannon foundry is the only one which has been established in the western country; and as the supply required was so limited, no adequate inducement could be offered to other persons to establish a foundry for the purpose. It may be proper to add, that, if contracts for ordnance should be authorized upon a scale adequate to the supply of the permanent fortifications, there is no doubt but that more favorable terms can be obtained, under an assurance of continued employment for a term of years.

In answer to that part of the resolution which requires it to be stated "who are the persons with whom such contracts were made, and whether there are any other persons beneficially interested therein," I have the honor to state that all the contracts herewith communicated were made with the persons whose names are affixed to them, and that it is not known to this department that any other persons are in any manner interested therein.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Whereas, by articles of agreement made and concluded on the 6th day of January, 1821, by and between Alexander McRae, of the city of Richmond, and State of Virginia, of the one part, and John Rogers, of the city of Philadelphia, and State of Pennsylvania, of the other part, the said John Rogers hath, for certain causes and considerations therein specified, covenanted and agreed, for himself and his legal representatives, with the said McRae and his legal representatives, well and truly to perform and to carry into full effect, upon the part of the said Alexander McRae, the agreement or contract heretofore, to wit, on the 28th day of July, 1817, entered into between the United States, (through the agency of George Bomford, lieutenant colonel of ordnance,) of the one part, and the said Alexander McRae, of the other part, by which said agreement or contract the said Alexander McRae was to manufacture and to deliver to the United States ten thousand stands of arms, (muskets, bayonets, and ramrods, complete,) as in the said agreement particularly described, for the sum or price of fourteen dollars per stand, whereof two dollars and fifty cents per stand have been advanced by the United States to the said McRae; so that, upon manufacturing and delivering the said arms, there will remain due and payable, as in the said contract between the United States and the said McRae is more particularly set forth, the sum of eleven dollars and fifty cents per stand only; which sum the said Alexander McRae, as evidenced by his being a party to these presents, hath requested and authorized to be paid to the said Rogers, as from time to time he may be entitled to the same, by manufacturing and delivering the arms aforesaid, in conformity to the said McRae's contract with the United States, or by delivering the same at the city of Philadelphia, as is hereinafter mentioned:

And whereas the said McRae hath requested, and the said United States, with the consent of the honorable the Secretary of War, and through the agency of the said Lieutenant Colonel George Bomford, have consented to accept an assignment of the said articles of agreement between the said Alexander McRae and the said John Rogers, as a collateral security, but not to impair the force of any obligation or contract heretofore entered into by the said McRae with the United States, for the fulfilment of the said McRae's contract with the United States; which said articles of agreement between the said Alexander McRae and the said John Rogers the said McRae hath accordingly assigned, and by these presents doth assign and transfer, to the United States, with full power and authority, in the event of the said Rogers failing to perform the same, to institute an action on the same for the benefit of the said United States, in the name of the said McRae, or in any other manner which may be deemed more proper, for the purpose of indemnifying the United States for any damage they may sustain by reason of the non-performance of the said agreement, and the consequent violation of the said McRae's contract with the United States; to which said assignment, so made, the said John Rogers hath assented, and doth hereby assent: and the said John Rogers having contracted, for a consideration good and valuable in law, with Brooke Evans, of the said city of Philadelphia, to unite with him in the performance of the said agreement with the said Alexander McRae, and the said Brooke Evans now consenting, in consideration of the premises, and for the consideration hereinafter mentioned, to unite with the said John Rogers in an agreement with the United States, to fulfil the said Rogers's contract, as the same hath been entered into with the said Alexander McRae, except as is hereinafter excepted, therefore the said John Rogers and Brooke Evans do hereby, for themselves and their legal representatives, with the consent of the honorable the Secretary of War, and through the agency of the said Lieutenant Colonel George Bomford, covenant and agree to and with the United States that they will manufacture and deliver to the United States the said ten thousand stands of arms, agreeably to the covenants contained in the articles of agreement aforesaid between the said John Rogers and the said Alexander McRae as aforesaid, save only that the said John Rogers and Brooke Evans, instead of delivering the said arms as stipulated in the said contract between the United States and Alexander McRae aforesaid, shall deliver the same in the city of Philadelphia; and, upon the making and delivery of the said arms in the said city, it is hereby understood and agreed, that payments shall be made to the said John Rogers of eleven dollars and fifty cents per stand, by the United States, for every stand of arms so manufactured and delivered, excepting only that there shall be a deduction from the said eleven dollars and fifty cents per stand of so much as it would reasonably cost to transport each stand of arms as aforesaid from the said city of Philadelphia to the United States' arsenal on James river, near the city of Richmond aforesaid; which reasonable cost or freight shall be ascertained and fixed agreeably to the opinion thereof, which shall, upon strict and proper inquiry, be formed by the quartermaster general of the United States.

It is distinctly understood that the said arms are to be inspected, proved, and put up in boxes, in the manner and at the cost of the United States, as specified in the said contract entered into between the United States and the said McRae.

It is further understood and agreed upon, between all the parties aforesaid, that this agreement, nor any part thereof, is not in any manner to discharge or impair any contract or obligation heretofore entered into by the said Alexander McRae, to manufacture and deliver the said ten thousand stands of arms, unless the agreement aforesaid of the said John Rogers and Brooke Evans be carried into full effect; but, in case of the full and faithful execution of their said agreement by the said John Rogers and Brooke Evans, then, and in that case, the said agreement between the said Alexander McRae and the United States shall be regarded as fully performed and discharged upon the part of the said McRae.

In testimony whereof, the parties to these presents have interchangeably signed their names, and affixed their seals, this 21st day of March, 1821.

ALEX. McRAE,
JOHN ROGERS,
BROOKE EVANS.

Witness present as to the signature of A. McRae and J. Rogers,
JAMES T. ALEXANDER.

Witness present as to A. McRae, John Rogers, and B. Evans,
W. RIDDALL.

This agreement, made this 3d day of February, A. D. 1821, between Lieutenant Colonel George Bomford, in the ordnance service of the United States, with the consent and approbation of the Hon. John C. Calhoun, Secretary of War, of the one part, and Alexander McClurg, James McClurg, and William McKnight, of Pittsburg, of the State of Pennsylvania, of the other part, witnesseth:

That the said McClurgs and McKnight do engage to fabricate and deliver to the United States, under an act of Congress for arming and equipping the militia, within two years from this date, one hundred light six pounder cannon and thirty twenty-four pounder howitzers, at the following rates or prices, viz: light six pounders at eighty dollars each; and howitzers in the same proportion, according to the weights thereof: the drawings, patterns, and dimensions of the different guns to be furnished by the United States' Ordnance Department.

It is agreed that the cannon herein mentioned shall be inspected, and proved, and delivered at the United States' arsenal near Pittsburg, conformably to such regulations as have been, or may hereafter be, established by the Ordnance Department: the payment for said cannon to be made to the parties contracting, upon certificates being received at the Ordnance Office of such inspection, proof, and delivery.

In witness whereof, the parties have hereunto set their hands, and affixed their seals, the day and year before written.

GEORGE BOMFORD, *Lieut. Col. of ordnance.*
McCLURGS & McKNIGHT, by
WILLIAM McKNIGHT.

Witnesses,
JOHN MORTON,
J. T. ALEXANDER.

This agreement, made this 3d day of April, 1821, between Lieutenant Colonel George Bomford, of ordnance, in the service of the United States, acting by the direction of the Hon. John C. Calhoun, Secretary of War, and Henry Deringer, of Philadelphia, witnesseth:

1st. That the said Henry Deringer covenants and agrees to manufacture, for the service of the United States, and to deliver at the arsenal of the United States, in the neighborhood of Philadelphia, two thousand rifles, of a quality and workmanship in all their parts equal to a standard pattern deposited in the Ordnance Office.

2d. It is agreed that the said rifles shall be proved and inspected by an officer to be appointed by the Ordnance Department, in parcels of five hundred at a time, or thereabouts; and that the expense of proving and inspecting the arms shall be defrayed by the United States: the inspection to be made at or in the neighborhood of Philadelphia.

3d. It is agreed that the price of the said rifles shall be fifteen dollars and fifty cents each, including bullet mould, charger, wiper, and ball screw, payable after delivery of each parcel, on a proper certificate of inspection.

4th. It is agreed that the rifles so to be delivered shall be securely packed in good and sufficient cases for transportation, each case being made to contain twenty rifles; a reasonable price to be allowed the said Henry Deringer for the expense of the cases.

5th. It is agreed that a period of two years, from and after the fulfilment of his former contract, dated the 23d day of July, 1819, shall be allowed to the said Henry Deringer for the completion of the work.

In witness whereof, the parties have hereunto set their hands and seals, the day and year first above written.

GEORGE BOMFORD, *Lieut. Col. of ordnance.*
HENRY DERINGER.

Sealed and delivered, in presence of
T. G. RINGGOLD,
WILLIAM RIDDALL.

This agreement, made this 19th day of July, 1822, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Hon. John C. Calhoun, Secretary of War, of the one part, and Marine T. Wickham, of Philadelphia, in the State of Pennsylvania, of the other part, witnesseth:

1st. That the said Marine T. Wickham shall manufacture and deliver, for the military service of the United States, five thousand stands of arms, with bayonets and ramrods complete, at the rate of two thousand stands in each year, for two and a half years, commencing with the 1st day of January in the year 1822. The arms to be manufactured shall, in all their parts, conform, in model, size, and form, to the pattern or standard musket to be furnished by the Ordnance Department; and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the arms shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are, or may be, established by the Ordnance Department. It is understood, however, that no methods of proof or inspection more rigorous than those established for and practised at the national armories of the United States shall at any time be established The arms are to be proved and inspected at or near Philadelphia, and in parcels consisting each of not less than two hundred and fifty stands; the expense of proof and inspection to be defrayed by the United States.

3d. It is further agreed that the price of the arms to be manufactured shall be as follows, viz: for each musket complete, including bayonet, ramrod, and flint, including also the proportion of screw drivers, wipers, ball screws, and spring vices, stated in the fourth article of this agreement, the price shall be twelve dollars; subject, however, to the following proviso; that if, during the period prescribed for the existence of this agreement, there be any new agreement made by the Ordnance Department for the manufacture of arms, in which the price for similar arms shall be greater or less than the price stipulated in this article, then the price herein stipulated shall be so modified as to conform and be equal to the price stipulated in such new agreement. The new price, if lower than is herein stipulated, shall not take effect upon any arms delivered under this agreement, within four months from and after the commencement of the new agreement, nor until at least five hundred stands complete shall have been delivered under the latter, nor until four months' previous notice shall have been given of the change; but, if the new price be higher, it shall take effect upon the first delivery under the new agreement. In order, however, that persons in all parts of the United States may participate in the manufacture of arms upon equal terms, it is understood and agreed, that if the United States shall make an agreement for the manufacture of arms at any place south or west of the place where arms are now mannfactured under contract for the United States, an additional allowance, equal to the cost of transporting arms from the latter to the former place, may be made in such agreement, without thereby augmenting the allowances stipulated in this agreement.

4th. It is agreed that the said Marine T. Wickham shall cause the said arms to be safely and properly packed for transportation, in good and sufficient boxes, and in the manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty muskets complete, twenty screw drivers, twenty wipers, two ball screws, and two spring vices; and the said arms, when so packed, shall be delivered at the United States' arsenal at Frankford, Pennsylvania. A reasonable price is to be allowed by the United States to the said M. T. Wickham, for the packing boxes, and for transporting the arms to the arsenal. The cost of the boxes to be ascertained and certified by the inspector, and the cost of transportation by the receiving officer.

5th. It is agreed that no advances of money shall be required or made; and the arms manufactured and delivered under this agreement shall be paid for on delivery of each parcel, consisting of not less than two hundred and fifty stands complete, at the price stipulated in the third article, and to the full amount of the parcel delivered, not exceeding in any one year the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the arms, and a receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed that, if the United States shall alter or modify the pattern or model musket, or establish a model or pattern, at the national armories, differing in any respect from that upon which this agreement is founded, then the arms to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: provided, however, that the said Marine T. Wickham shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made.

No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void, whenever the said M. T. Wickham shall fail to deliver, in any one year, the number of arms stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

APPENDIX.

As it has not been customary, heretofore, for contractors to furnish the additional articles enumerated in the fourth article of the foregoing agreement, viz: screw drivers, wipers, ball screws, and spring vices; and as they were not included in the estimate and proposals of the contractor, at the time he offered to manufacture muskets for twelve dollars each, it has been agreed, and was so understood by the parties at the time of signing the aforesaid agreement, that when the United States shall require the contractor to furnish said additional articles, an additional allowance, equal to the cost of the articles, shall be made.

GEORGE BOMFORD, *Lt. Col. on ordnance duty.*

It is agreed, by the respective parties to this contract, [referring to a contract made the 18th July, 1812,] viz: by Lieutenant Colonel George Bomford, acting with the consent and under the direction of the honorable J. C. Calhoun, Secretary of War, of the one part, and the said Eli Whitney on the other part, that the terms of this contract shall be extended to the receipt of the additional number of three thousand muskets; that for two thousand of the said three thousand muskets, the said Whitney shall be entitled to receive thirteen dollars each, agreeably to an arrangement entered into in July, 1821, which provided that said arrangement should be conclusive, on condition that the States of New York and Connecticut, or either of them, should consent to receive the same as part of their quota, under the law of 1808; and for the remaining one thousand muskets, he shall be entitled only to receive twelve dollars each, that being the present contract price: provided the said Whitney shall deliver the said three thousand muskets within eighteen months from the date hereof; and provided, also, that said Whitney shall procure the approbation and consent of his original sureties to his extension of this contract.

Signed, sealed, and delivered, this 1st day of August, in the year 1822.

ELI WHITNEY,
GEORGE BOMFORD, *Lt. Col. on ordnance duty.*

Witness present,
JOHN MORTON.

This agreement, made this 15th day of August, 1822, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Honorable John C. Calhoun, Secretary of War, of the one part, and Eli Whitney, of New Haven, in the State of Connecticut, of the other part, witnesseth:

1st. That the said Eli Whitney, on his part, hath agreed, and doth hereby covenant and engage, to manufacture and deliver, for the service of the United States, fifteen thousand muskets, with bayonets, ramrods, and flints complete, and that the same shall be delivered in parcels of five hundred each, and at the rate of three thousand in each year, for five years, commencing with the 1st January, 1824; it being, however, understood, that if the said Whitney shall fail to deliver the whole of said three thousand in any one year, he shall be allowed to make up the deficiency in the next succeeding year, to an extent not exceeding six hundred. It is also agreed that the said Whitney shall be furnished by the Ordnance Department with a perfect model or standard musket, such as is used for a pattern at the United States' armories, and a box of muskets manufactured at the United States' armory at Springfield, as standards of reference in relation to the execution of this contract; and that the said fifteen thousand muskets shall, in all their parts, conform, as nearly in model, size, and form, and be as nearly equal in workmanship and quality, in every respect, to the said perfect model, as the muskets contained in the said box, so to be furnished, are to the same.

2d. It is agreed that the said muskets shall be proved and inspected at said Whitney's manufactory, near said New Haven, by an officer or person appointed by the Ordnance Department for that purpose; and that the said muskets shall be subjected to and sustain the same rigor of proof to which muskets now manufactured at the national armory at Springfield are subjected; the expense of proving and inspecting to be paid by the United States.

3d. It is further agreed that the said Whitney shall cause the said muskets to be safely and properly packed for transportation, in good and sufficient boxes, in the manner which is, or may be, prescribed by the Ordnance Department, and practised at the national armories; each box to contain twenty muskets, twenty screw drivers, twenty wipers, two ball screws, and two spring vices; and, when so packed, he shall cause the said muskets to be delivered in the city of New Haven, to such person as shall be appointed to receive the same; and that the said Whitney shall be allowed by the United States a reasonable price for the screw drivers, wipers, ball screws, spring vices, packing boxes, and transportation of the arms to the place aforesaid.

4th. It is agreed, and the said George Bomford, in the capacity and acting with the consent and under the direction aforesaid, doth hereby engage, that the United States shall pay to the said Whitney twelve dollars for each of said muskets complete. It is, however, provided, that when the actual cost of manufacturing muskets at the public armories shall be satisfactorily ascertained, then the said Whitney shall be entitled to receive from the United States, for each of the said fifteen thousand muskets, the same sum to which the actual average cost of manufacturing a musket in the two armories of the United States shall amount, in lieu of the twelve dollars aforesaid; said average cost to be ascertained within one year from the date hereof. It being fully understood by the respective parties to this agreement, that the interest on the entire capital employed at the armories, insurance against all risks, with the addition of such further per centage for wear and decay, as shall be sufficient to preserve said capital unimpaired, shall be charged as making a part of the cost of manufacturing arms at the United States' armories.

5th. It is agreed that the amount of each parcel of five hundred muskets, with the screw drivers, boxes, &c. shall be paid to said Whitney at the time of his delivering the same, as aforesaid.

6th. It is agreed that, if the United States shall alter or modify the pattern or model musket, or establish a model or pattern at the national armories differing, in any respect, from that upon which this agreement is founded, then the arms to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Deprrtment: provided, however, that the said Whitney shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made. No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States shall possess the right to declare this agreement null and void, whenever the said Whitney shall fail to deliver four-fifths of the number of arms, as herein stipulated.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands and affixed their seals, the day and year first above written.

ELI WHITNEY,
GEORGE BOMFORD, *Lieut. Col. on ordnance duty.*

Witness present,
W. WADE.

This agreement, made this 17th day of May, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Honorable John C. Calhoun, Secretary of War, of the one part, and Lemuel Pomeroy, of Pittsfield, in the State of Massachusetts, of the other part, witnesseth:

1st. That the said Lemuel Pomeroy shall manufacture and deliver, for the military service of the United States, ten thousand stands of arms, with bayonets and ramrods complete, at the rate of two thousand in each year, for five years, commencing with the 1st day of July, 1823; the arms to be manufactured shall, in all their parts, conform in model, size, and form, to the pattern or standard musket, to be furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the arms shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are or may be established by the Ordnance Department. It is understood, however, that no methods of proof or inspection more rigorous than those established for and practised at the national armories of the United States shall at any time be established. The arms are to be proved and inspected at or near Pittsfield, and in parcels consisting each of not less than two hundred and fifty stands; the expense of proof and inspection to be defrayed by the United States.

3d. It is further agreed that the price of the arms to be manufactured shall be as follows, viz: For each musket complete, including bayonet, ramrod, and flint, including also the proportion of screw drivers, wipers, ball screws, and spring vices, stated in the fourth article of this agreement, the price shall be twelve dollars and twenty-five cents; subject, however, to the following proviso: That if, during the period prescribed for the existence of this

agreement, there be any new agreement made by the Ordnance Department for the manufacture of arms, in which the price for similar arms shall be greater or less than the price stipulated in this article, then the price herein stipulated shall be so modified as to conform and be equal to the price stipulated in such new agreement. The new price, if lower than is herein stipulated, shall not take effect upon any arms delivered under this agreement within four months from and after the commencement of the new agreement; nor until at least five hundred stands complete shall have been delivered under the latter; nor until four months' previous notice shall have been given of the change: but, if the new price be higher, it shall take effect upon the first delivery under the new agreement. In order, however, that persons in all parts of the United States may participate in the manufacture of arms upon equal terms, it is understood and agreed, that if the United States shall make an agreement for the manufacture of arms at any place south or west of the place where arms are now manufactured under contract for the United States, an additional allowance, equal to the cost of transporting arms from the latter to the former place, may be made in such agreement, without thereby augmenting the allowances stipulated in this agreement.

4th. It is agreed that the said Lemuel Pomeroy shall cause the said arms to be safely and properly packed for transportation, in good and sufficient boxes, and in the manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty muskets complete, twenty screw drivers, twenty wipers, two ball screws, and two spring vices; and the said arms, when so packed, shall be delivered at the United States' arsenal at Watervliet, New York. A reasonable price is to be allowed by the United States to the said Lemuel Pomeroy for the packing boxes, and for transporting the arms to the arsenal; the cost of the boxes to be ascertained and certified by the inspector, and the cost of transportation by the receiving officer.

5th. It is agreed that no advances of money shall be required or made, and that the arms manufactured and delivered under this agreement shall be paid for on the delivery of each parcel, consisting of not less than two hundred and fifty stands complete, at the price stipulated in the third article, and to the full amount of the parcel delivered, not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the arms, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed that if the United States shall alter or modify the pattern or model musket, or establish a model or pattern at the national armories differing in any respect from that upon which this agreement is founded, then the arms to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: provided, however, that the said Lemuel Pomeroy shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made. No deviations from the established pattern will at any time be made, unless expressly directed in writing by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void, whenever the said L. Pomeroy shall fail to deliver, in any one year, the number of arms stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

Memorandum of prices in detail, viz:

For muskets complete, each	$12 00
Screw drivers, each	7
Wipers, each	13
Ball screws, each 15 cents, one-tenth of which is	1½
Spring vices, each 35 cents, one-tenth of which is	3½
	$12 25

This agreement, made this 28th day of August, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Hon. John C. Calhoun, Secretary of War, of the one part, and Henry Deringer, of Philadelphia, of the other part, witnesseth:

1st. That the said Henry Deringer shall manufacture and deliver, for the military service of the United States, three thousand rifles complete, at the rate of six hundred in each year, for five years, commencing with the 1st day of January, 1824. The rifles to be manufactured shall, in all their parts, conform in model, size, and form, to the pattern or standard model furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the rifles shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are or may be established by the Ordnance Department. It is understood, however, that no methods of proof and inspection more rigorous than those established for and practised at the national armories of the United States shall at any time be established. The rifles are to be proved and inspected at or near Philadelphia, and in parcels consisting each of not less than two hundred; the expense of proof and inspection to be defrayed by the United States.

3d. It is further agreed that the price of said rifles shall be as follows, viz: for each rifle complete, including ramrod and flint, including also the proportion of bullet moulds, screw drivers, wipers, ball screws, spring vices, and flint caps, stated in the fourth article of this agreement, the price shall be fourteen dollars and fifty cents; subject, however, to the following proviso: that if, during the period prescribed for the existence of this agreement, the cost of arms at the national armories shall be increased or diminished, by the rise or fall of materials or labor, to an amount equal to fifty cents on each stand of arms made, then the price herein stipulated shall be increased or diminished in an equal amount. The new price, if it be lower than is herein stipulated, shall not take effect upon any

rifles delivered under this agreement, within three months from and after the time when such reduction shall have been satisfactorily ascertained, nor until three months' previous notice thereof shall have been given; but, if the new price be higher, it shall take effect upon the first parcel of rifles delivered, after the increased price has been ascertained and determined.

4th. It is agreed that the said Henry Deringer shall cause the said rifles to be safely and properly packed for transportation in good and sufficient boxes, and in the manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty rifles, with flints and flint-caps complete, two bullet moulds, twenty screw drivers, twenty wipers, two ball screws, two spring vices, and twenty spare lead flint-caps; and the said rifles, when so packed, shall be delivered at the United States' arsenal near Frankford, Pennsylvania. A reasonable price is to be allowed by the United States to the said Henry Deringer for the packing boxes, and for transporting the arms to the arsenal; the cost of the boxes to be ascertained and certified by the inspector, and the cost of transportation by the receiving officer.

5th. It is agreed that no advances of money shall be required or made, and that the rifles manufactured and delivered under this agreement shall be paid for on the delivery of each parcel, consisting of not less than two hundred complete, at the price stipulated in the third article, and to the full amount of the parcel delivered; not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the rifles, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed, that if the United States shall alter or modify the pattern or model rifle, or establish a model or pattern at the national armories differing in any respect from that upon which this agreement is founded, then the rifles to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: Provided, however, that the said Henry Deringer shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made.

No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void, whenever the said Henry Deringer shall fail to deliver, in any one year, the number of rifles stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

GEO. BOMFORD,
Lieutenant Colonel on ordnance duty.

This agreement, made this 16th day of October, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Hon. John C. Calhoun, Secretary of War, of the one part, and Asa Waters, of Millbury, in the State of Massachusetts, of the other part, witnesseth:

1st. That the said Asa Waters shall manufacture and deliver, for the military service of the United States, ten thousand muskets, with bayonets and ramrods complete, at the rate of two thousand in each year, for five years, commencing with the 1st day of January, 1825. The muskets to be manufactured shall, in all their parts, conform, in model, size, and form, to the pattern or standard model furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the said muskets shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are, or may be, established by the Ordnance Department. It is understood, however, that no methods of proof or inspection more rigorous than those established for, and practised at, the national armories of the United States, shall at any time be established. The muskets are to be proved and inspected at Millbury, and in parcels consisting each of not less than two hundred and fifty stands; the expense of proof and inspection to be defrayed by the United States.

3d. It is further agreed that the price of the muskets to be manufactured shall be as follows, viz: for each musket complete, including bayonet, ramrod, and flint, including also the proportion of screw drivers, wipers, ball screws, and spring vices, stated in the fourth article of this agreement, the price shall be twelve dollars and twenty-five cents; subject, however, to the following proviso: that if, during the period prescribed for the existence of this agreement, the cost of arms at the national armories shall be increased or diminished, by the rise or fall of materials or labor, to an amount equal to fifty cents, or more, on each stand of arms made, then the price herein stipulated shall be increased or diminished an equal amount. The new price, if it be lower than is herein stipulated, shall not take effect upon any muskets delivered under this agreement within three months from and after the time when such reduction shall have been satisfactorily ascertained, or until three months' previous notice thereof shall have been given. But, if the new price be higher, it shall take effect upon the first parcel of muskets delivered after the increased price has been ascertained and determined.

4th. It is agreed that the said Asa Waters shall cause the said muskets to be safely and properly packed for transportation in good and sufficient boxes, and in a manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty muskets complete, twenty screw drivers, twenty wipers, two ball screws, and two spring vices; and the said muskets, when so packed, shall be delivered at the United States' arsenal, at Watertown, Massachusetts. A reasonable price is to be allowed by the United States to the said Asa Waters for the packing boxes, and for transporting the arms to the arsenal; the cost of the boxes to be ascertained and certified by the inspector, and the cost of transportation by the receiving officer.

5th. It is agreed that no advances of money shall be required or made, and that the muskets manufactured and delivered under this agreement shall be paid for on the delivery of each parcel, consisting of not less than two hundred and fifty stands complete, at the price stipulated in the third article, and to the full amount of the parcel delivered; not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the arms, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed that if the United States shall alter or modify the model or pattern musket, or establish a model or pattern at the national armories differing in any respect from that upon which this agreement is founded, then the arms to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: Provided, however, that the said Asa Waters shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made.

No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void whenever the said Asa Waters shall fail to deliver, in any one year, the number of arms stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this agreement or contract, or to any benefit to arise therefrom.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

ASA WATERS,
GEORGE BOMFORD,
Lieut. Col. on ordnance duty.

Witness present, W. WADE.

This agreement, made this 6th day of December, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Honorable John C. Calhoun, Secretary of War, of the one part, and Marine T. Wickham, of the city of Philadelphia, of the other part, witnesseth:

1st. That the said Marine T. Wickham shall manufacture and deliver, for the military service of the United States, ten thousand muskets, with bayonets and ramrods complete, at the rate of two thousand in each year, for five years, commencing with the 1st day of July, 1824. The muskets to be manufactured shall, in all their parts, conform, in model, size, and form, to the pattern or standard model furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the muskets shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are, or may be, established by the Ordnance Department. It is understood, however, that no methods of proof or inspection more rigorous than those established for, and practised at, the national armories of the United States, shall at any time be established. The muskets are to be proved and inspected at or near Philadelphia, and in parcels consisting each of not less than two hundred and fifty stands; the expense of proof and inspection to be defrayed by the United States.

3d. It is further agreed that the price of the muskets to be manufactured shall be as follows, viz: for each musket complete, including bayonet, ramrod, and flint, including also the proportion of screw drivers, wipers, ball screws, and spring vices, stated in the fourth article of this agreement, the price shall be twelve dollars and twenty-five cents; subject, however, to the following proviso: that if, during the period prescribed for the existence of this agreement, the cost of the arms at the national armories shall be increased or diminished, by the rise or fall of materials or labor, to an amount equal to fifty cents, or more, on each stand of arms made, then the price herein stipulated shall be increased or diminished an equal amount. The new price, if it be lower than is herein stipulated, shall not take effect upon any muskets delivered under this agreement, within three months from and after the time when such reduction shall have been satisfactorily ascertained, nor until three months' previous notice thereof shall have been given. But, if the new price be higher, it shall take effect upon the first parcel of muskets delivered after the increased price has been ascertained and determined.

4th. It is agreed that the said M. T. Wickham shall cause the said muskets to be safely and properly packed for transportation, in good and sufficient boxes, and in the manner which is, or may be, prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty muskets complete, twenty screw drivers, twenty wipers, two ball screws, and two spring vices; and the said muskets, when so packed, shall be delivered at the United States' arsenal, Frankford, Pennsylvania. A reasonable price is to be allowed by the United States to the said Marine T. Wickham for the packing boxes, and for transporting the arms to the arsenal. The cost of the boxes to be ascertained and certified by the inspector, and the cost of transportation by the receiving officer.

5th. It is agreed that no advances of money shall be required or made, and that the muskets manufactured and delivered under this agreement shall be paid for on the delivery of each parcel, consisting of not less than two hundred and fifty stands complete, at the price stipulated in the third article, and to the full amount of the parcel delivered, not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the arms, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed that if the United States shall alter or modify the model or pattern musket, or establish a model or pattern at the national armories differing in any respect from that upon which this agreement is founded, then the arms to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: Provided, however, that the said M. T. Wickham shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made.

No deviations from the established patterns will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void whenever the said Marine T. Wickham shall fail to deliver, in any one year, the number of arms stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this agreement or contract, or to any benefit to arise therefrom.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

GEORGE BOMFORD, *Lt. Col. on ordnance duty.*
MARINE T. WICKHAM.

Witness present to the signature of George Bomford, W. WADE.
To the signature of Marine T. Wickham, J. BAKER.

This agreement, made this 9th day of December, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Honorable John C. Calhoun, Secretary of War, of the one part, and Nathan Starr, of Middletown, in the State of Connecticut, of the other part, witnesseth:

1st. That the said Nathan Starr shall manufacture and deliver, for the military service of the United States, four thousand rifles complete, at the rate of eight hundred in each year, for five years, commencing with the 1st day of July, 1823. The rifles to be manufactured shall, in all their parts, conform, in model, size, and form, to the pattern or standard model furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the said rifles shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are or may be established by the Ordnance Department. It is understood, however, that no methods of proof and inspection more rigorous than those established for and practised at the national armories of the United States shall at any time be established. The rifles are to be proved and inspected at Middletown, and in parcels consisting each of not less than two hundred; the expense of proof and inspection to be defrayed by the United States.

3d. It is agreed that the price of said rifles shall be as follows, viz: for each rifle complete, including ramrod and flint, including also the proportion of bullet moulds, screw drivers, wipers, ball screws, spring vices, and flint-caps, stated in the fourth article of this agreement, the price shall be fourteen dollars and fifty cents; subject, however, to the following proviso: that if, during the period prescribed for the existence of this agreement, the cost of arms at the national armories shall be increased or diminished, by the rise or fall of materials or labor, to an amount equal to fifty cents, or more, on each stand of arms made, then the price herein stipulated shall be increased or diminished an equal amount. The new price, if it be lower than is herein stipulated, shall not take effect upon any rifles delivered under this agreement within three months from and after the time when such reduction shall have been satisfactorily ascertained, nor until three months' previous notice thereof shall have been given. But, if the new price be higher, it shall take effect upon the first parcel of rifles delivered, after the increased price has been ascertained and determined.

4th. It is agreed that the said Nathan Starr shall cause the said rifles to be safely and properly packed for transportation in good and sufficient boxes, and in the manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty rifles, with flints and flint-caps complete, two bullet moulds, twenty screw drivers, twenty wipers, two ball screws, two spring vices, and twenty spare lead flint-caps; and the said rifles, when so packed, shall be delivered at the store of such person in Middletown as may be appointed to receive them. A reasonable price is to be allowed to the said Nathan Starr for the packing boxes, the cost of which will be ascertained and certified by the United States' inspector.

5th. It is agreed that no advances of money shall be required or made, and that the rifles manufactured and delivered under this agreement shall be paid for on delivery of each parcel, consisting of not less than two hundred complete, at the price stipulated in the third article, and to the full amount of the parcel delivered, not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the rifles, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed, that if the United States shall alter or modify the pattern or model rifle, or establish a model or pattern at the national armories differing in any respect from that upon which this agreement is founded, then the rifles to be thereafter manufactured under this agreement shall be conformable thereto, if it be required by the Ordnance Department: Provided, however, that the said Nathan Starr shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made. No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void, whenever the said Nathan Starr shall fail to deliver, in any one year, the number of rifles stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

NATHAN STARR,

GEORGE BOMFORD, *Lt. Col. on ordnance duty.*

This agreement, made this 10th day of December, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Honorable John C. Calhoun, Secretary of War, of the one part, and Robert and John D. Johnson, of Middletown, in the State of Connecticut, of the other part, witnesseth:

1st. That the said Robert and John D. Johnson shall manufacture and deliver, for the military service of the United States, three thousand rifles complete, at the rate of six hundred in each year, for five years, commencing with the 1st of July, 1824. The rifles to be manufactured shall, in all their parts, conform, in model, size, and form, to the pattern or standard model furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the said rifles shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are, or may be, established by the Ordnance Department. It is understood, however, that no methods of proof and inspection more rigorous than those established for and practised at the national armories of the United States shall at any time be established. The rifles are to be proved and inspected at Middletown, and in parcels consisting each of not less than two hundred; the expense of proof and inspection to be defrayed by the United States.

3d. It is agreed that the price of the said rifles shall be as follows, viz: For each rifle complete, including ramrod and flint, including also the proportion of bullet moulds, screw drivers, wipers, ball screws, spring vices, and flint-caps, stated in the fourth article of this agreement, the price shall be fourteen dollars and fifty cents, subject, however, to the following proviso: that if, during the period prescribed for the existence of this agreement, the cost of arms at the national armories shall be increased or diminished, by the rise or fall of materials or labor, to an amount equal to fifty cents, or more, on each stand of arms made, then the price herein stipulated shall be increased

or diminished an equal amount. The new price, if it be lower than is herein stipulated, shall not not take effect upon any rifles delivered under this agreement within three months from and after the time when such reduction shall have been satisfactorily ascertained, nor until three months' previous notice shall have been given. But if the new price be higher, it shall take effect upon the first parcel of rifles delivered, after the increased price has been ascertained and determined.

4th. It is agreed that the said Robert and John D. Johnson shall cause the said rifles to be safely and properly packed for transportation in good and sufficient boxes, and in the manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty rifles, with flint and flint-caps complete, two bullet moulds, twenty screw drivers, twenty wipers, two ball screws, two spring vices, and twenty spare lead flint-caps; and the said rifles, when so packed, shall be delivered at the store of such person in Middletown as may be appointed to receive them. A reasonable price is to be allowed to the said R. and J. D. Johnson for the packing boxes, the cost of which will be certified by the United States' inspector.

5th. It is agreed that no advances of money shall be required or made, and that the rifles manufactured and delivered under this agreement shall be paid for on delivery of each parcel, consisting of not less than two hundred complete, at the price stipulated in the third article, and to the full amount of the parcel delivered, not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the rifles, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed, that if the United States shall alter or modify the pattern or model rifle, or establish a model or pattern at the national armories differing, in any respect, from that upon which this agreement is founded, then the rifles to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: Provided, however, that the said Robert and John D. Johnson shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made.

No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void, whenever the said Robert and John D. Johnson shall fail to deliver, in any one year, the number of rifles stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

Witness present to the signature of W. WADE. — GEO. BOMFORD, *Lt. Col. on ordnance duty.*

Witness present to the signature of NOAH WELLES. — ROB. & J. D. JOHNSON.

This agreement, made this 10th day of December, 1823, between George Bomford, lieutenant colonel of artillery, on ordnance duty, in the service of the United States, acting with the consent and under the direction of the Hon. J. C. Calhoun, Secretary of War, of the one part, and Simeon North, of Middletown, in the State of Connecticut, of the other part, witnesseth:

1st. That the said Simeon North shall manufacture and deliver, for the military service of the United States, six thousand rifles complete, at the rate of twelve hundred in each year, for five years, commencing with the 1st day of July, 1823. The rifles to be manufactured shall, in all their parts, conform, in model, size, and form, to the pattern or standard model furnished by the Ordnance Department, and shall be equal in workmanship and quality, in every respect, to the arms made at the national armories during the same period.

2d. It is agreed that the rifles shall be proved and inspected by an officer or person appointed by the Ordnance Department for that purpose, and in the manner prescribed by the regulations which are or may be established by the Ordnance Department. It is understood, however, that no methods of proof or inspection more rigorous than those established for and practised at the national armories of the United States shall at any time be established. The rifles are to be proved and inspected at Middletown, and in parcels consisting each of not less than two hundred: the expense of proof and inspection to be defrayed by the United States.

3d. It is agreed that the price of the said rifles shall be as follows, viz: for each rifle complete, including ramrod and flint, including also the proportion of bullet moulds, screw drivers, wipers, ball screws, spring vices, and flint-caps, stated in the fourth article of this agreement, the price shall be fourteen dollars and fifty cents; subject, however, to the following proviso: that if, during the period prescribed for the existence of this agreement, the cost of arms at the national armories shall be increased or diminished, by the rise or fall of materials or labor, to an amount equal to fifty cents, or more, on each stand of arms made, then the price herein stipulated shall be increased or diminished an equal amount. The new price, if it be lower than is herein stipulated, shall not take effect upon any rifles delivered under this agreement within three months from and after the time when such reduction shall have been satisfactorily ascertained, nor until three months' previous notice thereof shall have been given. But, if the new price be higher, it shall take effect upon the first parcel of rifles delivered, after the increased price has been ascertained and determined.

4th. It is agreed that the said Simeon North shall cause the said rifles to be safely and properly packed for transportation in good and sufficient boxes, and in the manner which is or may be prescribed by the regulations of the Ordnance Department, and practised at the national armories; each box to contain twenty rifles, with flints and flint-caps complete, two bullet moulds, twenty screw drivers, twenty wipers, two ball screws, two spring vices, and twenty spare lead flint-caps; and the said rifles, when so packed, shall be delivered at the store of such person in Middletown as may be appointed to receive them. A reasonable price is to be allowed to the said Simeon North for the packing boxes, the cost of which will be ascertained and certified by the United States' inspector.

5th. It is agreed that no advances of money shall be required or made, and that the rifles manufactured and delivered under this agreement shall be paid for on the delivery of each parcel, consisting of not less than two hundred complete, at the price stipulated in the third article, and to the full amount of the parcel delivered; not exceeding, in any one year, the number specified in the first article. The vouchers upon which payment will be made will be, a certificate of the person appointed to inspect the rifles, and the receipt of the person to whom they were delivered for the service of the United States.

6th. It is agreed, that if the United States shall alter or modify the pattern or model rifle, or establish a model or pattern at the national armories differing, in any respect, from that upon which this agreement is founded, then the rifles to be thereafter manufactured under this agreement shall be made conformable thereto, if it be required by the Ordnance Department: Provided, however, that the said Simeon North shall be allowed a reasonable compensation for any extra expense occasioned by such alteration; and provided, also, that the amount of such compensation shall be agreed upon and established before any alteration is made. No deviations from the established pattern will at any time be made, unless expressly directed, in writing, by the Ordnance Department.

7th. It is agreed that the United States possess and reserve the right to declare this agreement null and void, whenever the said Simeon North shall fail to deliver, in any one year, the number of rifles stipulated in the first article.

8th. It is expressly conditioned that no member of Congress is, or shall be, admitted to any share or part of this contract or agreement, or to any benefit to arise thereupon.

In witness whereof, the parties aforesaid have hereunto set their hands, and affixed their seals, the day and year first above written.

Witness present to the signature of EDWARD HULBERT. — SIMEON NORTH.

Witness present to the signature of W. WADE. — GEORGE BOMFORD, *Lt. Col. on ordnance duty.*

ORDNANCE DEPARTMENT, WASHINGTON, *August* —, 1823.

The following regulations for the proof and inspection of small arms, made under contract with the United States, are hereby established; and all the inspectors of contract arms are strictly enjoined to conform thereto.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Regulations for the proof and inspection of small arms made under contract with the United States.

The model arm referred to in the contract, and furnished by the Government to the contractor, will be considered a standard of reference. The arms manufactured should conform, in all their parts, in pattern or form, to the standard model; and should be equal in workmanship to the arms of similar denomination made at the national armories during the same period. The several parts of the arms should be browned, blued, case-hardened, or polished, as in the standard model.

MUSKETS.—*Proof and inspection of barrels.*

The inspector will first examine the barrel, and ascertain whether it is reduced to its proper weight, which is four pounds when the breech is screwed in; and whether the external and internal parts of the barrel are of the prescribed dimensions, and free from ring bores, cinder holes, flaws, cracks, and other defects. The diameter of the bore should be a little less than the smallest diameter allowable in finished muskets. To ascertain this, a small gauge-plug should be used, which differs as much from the smallest of the two used in finished muskets as those two differ from one another. The bore should be made to admit the passage of the smallest plug freely through it, but not so large as to receive the second size plug.

All the barrels which may pass this examination will be closed at the breech, either with proving plugs or breech pins, and proved as follows, viz:

1*st Charge.*—One-eighteenth part of a pound of powder; one lead bullet, weighing one-fifteenth part of a pound; and two paper wads, each to measure three-fourths of an inch in length, after being well rammed; one of the wads to be placed on the top of the powder, the other on the top of the bullet. The whole to be well rammed with copper rods.

2*d Charge.*—One twenty-second part of a pound of powder, with one bullet and two wads, as in the first charge.

The powder used in proving barrels must be of the full proof, which is or may be established by the Ordnance Department, and should, in all respects, be equal to that used for proving barrels in the national armories.

The inspector will be careful in ascertaining the quality of the powder, before he proceeds to proving.

The barrels which resist the proof will be cleaned and examined; and, if no defects are discovered, the vents will be stopped, and the bores will be filled with water. If proving plugs have been used, they will be removed, and the breech pins will be screwed in before the water is applied. The barrels, when filled with water, will be left standing about six hours, when they will be again examined; and if no water has passed through the breech, or made its appearance on the exterior of the barrel, nor any other defects observed, they will be received. The marks of reception will be as follows, viz: the letters U. S. to be placed on the top of the barrel, one inch distant from the breech; the initial letters of the inspector's name, with the letter P. under them, to be placed to the left of the letters U. S.; which marks will be made by the inspector.

INSPECTION OF FINISHED MUSKETS.

Every musket should be taken to pieces; the breech pin turned out of the barrel; the screws turned out of the lock, and every component part separated; when the inspector will proceed to examine each part in the following manner, viz:

First.—THE BARREL. The inspector will first examine the exterior and interior surface of the barrel, to see if it is free from flaws, cracks, cinder holes, or ring bores. He will then stretch a line through the barrel, and apply it to at least four sides of the bore, to ascertain if the interior is straight. The caliber of the bore will then be verified by the gauge-plugs, the small plug should pass freely through the barrel, and the large plug should not enter its whole length. If the barrel will not receive the small plug, or if it will admit the large plug, the barrel will be rejected.

The inspector will carefully examine the threads of the screw on the inside of the barrel, and will be particular to ascertain that they do not project inwards beyond the surface of the bore. The small gauge-plug should pass freely

through, without touching the threads. The exterior dimensions of the barrel will then be verified, by applying the gauges to the breech, middle, and muzzle. The breech pin should be case-hardened, but the temper of the tang should be reduced, or it will be too easily broken; the proper temper can be ascertained by trying it with the edge of a fine cut file. The hole in the tang must be exactly in the centre of its width, and at the same distance from the end of the barrel as in the model musket. The breech pin should be screwed into its place in the barrel; when the dimensions of the breech of the barrel, with the breech pin and tang, will be verified by the breech gauge. The vent will be carefully examined; it should enter the bore of the barrel in front of, but close to the end of the breech pin; care should be taken that the latter does not obstruct it. The diameter of the vent should be the same as in the model musket. The barrel will next be placed in the stock, to see if it fits the wood closely all along, and that it is sunk nearly one-half its diameter into the stock.

Second.—THE LOCK. The various parts of the lock will be closely examined, to see that the limbs are sound, well filed, and of the proper form; that the pins have good threads on them; and that the holes in the plate and cock have also good threads, and correspond with those on the pins, and are of the same size with those in the pattern locks. After examining all the limbs separately, the lock will be put together; in doing which it will be ascertained whether the pins turn in and out freely. The lock will then be applied to the lock-gauge, to ascertain the size of the plate, and position of the other parts of the lock; after which the following points will be noted, viz:

Observe, 1st, if the sear moves freely, after screwing its pin as closely as possible, and that its point is sufficiently strong, and falls properly into the notches of the tumbler. 2d. If the bridle has no cracks or flaws in its pin holes, or the hole of the tumbler pivot. 3d. If the springs are well adjusted to the lock plate, and play freely when working the lock. 4th. If the neck of the tumbler fits exactly its hole in the lock plate, that the pivot fits its hold in the bridle, and that the hook of the tumbler does not pass below the edge of the lock plate. 5th. Observe whether the cock works freely and steadily, without rubbing against the lock plate, when screwed up tight. 6th. See that the hammer plays freely, and covers the pan closely. To ascertain if all the parts be well hardened, try them with a fine cut file. Try the action of the lock generally, to observe the harmony of all its movements. Snap the lock, and, if the hammer does not uncover the pan, the hammer spring is then too strong for the main spring; if the hammer flies open too freely, the main spring is then too strong for the hammer spring. In either case, there will be but little fire, and the sparks will not fall fairly into the pan. Observe, in drawing up the cock, if the point of the sear falls properly into the notches of the tumbler, and that, in snapping, it does not stop at the half-cock. Try the hardness of the face of the hammer, by snapping the lock several times with a good flint, and observe if it makes fire freely. In returning the lock to its place, see that it has been well fitted into the stock. The springs, and other moving parts on the interior side of the lock, should have sufficient room to work freely, without being obstructed by the wood. The part of the stock upon which the inner surface of the lock plate rests should be smooth and straight, so that the plate should rest firmly upon the wood, in all its touching points. See that the cavities made in the stock, for the bridle and heads of the screws, are not sunk deeper than is necessary, and that the trigger is not uncovered thereby; also, that the cavity made for the reception of the main spring is not so deep as to expose the barrel. The lining of the lock should fit the flat side of the barrel closely. The inner edge of the seat of the hammer should fit the barrel closely, but not to chafe in its movements.

The lock should be drawn firmly into its place by the side pins, and its action tried again by half-cocking, cocking, and snapping. This will determine whether the interior parts are bound, or their movements obstructed by the wood; also, whether the trigger be well hung, and properly adjusted to the sear. When the lock is at half-cock, pull the trigger hard, to ascertain if it will go off. The action of the lock should be as free and clear when secured in its place as when separate.

Third—MOUNTING. The form and dimensions of every part of the mounting will be verified by comparing them with the pattern musket. After having been critically examined, and the bands verified by the gauge, they will be put in their proper places on the stock, and every part must be well fitted in its place. The guard plate must be sunk even with the surface of the stock, and the hole which receives the tang pin must have a full and perfect thread. The trigger must have as little lateral play in its groove as possible to admit its free movement. It should not be susceptible of any other motion than one perpendicular to the axis of its wire. The side plates must have full square edges, and be so fitted in the stock, that, when screwed up tightly by the side pins, the surface of the plate shall not sink below the surface of the stock. The side pins must be straight and cylindrical, and the shoulders of the heads should rest evenly upon the side plate. The heel plate must fit the end of the breech closely, and be made to cover it exactly. The edge of the plate should be full and equal in its thickness, and should neither project beyond, nor recede within, the wood. The tang of the heel plate should be sunk into the wood a depth equal to its thickness, so that its upper surface shall be even with that of the stock. The screws which secure the heel plate and guard should have full deep threads, corresponding with the pattern. The holes in the stock, which receive the screws, should be closely examined, to see if they are of the proper size, and have full well-formed threads; it is essential that the screws fit very closely in their holes. The upper, middle, and lower bands should fit, both in their shoulders and over the barrel and stock, so as to secure both firmly together. The wood below the middle and lower bands should project so much, as will make it even with the external surface of the bands. The band-springs must not be sunk too deep in the wood, nor their beds reach to the inside of the stock; they should move freely, so as to fall back naturally to their proper position when no longer pressed. They should be so placed as to keep the bands in a fixed position, not permitting them to slide upon the stock, only when the springs are forced down.

Fourth.—THE STOCK. The stock should be examined when the barrel, lock, and mounting are separated from it. Observe if the groove for the barrel is so formed as to fit the barrel closely its whole length, and that the butt of the barrel fits closely against the wood behind it; and, also, that the breech pin and tang are closely fitted. Observe, also, if there be any cracks, splits, or worm-holes, in any part of the stock. To detect these defects (the splits especially) requires a close scrutiny, as it is not uncommon for workmen to endeavor to conceal them, by filling up the cavities with glue and saw-dust.

The form and dimensions of the stock will also be observed: see that it is the proper length, from the butt of the barrel to the butt of the stock, and that it has the same fall or crook as the pattern musket; to ascertain which, apply the gauge.

The quality of the wood of which the stock is made must be examined. It should be hard and firm. Light, porous, or brittle wood, such as is taken from old trees, should not be received. The stocks should be well seasoned. This may be ascertained by the following methods, viz: When the lock is first removed from the stock, the inner surface of it will be rusted if the stock is unseasoned. Take a thin shaving from the stock, and roll it between the fingers; if the stock be seasoned, the shaving will crumble, but not if it be unseasoned. The smell of the wood, at a place fresh cut, will assist in determining whether the wood be seasoned or not. No stocks should be used which have not been cut from the plank at least three years, and stored in a dry place for two years. Kiln-dried or steamed stocks should not be received.

Fifth.—RAMROD. The rod should be first tested in its dimensions. To ascertain its length, let it fall into the barrel, the head resting on the breech pin; the small end of the rod should then project from three to five-tenths of an inch beyond the muzzle. The diameter of the rod will be verified by gauges, which have been adjusted upon the pattern rod; the rods should be tried in three places in the middle, and near to each end. See that the head is formed like the pattern, and that the screws at the end have well-formed threads. Try the temper of the rods by springing them in four different directions, so that the middle of the rod will be six inches from a straight line, drawn from the head to the point. Observe, after bending, that they are not made crooked by the operation; they should spring back by their elasticity, and remain straight. Observe, also, that they have no flaws nor cross cracks; these defects sometimes exist without being visible, and, to detect them, suspend the rod by a thread at one end, and strike it gently with a piece of metal; the sound will indicate whether there be any flaws or not. Try the rod in the groove, see that it fits snugly, that it can be pushed down, and withdrawn without much effort, and at the same time be not too loose. The rod should go down so far, that its head shall not project above the end of the barrel. Observe whether the covered part of the groove is in the centre of the stock, and that it does not interfere with the front side pin.

Sixth.—BAYONET. The bayonet must be tried in the following manner: Drive a staple into a work bench, about fifteen inches from the edge, the staple to project just sufficient to receive the point of the bayonet; place a piece of hard wood, half an inch thick, equidistant between the staple and edge of the bench, insert the point of the bayonet in the staple, the middle resting upon the block of wood, and bear upon the other end until it touches the bench. It should be tried with both the face and back uppermost, which will spring it each way one inch. The bayonet should stand this trial without remaining bent, or exhibiting any cracks or flaws. The neck of the bayonet should be tried by placing the point on the floor, when the bayonet is fixed to the musket; hold the breech of the musket with one hand, and with the other bear firmly upon the barrel, and observe whether the neck of the bayonet bends, or exhibits any other signs of weakness. The socket of the bayonet should be bored straight and cylindrical, and should fit the muzzle of the barrel with such exactness, as not to play or move easily, but not to require a greater effort than can be given with the hand to fix or remove it. The canal cut in the socket, for passing the bayonet stud, should agree in form and dimensions with the pattern.

The stud should also be agreeable to the prescribed dimensions. The bayonet, when fixed, should have one end of its socket resting upon the upper band and the extremity of the stock; the other end of the socket should be even with, or fall a little below, the end of the barrel. The blade of the bayonet should diverge a little from the line of the axis of the bore, it being more open at the point than at the neck. The blade should be made to pass freely into the scabbard gauge.

MARKS.

Muskets will be marked by the manufacturer, before they are offered for inspection, in the following manner, viz: The letters U. S. and the name of the contractor will be stamped upon the lock plate, under the pan; the name of the place where the musket is manufactured, and the year within which it is made, will be stamped upon the lock plate, in the rear of the cock; the letters U. S. will be placed on the tang of the heel plate; the year will be placed on the tang of the breech pin, near the breech of the barrel; and the letters U. S. will be placed on the face of the bayonet blade, near the neck. For the marks upon the barrel, see "proof of barrels."

Care should be taken that none of the marks upon the arms should be stamped so deep as to be injurious.

PROOF AND INSPECTION OF RIFLES.—*Proof of barrels.*

Rifle barrels will be examined and proved in the same manner as is directed for musket barrels, except the proof charge, which will be as follows, viz:

1*st Charge.*—One twenty-eighth part of a pound of powder, and two lead bullets, each weighing one thirty-second part of a pound; and two paper wads, each measuring one-half an inch in length after being well rammed. One of the wads to be placed on the top of the powder, and the other on the top of the bullets.

2*d Charge.*—One thirty-second part of a pound of powder, with one bullet and with two wads, as in the first charge.

The barrels to be loaded and fired in the same manner as musket barrels.

INSPECTION OF FINISHED RIFLES.

The grooves in the bore of the barrel will be carefully examined, to ascertain that they are formed according to the pattern, and that they are even and uniform throughout. All the component parts of the rifle will be examined in the same manner as is directed for muskets, except the ramrod, which is required to spring only four inches.

The marks upon the rifles will be the same as those directed for muskets.

PROOF AND INSPECTION OF PISTOLS.

Pistol barrels, where the caliber is the same as the rifle, will be proved as follows, viz:

1*st Charge.*—One thirty-second part of a pound of powder, with one bullet and two wads, as directed for rifle barrels.

2*d Charge.*—One fortieth part of a pound of powder, with one bullet and two wads, as above.

The examination of the component parts of the pistol will be made according to the general instructions given above for other arms.

GENERAL REMARKS.

The inspector will not consider himself restricted to the particular examinations above mentioned; but he will make any other examinations which he may deem necessary, to ascertain more minutely the quality of any part of the arms. And whenever he discovers, or suspects, that attempts have been made by the workmen to cover or conceal material defects, he will be very cautious and vigilant, and will subject the arms to the severest scrutiny, in order to detect them.

It being the intention of the Government to provide arms of a uniform model for the public service generally, the contractors are required to conform to the model and the workmanship of the arms made at the national armories. The inspector will therefore decide upon the quality of materials and of workmanship by the rules which govern in like cases at the national armories; that is, he will reject such arms, or parts of arms, as would be rejected at the armories, and he will receive such as would be received there. He will not, however, in any case, exact more rigid conditions than are enforced at the national armories.

After the examinations are concluded, all the arms which are of an approved quality will be marked by the inspector with the initials of his name, to be stamped on the stock, opposite the lock; when they will be set apart for packing.

PACKING BOXES.

The contractor will provide suitable boxes for packing the arms, which will be subject to the inspection of the inspector.

The boxes are to be planed both on the inside and on the outside, and should be made of good, sound, well-seasoned, white pine boards, and free from splits, knots, and worm holes, and to be full one inch thick when worked. In each corner of the box there should be a post of hard wood, two and a half inches wide, and one and a quarter inch thick; the flat side laid against the end of the box. Each of the angles of the box will be secured by eight 8*d.* cut nails, driven through the end piece into the post; and by nine 12*d.* cut nails, driven through the side piece, four of them into the post, and five into the end piece, making, in all, seventeen nails in each angle. The space between the posts, at the ends, will be filled with boards one inch thick. The bottom of the box will be secured by four two-inch screws, and by twelve 12*d.* and fourteen 10*d.* cut nails. Two of the screws and four of the nails to be driven at each end of the bottom. The lid will be secured by sixteen 8*d.* cut nails, viz: five in each side, and three in each end. Each box is to be furnished with two beckets or handles, (one at each end,) made of strong rope, at least half an inch in diameter. The holes for the beckets will be made through the end piece of the box, a little above the centre, but not through the inner lining of the end; so that the knots at the end of the rope will lie between the two pieces. The lining will be cut away to make room for the knots. The inspector will be particular to ascertain that the boards used in making the boxes, and also the cleets, bars, and wedges, used in packing, are perfectly seasoned: he can ascertain this by boring into the wood with a small gimlet, and examining the chips or borings. No materials should be used for boxes which have not been placed under cover, in a dry place, at least eighteen months.

The dimensions of the boxes will be as follows, viz: for muskets, 4 feet 10¼ inches long, 15½ inches wide, and 12½ inches deep.

For rifles, 4 feet 4½ inches long, 14⅜ inches wide, and 12⅜ inches deep. All the dimensions are taken on the inside, "in the clear," when the box is completed.

PACKING ARMS.

When the boxes are approved by the inspector, the contractor will cause the arms to be packed in the manner directed in the contract. Each box of muskets will contain twenty muskets and bayonets, twenty screw drivers, twenty wipers, two ball screws, two spring vices, and twenty spare lead flint-caps. Each musket to be furnished with a good flint and a lead flint-cap.

Each box of rifles will contain twenty rifles, two bullet moulds, twenty screw drivers, twenty wipers, two ball screws, two spring vices, and twenty spare lead flint-caps. Each rifle to be furnished with a good flint and a lead flint-cap. The arms are to be so placed that they will be firmly secured without touching each other.

The bayonets and small articles are to be well secured to the bottom of the box.

Before the arms are placed in the boxes, they will be oiled and lackered in the following manner, viz: the inside of the barrel and lock will be made clean, and well oiled with pure oil, in the usual manner. The vent will then be closed with wax, and the muzzle with a good soft cork that fits it closely. The whole of the exterior surface of the arm, including both the wood and metallic parts, is then covered with lacker prepared for the purpose. The exterior surface of the arm should be wiped clean, and entirely freed from oil before the lacker is applied. To apply the lacker, it should be put into a glazed earthern or stone-ware vessel, of convenient size, and heated in a stove, or sand bath, just sufficient to keep the ingredients in a state of fusion. As the ingredients are very inflammable, much caution should be used in heating them.

The lacker, in this warm state, is spread upon the arms with a small paint brush; it is afterwards smoothed and spread more evenly with a large brush, made of camel's hair. The brushes should be dipped into pure spirits of turpentine, before they are put into the lacker.

Spirits of turpentine forms one of the principal ingredients of the mixture, and a portion of it is evaporated by heating; it will, therefore, be necessary to add small quantities of spirits of turpentine to the lacker occasionally, in order that its proper consistence may be preserved.

When the arms are well covered with the lacker, they will be set aside in a dry, cool place, and they should not be packed before they are perfectly dried.

The lacker, properly prepared, will be furnished to the contractors by the United States.

The packing will be done under the immediate inspection of the inspector, who will be careful to see that the work is properly done. The inspector will place on the inside of each box, in a secure manner, a card giving a list of all the articles packed in the box, and the date of inspection. He will also place his signature upon the card.

The ends of the box, on the outside, will be marked by the contractor with his name, the number of arms contained in the box, and the year within which they were inspected.

CERTIFICATES OF INSPECTION.

When the inspection and package of the arms have been completed, the inspector will furnish the contractor with three certificates, according to the following form.

I hereby certify, that I have this day inspected and approved five hundred muskets, five hundred screw drivers, five hundred wipers, fifty ball screws, fifty spring vices, five hundred spare lead flint-caps, and twenty-five packing boxes, manufactured by A B, of ——, Massachusetts, under his contract with the United States, dated ——.

And I further certify, that the said arms and appendages have been inspected according to the regulations established by the Ordnance Department, and that they conform to the standard model, and are of good quality and workmanship, and are securely packed in good, strong boxes, and that they are in all things conformable to the contract.

I certify, also, that, according to my best judgment, the true value of each packing box is one dollar and fifty cents.

Given under my hand at ——, this —— day of ——, 18 .

C. D., *U. S. Inspector of Arms.*

RECAPITULATION.

500 muskets and bayonets.
500 screw drivers.
500 wipers.
50 ball screws.
50 spring vices.
500 spare flint-caps.
25 packing boxes.

The above certificates will be marked by the inspector, "original," "duplicate," "triplicate." Two of them will be forwarded by the contractor, with his accounts, to the Ordnance Department; the third he will retain for his own security.

The inspector will also furnish the contractor with an invoice of the arms inspected and approved, according to the following form, viz:

Invoice of arms manufactured by A B, of Pittsfield, Massachusetts, and inspected and approved by C D, United States' inspector of arms.

Nos.	Packages.	Marks.	Contents.
1 *a* 25	25 boxes,	A B, 20 muskets, 1823.	500 muskets and bayonets. 500 screw drivers. 500 wipers. 50 ball screws. 50 spring vices. 500 spare flint-caps.

C D, *U. S. Inspector of Arms.*

PITTSFIELD, MASS., ———, 1823.

The invoice will be transmitted by the contractor, with the arms, to the person who is authorized to receive them.

18th CONGRESS.] No. 249. [1st SESSION.

ARMY REGISTER FOR THE YEAR 1824.

COMMUNICATED TO THE SENATE, JANUARY 8, 1824.

General Staff.

Names and rank.	Date of appointment.	Brevets and former commissions.	Remarks.
Jacob Brown, major general, - -	Jan. 24, 1814,	- -	Washington.
Edmund P. Gaines, brigadier general, -	March 9, 1814,	Aug. 15, 1814, major general brevet, -	Comd'ng east. depart.
Winfield Scott, brigadier general, - -	March 9, 1814,	July 25, 1814, major general brevet, -	Comd'ng west. depart.
Thomas S. Jesup, brigadier general, and quartermaster general, - - -	May 8, 1818,	- -	Washington.
——— ———, adjutant general, - -	- -	- -	Washington.
John E. Wool, colonel and inspector general, -	April 29, 1816.		
S. B. Archer, colonel and inspector general, -	Nov. 10, 1821.		
William Linnard, major and quartermaster, -	May 12, 1813,	- -	Philadelphia.
Henry Stanton, major and quartermaster, -	May 13, 1820,	- -	Detroit.
For assistant quartermasters, see officers of the line.			
Subsistence Department.			
Colonel George Gibson, com. gen. subsistence,	April 18, 1818,	- -	Washington.
For assistant commissaries of subsistence, see the subalterns of the line.			
Purchasing Department.			
Callender Irvine, commissary of purchases, -	Aug. 8, 1812,	- -	Philadelphia.
Pay Department.			
Colonel N. Towson, paymaster general, -	- -	- -	Office, Washington.
Thomas Wright, paymaster, - -	June 22, 1815,	- -	Pensacola.
Asher Phillips, do - -	Aug. 26, 1815,	- -	Louisville, Kentucky.

GENERAL STAFF—Continued.

Names and rank.	Date of appointment.	Brevets and former commissions.	Remarks.
Alphonso Wetmore, - paymaster, -	Oct. 14, 1815,	- -	Franklin, Missouri Ter.
Benjamin F. Larned, - do -	Nov. 24, 1815,	- -	Baton Rouge.
Satterlee Clark, - do -	April 29, 1816,	- -	Utica, New York.
David Gwynne, - do -	April 29, 1816,	- -	Detroit, Michigan Ter.

MILITARY ACADEMY, WEST POINT, NEW YORK.

INSPECTOR.

Brevet Major General Alexander Macomb, Chief Engineer, (*ex officio*) inspector of the Military Academy.

SUPERINTENDENT AND COMMANDANT.

Brevet Lieutenant Colonel S. Thayer, corps of engineers.

ACADEMIC STAFF.

Jared Mansfield, professor of natural and experimental philosophy.
Lieutenant Samuel S. Smith, (3d artillery,) assistant professor of natural and experimental philosophy.
Lt. Alfred Mordecai, (corps of engineers,) acting assistant professor of natural and experimental philosophy.
Charles Davies, professor of mathematics.
Lieutenant Horace Webster, (3d infantry,) assistant professor of mathematics.
Lieutenant George S. Green, (artillery,) acting professor of mathematics.
Captain David B. Douglass, professor of engineering.

ARMY REGISTER—Continued.

The following officers have heretofore held appointments in the staff of the army, with brevet rank of a higher grade than that which they lineally hold at present, viz:

Names.	Present lineal rank.	Staff appointments with their brevet rank.	Date.
John B. Walbach,	Major,	Adjutant general and colonel,	6 August, 1813
James Bankhead,	Major,	Adjutant general and colonel,	9 September, 1813
John R. Bell,	Captain,	Inspector general and colonel,	28 October, 1814
Roger Jones,	Captain,	Adjutant general and colonel,	10 August, 1818
J. Erving, Jr.,	Captain,	Assistant adjutant general and major,	1 April, 1813
S. Churchill,	Captain,	Assistant inspector general and major,	29 August, 1813
Mann P. Lomax,	Captain,	Assistant adjutant general and major,	3 March, 1814
Charles J. Nourse,	Captain,	Assistant adjutant general and major,	14 September, 1814
F. S. Belton,	Captain,	Assistant adjutant general and major,	18 October, 1814
Milo Mason,	Captain,	Deputy quartermaster general and major,	29 April, 1816
R. M. Kirby,	1st lieutenant,	Assistant adjutant general and major,	29 April, 1816
J. M. Glassell,	Captain,	Assistant adjutant general and major,	22 May, 1818
T. Cross,	Captain,	Assistant inspector general and major,	17 October, 1820
James Green,	2d lieutenant,	Assistant deputy quartermaster gen. and capt.,	11 September, 1818
R. M. Harrison,	1st lieutenant,	Assistant deputy quartermaster gen. and capt.,	3 May, 1819
J. B. Brant,	1st lieutenant,	Assistant deputy quartermaster gen. and capt.,	30 November, 1819
J. L. Gardner,	1st lieutenant,	Assistant deputy quartermaster gen. and capt.,	18 May, 1820

The following list of Cadets is attached to the Army Register, conformably to a regulation for the government of the Military Academy, requiring the names of the most distinguished Cadets, not exceeding five in each class, to be reported for this purpose at each annual examination.

REPORTED AT THE EXAMINATION IN JUNE, 1823.

Names.	Studies in which each Cadet particularly excels.
First Class.	
Alfred Mordecai,	Mathematics, natural philosophy, engineering, chemistry and mineralogy, history and moral science, French language, and tactics.
George S. Green,	Mathematics, natural philosophy, engineering, history and moral science, and tactics.
George C. Richards,	Mathematics, natural philosophy, engineering, chemistry and mineralogy, history and moral science, and tactics.
Reuben Holmes,	Mathematics, natural philosophy, engineering, and French language.
Samuel M. Southerland,	Natural philosophy, engineering, and tactics.
Second Class.	
Dennis H. Mahan,	Natural philosophy, chemistry, and drawing.
John W. A. Smith,	Natural philosophy, chemistry, and drawing.
Robert P. Parrott,	Natural philosophy and chemistry.
Napoleon B. Bennett,	Natural philosophy, chemistry, and drawing.
Edward Hazzard,	Natural philosophy and chemistry.
Third Class.	
Alexander D. Bache,	Mathematics, French language, and drawing.
Peter McMartin,	Mathematics, French language, and drawing.
Horace Smith,	Mathematics, French language, and drawing.
Thompson S. Brown,	Mathematics and drawing.
Raphael C. Smead,	Mathematics and drawing.
Fourth Class.	
William H. C. Bartlett,	Mathematics and French language.
William Bryant,	Mathematics and French language.
Charles G. Ridgely,	Mathematics and French language.
George Woodbridge,	Mathematics and French language.
Daniel S. Herring,	Mathematics and French language.

Resignations, &c. since the publication of the last Register.

W. H. Mann, 4th infantry, April 25, 1823.

The Western Department comprises all west of a line drawn from the southernmost point of East Florida, to the northwest extremity of lake Superior, taking in the whole of Tennessee and Kentucky; and the Eastern Department all east of such line.

The head-quarters of the general-in-chief is in the District of Columbia.

The head-quarters of the commanding general of the Western Department is at Louisville, Kentucky; and the head-quarters of the commanding general of the Eastern Department is at Governor's Island, New York.

Cadets acting as supernumerary officers in the army, by brevet commissions, will be promoted successively to vacancies which may occur in the lowest grade of the arm to which they may be attached, conformably to the rank held by each on the merit roll when recommended for promotion.

Those officers, whose stations are changed by transfers and promotions, will report for duty accordingly.

C. J. NOURSE, *Acting Adjutant General.*

18th CONGRESS.] **No. 250.** [1st SESSION.

CLAIM OF A PAYMASTER OF A REGIMENT OF MILITIA.

COMMUNICATED TO THE SENATE, JANUARY 30, 1824.

Mr. TAYLOR, from the Committee on Military Affairs, to whom was referred a bill for the relief of James Johnson, reported:

That Colonel Richard M. Johnson commanded, during the late war with Great Britain, a regiment of mounted infantry; that he appointed James Johnson paymaster to said regiment; that the service of this regiment was performed, during the summer and fall of 1813, on the frontier of the State of Ohio, including Fort Wayne, Fort Meigs, Lower Sandusky, Brownstown, and Detroit; that, during this service, which lasted six months, the regiment had to furnish themselves with rations, a portion of the time, at their own expense, on account of the impracticability of furnishing the rations on the part of the Government; that, in making out an estimate of the amount due the non-commissioned officers, musicians, and privates, the commandant of said regiment gave the order that the rations furnished by the men should be estimated at twenty cents per ration, under a belief that the law authorized that sum; that the estimate was made out accordingly, and the rations estimated at twenty cents, when, in fact, the only act which had a direct bearing on this part of the payment to the non-commissioned officers, musicians, and privates, was passed in January, 1795, and which allowed only twenty-five cents for forage and rations per day, for each individual, making an excess to each of seven and a half cents per ration, for rations which were, by the said non-commissioned officers, musicians, and privates of said regiment, furnished by them during said service, making a total of four thousand three hundred and two dollars and seventy-five cents, the sum provided for by the bill. It also appears to your committee, from record evidence, furnished by the Third Auditor, that, within the same period, and within the same district of country in which said regiment operated and furnished themselves with rations, the Government gave to Orr and Greely from twenty to twenty-five cents, making an average of twenty-two and a half cents per ration, which the Government would have given, provided the ration had been furnished by the contractors, or the agents of the Government. In examining the report of balances made to Congress at the last session, your committee find that the Third Auditor, after stating the nature of this balance, concludes by saying, that, under the peculiar circumstances of the case, in his opinion, legislative provision would not be unreasonable. Your committee have thought it consistent with their duty to make this summary statement of facts, and to annex the evidence upon it which is given, viz: paper marked A is an extract of a letter from Peter Hagner, explaining the nature of the balance provided for; the paper marked B contains an extract furnished by the Third Auditor, as to the contract price of rations given to Orr and Greely during the same period, and within the same district of country, in which said regiment performed its military service; and paper marked C being an extract of the remarks of the Third Auditor in his report of the last session of Congress as to this balance. Upon this statement of the case, your committee think it would be reasonable and expedient to give the relief asked for, more especially when they recollect that the Government was not able to furnish the rations to the regiment, as in ordinary cases; that, if they had been furnished by Government, the cost would have amounted to more than twenty cents, the price allowed; that a previous estimate was made and presented to the disbursing officer of the Government, who made the advance accordingly, and the money being faithfully paid, according to such estimate, that it would be impracticable for said James Johnson to recover this small sum from a regiment which consisted of upwards of one thousand men, and the loss must fall upon the said James Johnson, who has faithfully disbursed the money according to the order of his commanding officer; and that the said regiment performed their duty with fidelity to their country. Upon this view of the case, the committee beg leave to report the bill without an amendment.

A.

Extract of a letter from Peter Hagner, Esq., Third Auditor.

SIR: TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *January* 1, 1824.

Agreeably to your request, I have the honor to state that the amount deducted from James Johnson's account, as late paymaster of your regiment of mounted Kentucky militia, in consequence of his having paid the non-commissioned officers, musicians, and privates, who furnished themselves with rations and forage, more than the law of the 2d of January, 1795, authorized, is $4,302 75. The whole of the foregoing sum was deducted in consequence of the law allowing only twenty-five cents per day for "*rations and forage*," and the payments appearing to have been made at the rate of twenty cents per day for the ration, and twelve and a half cents for forage, making a total sum of thirty-two and a half cents per day, and, consequently, an excess of seven and a half cents per day to each man more than the law warranted.

[NOTE.—Exhibits B and C are not now to be found.]

18th CONGRESS.] No. 251. [1st SESSION.

RULES AND REGULATIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 23, 1824.

To the House of Representatives of the United States: WASHINGTON, *February* 23, 1824.

The House of Representatives, on the 12th instant, having "resolved that the President of the United States be requested to inform this House whether the rules and regulations, compiled by General Scott, for the government of the army, are now in force in the army, or any part thereof; and by what authority the same have been adopted and enforced," I herewith transmit a report from the Department of War, which contains the information required.

JAMES MONROE.

DEPARTMENT OF WAR, *February* 16, 1824.

The Secretary of War, to whom was referred the resolution of the House of Representatives, requesting the President of the United States to inform that House "whether the rules and regulations, compiled by General Scott, for the government of the army, are now in force in the army, or any part thereof; and by what authority the same have been adopted and enforced," has the honor to state, that, after the repeal of the fourteenth section of the act of the 2d of March, 1821, which established the book of rules and regulations, compiled by General Scott, for the government of the army, the President caused the said book of rules and regulations to be continued in force by general order; a copy of which is herewith enclosed.

Respectfully submitted.

J. C. CALHOUN.

To the PRESIDENT OF THE UNITED STATES.

No. 33.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *May* 22, 1822.

ORDERS.

The fourteenth section of the act of the 2d of March, 1821, having been repealed by the act of the 7th of May, 1822, "the general regulations for the army" rest solely on the sanction of the President of the United States. The said regulations are, therefore, continued in force by his authority, in all cases where they do not conflict with positive legislation.

By order:

CHARLES J. NOURSE, *Acting Adjutant General.*

18th CONGRESS.] No. 252. [1st SESSION.

ESTIMATE OF THE EXPENSE OF TRANSPORTING TWO HUNDRED TROOPS TO THE MOUTH OF COLUMBIA RIVER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 23, 1824.

To the House of Representatives of the United States: WASHINGTON, *February* 20, 1824.

The House of Representatives, on the 26th ultimo, having "resolved that the President be requested to cause to be laid before the House an estimate of the expense which would be incurred by transporting two hundred of the troops now at the Council Bluffs to the mouth of the Columbia or Oregon river," I herewith transmit a report of the Secretary of War, which contains the information required.

JAMES MONROE.

DEPARTMENT OF WAR, *February* 17, 1824.

The Secretary of War, to whom was referred the resolution of the House of Representatives of the 26th of January last, requesting the President of the United States to cause to be laid before the House "an estimate of the expense which would be incurred by transporting two hundred of the troops now at the Council Bluffs to the mouth of the Columbia or Oregon river," has the honor to transmit, herewith, a report of the quartermaster general, which contains the information required.

Respectfully submitted.

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: QUARTERMASTER GENERAL'S OFFICE, WASHINGTON CITY, *February* 16, 1824.

In obedience to your order, dated the 30th ultimo, requiring an estimate of the probable expense of transporting two hundred of the troops now at the Council Bluffs, on the Missouri river, to the mouth of Columbia or Oregon river, I have the honor to report that the expense will consist:

1. Of an outfit of boats, and the necessary tools and materials to keep them in repair, to transport the detachment from the Council Bluffs to the head of navigation on the Missouri or Yellow Stone river;

2. The number of horses necessary to transport the detachment, their provisions, and stores, from that place to some navigable point on the Columbia river, and tools to open a road and construct bridges on the route; and

3. The tools and materials necessary to enable them to construct boats to descend the Columbia.

I take it for granted that the ordnance, clothing, provisions, and all the heavy baggage required for the use of the detachment, after it shall have arrived at its destination, will be transported by sea, and that no other supplies than those actually necessary on the march will be taken across the Rocky Mountains. If so, the whole outfit, including arms, ammunition, and provisions for twelve months, would not exceed one hundred and forty tons; to transport which, ten boats, which, with all their equipments, would not exceed seven hundred dollars each, would be sufficient.

Fifteen hundred dollars would provide all the tools that would be required in opening a road and constructing bridges between the navigable points of the Missouri and the Columbia; and two hundred horses would be amply sufficient for the transportation over that route. These horses could be obtained from the Pawnees, near the Council Bluffs, or from the Mandans, at about thirty dollars each, in merchandise; and, perhaps, would not cost the Government more than fifteen or twenty dollars each, in cash; at all events, not more than twenty-five dollars each.

Fifteen hundred dollars would provide all the tools and materials necessary to construct boats to descend the Columbia.

The necessary expense, then, incident to the movement, would be—

For ten boats, at $700 each,	$7,000
For intrenching and other tools necessary on the march,	1,500
For two hundred horses, at thirty dollars each, in merchandise, say twenty-five dollars each,	5,000
Tools and materials for boats on the Columbia,	1,500
Total,	15,000
Add an equal sum for unforeseen expenses,	15,000
And the whole amount required will be	$30,000

To transport the heavy baggage, ordnance, and a supply of provisions, by sea, whaling or sealing vessels, or northwest traders, it is believed, might be chartered at about five or six thousand dollars each; two would be sufficient; say they would cost $7,000 each; and the amount of sea transportation would be $14,000; making the entire expense of the operation, by land and water, $44,000.

Small as this estimate may appear, when we consider the magnitude of the object proposed to be accomplished, I feel confident that, if the operations be conducted by the military, it will be more than sufficient.

I have the honor to be, sir, your obedient servant,

TH. S. JESUP,
Brigadier General and Quartermaster General.

Hon. JOHN C. CALHOUN, *Secretary of War, Washington City.*

18th CONGRESS.] No. 253. [1st SESSION.

CLAIM TO THE LAND ON WHICH FORT DELAWARE IS ERECTED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 26, 1824.

To the House of Representatives: FEBRUARY 24, 1824.

I transmit, herewith, a report of the Secretary of War, containing the information called for by a resolution of the House of Representatives of the United States, passed on the 4th instant, respecting any suit or suits which have been, or are now depending, in which the United States are interested, for the recovery of the Pea Patch.

JAMES MONROE.

DEPARTMENT OF WAR, *February* 14, 1824.

The Secretary of War has the honor to transmit, herewith, a report of the chief engineer, dated the 12th instant, containing the information called for by a resolution of the House of Representatives of the United States, passed on the 4th instant, respecting any suit or suits which have been, or are now depending, in which the United States are interested, for the recovery of the Pea Patch.

Which is respectfully submitted.

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ENGINEER DEPARTMENT, *February* 12, 1824.

In obedience to your orders, in relation to a resolution of the House of Representatives of the United States' passed on the 4th instant, in which the President of the United States is requested to communicate to that House "a statement showing the situation of any suit or suits which have been, or now are depending, in which the United States are interested, for the recovery of the possession of a tract of land commonly called the Pea Patch, and on which Fort Delaware is situated; specifying the amount of money paid by the United States in each case; to whom paid, and the time, respectively; by whom, on what account, and from what fund;" I have the honor to report, that an action of ejectment by Dr. Henry Gale, of New Jersey, against Major Babcock, the engineer superintending the erection of Fort Delaware, was commenced in the circuit court of the United States for the district of New Jersey, and continued until the spring term of the year 1822, when it was discontinued. In the autumn of that year the same action was revived in the supreme court of the State of New Jersey, in the name of John Den (on the demise of Henry Gale) and the State of New Jersey against Major Babcock before mentioned. The case was removed from the supreme court of New Jersey to the circuit court of the United States for the district of New Jersey, and there remained until April, 1823, when the judges, believing that it was not within the jurisdiction of that court, remanded it to the supreme court of New Jersey, where it now remains ready for trial whenever the counsel for the plaintiff shall think proper to bring it on.

The case being one of great importance, on account of the value of the Pea Patch to the United States, as the only position adapted to the defence of the Delaware, and the large sum expended upon it, and on account of its involving the question of title between the States of New Jersey and Delaware, it was proper that respectable legal talents should be engaged to defend it. Accordingly, as the question of title would involve the laws of both States, the United States' attorney of each was employed, and able counsel were associated with them; Mr. Stockton with Mr. McIlvaine, the attorney for New Jersey; and Mr. Rodney in the first instance, and, on his leaving the country, Mr. Van Dyke, who was recommended by Mr. Rodney, with Mr. Read, the attorney for Delaware. Mr. Rodney and Mr. Van Dyke were each paid $500; the services they were required to perform being out of their State, and at a distance from their homes. Mr. Read was paid the same, having performed the same services, which did not belong to his official duty, as they were not performed within his district. Mr. Stockton, being in the vicinity of the court, was paid $100. Mr. McIlvaine was paid, as United States' attorney, the expenses authorized by law; his account, amounting to $209 62, having been submitted to and approved by the attorney general of the United States. These payments were all made by warrants on the Treasury of the United States, with the exception of that to Mr. Stockton, which was paid by Major Babcock. They were for professional services, and were drawn from the appropriations for Fort Delaware and contingencies of fortifications. Mr. Rodney received his on the 8th of November, 1820; Mr. Read on the 11th of July, 1821; Mr. Stockton on the 11th of July, 1822; Mr. McIlvaine on the 12th of December, 1822; and Mr. Van Dyke on the 5th of January, 1824.

Respectfully submitted.

ALEXANDER MACOMB, *Maj. Gen., Chief Engineer.*

The Hon. J. C. CALHOUN, *Secretary of War.*

18th CONGRESS.] No. 254. [1st SESSION.

AMMUNITION FOR CAPTAIN PARTRIDGE'S ACADEMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 3, 1824.

Mr. HAMILTON made the following report:

The Committee on Military Affairs, to whom was referred a resolution instructing it "to inquire into the expediency of authorizing the Secretary of War to permit the issue of ammunition to Captain Alden Partridge, Superintendent of the American Literary, Scientific, and Military Academy, for the improvement of the pupils of the said academy in practical gunnery," beg leave to report:

That, in the consideration of this subject, they have felt that it was their duty to discuss the policy inseparably connected with the resolution; nor have they been unmindful of the necessity of instituting a proper inquiry into the merits of the seminary for which the proposed bounty is intended.

Your committee would deem it altogether superfluous that they should at this moment enforce, by any argument of theirs, the utility of encouraging the diffusion of useful knowledge, or that they should insist on a position so indisputably true, that a Government cannot employ its energies more beneficially, or act under a higher moral sanction, than by advancing the prosperity of institutions of learning. But the proposition submitted for their consideration affects the country in one of its most interesting relations—its defence; and, as such, it forms one of the most important objects of our notice and regard. If it be admitted that the existence and dissemination of the knowledge of the military science is perhaps more important to the ultimate defence of the country than the continuance of a standing army in time of peace, the promotion of this sort of learning may well be called "the cheap defence of nations." The only inquiry would then seem to be whether the academy of Captain Partridge

is subservient to these important purposes. And here your committee would rely on the fact that this institution is founded on the basis of military subordination; and one of the primary branches of its course of instruction is the theory of the art of war, as far as it can be taught in reference to its abstract principles.

It appears that, independently of the superintendent, (a gentleman of acknowledged genius and distinguished attainments,) who takes upon himself the instruction of his pupils in mathematics, natural and moral philosophy, and the military science, there are at this school the following professorships, each filled by a separate instructor: 1st, of ethics and belles-lettres; 2d, geography and history; 3d, chemistry; 4th, practical geometry and topography; 5th, of the Greek language; 6th, of the Latin language; 7th, of the French language. Organized as this institution is, your committee must regard it as a very essential auxiliary to the academy at West Point, as the lesser tactics are taught by field exercises, together with castrametation, military surveying, and most of the duties incident to active service in the presence of an enemy.

Out of one hundred and fifty students now at Captain Partridge's academy there are eight officers of the navy of the United States, on furlough, pursuing those studies which are indispensably connected with the duties of their profession; and among the rest of the pupils there are several who are looking to the navy as their ultimate avocation, and whose names are registered on the list of applicants for appointments in that service.

Indeed, your committee think, without hitherto subjecting the Government to the cost of a cent, that Captain Partridge, by an enlightened public spirit, and ardent devotion to his present enterprise, is carrying into effect a portion of the admirable purposes of our own institution.

The value of the ammunition which, by the bill accompanying this report, it is contemplated to put at the disposal of Captain Partridge, it will be seen, will amount to four hundred and fifty dollars for the first year—a little more than the annual expense of a cadet at West Point. When a sum so trifling is contrasted with advantages so obvious, and when it is recollected that Captain Partridge could not procure the fixed ammunition, (as facilities for its preparation are only to be found in arsenals,) except at an expense much beyond the annexed estimate, and not at all, perhaps, without great inconvenience, your committee cannot but believe that, in recommending the passage of the bill herewith reported, they are firmly sustained by the enlightened policy which dictated the establishment of the military school at West Point, and by considerations which tend to justify the liberal application of national patronage and beneficence to the meritorious and useful objects of individual enterprise and exertion.

Your committee will not waste your time, or uselessly consume their own, by dwelling on the importance of lessons in practical gunnery to those on whom the future defence of this country may devolve. They cannot, however, refrain from offering one observation, which they think of some importance. Although many of the young men educated at Captain Partridge's seminary may not be destined to obtain commissions in the navy or regular army of the United States, yet it is highly probable, from the military spirit and knowledge which they will there imbibe, that they will seek in the militia of the several States occasions for usefulness and distinction. In this department of the public service a knowledge of practical gunnery is much wanted, nor could the General Government supply it more cheaply (with the same degree of efficiency) than by aiding its instruction at the fountain head of schools founded on a military basis.

Your committee beg leave to subjoin the following communications which they have received in reply to a letter addressed by them to the Secretary of the War Department.

SIR: DEPARTMENT OF WAR, *February* 25, 1824.

Agreeably to your request, I herewith transmit to you a report of the Ordnance Office relative to supplying the academy of Captain Partridge with ammunition for artillery practice.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

Hon. JAMES HAMILTON, Jun., *Chairman Military Committee.*

SIR: ORDNANCE DEPARTMENT, *February* 25, 1824.

In compliance with your instructions to prepare an estimate of the probable cost of supplying the academy of Captain Partridge with ammunition for artillery practice, I have the honor to state that it is impossible to form any just estimate without first being informed of the extent to which Captain Partridge may think it necessary to extend the practice.

In order, however, to present some data for an estimate, it will be supposed that the practical exercises will be performed once in a month, for eight months in a year; and that the exercises will be conducted as follows, viz:

That a ten inch mortar will be used on one occasion, and thirty rounds be fired from it; an eighteen pounder cannon, with thirty rounds, on another; a twelve pounder, with forty rounds, on another; and, on the five remaining days, six pounders to be used, firing on each day fifty rounds. This supposition gives the following results, viz:

10 inch mortar, one day, 30 rounds, at $4 80 each,	$144 00
18 pounder cannon, one day, 30 rounds, at $2 each,	60 00
12 pounder cannon, one day, 40 rounds, at $1 35 each,	54 00
6 pounder cannon, five days, 50 rounds each, 250 rounds, at 70 cents,	175 00
Slow match, tubes, portfires, &c., for the whole,	17 00
	$450 00

Thus, eight days' practice, firing three hundred and fifty rounds, will cost about four hundred and fifty dollars. In the above estimate, the shot, shells, powder, flannel, paper, thread, twine, &c., for the cartridge, are included. A portion of the shot and shells used may, however, be recovered and used again. For this reason, the cost of a second year's course, upon the same scale, would be reduced to about three hundred dollars.

The extent of practice contemplated in the foregoing estimate is believed to be limited to its minimum; a more limited practice would, it is conceived, be inadequate to the objects contemplated by the measure.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

The Hon. JOHN C. CALHOUN.

18th Congress.] No. 255. [1st Session.

FORTIFICATIONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 4, 1824.

To the House of Representatives of the United States: WASHINGTON, *March* 4, 1824.

In compliance with a resolution of the House of Representatives of the 1st of March, 1823, requesting information of the number and position of permanent fortifications which have been, and are now, erecting for the defence of the coasts, harbors, and frontiers of the United States, with the classification and magnitude of each; with the amount expended on each; showing the work done, and to be done; the number of guns, of every caliber, for each fortification; the total cost of a complete armament for each; the force required to garrison each in time of peace and of war; I transmit to the House a report from the Secretary of War, containing the information required by the resolution.

JAMES MONROE.

DEPARTMENT OF WAR, *February* 25, 1824.

The Secretary of War has the honor to transmit, herewith, to the President, a report from the chief engineer, of this date, accompanied with two tables, marked A and B, affording the information respecting permanent fortifications, desired by a resolution of the House of Representatives of the United States, passed on the 1st of March last; which is respectfully submitted.

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

SIR: ENGINEER DEPARTMENT, *February* 25, 1824.

In pursuance of your instructions, I have collected the information desired by a resolution of the House of Representatives of the United States, passed on the 1st of March last, which requires a statement of the number and position of the permanent fortifications, and other particulars respecting them, to be reported at its next session; and have the honor to present, herewith, a table marked A, in which the information with respect to the several fortifications referred to is consolidated; and a table marked B, referring to and explaining a part of table A.

Respectfully submitted.

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

The Hon J. C. CALHOUN, *Secretary of War.*

A.

Table exhibiting the permanent fortifications which have been erected, or are now erecting, for the defence of the coasts, harbors, and frontiers of the United States; their positions in the several States and frontiers, distinguished, with respect to the latter, by separate classes; the periods at which they were begun and finished; their magnitude; the amount expended in erecting those which have been completed; the amount expended on those now erecting, and the estimates of the amounts requisite to complete them; the description, extent, and cost of the armament requisite for each; the garrisons requisite for each during peace and during war, and the strength of the garrisons of such as are now occupied.

Name or description of the fortification.	Position.		Period.		Magnitude.	Cost.			Armament.											Garrison.		
	Frontier.	States.	Begun.	Finished.	Indicated by the length of the line along the crest of the parapet.	Of works erecting.		Of works finished, and estimated total cost of those erecting.	Guns.			Carronades.	Mortars.		Howitzers.			Total of pieces of ordnance.	Cost.	Requisite for war.	Requisite for peace.	As now established.
						Up to 30th September, 1823.	Contemplated for completion.		32's at $761.	24's at $647.	18's at $556.	32's at $430.	13 inch at $495.	10 inch at $390.	10 inch at $430.	8 inch at $430.	5½ inch at $430.

REMARKS.—This table exhibits as permanent fortifications those embraced in the general plan which has been determined on for the defence of the United States. Fort Lafayette, the only one finished, has been occupied by a garrison nearly two years, but has not yet received its armament. Forts Delaware and Washington will be finished in the course of two or three months. As the actual cost of Fort Monroe will greatly exceed the amount of the first estimate, a table affording full explanation on the subject has been prepared, and accompanies this, marked B. The sums advanced to contractors on account of the fort at Mobile Point are included in the sum stated as the amount of expenditure up to the 30th of September, 1823. As the contractors failed to perform work of the value of those advances, a suit was instituted, and is now pending against their sureties for the difference. If recovered, or any part of it, the sum stated as the amount of expenditure will be diminished accordingly; otherwise, it must remain as it is. The original estimate of the cost of the forts at Rigolets and Chef Menteur was the same for both of those works, and amounted to $264,517 52. The difference between that amount and the amount stated for the actual cost has arisen from alterations of the plans, by which have been added masonry to the value of $22,000, and a platform of timber and plank to support the foundation, which, with contingencies not contemplated in the original estimates, amounted to upwards of $30,000 at Rigolets, and nearly $20,000 at Chef Menteur; the amount being greater at the former, in consequence of the expense incurred in commencing the work at the site originally selected, which was afterwards relinquished, and in losses of materials and injury of work occasioned by hurricanes. The number and description of ordnance, and the designation of their calibers, are derived from statements of the local engineers, and the cost of the armament was furnished by the Ordnance Department. The statement is not to be considered conclusive in relation to the description and calibers of ordnance, as those particulars, with respect to the ordnance that may be required for the several branches of service, are to be submitted to a board of officers, to be appointed especially for that purpose, before they are definitively determined on.

B.

Excavation of a well,	-	7,057 16		-	-		-	-	-	7,057 16		
Water for drinking,	-	1,981 51		-	-		-	-	-	1,981 51		
Temporary quarters,	-	20,655 87		-	-		-	-	-	20,655 87		
				83,733.54								83,733.54
				$738,333.17	Amount of the estimate of the superintending engineer,							1,259,792.19
					Amount of the original estimate, with the alterations and contingencies,							1,159,522.17
					Excess of the former, resulting from the enhancement of the rate of stone masonry,							$100,270.02

Remarks.—The quantity of stone masonry, according to the plans and sections upon which the original estimate was founded, instead of 73,594.13 cubic yards, which is the aggregate of the quantities stated for foundations, walls, &c. should be 77,071.50 cubic yards; and the cost, according to the analysis of prices referring to the estimates, instead of $5,252 for foundations, and $6,251 for walls, &c., should be $6,299 for both. In the analysis of prices, $5,252 refers to mortar, and there is no other price for masonry than $6,251, which, by the correction of trivial errors in the calculations of its several parts, should be altered to $6,299. The quantity of brick masonry for arches, according to the plans and sections, should be 14,697.26 cubic yards, instead of 13,898.07 cubic yards, as stated in the estimate. The error in the brick masonry for the revetements of parapets is evidently the effect of the dollars and cents being inadvertently divided one figure too far to the left.

The reduction of the quantity of earth excavated arises from the diminution of the depth of the ditch, and the same circumstance accounts for the addition to the quantity to be drawn from a distance. The reduction of the quantity of brick masonry for arches results from the diminution of the arches from 180 to 130 degrees. The quantity of stone masonry is increased by full revetements being substituted for demi-revetements in the scarps of two of the fronts; and the enhancement of the rate per cubic yard is produced by merging in it the additional cost of freestone, and the cost of iron borings, foundation plank, boards for covering masonry, and other incidental contingencies, which were not taken into view in the formation of the price referring to the estimate of the Board of Engineers. The revetements of the parapets being one brick thicker accounts for the additional cost. The requisite permanent quarters cannot be provided for less than the larger amount stated, but there are no means of showing why it differs so greatly from that stated in the estimate of the Board of Engineers, as the latter is given without details.

18th Congress.] No. 256. [1st Session.

CONDITION OF THE MILITARY ACADEMY AT WEST POINT, AND AN ESTIMATE OF THE COST OF ESTABLISHING ANOTHER IN ONE OF THE WESTERN STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 8, 1824.

SIR: DEPARTMENT OF WAR, *February* 21, 1824.

I have the honor to transmit, herewith, a report from the chief engineer, furnishing the information, in relation to the Military Academy, requested in your letter to me of the 22d ultimo.

I am, with great respect, sir, your most obedient servant,

J. C. CALHOUN.

Hon. EDWARD LIVINGSTON, *of the House of Representatives.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *February* 21, 1824.

In obedience to your direction, I have the honor to present, herewith, the information, in relation to the Military Academy, requested by the Hon. Mr. Livingston, in his letter of the 22d ultimo, addressed to you, and referred to this department.

Statements A and B exhibit "the number of cadets who have entered the academy in each year, from its institution to this time; the number who have completed the regular course of study; and of that number how many have been employed in the public service, and in what capacity; also, the number who have been discharged or permitted to depart in each year, without completing their course of study."

Statements C and D exhibit the information required in queries 1 and 2.

In answer to query 3d, "Are any other officers or teachers wanted, if the academy continues, as to numbers, on its present footing?" I have to observe that legal provision is wanted for a professsor of chemistry and mineralogy, with one assistant, and for two teachers of French, in addition to the teacher already authorized by law. The average number of students who receive daily instruction in the French language is one hundred and fifty. They are divided among three teachers, one of whom is a cadet. It is earnestly desired that the necessity of employing cadets in the capacity of teachers may be obviated by Congress at the present session. Further provision is deemed necessary, in order that the academy may attain a high degree of perfection; but, for a detail of this, I beg leave to refer you to statement F.

Statement E exhibits the information asked in queries 4, 5, and 6. This statement further shows, that, by augmenting the number of students to five hundred, (that is to say, doubling the number now authorized by law,) the expense, exclusively of the pay and subsistence of the students, would be increased about one-third. The only additional expense would be on account of French teachers, a sword-master, and the extra compensation allowed to the officers of the army and cadets detailed to act as assistant professors and instructors. The cost of the additional buildings which would be necessary, in the event of the proposed augmentation, would not exceed $35,000 for each one hundred cadets. In reference to the sixth query, it is proper to remark, that the company of artillery stationed at West Point is not employed in the service of the academy, or in any way connected with it. Its chief duty is to furnish a guard for the protection of the magazines, stores, and other property belonging to the Ordnance Department. The expense of the company is not, therefore, in any sense, chargeable to the institution.

In answer to query 7th, "How much would the expense be reduced, if the pay of the cadets were retrenched, and clothing only furnished them?" I have to state, that the pay and subsistence of a cadet, as established by law, amount to twenty-eight dollars per month; but, it is believed that twenty-four dollars per month would defray all his necessary expenses at the academy, including board, clothing, washing, candles, books, stationary, &c. A deduction of four dollars per month from the pay of each cadet, after providing for all the wants of the institution, would effect an annual saving of about $3,000, as may be seen by reference to statement F.

In reference to query 8th, "What would be the probable expense of establishing a new school, calculated for one hundred and fifty or two hundred cadets, in one of the Western States?" I beg leave to state, that the cost of the buildings for such a school would depend on the plan which might be adopted, the style of the buildings, and many other circumstances; but the probable cost may be estimated:

For a school for one hundred and fifty cadets, at - - - -	$180,000
For a school for two hundred cadets, at - - - - -	200,000
The cost of a library, astronomical instruments, chemical and philosophical apparatus, equal to those at West Point, would be at least - - - -	20,000

The annual expense of a school, having a similar organization to that of the present Military Academy, is exhibited in table G. By comparing the several statements of expense in this table, it will be seen that, in addition to the saving in the cost of the necessary buildings, apparatus, and library, there would be an annual saving of at least $12,000 by educating the proposed additional number of cadets at West Point, instead of establishing a separate school for that purpose.

In answer to query 9th, "What is the course of study prescribed for each year?" I beg leave to refer you to the accompanying printed pamphlet, marked H, containing the rules and regulations of the Military Academy. The course of studies and instruction is pointed out in that pamphlet, at page 7.

Statement I contains the information requested in query 10th, viz: "the number of applications for admission now before the Department, designating the number from each State?"

In answer to the 11th and last query, "What are the rules laid down for admission? Have they relation to the population of the different States?" I beg leave to refer you, in relation to the first branch of the inquiry, to the 19th page of the printed pamphlet, under the head of "admission;" and, in relation to the second branch of the inquiry, to remark, that the whole number of cadets authorized by law are apportioned and distributed among the States and Territories, respectively, in the rates of their population, as determined by the number of members of Congress from each State and Territory in the House of Representatives, giving the fractions to the Territories and smaller States.

I beg leave to remark, that, in addition to what is now taught at West Point, it has been judged advisable to introduce a system of equitation, and the manœuvres of the cavalry and light artillery. As we have no cavalry in the present organization of the army, it is very desirable to have a number of well instructed cavalry officers, in order to facilitate, in case of necessity, the raising of a good corps of cavalry. This instruction is also essential to artillery and staff officers, and it could be introduced without much additional expense, as will be seen by reference to the enclosed estimate, marked K, for the purchase and keeping of twenty-four horses, the least number supposed to be adequate to the contemplated purposes of instruction.

In addition to the foregoing information, I take the liberty of transmitting a statement, marked L, presenting a comparative view of the expense of instruction at the Military Academy at West Point, the Royal Military College at Sandhurst, and the Woolwich Academy. Also, a copy of a communication, marked M, from the academic board at West Point, representing the expediency of an act of Congress to allow to officers, acting as assistant professors and instructors, the same extra pay as by regulation is now granted to cadets; and a communication, marked N, from the superintendent of the academy, enclosing a project of a law, marked O, for the better organization of the institution, accompanied by statements, marked P, showing the ordinary expenses of the academy, under the present and proposed organizations.

It will be seen, by reference to the communication of the superintendent, just mentioned, that it was contemplated to establish a professorship of the Spanish language; but the reasons urged against it by him are deemed sufficient to forbid, at the present time, any further consideration of the subject.

I have the honor to be, very respectfully, sir, your most obedient servant,

ALEX. MACOMB,
Maj. Gen., Inspector of the Military Academy.

Hon. Secretary of War.

A.

Schedule containing an account of the number of cadets who have entered the Military Academy in each year, from its institution to the present date; the number who have completed the regular course of study prescribed for the institution; the number who have been employed in the public service; and the number who have been discharged or permitted to depart in each year, without completing their course of study.

Year.	Number of cadets admitted each year.	No. of cadets who have completed the regular course of study and instruction.	No. of cadets who have been commissioned in each year.	No. of cadets who have been discharged or permitted to depart, each year.
1802	10	2	2	1
1803	9	3	3	1
1804	11	2	2	
1805	8	3	3	
1806	13	15	15	10

RECAPITULATION.

Admitted, - - - - -		1,050
Commissioned, - - - -	359	
Resigned, discharged, &c. - - -	447	
Number of cadets at the institution, - -	244	
		1,050

Note.--The second column includes all those who were only admitted *conditionally*, and did not receive warrants.

Of cadets who have been discharged or permitted to depart without completing the course of study, some were subsequently commissioned in the army, and a considerable number have entered the naval service, either as officers of marines or midshipmen.

United States' Military Academy, West Point, *January* 31, 1824.

Register of Cadets who have been graduated at the United States' Military Academy, and received commissions in the army of the United States, from June, 1802, to July, 1823, inclusive; showing in "what capacities they have been employed."

THE MILITARY ACADEMY.

By the act of Congress passed the 16th of March, 1802, entitled "An act fixing the military peace establishment of the United States," section 26, the President of the United States was authorized and empowered, when he should deem it expedient, to organize and establish a corps of engineers, to consist of one engineer, with the pay, rank, and emoluments of a major; two assistant engineers, with the pay, rank, and emoluments of captains; two other assistant engineers, with the pay, rank, and emoluments of first lieutenants; two other assistant engineers, with the pay, rank, and emoluments of second lieutenants; and ten cadets, with the pay of sixteen dollars per month, and two rations per day; and the President was, in like manner, authorized, when he should deem it proper, to make promotions in the said corps, with a view to particular merit, and without regard to rank, so as not to exceed one colonel, one lieutenant colonel, two majors, four captains, four first and four second lieutenants, and so as that the number of the whole corps should at no time exceed twenty officers and cadets. Section 27 directed that the said corps, when so organized, should be stationed at West Point, in the State of New York, and should constitute a *Military Academy;* and that the engineers, assistant engineers, and cadets of the said corps, should be subject, at all times, to do duty in such places, and on such service, as the President of the United States should direct. Section 28 enacts that the principal engineer, and, in his absence, the next in rank, shall have the superintendency of the Military Academy, under the direction of the President of the United States; and the Secretary of War was authorized, at the public expense, under such regulations as should be directed by the President of the United States, to procure the necessary books, implements, and apparatus, for the use and benefit of the said institution.

Under the foregoing act, the following officers were appointed:

Jonathan Williams, *major, and superintendent.*

William A. Barron, *captain, and professor of mathematics.*

Jared Mansfield, *captain, and professor of natural and experimental philosophy.*

James Wilson, 1*st lieutenant,* } *students at the academy.*
Alexander Macomb, 1*st lieutenant,* }

Joseph G. Swift, 2*d lieutenant,* } *students also.*
Simon M. Levi, 2*d lieutenant,* }

By the act of the 28th of February, 1803, there were added to the academy one teacher of the French language, and one teacher of drawing; also, one artificer and eighteen men, to aid in making practical experiments, and for other purposes. The academy has since, by acts of Congress, and by regulation, been increased to its present establishment.

1 teacher of drawing, pay and emoluments of captain,	862 12	1 assistant professor of engineering, brevet rank, pay, and emoluments of captain of infantry,	120 00
1 first lieutenant, assistant professor of philosophy, extra pay to equal captain's,	120 00	1 assistant professor of mathematics, brevet rank, pay and emoluments of captain of infantry,	120 00
1 first lieutenant, assistant professor of mathematics, extra pay to equal captain's,	120 00	1 assistant professor of chemistry and mineralogy, brevet rank, pay, and emoluments of captain of infantry,	120 00
1 second lieutenant, assistant professor of engineering, extra pay to equal captain's,	180 00	3 teachers of French, brevet rank, pay, and emoluments of captain of infantry,	2,586 36
1 sword-master, $60 per month,	720 00	1 teacher of drawing, brevet rank, pay, and emoluments of captain of infantry,	862 12
10 cadets, acting assistant professors, $10 per month for each,	1,200 00	1 sword and riding-master, brevet rank, pay, and emoluments of first lieutenant,	912 00
1 teacher of music, $50 per month,	600 00	12 officers and cadets, acting as instructors, $10 per month extra,	1,440 00
1 clerk to the treasurer,	300 00	1 teacher of music, $50 per month,	600 00
250 cadets, $16 per month and 2 rations per day,	84,500 00	1 clerk to the treasurer,	300 00
20 musicians, pay, clothing, and rations,	2,770 00	1 modeler, $50 per month,	600 00
Fuel, transportation, stationary, repairs and incidental expenses,	10,000 00	1 fire worker, $30 per month,	360 00
	$109,434 32	1 armorer, $30 per month,	360 00
		250 cadets, $12 per month, and 2 rations per day,	72,500 00
		20 musicians, pay, clothing, and rations,	2,770 00
		1 sergeant, 2 corporals, and 12 privates, to be enlisted for the exclusive service of the academy,	1,987 50
		Expense of 24 horses to teach the cadets equitation and cavalry exercises, &c.,	2,200 00
		Fuel, transportation, stationary, repairs, and incidental expenses,	10,000 00
			$106,537 98

NOTE.—The assistant professors of philosophy, engineering, mathematics, and chemistry, being officers of the army, the difference only between their pay as such, and that of a captain of infantry, is inserted in the column of pay and emoluments.

Table exhibiting the number of officers and teachers who would be wanted for a new military school calculated for one hundred and fifty or two hundred cadets, and the probable expense of said school; also the additional number of officers and teachers who would be wanted for the instruction of the same number of cadets at West Point, in addition to the present number, and the additional expense for the same.

	Number of cadets.	Professor of philosophy.	Assistant professor of philosophy.	Acting assistant professor of philosophy.	Professor of engineering.	Assistant professor of engineering.	Acting assistant professor of engineering.	Professor of mathematics.	Assistant professor of mathematics.	Acting assistant professor of mathematics.	Professor of chemistry and mineralogy.	Assistant professor of chemistry and mineralogy.	Acting assistant professor of chemistry and mineralogy.	Professor of ethics.	Teacher of drawing.	Acting assistant teacher of drawing.	Teachers of French.	Sword-master.	Instructor of tactics.	Assistant instructor of tactics.	Instructor of artillery.	Total of professors, teachers, and instructors.	Number of musicians.	Expense of professors, teachers, and instructors.	Expense of musicians and teachers of music.	Repairs, fuel, transportation, and other incidental expenses.	Total annual expense, exclusively of the pay and subsistence of cadets.	Cost of building.	Cost of library and chemical and philosophical apparatus.

Regulations of the United States' Military Academy at West Point.—Extract from the General Regulations of the Army.—Article 78.

ORGANIZATION OF THE ACADEMY.

1. The commandant of the United States' corps of engineers is the inspector of the academy. The orders of the Secretary of War relative to the academy will be communicated through him, and to him only the superintendent will make all returns, estimates, and communications appertaining to the institution; and he shall make a thorough inspection of the academy at least once a year.

2. A permanent superintendent of the academy will be appointed from the corps of engineers, who will have the immediate control of the institution, and be held responsible for the correct management of it. He will direct the studies, field exercises, and all other academic duties; and all professors, academic officers, and cadets shall be under his command.

3. No officer of the army, of any rank whatever, shall exercise command in the Military Academy, unless subordinate to the superintendent.

4. The professors, assistant professors, and others composing the academic staff of the Military Academy, shall receive every mark of respect to which their rank and situation in the institution may entitle them respectively. They are not to assume, nor are they subject to be ordered upon, any duty beyond the line of their several professions as instructors, except by the authority of the President of the United States.

5. There shall be detailed a captain, or field officer, and attached to the academy as instructor of infantry tactics; and a captain or lieutenant as instructor of artillery; and such number of lieutenants, to perform the duties of assistant professors, &c., as shall from time to time be deemed necessary.

6. The superintendent is authorized to detail such a number of cadets, to perform the duties of acting assistant professors, or teachers, as the system of the institution may require; and each cadet, so detailed, shall be entitled to receive ten dollars per month, as a compensation for extra services. The appointment will be considered as an honorable distinction.

7. The following members of the academic staff shall constitute a board for the transaction of business, viz: The professors of natural philosophy, mathematics, engineering, and ethics; the acting professor of chemistry; the principal teacher of French; the teacher of drawing; the instructor of tactics; and the instructor of artillery: of which board the superintendent shall always be president.

8. During the principal annual examination of the academy, and for the purpose of that examination, the principal assistant professor of mathematics, the principal assistant professor of natural philosophy, and the principal assistant professor of engineering, shall be associated with and become for the time members of the board.

9. During the time that any class, or section of a class, is under examination, the immediate instructor of the same shall be associated with and become a member of the board.

10. Other instructors in the institution may be invited by the superintendent, in the name of the board, to attend its meetings; in which case, they may be called upon to give information, or to express their opinion, but can have no voice in the decisions of the board.

11. A member of the academic staff shall be designated as secretary to the board, by whom all its proceedings shall be fully and fairly recorded.

12. It shall be the duty of the board to regulate the system of class-books; to recommend for purchase all such books, maps, charts, models, machinery, and apparatus, connected with the departments of instruction, as may be deemed necessary; to superintend the initiatory and all other examinations of the cadets; decide on their merits and standings; grant diplomas, and recommend for promotion. It shall also be the duty of the board, immediately after the June examination, annually to report to the Secretary of War on the system of studies and instruction, proposing for his approbation such additional rules and regulations for perfecting the same, and such improvements in those already existing, as experience may have suggested.

13. A number of gentlemen, not less than five, distinguished for military and other sciences, shall be appointed by the Secretary of War, to constitute the board of visiters; of which board, one of their number, designated by the Secretary of War, shall be president.

14. It will be the duty of the board of visiters to attend at the academy during the general June examination, annually, for the purpose of ascertaining the progress and improvement of the cadets in each of the branches of science and instruction; of examining into the state of police and discipline; and of inspecting, generally, the management of the institution: concerning all which they shall make report to the Secretary of War.

15. A paymaster, to be stationed at West Point, shall act as treasurer of the cadets.

16. The quartermaster at West Point shall furnish books, stationary, and all other articles wanted for the use of the Military Academy, upon the requisition of the superintendent; and shall furnish to the War Department timely estimates for the necessary funds, approved by the superintendent.

17. The quartermaster, under the direction of the superintendent, shall make contracts for the supply of the commons; and he shall also perform the duty of commissary of purchases for the Military Academy; and, as such, shall furnish clothing and equipments of every kind to the cadets.

18. The military storekeeper at West Point will be under the immediate command of the quartermaster, and shall be responsible for the safe-keeping and issuing, according to forms which may be prescribed, of all property which may be delivered to him by the Quartermaster's or Ordnance Department.

19. It shall be the duty of the quartermaster to procure, by contract or otherwise, clothing and necessaries, of all kinds, on the most advantageous terms, which shall be delivered to the cadets at prime cost, with no other extra charge than what may be necessary to cover expenses, which extra charge shall in no instance exceed six per centum. The quartermaster shall keep proper vouchers of all his purchases, and shall, on inspection, pass the same to the storekeeper, for safe-keeping and issuing, accompanied by a statement of the prime cost and extra charge on each article.

20. Every article issued to cadets to be charged in the storekeeper's books, specifying, opposite each article, the prime cost thereof, and the extra charge on the same. Each article to be charged, also, at the time of its delivery, in the account book kept by the cadet to whom said article is delivered.

21. The books and vouchers of the quartermaster and storekeeper to be at all times open to the inspection of the superintendent, the inspector of the academy, and the board of visiters.

22. On the 1st day of January, and on the 1st day of July, each year, the storekeeper shall make out a statement of all the articles delivered to cadets during the preceding six months, specifying the prices charged for each,

and the prime cost of the same. This statement shall be examined and certified by the superintendent, and by him transmitted to the Department of War.

23. Three officers of the academy, designated by the superintendent, shall constitute a board of clothing inspectors, whose duty it shall be to view, and compare with the approved patterns, all articles purchased for cadets, and to report thereupon to the superintendent. No articles but such as have been approved by the said board shall be delivered to the storekeeper, or issued to the cadets.

24. The delivery of all clothing and necessaries shall take place at stated periods, in presence of at least one of the inspectors.

25. The officer commanding at the arsenal near Albany will furnish the Military Academy with ordnance and ordnance stores, on the requisition of the inspector.

26. An officer of the academic staff will be appointed to act as librarian, under such regulations as the superintendent shall prescribe.

27. No books, instruments, or other public property, at West Point, attached to the academy, shall, on any account, be removed therefrom, except by order of the Secretary of War.

COURSE OF STUDIES AND INSTRUCTION.

28. The following branches of science and instruction will be considered as comprising a complete course of education at the Military Academy, viz: the French language, drawing, geography, history and moral science, chemistry and mineralogy, mathematics, natural and experimental philosophy, including astronomy, engineering, and military science; also, a course of practical military instruction.

29. The course of French shall consist in pronouncing the language tolerably, and in translating French into English, and English into French, accurately.

30. The course of drawing will embrace, 1st. The elements of the *human figure*. 2d. A series of elementary studies in *landscape*, with the pencil; the art of shading geometrical figures with Indian ink; the shading and finishing of *landscape*, in Indian ink; sketches from nature, and elements of *topography*, with the pen and pencil, and with Indian ink and colors.

31. The course of geography shall comprehend a knowledge of the grand divisions of the earth, and of the relative situation, extent, and boundaries of the several countries in each of those grand divisions; likewise, a knowledge of their natural productions, commerce, manufactures, governments, naval and military strength, and relative importance; also, the use of the maps.

32. The course of history shall comprise a general summary of universal history, with a view more particularly of the history and political relations of the United States.

33. The course of moral science will include moral philosophy and the elements of national and political law.

34. The course of chemistry and mineralogy will embrace, 1st. *Chemical philosophy*, including the theory and practice of analysis, and the examination of vegetable and animal productions; 2d. *Application of chemistry to the arts*, as agriculture, distilling, tanning, dying, bleaching, gilding, pyrotechny, &c. &c.; 3d. *Mineralogy and geology*, viz: classification and description of mineral substances, general structure and classification of rocks, analysis and uses of minerals, view of the different systems of geology and mineralogy, and an account of the minerals and geology of the United States.

35. The complete course of mathematics will comprehend:

Algebra, viz: Fundamental operations; involutions and evolutions: reduction and conversion of fractional and surd quantities; reduction and solution of equations, to include those of the third degree; ratios and proportions; summation of infinite series and figurate numbers; nature and construction of logarithms.

Geometry, viz: Plane and solid geometry, and the formation and construction of determinate geometrical equations.

Trigonometry, viz: The solution of all the various cases in plane and spherical trigonometry; spherical projections; analytical investigation of trigonometrical formulæ, and the construction of tables.

Surveying, viz: Mensuration of planes and solids; principles and practice of common land surveying; different methods of platting and calculating such surveys, and the use of mathematical instruments; also, trigonometrical surveying, and measurement of heights and distances, and the use of instruments usually employed therein.

Descriptive geometry, viz: The graphic illustration and solution of problems in solid geometry, generally, and the particular application of this method to spheric and conic sections.

Perspective, viz: The theory and use of linear perspective, shades and shadows.

Analytical geometry, viz: The construction and analysis of linear and superficial loci, particularly for equations of the first and second order.

Fluxions, viz: Direct and inverse methods of fluxions, their application to maxima and minima, the drawing of tangents, rectification of curves, radii of curvature, quadratures, cubatures, &c.

36. The course of natural philosophy will consist of mechanics, experimental philosophy, and astronomy.

The course in mechanics will embrace:

Statics, viz: The equilibrium of forces at rest; centres of gravity; mechanical powers; strength and stress of materials, and theory of arches.

Dynamics, viz: The laws in general of uniform and variable motion; falling bodies; motion of projectiles *in vacuo;* vibration of the pendulum; central forces and laws of the planetary motions; percussion and rotatory motion.

Hydrostatics, viz: The pressure of fluids; specific gravity; theory of the stability of vessels.

Hydrodynamics, viz: Theory of effluent fluids; estimate of the force, motion, and resistance of fluids; calculation of the moving force of water in mills.

Pneumatics, viz: Compression, density, and elasticity of air; theory and practice of barometric measurement; acoustics; explanation of the wind; wind as a moving force; theory of pumps; application of mechanics in various arts, and in the construction of machinery; consideration of first movers; combination and simplification of machinery; calculation of the maximum effects of machines; critical examination and analysis of various kinds of mills, engines, hydraulic works, &c.

The instruction in experimental philosophy will include an illustration of the physical properties of heat; the principles of light and colors; refraction and reflection of light; theory and use of lenses; construction of optical instruments: likewise the experimental investigation of the principles of magnetism, and of common and galvanic electricity.

The course of astronomy will comprehend a description of the solar system, and of the celestial and terrestrial spheres; motion of the earth, and the various vicissitudes and appearances arising therefrom; solution of the problems on the globes; figure of the earth; equation of time; motion, phases, and irregularities of the moon; eclipses of the sun and moon; theory of the tides; physical laws of the motion of the planets, primary and secondary; and of

the comets, and the determination of their orbits; theory of the connexions arising from parallax, refraction, aberration, precession, and nutation; application of spherical trigonometry to astronomy; use of instruments and tables; various methods of making, clearing, and calculating observations for the time, latitude, longitude, and true meridian; applications of astronomy to navigation; and the construction of general charts.

37. The course of engineering and science of war will comprehend:

Field fortification, viz: The description and analysis of the various systems of fortified lines; construction of batteries and redoubts; calculation of the labor, time, and materials for the construction of different kinds of field works; military bridges; defence of posts; field defilement; practical operations on the ground.

Permanent fortifications, viz: The attack and defence of fortified places; analysis of the systems of Vauban, Coehorn, Cormontaigne, and of the later improvements; construction of mines and fougasses, and their use in the attack and defence; construction of works; art of defilement; armament of fortresses.

Science of artillery, viz: The knowledge and use of the various kinds of ordnance and military projectiles; principles of gunnery, &c. &c.

Grand tactics, viz: Organization of armies; marches; orders of battle; battles; general maxims, deduced from the most important operations on record; castrametation.

Civil and military architecture, viz: Elementary parts of buildings, and their combination; orders of architecture; construction of buildings and arches, canals, bridges, and other public works; machines used in construction; also, the execution of a series of drawings, consisting of plans elevations, and sections, to illustrate the principal parts of the course.

PRACTICAL MILITARY INSTRUCTION.

38. This will embrace:

1st. A course of *infantry instruction*, viz: The system of infantry tactics established for the army of the United States, commencing with the elementary drill of the soldier, and including the school of the company, school of the battalion, and the evolutions of the line; the exercise and manœuvres of light infantry and riflemen; the duties in camp and garrison of privates, non-commissioned officers, and officers, including those of guard and police. 2d. A course of *artillery instruction*, viz: Nomenclature of the different parts of cannon, gun-carriages, caissons, and their implements; exercise and manœuvres of field artillery; exercise of siege artillery, including the mortar and howitzer exercises; mechanical manœuvres; target practice with the gun, howitzer, and mortar; duties of the laboratory. 3d. *Sword exercise*, including the exercise of the broad sword, and the cut-and-thrust, or small sword.

39. To complete the preceding course of studies will require four years; the branches to be pursued, and the course to be completed in each, exclusively of the practical military instruction, shall be as follows:

First year.—The French language, and a part of the mathematical course; algebra, geometry, plane trigonometry, application of algebra to geometry, and mensuration of planes and solids.

Second year.—Continuation of the French language, the first part of the course of drawing, and the remainder of the course of mathematics.

Third year.—The second part of the course of drawing, mechanics, experimental philosophy, astronomy, and the first part of the course of chemistry and mineralogy.

Fourth year.—Geography, history, moral science, engineering, and science of war, and the remainder of the course of chemistry and mineralogy.

40. Should it be found, by experience, that too great a portion of study or instruction is assigned, in the preceding course, to any particular year, the academic board shall be at liberty to transfer, from the course of one year to that of another, such particular portions of study or instruction as may appear necessary to produce an equality; which transfer shall be reported to the Secretary of War.

41. The annual term allotted to the class studies will be ten months, commencing on the 1st of September, and ending on the 1st of July following.

42. It shall be the duty of the academic board to assign the particular portion of study to be attended to in each class, between the commencement of the term and the winter examination, in such a manner as experience shall point out to be most conducive to the interests of the institution.

43. The daily allowance of time for the class studies will be not less than nine, nor more than ten hours.

The distribution of the studies, and the employment of time during each day, will, in general, be conformable to table No. 1, hereunto annexed.

44. The collateral portion of military instruction to be attended to in each year will be as follows:

First year.—School of the soldier, and the guard and police duties of privates.

Second year.—School of the company, and the duties of corporals.

Third year.—School of the battalion, and the duties of sergeants; also, the exercise and manœuvres of artillery pieces.

Fourth year.—Evolutions of the line, duties of orderly sergeants and commissioned officers, including those of the battalion staff and of officers of the day; also, the remainder of the instruction in artillery, and the sword exercise.

45. Practical military instruction will be given generally throughout the year; field exercises only will be limited between the 1st of April and the 1st of November following.

46. There will be an encampment of the cadets annually, to commence on the 1st day of July, and end on the 31st day of August next ensuing; during which, the instruction shall be exclusively military.

CLASSIFICATION.

47. The cadets shall be formed into four distinct annual classes, corresponding with the four years of study; that is to say, all cadets employed on the first year's course shall constitute the fourth, or lowest class; those on the second year's course shall constitute the third class; those on the third year's course shall constitute the second class; and those on the fourth year's course shall constitute the first class. No intermediate class shall in any case be allowed.

48. The classes shall be considered as taking their commencement on the 4th day of July, annually, and at no other time shall a cadet be advanced or transferred from the standing of one year to that of another; nor then, except upon due and sufficient examination by the academic board, and with the approbation of the Secretary of War.

GENERAL EXAMINATION.

49. The general examination of the classes preparatory to their advancement will commence on the first Monday of June, annually, at which time the cadets shall be examined by the academic board in all the branches of science and instruction through which they have passed, in presence of the board of visiters, and such other literary gentlemen as may be invited to attend.

50. Any cadet of either class, who, at that examination, shall be found deficient in the proper studies of the preceding year, shall be reduced to the class next following; or if, in the opinion of the academic board, he shall be evidently incapable of proceding with that class, his case shall be represented to the Secretary of War, to the end that he may be discharged.

51. Besides the general examination in June, above mentioned, a semi-annual one will be held by the academic board, in January of each year, commencing on the first Monday of that month.

ROLLS OF MERIT.

52. The internal organization and arrangement of the respective classes shall be strictly according to the principle of merit; to which end, the academic board, at the examinations in January and June, annually, shall carefully determine the relative merit of the cadets in each class, and in each particular branch of the studies of that class, and shall form a roll of the same. By a comparison of the particular rolls thus formed, and by attending to the relative weight and importance of the several branches, the board shall determine, at the examination in June, an order of general or aggregate merit in each class; according to which, the members of the class shall be arranged and enrolled from first to last.

53. The relative importance of the studies in each particular class, (excepting the first,) in forming the general merit-roll of that class, shall be specifically determined by the academic board;* in forming the final merit-roll of the first class, however, the different subjects of the course, and the conduct of the cadets, shall have weight as follows: *conduct*, three; *engineering and science of war*, three; *mathematics*, three; *natural philosophy*, three; *practical military instruction*, two; *geography, history, and moral science*, two; *chemistry and mineralogy*, two; *French*, one; *drawing*, one.

54. The superintendent will, annually, in the month of November, report to the War Department, for publication in the Army Register, the names of such cadets as have most distinguished themselves in the examinations, not exceeding five in each class, specifying the studies in which they excel.

MANNER OF GIVING INSTRUCTION.

55. For instruction in mathematics, the third and fourth classes shall be divided separately into convenient sections, which sections shall be counted off from the mathematical merit-roll of each class, respectively, in such manner that the first section shall consist of the first cadets on that roll; the second, of those next in order, and so on; the first section, thus formed, shall be under the immediate tuition of the professor, and each of the others of an assistant professor of mathematics, and will attend with him three hours every day in the recitation room of the section.

56. The instruction to be conveyed under each particular head of the specified course of mathematics will be proportioned in extent, as well as in the manner of conveying it, to the capacity of the different sections; and, in conformity with this principle, the following branches may be omitted, in the instruction of the lower sections, at the discretion of the academic board, viz: The summation of infinite series and figurate numbers; construction of logarithms; construction of trigonometrical tables and fluxions; those, together with the more profound and difficult investigations of the course, generally, being reserved for the sections of the highest rank.

57. For instruction in the French language, the two lower classes shall be counted off into sections, according to the French merit-roll, in like manner as in mathematics; each section to consist of not more than twenty pupils, and to be instructed one hour every day.

58. For instruction in natural and experimental philosophy, the second class shall be told off into convenient sections, and take rank at the commencement of that class, according to the roll of mathematical merit; the first section, so formed, shall be under the immediate instruction of the professor, and each of the others of an assistant professor of natural philosophy.

59. The instruction in natural philosophy, like that of mathematics, will be proportioned in extent, and in the manner of conveying it, to the rank and capacity of the different sections; the more abstruse and profound operations under each particular head being reserved for the higher sections.

60. The professors of mathematics, natural philosophy, and engineering, in order to ascertain the proficiency of the sections intrusted immediately to their assistants, and the manner in which they have performed their duty, shall, occasionally, and in rotation, where there are more than two sections, instruct the sections intrusted to the assistants; the periods for which will be fixed by the academic board, and reported to the War Department; and the assistant professor, when the professor has his section under instruction, shall take charge of the section usually under the instruction of the latter. Lectures on such portions of the studies as are most suitable to them may, with the assent of the superintendent, be substituted in lieu of the usual mode of instruction.

61. The teacher of drawing will give daily instruction to the second and third classes in the elements of drawing.

62. The first class for instruction in engineering shall be divided, according to the roll of general merit, into sections; the first of which shall be under the professor, and each of the others shall be under the particular instruction of an assistant professor; the extent and manner of instruction in each will be proportioned to the rank and capacity of the same; and the principles of engineering shall, as far as practicable, be taught by actual operations on the ground.

63. The first class will be taught entire, in one or two sections, according to circumstances, the course of geography, history, and moral science, successively, by the professor of ethics, who, having no assistant, will give immediate instruction in these branches.

64. The course of chemistry and mineralogy will be taught by the professor of those sciences, in a course of lectures and experiments, to the first and second classes, at the rate of three lectures per week to each, accompanied with suitable interrogatories.

65. The cadets shall be organized into companies by the superintendent, for the purpose of military instruction.

66. The instructor of tactics, under the direction of the superintendent, will have charge of the infantry drills and instruction, and also of the police and discipline of the cadets.

67. The instructor of artillery, under the direction of the superintendent, will have charge of all the practical instruction appertaining to artillery. He will also have charge of, and be accountable for, the ordnance and ordnance

* The academic board have determined that, in forming the general merit-rolls of the second, third, and fourth classes, the subjects of each course shall have weight as follows:

FOURTH CLASS. Mathematics, *two*—French language, *one*.

THIRD CLASS. Mathematics, *three*—French, *one*—Drawing, *one-half*.

SECOND CLASS. Philosophy, *three*—Chemistry, *one*—Drawing, *one*.

stores furnished for the use of the Military Academy and the post of West Point, and shall perform all the duties of a conductor of artillery.

68. The swordmaster will teach the exercises of the sword, at such times, and under such regulations, as the superintendent shall prescribe.

69. Each professor and instructor at the head of a separate department shall be the judge of the proper mode of conveying instruction in his own department, and shall be held responsible for the correctness of that mode.

70. Each instructor having the immediate charge of a class, or section of a class, for instruction, shall keep daily notes of their progress and relative merit, and at the end of each week shall report thereupon to the superintendent. (See form No. 2.)

71. An abstract of the weekly class reports, exhibiting the names of those who have been chiefly meritorious, as also of those who have been least so, in the respective sections, shall be made out by the superintendent, and forwarded weekly to the War Department. (See form No. 3.)

ADMISSION.

72. Each cadet, previously to his being admitted a member of the Military Academy, must be able to read distinctly, and pronounce correctly; to write a fair, legible hand; and to perform, with facility and accuracy, the various operations of the four ground rules of arithmetic, both simple and compound; also, of reduction, of simple and compound proportion, and of vulgar and decimal fractions.

73. No candidate for admission shall be received into the Military Academy who is below four feet nine inches in height, or who is deformed, or otherwise afflicted with any disease or infirmity which would render him unfit for the military service of the United States, or who may bring with him, at the time of presenting himself, any disorder of an infectious character.

74. All newly appointed cadets will be ordered to join the Military Academy, for examination, by the 30th day of June in each year; and no cadet shall be examined for admission after that time, unless he shall have been prevented from joining by sickness, or some other unavoidable cause; in which case, he may be examined on the 1st of September following, and, if then found qualified, may be admitted accordingly.

75. No cadet shall receive his warrant until after the January examination next ensuing his admission, and then only upon the report of the academic board that he has passed that examination in a satisfactory manner, and that his moral and military conduct previous thereto has, in like manner, been satisfactory; and the board will form a separate list of those who may not be favorably reported, noting particularly their character, degree of intellect, proficiency, and conduct, while at the academy; which list shall be reported to the Secretary of War.

FURLOUGHS.

76. The superintendent is authorized to grant furloughs to the cadets, at the request of their parents, during the period of encampment; provided, that not more than one-fourth part of the whole number be absent at any one time; and provided, also, that every cadet, previously to his receiving a furlough, shall have been present at not less than two entire encampments.

PROMOTIONS.

77. No cadet can be promoted from the academy, until he shall have completed his course of studies at the same, and received the diploma of the academic board to that effect.

78. Each cadet of the first class, who, at the final examination of that class, shall be found qualified for a commission, shall receive a diploma, signed by the superintendent and members of the academic board; and his name shall be presented to the Secretary of War by the inspector, with a recommendation for a commission in such corps as the diploma may authorize.

79. In the promotion of cadets, the lineal rank of each graduating class shall be established, in conformity to the principle of general merit, ascertained by the academic board.

80. The distribution of the cadets to the different corps of the army, at the time of promotion, shall be made according to their particular talents and qualifications, ascertained in like manner; provided, that this distribution be allowed, in no instance, to interfere with the principle of rank according to general merit.

81. No cadet who shall resign his warrant, or otherwise be separated from the academy, before the completion of his studies, shall, on any account, receive an appointment in the army of the United States, until after the promotion of the class to which he belonged; nor then, if such appointment interfere, in the smallest degree, with the rank of any member of that class.

82. No cadet, who shall be dismissed from the institution, or compelled to resign, on account of idleness, neglect of duty, or any species of bad conduct, shall be eligible to any office or post in the army of the United States, until at least five years after the promotion of the class to which he may have belonged.

DISCIPLINE, POLICE, &c.

83. The professors, the teachers, and cadets of the Military Academy, being a part of the corps of engineers, are, by law, subject to the rules and articles of war.

84. The cadets, not being commissioned officers, may be tried by a regimental or garrison court-martial; but a cadet, so tried, may appeal, in the manner prescribed by the rules and articles of war.

85. No cadet shall, in any case, be sentenced to suffer corporal punishment; nor shall any cadet be dismissed the service, or kept in close confinement for a longer period than twelve days, except by order of the President of the United States.

86. As obedience and subordination are essential to the ends of this institution, any cadet who shall disobey any command of the superintendent, or behave himself with contempt or disrespect towards him, or shall, by any means whatever, endeavor to persuade others to do the same, shall be dismissed from the service of the United States.

87. Any cadet who shall disobey the commands of his superior officer, professor, teacher, or instructor, or behave himself in a refractory or a disrespectful manner, shall be dismissed, or otherwise less severely punished, according to the nature and degree of his offence.

88. Any cadet who shall insult a sentinel, by words or gesture, shall be dismissed, or otherwise less severely punished.

89. Any cadet who shall answer to another's name at any roll-call, or who shall engage any other cadet to answer for him, shall be dismissed the service, or otherwise less severely punished.

90. The pay and subsistence of all cadets who neglect to join the Military Academy on the expiration of their furloughs shall be stopped; nor will the pay and subsistence so stopped be issued to them, unless they shall have been prevented from joining by sickness, or some other unavoidable cause.

91. Any cadet who shall be absent from the academy, without leave, for a longer period than two months, shall be dismissed the service.

92. No cadet shall go beyond the walls of West Point, or such other limits as may hereafter be prescribed.

93. No cadet is to visit another's room, or be absent from his own, in study hours, or between tattoo and reveille, without permission from the proper authority.

94. All scuffling, at any time or place, and all unnecessary noise, within or near the barracks, is strictly prohibited.

95. All cooking in quarters, or giving entertainments within or out of quarters, is strictly prohibited.

96. No cadet shall be allowed to keep a waiter, horse, or dog.

97. The strictest attention to study, and all other duties, will be required. Every cadet, therefore, who shall absent himself from duty of any kind, and shall fail to render a satisfactory excuse, in writing, for such absence, shall be reprimanded, put upon extra duty, or confined, according to the circumstances of the case; and any cadet who shall be habitually negligent of his studies, or other duties, shall be dismissed the service.

98. Any cadet who shall play at cards, or any game of chance, or who shall, without permission, procure or use wine or spirituous liquors, or shall go to any inn or public house, shall be dismissed the service.

99. On Sundays, except during the hours of divine service, at which all academic officers and cadets must strictly attend, every cadet will attend to reading or study at his own room. No application for leave of absence must be made on that day.

100. Any cadet who shall behave indecently or irreverently while attending divine service, or shall use any profane oath or execration, or who shall profane the Sabbath, shall be dismissed, or otherwise less severely punished, according to the nature of his offence.

101. Every cadet of dissipated or other vicious habit shall be dismissed the service.

102. The cadets are not only required to abstain from all vicious, immoral, or irregular conduct, but they are also expected, on every occasion, to conduct themselves with the propriety and decorum of gentlemen: any cadet who shall be guilty of conduct unbecoming an officer and a gentlemen shall be dismissed the service.

103. No cadet shall send a challenge to another cadet to fight a duel, or accept a challenge, if sent, upon pain of being dismissed the service; and all seconds, carriers, or promoters of challenges, in order to duels, shall be deemed principals, and punished accordingly.

104. Every cadet, knowing that any other cadet has sent or accepted, or is about to send or accept, a challenge to fight a duel, is required to give immediate information thereof to the superintendent.

105. Any cadet who shall upbraid another for refusing a challenge, shall himself be punished as a challenger.

106. No cadet shall use any reproachful or provoking speeches or gestures to another, upon pain of being confined, and of asking pardon of the party offended, in presence of his commanding officer.

107. Any cadet who shall, by any means whatever, traduce or defame another, shall be dismissed, or otherwise less severely punished, according to the nature of his offence.

108. Any cadet who shall strike, or in any manner offer violence to, another, shall be punished as specified in the preceding paragraph.

109. Any cadet who shall beat, or otherwise ill treat, any citizen, shall, besides being amenable to the laws, be otherwise punished, according to the nature of his offence.

110. No cadet shall sign any certificate or statement relative to personal altercations between officers and cadets, or to any transactions of a private or personal nature, without permission from the superintendent.

111. All cadets who shall combine or agree together to hold no friendly or social intercourse with another, and any cadet who shall endeavor to pursuade others to enter into such combination or agreement, shall be dismissed the service, or otherwise severely punished.

112. All combinations, under any pretext whatever, are strictly prohibited. Any cadet who, in concert with others, shall adopt any measure, or system of measures, under pretence of procuring a redress of grievances, or who shall sign any paper, or enter into any written or verbal agreement, with a view to violate or evade any regulation of the academy, or to do any act contrary to the rules of good order and subordination, or who shall endeavor to persuade others to do the same, shall be dismissed the service.

113. If any cadet shall think himself wronged by another, or by an officer, he is to complain thereof to the superintendent, who is hereby required to examine into the said complaint, and to take the proper measures for redressing the wrong complained of. Should the complaining party be refused redress, he may appeal to the Department of War, through the superintendent of the academy, whose duty it shall be to forward the appeal to the Secretary of War, for his examination and order on the same.

114. All publications relative to the Military Academy, or to transactions at the Military Academy, are strictly prohibited. Any professor, assistant professor, teacher, academic officer, or cadet, therefore, who shall be at all concerned in writing or publishing any article of such character, in any newspaper, or pamphlet, or in writing or publishing any handbill, shall be dismissed the service, or otherwise severely punished.

115. All communications to the Department of War, from any person or persons belonging to the Military Academy, must be made through the superintendent, whose duty it shall be to forward such communications to the Department of War, accompanied with such remarks as he may think proper.

116. Each cadet shall keep himself, at all times, supplied with the under-mentioned articles of clothing and necessaries, viz:

One uniform coatee, of gray cloth, single-breasted, three rows of eight gilt bullet buttons in front, and button-holes of black silk cord, in the herring-bone form, with a festoon turned at the back end; a standing collar to fit the neck, and hook in front; the cuffs four inches wide; the bottom of the breast and the hip buttons to range; on the collar, one blind hole of cord, formed like that of the breast, four inches long, with a button on each side; cord holes, in the like form, to proceed from three buttons placed lengthwise on the skirts, with three buttons down the plaits. The cuffs to be indented with three buttons, and cord holes likewise on each sleeve, corresponding with the indentation of the cuff, in the centre of which is to be inserted the lower button.

One vest, of gray cloth, for winter, single-breasted, yellow gilt buttons, trimmed with black silk lace.

Two pairs of pantaloons, of gray cloth, for winter, trimmed down the sides with black silk lace, and an Austrian knot in front; no buttons on the sides or at the bottom.

Four pairs of Russia sheeting pantaloons, for summer, without trimmings; the form the same as for winter.

One pair of fatigue pantaloons, of cotton, blue mixed.

One fatigue jacket, with sleeves, cotton, blue mixed.

One uniform cap, black leather, bell crown, seven inches high, with a semicircular visor, of strong leather, highly polished; yellow plate, diamond shape; black plume, eight inches long; leather cockcade, two and a half inches diameter, with a small yellow eagle; yellow scales, to fasten in front, or under the chin.

One forage cap, of gray cloth.
Two black silk stocks.
*Two pairs of Jefferson shoes, rising above the ankle joint, under the pantaloons.
*Two pairs of white leather gloves.
Two sets of white belts.
*Seven shirts.
*Seven pairs of worsted socks.
*Seven pairs of cotton socks.
*Four pocket handkerchiefs.
*Six towels.
*One foul clothes bag, made of ticking.
*One clothes brush.
*One hair brush.
*One tooth brush.
*One comb.
One mattress.
One pillow.
*Two pillow-cases.
*Two pairs of sheets.
*Two pairs of blankets.
One bed strap.
One small table.
One small looking-glass.
One chair.
One tin candlestick.
One tin wash-basin.
One tin tumbler.
One pitcher.
*One leather trunk.
One broom.
One account book.

All articles of uniform clothing and equipments must be made in strict conformity to approved patterns.

N. B. Cadets are required to bring with them to the academy the articles marked thus *.

117. No citizen's dress, or dress resembling the military, without conforming to the regulations, will be worn by a cadet on any occasion.

118. Neatness of dress, as well as personal cleanliness, will be required of every cadet; his clothes must be put on in a soldier-like manner, and his arms and accoutrements kept in perfect order.

119. Every cadet is prohibited selling, or otherwise disposing of, his clothing, or of any other article which he may have purchased for his own use, without permission of the superintendent.

120. The rooms occupied by cadets, as well as the furniture thereof, must be kept in perfect order. Any cadet, who shall wantonly damage any quarters, or their appurtenances, shall, besides making good such damages, be confined, or otherwise less severely punished, according to the nature and degree of his offence.

121. Any cadet who shall lose, damage, destroy, sell, or otherwise dispose of, his arms, accoutrements, books, instruments, or any other public property which he may have in his possession, shall, besides paying for the same, be dismissed, or otherwise less severely punished, according to the nature of his offence.

122. No cadet shall contract any debt, without permission of the superintendent. All authorized debts shall be paid by the treasurer, out of the pay and subsistence of the cadet by whom such debts have been contracted.

123. Every cadet shall keep a book, in which shall be charged every article he may purchase on credit; this book shall be examined by the superintendent, and, if found to be correct, shall be a voucher to the treasurer for the liquidation of the debt.

124. The treasurer shall keep an account open with each cadet, in which he shall be credited with his monthly pay and subsistence, and charged with the amounts paid to his creditors: any cadet will be permitted to inspect his account, whenever he shall apply for that purpose, during office hours.

125. Proper receipts will be taken by the treasurer, and kept on file in his office, for all moneys paid by him on account of any cadet.

126. Every cadet shall receive the balance, if any, which may be due him, each pay day, and shall then sign the receipt-rolls. Any cadet who shall refuse to sign the receipt-rolls, after his accounts shall have been properly adjusted by the treasurer, shall be dismissed the service.

127. No cadet shall apply for or receive money from his parents, or from any person whomsoever, without permission from the Secretary of War, or recommendation of the superintendent; any violation of which will be considered a positive disobedience of orders, and punished accordingly.

128. All immoralities, disorders, misbehavior, or neglects, which cadets may be guilty of, to the prejudice of good order and military discipline, though not herein expressly mentioned, are to be punished according to the nature and degree of the offence.

129. It shall be the duty of every professor, teacher, assistant professor, or acting assistant professor, as well as of every officer stationed at West Point, who is knowing to any violation of the academic rules and regulations, or to any crime, irregularity, neglect, or other improper conduct, of which a cadet has been guilty, to report the same, without delay, to the superintendent.

130. The professors, assistant professors, and teachers, will be held accountable for the regular and orderly conduct of their respective classes, or sections, while under their immediate instruction.

131. No professor, assistant professor, or teacher, will give a certificate, or make any report relating to the qualifications or standing of any member of the institution, or concerning the examination of any candidate for admission, separate from the academic board, unless required so to do by special direction from the superintendent or inspector of the Military Academy.

132. Each professor and instructor at the head of a separate department will have charge of, and be accountable for, the instruments and apparatus with which he shall be furnished for the use of his department.

133. The superintendent will cause a registry to be kept of all the delinquencies and punishments which may take place at the academy; and, at the end of every month, will report to the Department of War the names of those cadets who, during the month, have been most distinguished for correct deportment; also, the names of those who have been guilty of offences, specifying the number of offences committed by each; and of those who have been punished during the same period; specifying, in each case, the nature and degree of the offence and punishment.

134. All necessary regulations for interior police and discipline, not inconsistent with the above, will be established by the superintendent, (to be reported to the Secretary of War,) and are to be duly observed and obeyed.

Additional regulations, made in conformity with the preceding paragraph.

ORGANIZATION OF THE CADETS.

135. The cadets will be arranged for barracks into two companies, and for encampment into four companies. These companies shall form one battalion, to be commanded by the instructor of infantry tactics.

136. The appointment of the company officers and battalion staff will be made by the commandant of cadets, with the approbation of the superintendent; the selection to be made from those cadets who have acquired the best knowledge of tactics, have been the most active in the performance of their duties, and the most exemplary in their general deportment. As far as practicable, the commissioned officers and first sergeants will be taken from the first class, all other sergeants from the second class, and the corporals from the third class.

ASSIGNMENT OF QUARTERS.

137. The north barrack is assigned to the first company, and the south barrack to the second company of cadets.

138. Except in cases of absolute necessity, not more than four cadets will be arranged to one room in the north barrack, nor more than three to one room in the south barrack.

139. No cadet will remove from the room assigned to him, nor occupy any other room, without permission from the commandant of cadets.

ACADEMIC DUTIES.

140. When the weather will permit, the classes and sections will be formed on the battalion parade-ground. In bad weather, they will be formed in the lower hall of the north barrack. Every section must be formed within three minutes after the signal shall be sounded.

141. Every cadet, while on the class parade, or while marching to and from the academy, is required to observe perfect silence and regularity.

142. The cadets will form, march, and take seats in their academies, according to the order of their names on the section merit-roll.

143. No cadet, unless he be an acting assistant professor or teacher, or officer of the day, will be exempted from marching with his section.

144. No cadet will be allowed to go out of his academy till after one hour from its commencement; nor then, except on a necessary occasion. Cadets who get permission to go out will return as quickly as possible. Any cadet who remains out longer than ten minutes will be deemed guilty of disobedience of orders.

145. It will be the duty of every squad-marcher to form and call the roll of his section; to report all absentees to the officer of the day; to march his section, in a soldier-like manner, to and from the academy; to report, in writing, to the officer of the week, all infractions of the regulations, and all irregularities committed by any cadet of the section under his charge.

146. Whenever a squad-marcher is exempted from marching, in consequence of indisposition, or from any other cause, his duties will be performed by the next highest on the roll.

COMMONS.

147. The instructor of tactics is inspector of the commons; it will be his duty to report to the superintendent all deficiencies in the *bill of fare*, or in the police of the commons, and to watch over the execution of all established mess regulations.

148. There shall be appointed, by the inspector of commons, a superintendent of each of the mess halls, who shall be held accountable to the inspector for the strict observance, in their respective halls, of good order and decorum, and of all established mess regulations.

149. The cadets shall be divided into as many squads as there are tables, to each of which there shall be appointed, by the inspector, a first and a second carver, who shall be held accountable to the superintendents of the halls that those for whom they carve strictly observe the regulations.

150. At the signal for breakfast, dinner, and supper, the squads are to be formed, in front of the south barrack, by their respective carvers, acting as squad-marchers; after which they will be marched to the commons under the command of the superintendent of the lower mess hall, assisted by the superintendent of the upper hall. The carvers will march with their respective squads.

151. Each cadet is to have his particular place at table assigned to him, which he is not to change without permission of the inspector.

152. No cadet is to go to his meals without marching.

153. All unnecessary talking at table is prohibited; the carvers only will call on the waiters.

154. Wasting, or taking from the mess house, provisions of any kind, is strictly forbidden.

155. The officer, or non-commissioned officer, commanding the guard of cadets, will be held accountable to the inspector that no person, except he belongs to the guard, or is under its charge, goes to his meals with said guard.

156. All reports appertaining to the commons must be made to the inspector.

LIBRARY.

157. The librarian is responsible for the books in the library; he will, therefore, deny the key of it to all persons, except the superintendent.

158. No books shall be taken from the library without the knowledge and presence of the librarian.

159. Every Saturday, from 2 to 4 o'clock, P. M., the librarian will attend at the library room for the purpose of delivering and receiving books.

160. No person, except members of the instititution, or officers residing at the post, shall be allowed to draw books from the library.

161. Cadets are allowed to take from the library such books only as are calculated to assist them in their class studies; but no cadet may draw more than one volume at a time, nor keep any volume longer than one week, without special permission.

162. No cadet shall enter beyond the librarian's table, or take down any book from its place.

163. No member of the academic board shall be allowed to have in his possession more than eight volumes at the same time; no other officer more than four volumes; and for every book drawn a receipt shall be given to the librarian.

164. No person shall lend any book which he has drawn from the library.

165. No book shall be detained from the library more than two months, without special permission.

166. All books drawn from the library shall be returned on the last Saturday of May, annually; from which time, until the 5th of July following, no book shall be taken from the library, without special leave from the superintendent.

167. All persons who draw books from the library shall be responsible for the damages done to them, to be estimated by the librarian, or by a committee appointed by the superintendent. The librarian shall keep an account of all damages done to the books, and all fines assessed; and no person shall be allowed to draw books from the library while a fine remains unpaid.

SICK.

168. At sunrise the surgeon's call will be given, when the sick, who are able to leave their rooms without prejudice, will repair to the dispensary. The patients who cannot attend at the dispensary will be visited by the surgeon.

169. Patients in the hospital will obey all orders of the surgeon. Cadets, sick in quarters, will continue to perform all their duties, except those from which they have been expressly excused by the surgeon.

CONFINEMENT.

170. The superintendent and the commandant of cadets will alone have the power to confine a cadet, except for mutiny, wilful disobedience of orders, or gross disrespect to a superior; in which case, the offender may be confined to quarters; but such confinement shall be promptly reported to the superintendent through the commandant of cadets.

171. Cadets confined to quarters will march to meals with the guard, and will attend to all duties, except those of guard and dress parades.

172. Any cadet confined to quarters, who shall break his confinement, shall be brought before a court-martial, and tried for wilful disobedience of orders.

FURLOUGHS AND LEAVES OF ABSENCE.

173. All applications by cadets for furloughs, during encampment, will be made in writing, to the superintendent, and left with the post adjutant on the 1st of June each year, accompanied by the written request of the parent or guardian of the applicant.

174. Every cadet applying for a furlough will state the place to which he may wish to go, and to which any order necessary to be sent to him during his absence may be addressed.

175. Applications for leave of absence, during term time, if for a period not exceeding twenty-four hours, and all similar applications, made during encampment, for any period whatever, must, in the first instance, be made to the commandant of cadets, and, if approved by him, will then be submitted to the superintendent for his approbation.

176. Every cadet returning from furlough or leave of absence will, immediately on his arrival at his post, report himself for duty to the superintendent, to the post adjutant, and to the commandant of cadets.

177. Any cadet who shall fail to return to the Military Academy, on the expiration of his furlough or leave of absence, will subject himself to be tried before a court-martial, unless he shall have been prevented from returning by sickness, or some other unavoidable cause; of which proper certificates shall be presented in writing.

POLICE OF THE BARRACKS.

178. The cadets, in rotation, act as orderlies to their respective rooms. They are detailed weekly, and enter upon their duties every Sunday morning. The orderly for the week is held responsible for the cleanliness of his room, the arrangement of the furniture, and the observance of the regulations of the academy generally therein. He is accountable for the preservation of all public property in common use attached to the room, and is particularly responsible for the strict observance of all regulations guarding against accidents by fire. It will be his duty to report all infractions of regulations in the room over which he has charge, and failing so to do will render him liable to punishment as an offender in the same degree. He will, on entering upon his duties as orderly, post his name in some conspicuous place in his room; and he is not to be relieved until his room shall have been inspected and found in good order. Should it not pass inspection, he will be continued as orderly another week, or less, at the discretion of the commandant of the barrack. The orderlies of each division shall, when necessary, under the direction of the superintendent of their division, wash or sweep the floors of the halls and piazzas. They will wash their own rooms every Saturday, between one and four, P. M., and at no other periods, unless by written permission from the commandant of the barrack.

179. The superintendents of divisions are selected from those cadets who act as captains and lieutenants in the corps. They are charged with a general supervision of their division. It is accordingly their duty to notice and report all irregularities and infringements of regulations, and such other offences which, though not specified, are nevertheless contrary to good order and discipline. At thirty minutes after reveille, each superintendent will visit and inspect every room in his division, noticing particularly the state of police, and all infractions of regulations, and report to the officer in command of the barrack, in the following form, viz:

I certify that I have carefully and thoroughly inspected the rooms of my division (N. B. or S. B.) at the taps last evening, and thirty minutes after reveille this morning, and that I have reported all infractions of regulations, and such rooms as are not in good order.

_____ _____,

Superintendent Division, S. B.

It is his duty, in the event of noise, scuffling, or any improper conduct whatever, to repair instantly to the spot, order the parties to their rooms, and forthwith make report of the circumstances to the commandant of the barrack, or, in his absence, to the officer of the week; to visit his rooms, at the taps; see that the lights are extinguished; the fires properly secured; the occupants present, and in bed. All his inquiries to this effect will be directed to the orderly, whose duty it will be to give prompt and satisfactory answers. The superintendent will keep a regular roster of orderlies, personally warn those who are for duty, and see that their names, as such, are properly posted. They are responsible to the officers commanding the barracks for the faithful and active discharge of their duties.

180. Each cadet officer of the corps is detailed, in his turn, as officer of the day, and will, when relieving, demand of the relieved officer all orders of a general nature which he may have received, not embraced in the regulations, and all such of a special nature as are to be attended to during his tour. He will give the guard the orders of the day, regulate the reliefs, see their arms properly lodged in the guardroom, and dismiss them to academic duties. He will attend to the class signals, and see that they are given at the precise hour directed; to the formation of classes and sections; receive the reports of squad-marchers; note down the absentees, and give attention to the enforcement of good order and regularity on parade, and marching to and from it. After the squads are formed, united, and the reports taken, the officer of the day will face the whole to the flank nearest the academy, and march them off

as a battalion, the squad-marchers filing out as they approach their respective section rooms. He will, immediately after dismissing the parade, seek all absentees from academic as well as military duties, and order them to repair to the academy parade, or wherever their presence may be required. He will visit the rooms, between the hours of 7 and 9 P. M., and pass through the halls and piazzas not less than three times each day, and take special care that order and regularity are observed. He will cause the sentinels to be put on post at proper periods; visit them during each relief; ascertain whether they have their orders, and know and perform their duties. His station, from reveille until tattoo, except when necessarily absent in the performance of his duty, or at meals, will be at or in the vicinity of the guardroom. During his tour, he will give his whole attention to the performance of his duties. He will be held responsible that no disorders exist in or near the barracks, without prompt and effectual measures being taken to suppress the same. His reports which do not require immediate attention will be included in his guard report, which will be handed to the commandant of the corps immediately after he is relieved. He will receive and obey the orders of the officer of the week, stating them on his report.

181. The assistant instructors of tactics are detailed alternately as officer of the week. He has a general charge and responsibility; is to see that duty is done agreeably to regulation and orders; to take the necessary measures to correct any and all irregularities; and must not absent himself during his tour more than is absolutely necessary.

182. Each of the cadets' barracks is under the immediate charge of one of the assistant instructors of tactics, who is responsible for the police, regularity, and good order of his barrack, generally. He will make a daily report of its condition to the commanding officer of the corps, showing, in addition to its general police, the three best and the three worst rooms, with the names of the orderlies. He is required to visit and inspect his barrack not less than twice each day, at such hours as the object of his visit may be best attained; and all cadets are required to yield the most implicit obedience to his orders.

183. The cadets are strictly forbidden to throw stones, snow balls, or other imaterials, near the barracks or academy. They are also forbidden to throw water or filth out of the windows, or from the piazzas.

184. Every cadet is strictly forbidden to play on any instrument of music, except in hours allowed for recreation.

185. Cadets are forbidden to play at chess, chequers, or backgammon, or to keep boards and men in their rooms for that purpose.

186. No cadet shall read, or keep in his room, without permission, any novel, romance, or play.

MISCELLANEOUS REGULATIONS.

187. No cadet will go off the public ground of West Point without a written permission, signed by the commandant of cadets, and approved by the superintendent. Any infraction of this article will be deemed wilful disobedience of orders, and punished accordingly.

188. Cadets are at liberty to walk on the public ground beyond the walls of the post, by obtaining permission to that effect from their commandant. Such permission need not be sanctioned by the superintendent.

189. No cadet will go on Havens's or on the public wharf, or bathe in the river, without permission from the commandant of cadets.

190. Cadets are prohibited from going to the mess house, except at their regular meals.

191. Cadets are not allowed to visit in the families at the post, (Saturday afternoons excepted,) without special permission from the superintendent, on the written request of the officer or other person at whose house they may wish to visit. Any infraction of this article will subject the offender to be tried by a court-martial for wilful disobedience of orders.

192. No person shall be allowed to pay visits to the cadets on the Sabbath day, or evening, nor in study hours on any day of the week, nor after tattoo; nor will strangers be allowed to enter the barracks at any time, unless accompanied by a cadet, or by an officer.

193. The cadets are forbidden to organize any society, or to hold any meeting, without a special license from the superintendent, and for such purposes only as shall be expressed in the license.

194. The cadets are prohibited from taking any newspaper, or other periodical publication, without a special permission from the superintendent; and no such permission will be given for more than one newspaper to each cadet, and then only on condition of its being paid for in advance.

195. Every cadet, on entering the service, obligates himself to continue therein during the pleasure of the Persident. No cadet, therefore, will tender his resignation, unless impelled thereto by urgent reasons, which reasons must be fully stated in his letter of resignation; such letter to be accompanied by the written consent of his parent or guardian.

196. Every Sunday, before church, when the weather is favorable, there will be a review and inspection of the battalion of cadets.

197. The instructors will hand in their weekly reports to the superintendent every Saturday, between 2 and 4 o'clock, P. M.

198. The superintendent will transact business with cadets every day, (Sundays excepted,) between 7 and 8 o' clock, A. M., and with officers between 4 and 5 o'clock, P. M.

199. The general regulations of the army, as far as applicable, will be strictly observed at this institution.

200. No officer, having temporary command of the academy, will make the least alteration in the foregoing regulations, or issue any order inconsistent therewith.

Approved by the Secretary of War.

ALEX. MACOMB,
Major General, Inspector of the Military Academy.

No. 1.—(See paragraph 43.)

UNITED STATES' MILITARY ACADEMY.—*Distribution of studies and employment of time during the day.*

From dawn of day to sunrise.	From sunrise to 7 o'clock.	From 7 to 8.	From 8 to 11 o'clock.	From 11 to 12.	From 12 to 1 o'clock.	From 1 to 2.	From 2 to 4 o'clock.	From 4 to sunset.	From sunset to half hour past.	From half hour past sunset to half past 9 o'clock.	From half past 9 to 10 o'cl'k.
					FIRST CLASS.						
Reveille at dawn of day.—Roll-call immediately after reveille.—Police of rooms.—Cleaning of arms, accoutrements, &c.—Inspection of rooms thirty minutes after roll-call.	Study of engineering and the military art.	Breakfast at 7 o'clock.—Guard mounting at half past 7.—Class parade at 8.	Recitations and drawing relative to engineering and the military art.	Lectures on engineering and the military art.	*Monday, Wednesday,* and *Friday,* lectures on chemistry applied to the arts, or on mineralogy and geology. *Tuesday, Thursday,* and *Saturday,* study of the same subject.	Dinner at 1 o'clock.—Recreation from dinner to 2 o'clock.	Study and recitations of geography, history, ethics, and national law.	Military exercises.—Dress parade and roll-call at sunset.	Supper immediately after parade.—Signal to retire to quarters immediately after supper.	Study of engineering and the military art.	Tattoo at half past 9 o'clock.—Roll-call immediately after tattoo. Signal to extinguish lights, and inspection of rooms, at 10 o'clock.
					SECOND CLASS.						
	Study of natural and experimental philosophy.		Recitations in natural and experimental philosophy.	Lectures on natural and experimental philosophy.	*Tuesday, Thursday,* and *Saturday,* lectures on chemistry. *Monday, Wednesday,* and *Friday,* study of the same subject.		Drawing of landscape and topography.			Study of natural and experimental philosophy.	
					THIRD CLASS.						
	Study of mathematics.		Recitations in mathematics.	Study of mathematics.	Recitations in French.		*Monday, Wednesday,* and *Friday,* drawing of the human figure. *Tuesday* and *Thursday,* study of French.			Study of mathematics.	
					FOURTH CLASS.						
	Study of mathematics.		Recitations in mathematics.	Study of mathematics.	Study and recitations of French.		Study and recitations of French.			Study of mathematics.	

No. 2.—(See paragraph 70.)

Estimate of the expense of horses required to teach the cadets equitation and the cavalry exercises and manœuvres.

For 1824.

For the erection of a stable,	$600
For the purchase of 24 horses, at $100,	2,400
For forage for 24 horses from the 1st October to the 31st December, 1824, at $25,	360
Shoeing 24 horses, and other incidental expenses,	30
Total,	$3,390

Annual expense after the first year.

Forage for 24 horses, at $70 each,	$1,680
Shoeing do. and other incidental expenses,	120
For the purchase of horses to replace those which may be condemned as unfit for service,	400
Total,	$2,200

* The number of students at Woolwich in 1806 was 180. It is believed that the number has never exceeded 200.

M.

U. S. MILITARY ACADEMY, WEST POINT, *January* 29, 1824.

The members of the academic board solicit the attention of the honorable Secretary of War to the necessity of securing, by legislative provision, a greater degree of permanency in the department of instructors at the Military Academy, whereby the present objectional practice of employing under-graduates may be obviated. This practice was founded in necessity, but it is believed that now, and hereafter, a sufficient number of suitable officers may be obtained from the line of the army to satisfy all the wants of the institution, without much, if any, expense in addition to that now incurred, by allowing officers acting as assistants the same extra pay now granted to cadets detailed for this service.

The objections to the employment of cadets are, principally: 1st, that the portion of time devoted to instruction is by them required for study; 2d, that they are not free from the imputation, however unfounded, of undue partiality, in the minds of cadets; 3d, the lower sections, of which they become instructors, require greater experience in the art of instruction than the mere student can be supposed to possess; 4th, cadets holding those stations are necessarily entirely withdrawn from their military duties; 5th, cadets, who are instructors, are unable to give regular attendance to the lectures in the department of engineering, which occupies the cadets of the first class. This evil is particularly felt; for the greater number of the assistants being generally taken from this class, and always from the head of the roll, the candidates for the corps of engineers, and the most prominent of those for the artillery, are thus deprived of instruction in the professional part of their course, and are wholly unable to make that degree of proficiency which, under other circumstances, would be so honorable to themselves and to the institution.

It appears that legislative provision is necessary to allow to officers the same extra pay granted cadets; and certainly it is just and equitable that they receive it. Officers may be *ordered* to perform the duties of instructors, but the requisite zeal will hardly be manifested in the absence of some special inducement, particularly as they thereby lose the prospect of attaining to the staff appointments of the army, to which it is probable their merit would strongly recommend them. It may be further remarked, as the unanimous opinion of this board, that, by the discontinuance of the present, and the adoption of the practice now recommended, the police of the institution will be eminently benefited.

N.

SIR: MILITARY ACADEMY, WEST POINT, *January* 28, 1824.

I have the honor to acknowledge the receipt of your communication of the 23d instant, informing me that you had laid before the Secretary of War my plan for a more complete organization of the Military Academy, and that it met with his approbation, except in one or two unimportant particulars.

You mention that it is proposed to add to the academic staff two professors of the Spanish language. The introduction of that language, at the present time, appears to me to be inexpedient. The present course of studies is as great as can possibly be accomplished in the time allotted to it. If, therefore, any other study be introduced, it would be necessary, either to extend the time, which I presume is not contemplated, or to exclude some portion of what is now taught. But from what branch or branches shall the retrenchment be made? It will doubtless be admitted that any branch of the present course is of essential importance to the scientific officer; and I believe it can be clearly demonstrated that no one of these branches is carried too far, or beyond the limits of practical utility; moreover, the several parts of the course are so connected with and adapted to each other, that no one can be retrenched or lessened, in any degree, without injury to all the rest.

Equitation and the cavalry exercises and manœuvres would constitute a most important addition to our course of practical instruction, and are only wanting to render that course tolerably complete. The horses necessary for this purpose might also be employed to manœuvre a battery of field artillery. It is believed that twenty-four horses would be a sufficient number, the annual expense of which, after the first year, would not exceed $2,200. (See estimate marked K.)

With respect to the reduction of the pay of the cadets, as suggested in your letter, I am clearly of opinion that it ought to be reduced to twelve dollars per month, and two rations per diem. It has been satisfactorily ascertained that this sum would defray all necessary expenses.

Enclosed herewith is the draught of a bill embracing all the improvements contemplated, and accompanied by statements (marked P 1 & 2,) of the ordinary expenses of the academy, under the present and proposed organizations. The fourth section of the bill is to authorize the enlistment of fifteen men, to be employed in the exclusive service of the academy. These men are indispensably necessary, as keepers of the recitation and lecture rooms, police men, and in various other situations connected with the institution. Their expense, including pay, clothing, and rations, would amount to 1,900 and odd dollars, which is less than one-third of what is expended for the same purposes at the Military School of Sandhurst, as may be seen by referring to the first volume of Dupine's View of the Military Force of Great Britain.

Very respectfully, I am, your obedient servant,

S. THAYER, *Lieut. Col., Superintendent Military Academy.*

Maj. Gen. ALEX. MACOMB, *Inspector of the Military Academy.*

O.

AN ACT making further provision for the Military Academy.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, from and after the passage of this act, the staff of the Military Academy shall consist of one professor and one assistant professor of natural and experimental philosophy and astronomy, one professor and one assistant professor of mathematics, one professor and one assistant professor of engineering, one professor and one assistant professor of chemistry and mineralogy, one chaplain, who shall also be professor of ethics and belles-lettres, three teachers of the French language, one teacher of drawing, one sword and riding-master, and such number of officers as shall, under the direction of the President, be detailed from the army to act as instructors in the Military Academy.

SEC. 2. *And be it further enacted*, That each of the foregoing professors shall have the brevet rank and the pay and emoluments of a major of cavalry; each assistant professor and teacher shall have the brevet rank and the

pay and emoluments of a captain of infantry, if not an officer of the army; and, if taken from the army, then so much in addition to his pay and emoluments as shall equal those of a captain. The sword and riding-master shall have the brevet rank of a first lieutenant, and shall receive $60 per month, and forage for two horses. Each officer detailed from the army to do the duty of an instructor in the academy shall, while so employed, be allowed ten dollars per month in addition to his pay in the line.

SEC. 3. *And be it further enacted*, That the superintendent of the academy, under the direction of the Secretary for the Department of War, is hereby authorized to employ, in the service of the academy, one modeler, who shall be allowed $50 per month; one armorer, who shall be allowed $30 per month, and one ration per day; and one fire-worker, who shall be allowed $30 per month, and one ration per day.

SEC. 4. *And be it further enacted*, That the superintendent, under the direction of the Secretary of War, is authorized to enlist one sergeant, two corporals, and twelve men, who shall be employed as laborers in the service of the academy, and shall be allowed the same pay and emoluments as are allowed to the non-commissioned officers and men in the army.

SEC. 5. *And be it further enacted*, That, from and after the passing of this act, the cadets shall be allowed each twelve dollars per month, and two rations per day.

SEC. 6. *And be it further enacted*, That, after the 1st day of September, 1824, no candidate for the warrant of a cadet shall be admitted into the Military Academy under the full age of fifteen, nor above that of twenty years, and that all candidates shall, previously to their admission, be well versed in reading, writing, arithmetic, and English grammar.

P 1.

Statement of the ordinary expenses of the Military Academy.

Present organization.	Amount of pay and emoluments.
1 professor of natural and experimental philosophy, pay and emoluments of lieutenant colonel,	$1,699 24
1 professor of engineering, pay and emoluments of major,	1,506 24
1 professor of mathematics, pay and emoluments of major,	1,506 24
1 surgeon, acting professor of chemistry and mineralogy, $10 per month extra pay,	120 00
1 professor of ethics and chaplain, pay and emoluments of major,	1,506 24
2 teachers of the French language, pay and emoluments of captain,	1,724 24
1 teacher of drawing, pay and emoluments of captain,	862 12
1 first lieutenant, assistant professor of philosophy, pay and emoluments of captain,	120 00
1 second lieutenant, assistant professor of engineering, pay and emoluments of captain,	180 00
1 first lieutenant, assistant professor of mathematics, pay and emoluments of captain,	120 00
1 sword-master, $60 per month,	720 00
10 cadets, acting assistant professors, $10 per month extra for each,	1,200 00
	$11,264 32

Proposed organization.	Amount of pay and emoluments.
1 professor of natural and experimental philosophy and astronomy, brevet rank, and pay and emoluments of major of cavalry,	$1,716 00
1 professor of engineering, brevet rank, and pay and emoluments of major of cavalry,	1,716 00
1 professor of mathematics, brevet rank, and pay and emoluments of major of cavalry,	1,716 00
1 professor of chemistry and mineralogy, brevet rank, and pay and emoluments of major of cavalry,	1,716 00
1 chaplain, and professor of ethics and belles-lettres, brevet rank, and pay and emoluments of major of cavalry,	1,716 00
1 assistant professor of natural and experimental philosophy and chemistry, brevet rank, and pay and emoluments of captain of infantry,	120 00
1 assistant professor of engineering, brevet rank, and pay and emoluments of captain of infantry,	120 00
1 assistant professor of mathematics, brevet rank, and pay and emoluments of captain of infantry,	120 00
1 assistant professor of chemistry and mineralogy, brevet rank, and pay and emoluments of captain of infantry,	120 00
2 teachers of French, brevet rank, and pay and emoluments of captain of infantry,	1,724 24
1 teacher of drawing, brevet rank, and pay and emoluments of captain of infantry,	862 12
1 sword-master, brevet rank, and pay and emoluments of first lieutenant,	720 00
12 officers and cadets, acting as instructors, $10 per month extra pay,	1,440 00
1 modeler, $50 per month,	600 00
1 fire-worker, $30 per month,	360 00
1 armorer, $30 per month,	360 00
	$15,126 36
Increase of expense,	$3,862 04

P 2.

Statement of the ordinary expenses of the Military Academy.

Present organization.	Amount of pay and emoluments.
1 professor of natural and experimental philosophy, pay and emoluments of a lieutenant colonel,	$1,699 24
1 professor of engineering, pay and emoluments of a major,	1,506 24
1 professor of mathematics, pay and emoluments of a major,	1,506 24
1 surgeon, acting professor of chemistry and mineralogy, $10 per month extra,	120 00
1 professor of ethics and chaplain, pay and emoluments of a major,	1,506 24
2 teachers of the French language, pay and emoluments of a captain,	1,724 24
1 teacher of drawing, pay and emoluments of a captain,	862 12
1 first lieutenant, assistant professor of philosophy, extra pay to equal captain's,	120 00
1 first lieutenant, assistant professor of mathematics, extra pay to equal captain's,	120 00
1 second lieutenant, assistant professor of engineering, extra pay to equal captain's,	180 00
1 sword-master, $60 per month,	720 00
10 cadets, acting assistant professors, $10 per month for each,	1,200 00
1 teacher of music, $50 per month,	600 00
1 clerk to the treasurer,	300 00
250 cadets, $16 per month, and two rations per day,	84,500 00
20 musicians, pay, clothing, and rations,	2,770 00
Fuel, transportation, stationary, repairs, and incidental expenses,	10,000 00
	$109,434 32

Proposed organization.	Amount of pay and emoluments.
1 professor of natural and experimental philosophy and astronomy, brevet rank, pay, and emoluments of major of cavalry,	$1,716 00
1 professor of engineering, brevet rank, pay, and emoluments of major of cavalry,	1,716 00
1 professor of mathematics, brevet rank, pay, and emoluments of major of cavalry,	1,716 00
1 professor of chemistry and mineralogy, brevet rank, pay, and emoluments of major of cavalry,	1,716 00
1 chaplain and professor of ethics and belles-lettres, brevet rank, pay, and emoluments of major of cavalry,	1,716 00
1 assistant professor of natural and experimental philosophy and astronomy, brevet rank, pay, and emoluments of captain of infantry,	120 00
1 assistant professor of engineering, brevet rank, pay, and emoluments of captain of infantry,	120 00
1 assistant professor of mathematics, brevet rank, pay, and emoluments of captain of infantry,	120 00
1 assistant professor of chemistry and mineralogy, brevet rank, pay, and emoluments of captain of infantry,	120 00
3 teachers of French, brevet rank, pay, and emoluments of captain of infantry,	2,586 36
1 teacher of drawing, brevet rank, pay, and emoluments of captain of infantry,	862 12
1 sword and riding-master, brevet rank, pay, and emoluments of first lieutenant,	912 00
12 officers and cadets, acting as instructors, $10 per month extra,	1,440 00
1 teacher of music, $50 per month,	600 00
1 clerk to the treasurer,	300 00
1 modeler, $50 per month,	600 00
1 fire-worker, $30 per month,	360 00
1 armorer, $30 per month,	360 00
250 cadets, $12 per month, and two rations per day,	72,500 00
20 musicians, pay, clothing, and rations,	2,770 00
1 sergeant, two corporals, and twelve privates, pay, clothing, and rations,	1,987 50
Expense of twenty-four horses to teach the cadets equitation and cavalry manœuvres,	2,200 00
Fuel, transportation, stationary, repairs, and incidental expenses,	10,000 00
	$106,537 98
N. B.—From the foregoing should be deducted the pay of twenty cadets; the average number each year being only two hundred and thirty, instead of two hundred and fifty,	5,800 00
There will remain for the annual expense,	$100,737 98

18th Congress.] No. 257. [1st Session.

SALE OF SURPLUS ARMS, AMMUNITION, AND MILITARY STORES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 8, 1824.

Mr. HAMILTON made the following report:

The Committee on Military Affairs, who were instructed, by a resolution, to inquire into the expediency of authorizing the President of the United States to direct sales to be made, from time to time, of such arms, ammunition, and military stores, as are not wanted, or are unfit for public service, beg leave to report a bill for the purposes contemplated by the resolution, with accompanying documents from the Department of War, showing the amount of unserviceable munitions and military supplies now on hand.

SIR: ORDNANCE DEPARTMENT, *January* 23, 1824.

I have the honor to communicate, herewith, a statement of the damaged and unserviceable ordnance and ordnance stores on hand at the several arsenals and fortifications of the United States.

The statement of the damaged stores at the arsenals [B] has been prepared from returns made by the respective commanding officers, in pursuance of a circular, directing a report of all unserviceable stores on hand. The statement of damaged stores at the fortifications [A] is made up from the inventories prepared by the officers commanding, for the inspector general.

If a general sale of unserviceable military stores should be authorized and directed, it may be proper to take further measures to determine with more precision the actual condition of the stores in question, by instructions to the inspector general of artillery to inspect them, in conjunction with one or more of the officers serving at the posts, respectively, with a special view to this purpose.

When the unserviceable stores have been thus ascertained, it is proposed to offer them at public sale by auction, after giving due public notice in the papers.

A large proportion of the articles embraced by the statements have been in use a number of years. The cannon (many of them) were in service during the revolutionary war, and consist of a great variety of patterns. Those on hand in Louisiana, Alabama, and Florida, are principally of English, French, and Spanish construction. The brass cannon are principally from France, the calibers of which differ so much from those established for the United States' service, that the shot and ammunition provided for one would not serve for the other; hence, confusion and danger would arise from the use of both in the same service.

Much inconvenience has resulted from the use of so great a variety of calibers. Those established upon the recommendation of a board of officers, in 1819, consist of four only, viz: 6, 12, 18, and 24 pounders. The construction of all other denominations has been discontinued.

The gun-carriages reported were all made before or during the late war; and have been so much injured in service, or decayed by time, as generally to be no longer worth the cost of repairing. It may be more advantageous to break up the carriages, and reserve the iron for future use, or for sale, than to attempt any other disposition of them.

The shot, shells, old iron, and accoutrements generally, it is believed, can be more advantageously disposed of by public sale than in any other manner.

In conclusion, I beg leave to remark, that the accumulation of so large an amount of unserviceable military stores at the arsenals is productive of great inconvenience, and tends to give an erroneous view of the actual state of our means of defence. As but a small proportion of the stores in question could be put in a suitable condition for service, and are not susceptible of being made so but at an expense beyond their value, it is considered important to the public interest that they should be disposed of, and that no stores should be retained in the arsenals and depots but such as are of a suitable quality and condition for actual service.

I have the honor to be, sir, very respectfully, your obedient servant,

G. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. JOHN C. CALHOUN.

ORDNANCE DEPARTMENT, *January* 22, 1824.

G. BOMFORD, *Lt. Col. on ordnance duty.*

18th Congress.] No. 258. [1st Session.

PRESERVATION OF THE ARMS PROVIDED FOR THE MILITIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 10, 1824.

Mr. HAMILTON made the following report:

The Committee on Military Affairs, which was instructed "to inquire into the expediency of amending the act making provision for arming and equipping the militia of the United States, passed April 3, 1808, so that the arms provided by virtue of said act, and transmitted to the several States and Territories of the Union, shall, by each State and Territory, be deposited and kept in proper arsenals, to be provided by said State or Territory, ready to be delivered to the militia thereof only when called into the actual service of the United States, or of the State or Territorial Government, and to be returned to such place or places of deposite when said service shall cease," beg leave to report:

That, in considering this subject, they have conferred with the Department of War, and, in reply to a communication of theirs, the subjoined letters were received. To the very able and satisfactory letter of the chief of the Ordnance Department, your committee deem it unnecessary to superadd any suggestions of their own, as the whole ground is covered by the arguments of that officer; they, therefore, in conformity with these views, and in strict accordance with their own opinions, beg leave to report a bill.

SIR: DEPARTMENT OF WAR, *February* 19, 1824.

I transmit herewith a report of the Ordnance Department, in reply to your letter of the 30th ultimo, in the views of which I concur.

The paper transmitted with your letter is also enclosed.

I have the honor to be, sir, your obedient servant,

J. C. CALHOUN.

The Hon. J. HAMILTON, Jun., *Chairman Committee on Military Affairs.*

SIR: ORDNANCE DEPARTMENT, *February* 19, 1824.

In compliance with the request of the honorable chairman of the Committee on Military Affairs, I have the honor to submit the views of this department, respecting the proposition to amend the act for arming and equipping the whole body of the militia.

Under the existing provisions of the act, the arms are procured by the General Government, and distributed in due proportions to the several States and Territories. The arms are delivered to the respective Governors, or to other executive officers, duly authorized to receive them. When the arms are thus delivered, they become the property of the State, and the officers of the General Government no longer exercise any control over them. How the arms are then disposed of, this department is not fully informed. It is known, however, that no uniform practice prevails. In some of the States, the arms are deposited in State arsenals, and reserved for occasions when the militia shall be called into actual service; in others, they are distributed to certain corps or companies, in whose hands they remain. In some of the States, it is understood that the practice partakes of both the foregoing, yet differs from either; the arms are deposited in the arsenals, and given out to the militia on days of general parade and inspection, and returned again to the arsenals after the exercises of the day are over.

The laws of the United States respecting the militia require that every citizen enrolled in the militia shall provide himself with suitable arms and accoutrements. The difficulties which may have been experienced in enforcing an exact compliance with these laws, it is presumed, may have induced the Legislatures of some of the States to distribute the arms received from the United States, with a view to promote the discipline of the militia. This plan, it is conceived, tends rather to increase the difficulty of enforcing a compliance with the laws than to diminish it; for few individuals will provide arms, at their own expense, when the State will furnish them gratis; nor will they be willing to do so, even if required by the State, when it is seen that their neighbors are furnished at the public expense.

By placing the arms in the hands of the militia, to be used on all ordinary occasions, and confiding them entirely to the care of so many different persons, dispersed over a large tract of country, they must, in the course of a few years, be greatly injured, if not irreparably damaged and lost; and even if it were possible, under such circumstances, to preserve them uninjured, their wide dispersion would be almost equivalent to a total loss to the State, from the difficulty of collecting them upon urgent occasions.

It is believed, moreover, that a distribution of arms in this manner has but a very limited influence in improving the military skill and discipline of the militia; for, although it may be desirable, it is by no means indispensable, that arms of a perfect and uniform fabric should be placed in the hands of men for ordinary parades. Most of the knowledge to be acquired on such occasions can be as well obtained with arms of an inferior quality; and besides, the distribution must necessarily furnish but a very partial supply. About one-tenth only can be armed in this manner.

In connexion with this view of the subject, I beg leave to submit the following facts:

During the seven years, from 1816 to 1822, inclusive, ninety-four thousand stands of arms were procured, under the act of 1808, for arming and equipping the militia. These arms have been apportioned to the several States and Territories, as directed by the act, and placed at the disposal of the respective State Executives; and theprincipal part of them have been delivered. During the year 1823, about fourteen thousand stands of arms were obtained; making, in all, during the last eight years, one hundred and eight thousand. The total number of militia in all the States and Territories in the year 1822 was a small fraction over one million. The returns for the year 1823, judging from the increase of former years, it is estimated will exhibit a total of about one million and thirty thousand. Hence it appears that the arms procured during the last eight years are sufficient to arm only about one-tenth of the present number of effective militia in the United States; and this proportion will not be materially varied for several years to come, because the annual increase of the militia is more than double the number of arms procured annually.

When the militia, in times of war or danger, are called into actual service, either by the General or State Governments, in order to their being properly equipped, the sole reliance must be placed upon the arms deposited in the public depots; for the arms belonging to the respective individuals, consisting of all the varieties of calibres, models, and quality, would, if brought into the field, be of very little service, from the great difficulty and embarrassment of providing so many different kinds of ammunition.

In actual service, the militia of one State will frequently be required to act in concert with those of other States, and also with the troops of the United States. Hence it is of the utmost importance to the good of the service, that the militia of all the States, as well as the troops of the United States, should be furnished, not only with arms of a good quality, but of a uniform pattern, in order that but one description of ammunition may be necessary, and that the confusion and disorder which must result from providing different kinds may be avoided.

Such of the States as shall retain in their arsenals the arms which have already been received from the United States, will, in the event of a war, whether it occurs soon or late, be prepared to furnish about one-tenth part of its militia with arms of a good quality and of a uniform pattern, without placing any reliance upon the arms dispersed throughout the country in the hands of individuals.

On the contrary, such of the States as shall distribute the arms to their militia, immediately upon their reception from the United States, it may be confidently predicted will, in the event of a war occurring some years hence, be found nearly, if not entirely, destitute of an efficient equipment for their militia; and thus the great purpose for which a large annual expenditure is made for procuring arms will be partially, if not wholly, defeated.

If the views here taken be correct, it follows that the ends for which the laws for arming the militia were enacted will be better attained if those laws be so amended as to insure the arms being deposited and preserved in arsenals, and to prohibit their being delivered out, except to the militia while in actual service, in times of war or public danger, and when called out by the General or State Governments.

In conclusion, it may be proper to state, that the foregoing has no reference to the arms procured under the appropriations for the national armories; those arms are not distributed to the militia, but deposited in the United States' arsenals. I beg leave, also, to remark, that I have dwelt thus long upon the subject, because the communication of the chairmain of the committee seemed to invite a full consideration of it. The views above expressed are, therefore, with great deference, respectfully submitted.

I have the honor to be, sir, very respectfully, your obedient servant,

G. BOMFORD, *Lieut. Col. on ordnance duty.*

The Hon. JOHN C. CALHOUN.

18th CONGRESS.] **No. 259.** [1st SESSION.

OPERATIONS OF THE ARMORIES FOR THE YEAR 1823.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 24, 1824.

SIR: DEPARTMENT OF WAR, *March* 23, 1824.

In pursuance of an act concerning arsenals and armories, passed April 2, 1794, I have the honor to transmit, herewith, a statement of the expenditures at the national armories, and of the arms, &c. made therein during the year 1823.

I have the honor to be your obedient servant,

J. C. CALHOUN.

The SPEAKER *of the House of Representatives.*

Statement of the expenditures at the national armories, and of the arms, &c. made therein during the year 1823.

	Expenditures.					Arms, &c. made.					
	For land, buildings, canals, repairs, and other permanent improvem'ts.	For the manufacture of arms.	For miscellaneous expenses not embraced in the foregoing.	On account of 1,000 patent rifles in progress, but not yet completed.	Total am't expended.	Muskets.	Screw-drivers.	Wipers.	Ball-screws.	Spring-vices.	Arm chests.
	Dollars.	Dollars.	Dollars.	Dollars.	Dollars.

ORDNANCE DEPARTMENT, *March* 23, 1824.

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

18th Congress.] No. 260. [1st Session.

PAY AND EMOLUMENTS OF CERTAIN GENERAL OFFICERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 12, 1824.

To the House of Representatives: APRIL 9, 1824.

I herewith transmit the report of the Secretary of War, with the accompanying documents, containing the information requested by a resolution of the House of the 10th ultimo, and which communicates the accounts of all the generals of the army, likewise of the inspectors general, the adjutant general, the chiefs of the engineer and ordnance corps, and the surgeon general, for the two years preceding the 30th of September last; also showing the amount of money paid to each under the different heads of pay, fuel, straw, quarters, transportation, and all other extra and contingent allowances; which report, together with the statements herewith transmitted, furnish all the information required.

JAMES MONROE.

DEPARTMENT OF WAR, *April* 7, 1824.

The Secretary of War, to whom was referred the resolution of the House of Representatives of the 10th ultimo, requesting the President to cause to be laid before the House the "accounts of all the generals of the army, likewise of the inspectors general, the adjutant general, the chiefs of the engineer and ordnance corps, and the surgeon general, for the two years preceding the 30th of September last; showing the amount of money paid to each under the different heads of pay proper, brevet pay, rations, (single and double,) fuel, straw, quarters, transportation, and all other extra and contingent allowances, as well as the amount paid for rations, pay, and clothing for servants," has the honor to transmit, herewith, statements prepared by the Second and Third Auditors, (marked A and B,) which furnish the information required.

It may be proper to remark that the opinion of the Attorney General was taken by direction of the President in relation to the brevet pay and emoluments to Major Generals Scott and Gaines, and that it was communicated to the chairman of the Military Committee in a letter from this Department, dated January 22, 1822, [See No. 219, page 359,] and that they have been subsequently allowed by the accounting officer of the Treasury Department.

The accompanying documents (marked C) will explain the reason for the allowance of brevet pay as brigadier general to General Macomb.

Respectfully submitted.

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

A.

SIR: TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE, *March* 26, 1824.

I have the honor to transmit, herewith, a statement of the accounts settled in this office, of the generals of the army, the inspectors general, the adjutant general, the chiefs of the engineer and ordnance corps, and the surgeon general; showing the amount received by each for the two years preceding the 30th of September last, under the different heads of pay proper, brevet pay, rations, (single and double,) as well as the amount paid for rations, pay, and clothes for servants, furnished in obedience to a resolution of the House of Representatives of the 10th of this month.

I have the honor to be, respectfully, sir, your obedient servant,

WM. LEE.

The Hon. J. C. CALHOUN, *Secretary of War.*

Statement of the amount of money paid to the generals of the army, the inspectors general, the adjutant general, the chiefs of the engineer and ordnance corps, and the surgeon general, for the two years preceding the 30th September last; showing the amount received by each, under the different heads of pay proper, brevet pay, rations, (single and double,) and forage, as well as the amount paid for rations, pay, and clothing of servants, furnished in obedience to a resolution of the House of Representatives of 10th March, 1824.

To whom paid.	Heads under which the payments have been made.	Pay proper and emoluments.	Brevet pay and emoluments.	Total amount paid.
Jacob Brown, major general,	Pay,	$4,800 00		
	Rations,	2,190 00		
	Double rations,	2,190 00		
	Forage,	1,296 00		
	Pay of servants,	480 00		
	Clothing of servants,	240 00		
	Rations of servants,	584 00		
Amount paid from 1st October, 1821, to 30th September, 1823,		$11,780 00	-	$11,780 00
Edmund P. Gaines, brigadier general, and major general by brevet,	Pay,	$2,392 00	$1,960 24	
	Rations,	1,680 00	372 60	
	Double rations,	1,384 80	346 20	
	Forage,	745 38		
	Pay of servants,	290 00		
	Clothing of servants,	352 80		
	Rations of servants,	145 08		
From 1st October, 1821, to 31st August, 1823,		$6,990 06	$2,679 04	$9,669 10
The account of General Gaines for the month of September, 1823, has not been received yet at this office.				
Winfield Scott, brigadier general, and maj. general by brevet,	Pay,	$2,496 00	$2,304 00	
	Rations,	1,752 00	438 00	
	Double rations,	1,752 00	438 00	
	Forage,	920 00	352 00	
	Pay of servants,	360 00	120 00	
	Clothing of servants,	180 00	60 00	
	Rations of servants,	438 00	146 00	
Amount paid from 1st October, 1821, to 30th September, 1823,		$7,898 00	$3,858 00	$11,756 00
Thomas S. Jesup, quartermaster general, paid as brigadier general,	Pay,	$2,496 00		
	Rations,	1,752 00		
During the absence of the quartermaster general, Major Cross, who had the command of that department, received the double rations according to his rank, which was that of a captain.	Double rations,	1,178 40		
	Forage,	904 00		
	Pay of servants,	360 00		
	Clothing of servants,	180 00		
	Rations of servants,	438 00		
Paid from 1st October, 1821, to 30th September, 1823,		$7,308 40	-	$7,308 40
Henry Atkinson, colonel sixth infantry, brigadier general by brevet,	Pay,	$1,800 00	$356 29	
	Rations,	876 00	448 80	
	Double rations,	420 00	514 80	
	Forage,	768 00	83 83	
	Pay of servants,	240 00	36 41	
	Rations of servants,	292 00	44 20	
	Clothing of servants,	120 00	18 34	
Paid from 1st October, 1821, to 30th September, 1823,		$4,516 00	$1,502 67	$6,018 67
Simeon Bernard, assistant engineer, paid as brigadier general,	Pay,	$2,496 00		
	Rations,	1,752 00		
	Forage,	960 00		
	Pay of servants,	360 00		
	Rations of servants,	438 00		
	Clothing of servants,	180 00		
Paid from 1st October, 1821, to 30th September, 1823,		$6,186 00	-	$6,186 00
John E. Wool, inspector general,	Pay,	$2,160 00		
	Rations,	876 00		
	Forage,	960 00		
	Pay of servants,	240 00		
	Rations of servants,	292 00		
	Clothing of servants,	120 00		
Paid from 1st October, 1821, to 30th September, 1823,		$4,648 00	-	$4,648 00
S. B. Archer, inspector general,	Pay,	$1,980 00		
Appointed 10th November, 1821; receives his pay as such from 1st December, 1821. No officer was paid as inspector general for November and October, 1821.	Rations,	802 80		
	Forage,	376 00		
	Pay of servants,	220 00		
	Rations of servants,	267 20		
	Clothing of servants,	110 00		
Paid from 1st December, 1821, to 30th September, 1823,		$3,756 00	-	$3,756 00

STATEMENT—Continued.

To whom paid.	Heads under which the payments have been made.	Pay proper and emoluments.	Brevet pay and emoluments.	Total amount paid.
James Gadsden, adjutant general,	Pay,	$653 23		
	Rations,	264 00		
	Forage,	58 06		
	Pay of servants,	72 58		
	Rations of servants,	88 00		
	Clothing of servants,	36 29		
Paid from 1st October, 1821, to 8th May, 1822,		$1,172 16	-	$1,172 16
Charles J. Nourse, captain second artillery, acting adjutant general,	Pay,	$1,506 75		
	Rations,	612 00		
	Forage,	477 60

	Rations of servants,	204 00		
	Clothing of servants,	83 69		
Paid from 9th May, 1822, to 30th September, 1823,		$3,051 45	-	$3,051 45
Alexander Macomb, colonel, major general by brevet, receives brevet emoluments as brigadier general,	Pay,	$1,800 00	$696 00	
	Rations,	876 00	876 00	
	Forage,	768 00	192 00	
	Pay of servants,	240 00	120 00	
	Rations of servants,	292 00	146 00	
	Clothing of servants,	120 00	60 00	
	Double rations,	876 00	876 00	
Paid from 1st October, 1821, to 30th September, 1823,		$4,972 00	$2,966 00	$7,938 00
George Bomford, lieutenant colonel of artillery, on ordnance duty,	Pay,	$1,800 00		
Captain Wade received double rations for fifteen days, being on ordnance duty during the absence of Colonel Bomford.	Rations,	730 00		
	Double rations,	715 00		
	Forage,	400 00		
	Pay of servants,	240 00		
	Rations of servants,	292 00		
	Clothing of servants,	120 00		
Paid from 1st October, 1821, to 30th September, 1823,		$4,297 00	-	$4,297 00
Joseph Lovell, surgeon general, paid at the rate of $2,500 per annum, from 1st October, 1821, to 30th September, 1823,		-	-	$5,000 00

TREASURY DEPARTMENT, SECOND AUDITOR'S OFFICE, *March* 26, 1824.

WILLIAM LEE.

B.

SIR: TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *March* 24, 1824.

I have the honor to transmit you, herewith, a statement of the accounts of all the generals of the army, likewise of the inspectors general, the adjutant general, the chiefs of the engineer and ordnance corps, and the surgeon general, for the two years preceding the 30th of September last; showing the amount of money paid to each under the different heads of pay proper, brevet pay, rations, (single and double,) fuel, straw, quarters, transportation, and all other extra and contingent allowances, as well as the amount paid for rations, pay, and clothes for servants, as far as the accounts and vouchers have been rendered to this office, furnished in pursuance of the resolution of the House of Representatives of the 10th March, 1824, and agreeably to your letter of the 11th instant.

Very respectfully, I am, sir, your obedient servant,

PETER HAGNER, *Auditor.*

Hon. J. C. CALHOUN, *Secretary of War.*

Statement of the accounts of all the generals of the army, likewise of the inspectors general, the adjutant general, the chiefs of the engineer and ordnance corps, and the surgeon general, for the two years preceding the 30th of September last; showing the amount of money paid to each under the different heads of pay proper, brevet pay, rations, (single and double,) fuel, straw, quarters, transportation, and all other extra and contingent allowances, as well as the amount paid for rations, pay, and clothes for servants, as far as the accounts and vouchers have been rendered to this office, furnished in pursuance of the resolution of the House of Representatives of the 10th March, 1824.

TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *March* 24, 1824.

PETER HAGNER, *Auditor.*

C.

The points on which the Secretary of War requires further information and proof, are, 1st, The special assignment of General Macomb to the head of the Engineer Department, or, in other words, to the command of the Engineer Department; 2d, Whether the cadets may be considered a separate corps.

1st. The act of Congress of the 16th of March, 1802, establishes the corps of engineers, and stations it at West Point, which makes the permanent head-quarters of that corps at West Point; consequently, the senior officer on duty there accounts for the officers and men present and absent, and makes returns accordingly. This has ever been, and is, the constant practice. By the sixty-seventh article of the new Army Regulations, the chief engineer is specially assigned to the head of the Engineer Department, and stationed at the seat of Government, and is charged with the superintendency of the corps of engineers, to which is *attached* that of the topographical engineers. He is also the inspector of the Military Academy, and charged with its correspondence. It follows, from this arrangement, that the chief engineer is specially assigned to a *particular post*, which post is the seat of Government, where he receives the returns of the corps of engineers from the commanding officer at West Point, and the returns and reports of the topographical engineers and the officers of the line attached to that corps, doing duty as topographers, and entirely detached from the line of the army. It is evident, from the law constituting the corps of engineers, that the topographical engineers cannot be considered a part of the corps of engineers; and that corps being attached, as the regulations declare, to the command of the chief engineer, is an augmentation of his command, and gives him his claim to his brevet pay. Suppose General Macomb to be in command of a regiment of infantry, with the brevet rank of a brigadier, and stationed at Sackett's Harbor: while commanding that regiment, being colonel thereof, he would certainly be entitled to the pay of colonel only; but if another regiment should be ordered there and attached to his command, is there any doubt that he would be entitled to the pay and emoluments of a brigadier general? The claim is precisely the same, whether the officer be assigned to the command, or the command be assigned to the officer.

2d. The cadets are formed into a separate corps, by the act of the 29th April, 1812, section 3, and attached to the Military Academy as students, by the President. The law reads thus: "That the cadets heretofore appointed in the service of the United States, whether of artillery, cavalry, riflemen, or infantry, or that may in future be appointed, as hereinafter provided, shall at no time exceed two hundred and fifty; that they *may be attached*, at the discretion of the President of the United States, as students to the Military Academy, and be subject to the established regulations thereof; that they shall be *arranged into companies* of non-commissioned officers and privates, according to the directions of the commandant of engineers, and be officered from the said corps for the purposes of military instruction; that there shall be added to *each company of cadets* four musicians; and the said corps [that is, corps of cadets,] shall be trained and taught all the duties of a private, non-commissioned officer, and officer, be encamped at least three months of each year, and taught all the duties incident to a regular camp; that the candidates for cadets be not under the age of fourteen, nor above the age of twenty-one years; that each cadet, previously to his appointment by the President of the United States, shall be well versed in reading, writing, and arithmetic; and that he shall sign articles, with the consent of his parent or guardian, by which he shall engage to serve five years, unless sooner discharged; and all such cadets shall be entitled to and receive *the pay and emoluments now allowed by law to cadets in the corps of engineers.*"

It is evident, from the foregoing, that the cadets form a distinct corps, and may be commanded, as it is at this time, by a brevet major, taken from the infantry, and be organized into companies, and they bear all the distinctive characteristics of a separate corps, both in regard to its uniform and duties; and they may, at the discretion of the President, be attached to any corps of the army. They are, in fact, *the corps of cadets of the army*, and not of the engineers; very few of them ever attaining that *honor*. If they were cadets of the corps of engineers, why was it necessary to declare that they should be entitled to the pay and emoluments of cadets of that corps? They would, of course, without this special provision, have been entitled to such allowance. If, in the Regulations of the Army, a mistake may have entered from inadvertency, it is presumed that that mistake will not be sufficient to confirm the character of that, or any other corps of the army.

Respectfully submitted:

ALEX. MACOMB, *Maj. Gen. by brevet, Chief Engineer.*

General Macomb claims the pay and emoluments of a brigadier general under his brevet as brigadier general, confirmed by the Senate at their last session:

1st. Because he has a command according to his brevet as a brigadier general. The law of the 16th of April, 1818, regulating the pay and emoluments of brevet officers, enacts that the officers of the army, who have brevet commissions, shall be entitled to and receive the pay and emoluments of their brevet rank, when on duty, and having a command according to their brevet rank, and at no other time.

2d. The command of General Macomb consists of three corps, viz: the corps of engineers, the corps of topographical engineers, and the corps of cadets.

3d. As to the extent of his command, it is equal in geographical extent to the whole Union, and, of course, equal to that of the highest officer in the army.

4th. The corps of engineers, of which General Macomb is colonel, is by law stationed at West Point, where the senior officer present commands, and makes return to the general as chief engineer, commanding all the engineers. This return accounts for the officers of the corps of engineers, showing their distributions, whether present or absent, and if on duty, &c. In these reports General Macomb is reported on command at the city of Washington.

5th. General Macomb is detached, and by special assignment placed at the seat of Government, and at the head of a department termed the Engineer Department, and to his command is attached the corps of topographical engineers.

6th. He has under his command a brigadier general, which circumstance would imply that he commanded in a higher capacity than colonel, and that he, of consequence, held the command of a general officer.

7th, and finally. Because he has been assigned to a separate command by the President of the United States, which command is the Engineer Department, and stationed at the seat of Government.

ALEX. MACOMB, *Maj. Gen. by brevet, Chief Engineer.*

JUNE 12, 1822.

The nature and extent of General Macomb's command, taking into view the Military Academy at West Point and the topographical engineers, which are attached to his command, as chief of the corps of engineers, his brevet pay appears to be clearly within the meaning of the laws applicable to the case. The allowance of the pay of a brigadier to the assistant engineer, General Bernard, is an additional reason in favor of the allowance.

JAMES MONROE.

The brevet pay and emoluments of a brigadier will commence from the time that he was arranged to his present command.

J. M.

18th Congress.] No. 261. [1st Session.

CLAIM OF VIRGINIA FOR INTEREST ON MONEY BORROWED TO PAY HER MILITIA.

COMMUNICATED TO THE SENATE, APRIL 12, 1824.

To the Senate of the United States:

The Executive of Virginia having requested payment of the amount of interest paid by the State for moneys borrowed and paid by it, for services rendered by the militia in the late war, and such claim not being allowable, according to the uniform decisions of the accounting officers of the Government, I submit the subject to your consideration, with a report from the Secretary of War, and all the documents connected with it.

The following are the circumstances on which this claim is founded: From an early stage of the war, the squadrons of the enemy entered occasionally the Chesapeake bay, and, menacing its shores, and those of the principal rivers emptying into it, subjected the neighboring militia to calls from the local authorities, for the defence of the parts thus menaced. The pressure was most sensibly felt in 1814, after the attack on this city, and its capture, when the invading force, retiring to its squadron, menaced alike Baltimore, Norfolk, and Richmond. The attack on this city had induced a call, by the Department of War, for large detachments of the militia of Pennsylvania, Maryland, and Virginia; which being collected in this quarter, and the enemy bearing, in the first instance, on Baltimore, were ordered to its defence. As early as the 31st of August, notice was given by the Secretary of War to the Governor of Virginia of the position of the enemy, and of the danger to which Richmond, as well as Norfolk and Baltimore, was exposed; and he was also authorized and enjoined to be on his guard, prepared at every point, and in every circumstance, to meet and repel the invaders. This notice was repeated several times afterwards, until the enemy left the bay, and moved to the south.

In the course of the war, the State had augmented its taxes to meet the pressure; but, the funds being still inadequate, it borrowed money to a considerable amount, which was applied to the payment of the militia, for the services thus rendered. The calls which had been made, except for the brigades in this quarter, and at Norfolk, being made by the State, the settlement with those corps, and the payment for their services, were made, according to the rules and usage of the Department, by the State, and not by the United States. On the settlement by the State, after the peace, with the accounting officers of the Government, the reimbursement of the interest, which the State had paid on the sums thus borrowed and paid to the militia, was claimed, but not allowed, for the reason above stated. It is this claim which I now submit to the consideration of Congress.

It need scarcely be remarked, that, where a State advances money for the use of the General Government, for a purpose authorized by it, the claim for the interest on the amount thus advanced, which has been paid by the State, is reasonable and just. The claim is the stronger under the circumstance which existed when those advances were made, it being at a period of great difficulty, when the United States were compelled to borrow very large sums for the prosecution of the war. Had the State not borrowed this money, the militia, whose services have been recognised since by the nation, must have been disbanded, and the State left without defence.

The claim is, in my opinion, equally well founded, when a State advances money which it has in its treasury, or which it raises by taxes, to meet the current demand.

In submitting this claim to your consideration, it is proper to observe, that many other States have like claims with those of Virginia, and that all those similarly circumstanced should be placed on the same footing. I invite your attention to a principle which is deemed just, and with the view that the provision which may be made respecting it may be extended alike to all the States.

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *April* 9, 1824.

In obedience to your order, I herewith enclose copies of the correspondence between this Department and the Governor of Virginia, in relation to the militia called out for the defence of that State in the fall of 1814; and a report from the Third Auditor of the Treasury, in relation to interest on the advances for militia services during the late war.

It may be proper to remark, that, in auditing the accounts of the States, for the service of the militia called out by their authority during the late war, no account has been allowed, but in cases where the militia had been called out either to repel actual invasion, or under a well-founded apprehension of invasion. It may also be proper to state, that the States which were exposed to the attacks of the enemy almost invariably claimed further protection from the Government than was found practicable, under the embarrassment of the country, to extend to them.

It will be seen, from the report of the Auditor, that interest has been allowed in no case to the States for advances to their militia called out by the authority of the States. The payment of interest to the States of Pennsylvania and New Jersey was on a previous agreement by the Government, and for the purpose of paying militia called out by authority of the Union, and not of the States, and for the payment of which the States were nowise liable.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

CORRESPONDENCE WITH THE GOVERNOR OF VIRGINIA.

SIR: WAR DEPARTMENT, *August* 31, 1814.

We have this moment received information, the correctness of which is not doubted, that the enemy evacuated Nottingham yesterday at ten o'clock. The barges moved down about four o'clock. It is believed that they debarked from Benedict last evening and this morning. I give you this notice as early as possible, as it may have a bearing on your arrangements for the defence of your section of the country.

I have the honor, &c.

JAMES MONROE.

His Excellency JAMES BARBOUR, *Governor of Virginia.*

SIR: WAR DEPARTMENT, *September* 1, 1814.

The enemy have embarked on board their vessels in the Patuxent, and will, as I presume, in execution of their desolating system, proceed immediately to some other of our principal towns. Norfolk is known to be one on which they have fixed their attention; Baltimore and Richmond are others. Against which they will move, in the first instance, will not be known, until they land their men in a marked direction towards it. Be on your guard, prepared at every point, and in all circumstances, to repel the invaders.

I have the honor, &c.

JAMES MONROE.

His Excellency JAMES BARBOUR, *Governor of Virginia.*

SIR: WAR DEPARTMENT, *September* 5, 1814.

I am sorry to inform you that the enemy's squadron has passed our battery at the White House, on the Potomac river. It was impossible to collect such a number of heavy pieces, in the present state of affairs here, as to prevent it. The fleet which had descended the Patuxent, with the troops on board, lately employed against this city, and a reinforcement since received, which had paused at the mouth of that river, on account (as it was supposed) of the detention of this squadron, descended the bay yesterday, either for the Potomac, or some other object lower down the bay. Hearing, as it is doubtless will, immediately, that their squadron has passed our battery, it may proceed to such other object; which must be, I presume, if it has one in the bay, either Norfolk or Richmond. I hasten to give you this intelligence, that you may be prepared to meet the enemy, should they present themselves at either place.

I have the honor, &c.

JAMES MONROE.

His Excellency JAMES BARBOUR, *Governor of Virginia.*

SIR: WAR DEPARTMENT, *September* 19, 1814.

The enemy has passed down the bay, and out of sight, below Annapolis. It may be presumed that they will attack either Richmond or Norfolk. The force collected near Richmond is, I trust, fully adequate to its defence. Norfolk, General Porter writes me, is not so well prepared. Cannot some additional force be thrown in, to its aid? I fear the reinforcement from North Carolina will not arrive there in time.

I have the honor, &c.

JAMES MONROE.

His Excellency JAMES BARBOUR, *Governor of Virginia.*

SIR: WAR DEPARTMENT, *October* 2, 1814.

The recent alarming movements of the enemy, many of his vessels being at this time at the mouth of the Potomac, and the accounts that Lord Hill had arrived, or might soon be at Bermuda, with powerful reinforcements, have induced the President to make additional requisitions for militia. I have, therefore, to request your excellency to call into the service of the United States, and put in march for this city, as soon as practicable, all the State's quota of militia, infantry and riflemen, detached conformably to the requisition from this Department of July 4th, 1814, within the counties adjacent to and west of the Blue Ridge, and not now in the field, to the amount of four thousand, properly organized and officered, including in this arrangement Brigadier General Madison, and the troops now out under his command. One other brigadier general will be required, making two brigades of two thousand each. It is desirable that as great a proportion of this force as practicable should be riflemen, and such of the infantry as have rifles should march with them, in preference to muskets.

Much attention will be necessary, to prevent too extensive baggage trains; no more than one wagon being allowed to a company of one hundred men.

As this force will be marched in two distinct commands, no major general will be required. I have to request your excellency to put into their movements all the expedition practicable, and to accept the new assurances of my greatest respect.

JAMES MONROE.

P. S. To insure the earliest services of the troops now out, I have given an order directing General Madison to march his brigade to this place without loss of time.

His Excellency JAMES BARBOUR, *Governor of Virginia.*

SIR: TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *April* 8, 1824.

I have the honor, conformably to your direction, to furnish the subjoined estimate of the probable amount which would be allowable for interest, were the principle of paying interest to be assumed by the United States, upon the claims of the several States for disbursements for military services and supplies during the late war with Great Britain.

This estimate has been prepared from a very cursory view of the accounts, and, in a great measure, upon supposed data, and is, consequently, entitled to but little reliance. To have arrived at any thing like accuracy would, necessarily, have consumed a considerable length of time, and, with respect to large portions of the claims, information as to dates which cannot be obtained therefrom.

The interest has been computed at the rate of six per cent., and on such of the sums claimed as have either been, or are likely to be, admitted to the credit of the respective States specified, in pursuance of the assumptions already made on the part of the United States.

The claim of the State of Connecticut extends to expenditures of large amount not yet sanctioned by the General Government; and interest on those expenditures has, therefore, not been taken into the estimate. Interest on a claim rendered by the State of Massachusetts, amounting to nearly $850,000, has been left out for a similar reason. The interest on the aggregate of this latter claim would be at least half a million of dollars, and in like proportion, of course, for any part thereof which may eventually be admitted.

Pennsylvania and Connecticut appear to be the only States whose claims included interest.

With great respect, your most obedient servant,

PETER HAGNER, *Auditor.*

The Hon. JOHN C. CALHOUN, *Secretary of War.*

Estimate.

South Carolina,	$94,526
Virginia,	254,148
Maryland,	101,305
Delaware,	11,950
Pennsylvania,	53,768
New York,	39,372

	$578,333

SIR: TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE, *April* 1, 1824.

I have the honor, in compliance with your request, to hand you the copies of two accounts allowed for interest on loans obtained by States for account of the United States; the one that of the State of Pennsylvania, and the other of the State of New Jersey: these comprise the whole allowances for that object which I have been enabled to find on the books of this office.

With great respect, your obedient servant,

PETER HAGNER, *Auditor.*

The Hon. JOHN C. CALHOUN, *Secretary of War.*

The United States to the State of Pennsylvania, DR.

For interest paid by the Commonwealth of Pennsylvania to the several banks, on the loan of $300,000 made to the United States as follows, viz:

Bank of Pennsylvania, on $30,000 from June 10, 1815, to March 31, 1817,	$3,250 00
Farmers and Mechanics' Bank, on $40,000 from May 15, 1815, to March 31, 1817,	4,500 00
Bank of Northern Liberties, on $20,000 from May 13, 1815, to March 31, 1817,	2,259 17
Mechanics' Bank, on $50,000 from May 15, 1815, to March 31, 1817,	5,625 00
Philadelphia Bank, on $50,000 from May 13, 1815, to March 31, 1817,	5,650 00
Commercial Bank, on $40,000 from May 15, 1815, to March 31, 1817,	4,506 67
Schuylkill Bank, on $20,000 from May 16, 1815, to March 31, 1817,	2,250 00
Bank of North America, on $50,000 from May 15, 1815, to March 31, 1817,	5,630 13
	$33,670 97

I certify the above statement exhibits the true amount of moneys paid by the Commonwealth of Pennsylvania, for interest, as charged therein. Witness my hand and seal of office, the 10th of April, 1817.

GEORGE BRYAN, *A. G.*

Interest allowed.

GEORGE GRAHAM.

PETER HAGNER, *Auditor.*

TREASURY DEPARTMENT, SECOND COMPTROLLER'S OFFICE, *April* 22, 1817.

Admitted and certified.

Received, 23d of April, 1817, warrant No. 263, for thirty-three thousand six hundred and seventy dollars ninety-seven cents, to be forwarded to William Findley, at Harrisburg, Pennsylvania.

THOMAS T. TUCKER,
Treasurer United States.

$33,670 97.

(To be transmitted to Mahlon Dickerson, Esq.)

The United States to the Governor of the State of New Jersey, DR.

To interest on $50,000, loaned to the Paymaster General, from the 24th day of June, 1815, to the 30th day of April, 1816, $2,557 00

Ten months and seven days, at six per cent. $2,558 33

Approved:

WM. H. CRAWFORD.

Received, May 1, 1816, of Tobias Lear, A. W. D., a warrant, No. 4,299, issued by the Secretary of War, this day, for two thousand five hundred and fifty-eight dollars thirty-three cents, to be transmitted by me to his excellency M. Dickerson, Governor of New Jersey, at Trenton.

THOMAS T. TUCKER,
Treasurer United States.

$2,558 33.

SIR: DEPARTMENT OF WAR, *March* 24, 1815.

I have the honor to acknowledge the receipt of your letter, enclosing a copy of the act of the General Assembly of Pennsylvania, entitled "An act authorizing the Governor to negotiate a loan for paying the militia and volunteers of this State, late in the service of the United States," passed the 11th of March, 1815. This com-

munication has been submitted to the President, who authorizes me to express his high sense of the uniform patriotism and public spirit of the Legislature of Pennsylvania; and to accept the loan of $300,000, or such part of that sum as may be necessary for the contemplated object, at an interest of six per centum per annum, to be reimbursed at any time within three years, upon the condition prescribed in the act; and to give you an assurance that the sum so loaned shall be applied to the payment of the militia and volunteers of Pennsylvania, late in the service of the United States.

I cannot allow this opportunity to pass, without an expression of the personal gratification which, as a grateful citizen of Pennsylvania, I have derived from contemplating the exemplary conduct of the State, in its relations to the internal government, during your administration.

A. J. DALLAS.

His Excellency S. SNYDER, *Governor of Pennsylvania, Harrisburg.*

SIR: HARRISBURG, *March* —, 1815.

I enclose to you a copy of an act passed by the Legislature of this State, at their late session, authorizing the Governor to negotiate a loan for paying the militia and volunteers of this State, lately in the service of the United States; the motive for this law is too obvious to need any elucidation. If the Government of the United States is not prepared to pay those troops, I shall be happy to learn from you whether that Government will accept the loan from Pennsylvania, on the terms and conditions prescribed in the law.

I have the honor to be, very respectfully, your obedient servant,

SIMON SNYDER.

The SECRETARY OF WAR.

AN ACT authorizing the Governor to negotiate a loan for paying the militia and volunteers of this State, late in the service of the United States.

SEC. 1. *Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same*, That the Governor be, and he is hereby, authorized to negotiate a loan or loans with any of the incorporated banks of this State, for such sum or sums of money as may be necessary to pay the militia and volunteers of this State, late in the service of the United States, not exceeding three hundred thousand dollars, at an interest not exceeding six per centum per annum, to be reimbursed at any time within three years.

SEC. 2. *And be it further enacted by the authority aforesaid*, That the Auditor General shall ascertain the balance due by the United States to the militia and volunteers aforesaid, and make report thereof to the Governor, who is hereby authorized and required, in the name of this commonwealth, to loan to the Government of the United States the sum mentioned in the foregoing section, or such part thereof as may be necessary, on the condition and with the assurance that the sum so loaned shall be applied to the payment of the militia and volunteers aforesaid.

SEC. 3. *And be it further enacted by the authority aforesaid*, That the Governor be, and he is hereby, directed to lay before the Legislature, within the first week of the next session, a report of his proceedings under this act.

JACOB HOLGATE,
Speaker of the House of Representatives.
JOHN TOD,
Speaker of the Senate.

Approved the eleventh day of March, one thousand eight hundred and fifteen.

SIMON SNYDER.

PENNSYLVANIA, SECRETARY'S OFFICE, *March* 14, 1815.

I certify the above and foregoing to be a true copy of the original deposited among the rolls in this office.

N. B. BOILEAU, *Secretary.*

SIR: TRENTON, *February* 21, 1815.

It is understood that the militia of this State, who served last fall under General Elmer, at Billingsport, on the Delaware river, have not received the pay due from the United States; in consequence of which, the Legislature of this State, by an act passed the 18th instant, authorized me to obtain, by loan, money sufficient to pay the said militia, not exceeding $50,000, and to loan the same to the Government of the United States, for the purpose of paying the said militia, on condition that it shall be reimbursed to the State in one year, with interest.

Should the President of the United States be of opinion that a convenience will arise from carrying into effect the proposed measure, I can procure the money, and will at any time be ready to enter into such arrangements as the nature of the transaction calls for.

Accept, sir, assurances of high respect,

WILLIAM S. PENNINGTON.

The Hon. JAMES MONROE.

DEAR SIR: TRENTON, *April* 25, 1815.

Lieutenant Colonel Reynolds, who acted last fall as deputy quartermaster-general to the militia of New Jersey serving in the third military district, informs me that he finds it impossible to close his quartermaster's account, for the want of funds; and requests me to write to you on the subject. The funds wanted are from $2,000 to $3,000. I understand Colonel Reynolds, that the quartermaster-general in New York has had directions from the commanding general of the third military district, and also from the War Department, to furnish him with the necessary funds, but has put him off on various pretexts, from time to time, and finally came out with the insolent observation that New Jersey should loan to the General Government as New York had done. This subaltern arrogance makes it necessary to apply to the head of the Department of War. Nor would I trouble you on this occasion, was it not that Colonel Reynolds is exceedingly embarrassed by the frequent calls for small sums. Great convenience will arise to him from being able to meet his engagements. The smallness of the sum precludes the idea that the delay arises from a deficiency of funds.

I am, with great respect, your very humble servant,

WILLIAM S. PENNINGTON.

The Hon. A. J. DALLAS.

SIR: TRENTON, *May* 22, 1815.

The Legislature of New Jersey, in February last, passed a law authorizing me to borrow, and loan to the United States, $50,000, for the purpose of paying off the militia of New Jersey, who served last summer and fall in the fourth military district; on which I immediately wrote to Colonel Monroe, the then Secretary of War, informing him of the power given me, and of my readiness to execute it, in case it should meet the approbation of the President. As I have received no answer to this letter, I am apprehensive that it may have been mislaid or have miscarried.

As the soldiers are really in want of money, many of them being poor, and also as the enemies of the administration are taking advantage of this circumstance to excite discontent, I take the liberty of calling your attention to the subject. I can obtain the money, in case it should be thought proper to use it in the way suggested.

I am, with great respect, your very humble servant,

WILLIAM S. PENNINGTON.

The Hon. A. J. DALLAS, *Acting Secretary of War.*

SIR: DEPARTMENT OF WAR, *May* 31, 1815.

I have the honor to acknowledge the receipt of your letter dated the 22d instant.

It will be an accommodation to this Department that the militia of New Jersey, called into the service of the United States, should be paid out of the fund which the Legislature has authorized you to procure. If, therefore, you will be so good as to inform me when the money is ready to be distributed, the paymaster of the army will give the necessary directions for making the payment, in a form to be recognised here, upon the regular pay-rolls.

The amount thus advanced by the State will be considered as a loan to the United States, bearing six per cent. per annum interest, and reimbursable in one year.

The necessity of ascertaining the state of our appropriations for the payment of the troops, before your offer was accepted, will be deemed, I hope, a sufficient apology for not answering your letter sooner.

A. J. DALLAS.

His Excellency W. PENNINGTON, *Governor of New Jersey.*

SIR: SENATE CHAMBER, *March* 30, 1824.

We have been made the organ of the Virginia delegation, who have been specially charged by the Legislature to use our best endeavors to obtain a speedy adjustment of the claims of Virginia against the Government of the United States, to bring that subject before you.

We esteem ourselves fortunate in finding it necessary to call your attention to one item only—the interest paid by Virginia on loans negotiated by her, to meet the expenses incurred during the last war. In forbearing to press any other part of the claim, (for example, the whole interest on all her advances,) we find a sufficient motive in the hope that, on the one now presented, the Government here will have no difficulty in coming to a speedy and favorable decision.

As we confide exclusively in the justice of our claim, we intentionally forbear, however grateful the retrospect may be, to make an ostentatious parade of the zeal with which Virginia devoted her citizens and treasure to the vigorous prosecution of the war. This is willingly left to the province of history.

To the notes heretofore presented by the agents of Virginia on this subject, we beg leave to add that of Mr. Johnson, with the documents referred to by him. These contain so full and satisfactory an exposition of the merits of our claim, as to relieve us from the necessity of adding thereto.

We cannot, however, forbear subjoining a few observations. Virginia asks only an equal measure of justice with any other State in the confederacy. Had the Government of the United States fulfilled its obligations to her, the necessity of this application would never have existed. Virginia, by the embarrassment of the Government here, was constrained to borrow that money, which, by the Government's own acknowledgment, indicated in its repayment, should have been furnished, in the first instance, by the Government itself. That money cannot be borrowed without interest, is a truth too obvious to be enlarged upon; and hence the interest constituted an essential part of the advance. On what ground will the distinction rest, if any be attempted, between the principal and the interest? The general usage of the Government not to pay interest will scarcely be urged in this case. The readiness of Government to discharge its debts is the foundation on which it rests. That is the presumption. The *fact*, in the present case, is an admission of inability to pay. Where the reason ceases, so ought the law; and on this rational principle has the Government acted, both in regard to individuals and State Governments. In the case of contractors during the war, it is understood that they received indemnity, both as it regarded damages and interest for non-payment. In Pennsylvania, a loan was negotiated by the Government of that State, nominally for the General Government, but substantially for herself. Pennsylvania paid the interest; the Government returned it. The Executive of New York borrowed large sums for the defence of New York. The Government here paid the interest. The Executive of Virginia did the same. How can the Government here refuse the interest? Whether these loans, in either or both cases, were made by authority, does not, in the slighest degree, touch the question. The obligation to indemnify existed before, and independently of the authority given. The power in writing to negotiate the loan, if given at all, is the mere evidence of a pre-existing obligation, but does by no means increase it. It is not the written bond that creates the moral obligation on the debtor to pay the debt, but a pre-existing consideration, of which the bond is merely the evidence. But we forbear to enter further into the discussion, as we doubt not your experience and better judgment will amply compensate every omission. Should an insuperable difficulty to a favorable decision present itself to your mind, in the progress of your deliberation, we beg you will have the goodness to present the subject to the President. If the claim could be favorably decided, it is desirable that it should be done immediately, as $50,000 are for the benefit of the University of Virginia; some assurance of the payment of which is indispensable to the successful commencement of that institution, a visiter of which is now here, who will leave Washington on Thursday, to attend a meeting of the visiters at the university on Monday next.

We offer you our best respects.

JAMES BARBOUR,
JOHN TAYLOR.

The SECRETARY OF WAR.

DEAR SIR: RICHMOND, *March* 23, 1824.

I have examined, with as much care as the time and my professional avocations would allow, the papers submitted to me, relative to the claim of this commonwealth upon the United States, for reimbursement of interest paid upon several loans negotiated during the late war; and the result is, the clearest conviction of my mind that nothing is necessary but to make the claim clearly understood, in order to render its justice obvious, and the propriety of allowing it unquestionable.

I am not sufficiently acquainted with the organization of the Departments of the General Government, or with the laws which govern them, to decide whether it is in the power of the Secretary of War to authorize the payment of the claims. Perhaps it is not; it may be that the Government, which does not ordinarily pay interest, has not given to its Executive Departments any power to allow a claim which, whatever may be its real character, assumes in any manner the form of interest. However this may be it would probably be best that the claim, in the shape in which we now place it, should be distinctly submitted to the War Department; and if it be there disallowed, that then an appeal be made to the justice of Congress. I suggest this course, because I believe the nature and extent of our claim has never yet been explained to any Department of the General Government, and because, if we go before Congress, we should go with conclusive evidence, that if the claim be just, the law for its payment is necessary. I do it, too, in the hope that by explaining the claim to the Department, we shall satisfy its head that it deserves his countenance, if it cannot receive his legal sanction.

I will now submit to you, as briefly and as intelligibly as I can, the view which I have taken of the extent and character of our claim.

With the very commencement of the war began the advances of this State, to defray the expenses of the militia called into the service of the United States. By reference to the general order, issued by the Governor, for the detail and march of the detachment ordered to Norfolk in July, 1812, and of the detachment ordered to the northwestern frontier, in September of the same year, it will be seen that he authorizes drafts on the Executive Department of this commonwealth, for certain expenses of the equipment and march to the place of rendezvous. These general orders are in pages 23 and 24 of the Journal of the House of Delegates for the session of 1812–'13.

On the 12th of October, 1812, these advances had amounted to $17,751 37; on the 26th of February, 1813, to $31,583 09; and on the 24th of May, 1813, to $94,847 88. At these several periods, accounts of these advances were presented to the War Department for liquidation and payment.

A difference of opinion arose between the Department of War and this Government as to the principles on which these accounts were to be settled. The claims of Virginia were very ably sustained at the seat of the General Government, by Mr. Mercer and Mr. Campbell, charged with that duty by our Executive; and their views of the subject, with a statement of the points in difference, and of our accounts furnished, will be found in the Journal of the House of Delegates for the session of May, 1813, from page 13 to 36.

This Government maintained the simple (and one might have said the self-evident) proposition that the Goverment of the United States was bound to defray all the expenses attending the militia called out for their service; while the War Department of that Government held that a part of them should be borne by the States.

The discussions upon this subject left the principles uncertain on which the accounts were to be adjusted, and left the accounts themselves unsettled and unpaid. They did not, however, leave unsettled the principles which governed this commonwealth, from the moment when the declaration of war proclaimed that the honor and interests of the Union were to be protected by the sword, to the hour when the voice of peace assured us that this object had been happily attained. They did not in the slightest degree impair the promptitude with which the requisitions of the General Government were constantly complied with; the vigilance with which the danger from the common enemy was anticipated and guarded against; the liberality with which money was advanced to defray all necessary expenses; or the loyalty with which the whole resources of the commonwealth were devoted to the general defence.

Relying upon the justice of the United States for ultimate indemnity, and resolved to do her duty, whether indemnified or not, Virginia continued her advances for defraying the expenses of the war; so that, in the month of December, 1813, they amounted to $382,141 78; in February, 1814, to $444,049 56; in November, 1814, to $913,599 51; and, in the end, to not much less than $2,000,000.

Of all this not one cent was refunded till one year after the conclusion of the war, except $100,000 in Treasury notes, furnished in the autumn of 1814, when this State had in the field more than one-fourth of all its militia.

Of these advances the sum of $1,781,330 01 has been liquidated, and paid by the Government of the United States; the payments, except the $100,000 above mentioned, being made from the 29th of February, 1816, to the 22d January, 1823.

Some further claims remain suspended for the procurement of more satisfactory vouchers, of the extent whereof I am not informed; and some, perhaps, have been finally disallowed.

To meet these advances by Virginia, her ordinary revenue was by no means adequate. It had been fully competent, however, for years, to defray the expenses of her peace establishment, and would have sufficed for a state of war, if the General Government, fulfilling the great object of its creation, had provided sufficiently for the common defence, and defrayed all its charges. But a portion of those charges falling upon this Government, we were compelled both to raise our taxes and resort to loans.

Accordingly, by the act imposing taxes for the support of Government for the year 1813, our taxes were raised about one-third, as will be seen by comparing the act of the session of 1812–'13, chapter 1, with the act of the preceding session, chapter 1; also by another act of the session 1812–'13, chapter 9, a loan of $350,000 was authorized, at a rate of interest not exceeding six per cent.

Under this act, the sum of $350,000 was borrowed from the Bank of Virginia, on the 29th of March, 1813, at an interest of six per centum per annum, for the period of nine months; and this period was afterwards protracted to the 29th of March, 1814. Every dollar of this money was applied to defray the war expenses, with which the United States were justly chargeable.

Again, at the next session, 1813–'14, our taxes were increased upon the old subjects about 30 per cent., and taxes imposed on many new subjects. At this session, also, a law was passed authorizing another loan of $750,000, at a rate of interest not exceeding seven per cent. [See the Sessions Acts, 1813, chap. 1, page 1, and chap. 27, page 63.]

This loan was negotiated partly with the Bank of Virginia, and partly with the Farmers' Bank of Virginia; $350,000 was borrowed of the former, and applied to the repayment of the same sum borrowed the preceding year; and $400,000 was borrowed of the latter, of which $313,665 68 was applied to pay this State's quota of the direct tax, which had been assumed, and the balance was applied to defray the war expenses.

Notwithstanding the large increase of our taxes, and the sums of money thus borrowed, our Treasury was exhausted by the autumn of this year; and to meet the heavy expenses which the imminent danger of that period made necessary, our Executive, upon its own responsibility, borrowed money from the banks, and convened the

Legislature to provide for the emergency. At its session in November, 1814, it authorized a loan from the Farmers' Bank of Virginia of $200,000, at an interest of 7½ per cent., to be reimbursed out of the revenue of the next year. [See chap. 15, page 56.] This loan was accordingly made, and the money applied to refund that borrowed by the Executive, and to defray war expenses.

At this session the taxes were further raised; something being added to some of the old subjects, and many new subjects being introduced, and two other acts passed authorizing loans. One authorized a loan of $800,000, in anticipation of the revenue of 1815 and 1816, at an interest not exceeding 7 per cent.; the other authorized a loan of $1,100,000, at an interest not exceeding 8 per cent. per annum. [See chap. 16, page 57, and chap. 17, page 58.]

Under the former, $800,000 was borrowed of the Farmers' Bank of Virginia, at 7 per cent., and under the latter there was borrowed of the literary fund $6,200, at 8 per cent.; and of the Farmers' Bank two sums, one of $536,052 19, the other of $100,000; these two sums at an interest of 6 per cent.

The Auditor's statement (A) shows how much interest has been paid upon these loans, and how much of the principal has been reimbursed. It shows that the loans of $200,000, $800,000, and $336,052 19, were fully reimbursed in the year 1816; the loan of $100,000 in the year 1817, that of $6,200 in the year 1818. That of the loan of $350,000, only $120,000 have yet been reimbursed; and of the loan of $400,000, $311,000 have been reimbursed; and it shows that the whole amount of interest paid by this commonwealth upon these loans, up to the end of 1823, is $486,853 24.

The commonwealth can have no just claim to refund the whole of this interest. So much as accrued upon the $313,665 68, applied to pay the State's quota of direct tax, ought, perhaps, not to be reclaimed. There is some strong reason for contending that the interest, even upon this sum, which accrued after the first year, should be refunded by the United States; because it is very manifest that the increased revenue of the State, arising from the war taxes, would have redeemed this loan within a twelvemonth, if it had not been consumed in those expenses, which the United States should have borne; so that, although this loan was not made to meet these expenses, it was certainly continued in consequence of them. But this is debatable ground, and I would not advise that it should be occupied. Neither should we claim the refunding of interest paid after the principal advanced had been refunded to us; nor should we at any time claim the refunding of interest paid upon any sum beyond the amount of advances due to us.

Holding these principles in view, I have compiled, from the documents furnished me, a statement (marked No. 1) showing the amount of our claim for interest, on account of the advances already liquidated and paid, to be $232,702 67. I believe the calculations are correct; and I am well satisfied that the principles on which this statement is made must be sanctioned by the justice and good sense of all mankind.

I have made another statement, (marked No. 2,) which will show the probable amount of our advances to the General Government, at various times, within the period over which the account (No. 1) extends; and will show that the sums on which we charge for interest paid, have, for the greater part of the time, fallen short, by several hundred thousand dollars, of the amount of our advances; and have at no time exceeded that amount, unless, perhaps, for a few months of the year 1813, between the periods of borrowing and disbursing the $350,000.

The chief argument to sustain this claim is to be found in the narrative which explains it. This shows that we are not asking usance for the moneys advanced by us, but simply the return, without interest, of the specific sums paid out of our treasury for the benefit of the United States. Our advances, it is true, were of two kinds: the one of principal, to defray the expenses as they accrued; the other of interest, to pay for the use of the money we had borrowed to meet these expenses. The former has been refunded to us, as far as the claims have been liquidated; whether the latter shall also be refunded, is the question to be considered.

In considering this question, I shall adduce no further evidence to prove that the sums borrowed, on which the interest in my statement (No. 1) is charged, were borrowed to meet the war expenses, which have been since acknowledged as a just charge against the General Government, and that they were faithfully applied to that object. Our journals and public offices abound with evidence upon this subject, which leaves no manner of doubt in relation to it. I shall take it for granted, and examine the question upon principle.

What, then, is the nature of our claim? Is it a claim for interest upon the moneys advanced by us? or is it for part of the principal itself? It is, in truth, a claim for a part of the principal debt owing us by the Government of the United States; for, although we advanced it in the name of interest on the money we had borrowed, it became, at the moment of the advance, a part of the principal sum due us from that Government. This is illustrated by familiar transactions between man and man. One pays for another his principal debt, with the interest that has accumulated on it: from the moment of the payment, the principal and interest unite in constituting a new debt, the whole of which, as regards the person who made the advance, is principal, and carries interest. So, one borrows from another a sum of money, and pays interest upon it. The borrower becomes the creditor of him for whose use the money was borrowed, and the interest paid upon the loan constitutes a principal debt to the borrower, and carries interest. These are principles perfectly familiar to our courts of justice, and are founded in no arbitrary enactment of the statutes, but in those perfect doctrines of the common law, based in common right, matured by the experience, and sanctioned by the wisdom of centuries. The rule of right must be the same between Governments. It cannot be pretended that if Virginia had paid a hundred thousand dollars of the interest upon the United States' debt, her claim for reimbursement would have been a claim for interest upon her advances, or that it could have been refunded, upon the ground that the Government does not pay interest.

These considerations are sufficient to show that our claim is not for interest upon advances, but for the principal itself. And the question recurs, whether it ought to be allowed by the Government of the United States?

It is difficult to draw any just distinction between those advances which the Government of the United States has sanctioned and refunded, and those advances for interest upon the loans. We had no legal claim upon the Government of the United States for either. Neither advance was made under any previous contract with the United States, or any law authorizing it; for neither could any action have been sustained; both were made under the pressure of uncontrollable circumstances, and in the confidence that the United States would indemnify us for them; and it is manifest that both were applied to the use of the United States.

It may be said that, if Virginia had advanced the money to the United States out of her own revenue, without resorting to loan, the United States would have received equal benefit, and, in that case, would not have been chargeable with interest. This may be allowed, if you please, without affecting this question: for the question is not simply what benefit the United States has received, but the question is what burden Virginia has borne in her services. If Virginia had possessed revenues to meet these expenditures, she would not have paid interest: not having the revenue, she has been obliged to borrow, and to pay interest.

But has not the United States, in truth, profited in her fiscal affairs, to much more than the amount claimed, by the money which Virginia borrowed?

It is well known that the Government of the United States had not revenues to meet the war expenses; that they resorted to loans; that, while Virginia was paying from six to eight per cent. for the money borrowed for their

uses, they were paying much higher interest upon the money they borrowed for themselves; that they effected loans with much difficulty; and that the embarrassments at their Treasury were very great. If, then, Virginia had not borrowed this money, the Government of the United States must have done so, and would have paid, no doubt, a much higher interest.

In this view of the subject, how is our claim for the refunding the interest paid to be distinguished from the claim for refunding the principal? We advanced the principal, and it *paid* the United States the numerical sums advanced; this advance they refund to us. We advanced the interest; it saved to them a greater amount, which they must have paid for interest; and shall they refuse to refund us this?

The doctrine that the Government does not pay interest, unless where it has been contracted for, has no application to this subject. It may suit very well, and be very politic, in relation to individuals who became the creditors of the Government, without any contract for interest; who ought to be subjected to the necessity of a speedy settlement of accounts; whose claims the Government, it is to be presumed, are always ready to pay as soon as they may be liquidated, and from whose forbearance, in the general, the Government cannot profit. But, in a case like this, where the transaction is between Governments, where nothing is asked but a return of actual advances, and where the Government of the United States has profited as well by the advance as by the forbearance, to answer the demand by the proposition that the Government does not pay interest, unless by contract, is mockery.

If there were any thing in the delays which have attended the settlement, from which blame could be imputed to Virginia, or from which it could be shown that the Government of the United States had suffered injury, there might be some color in the objection to our claim. But the journals of our Legislature, and the records of our departments, will show that these claims have been pressed with at least as much earnestness and constancy as was convenient to the General Government, and that so much as has been paid was quite as soon as suited the fiscal resources of the General Government. Among other expedients proposed, to facilitate the settlement of these accounts, and to render their payment convenient to the United States, a law was passed in the session of 1814 and 1815, authorizing the assumption of the State's quota of the direct tax of 1815, provided that payment would be accepted in our advances. This was not agreeable to the General Government, the proposition was rejected, and the tax levied upon the people.

But the Government of the United States has not always acted upon the principle that they ought not to pay interest except when they had previously contracted for it. I have heard, though I cannot vouch for it, that there have been several exceptions to this rule. There is at least one example, which I think is entitled to great weight.

When, in the year 1790, the Government of the United States funded its own, and assumed the State debts, it took upon itself not only the principal but the interest of those debts. The State debts assumed were debts contracted for defence during the war of the revolution.

Individuals held the obligations of the States for principal sums bearing interest. The United States assumed both principal and interest, without its ever occurring to any one that they were departing from the principle of that rule which protects Governments from interest not contracted for. The analogy between the State debt and interest then assumed, and the State debt and interest now in question, is complete for the purposes of this argument; and the only difference between them renders the present claim much stronger. The difference is, that the old debt was incurred by the State, for the defence of the State, by forces not subjected to the authority of the United States. The present debt was incurred for the common defence, by forces either called out by orders of the General Government, or subjected to their authority as soon as they would receive them.

By the law, too, passed in the same year for the settlement of the accounts between the United States and the several States, provision is made for paying interest on the balances which should be found due to the States.

Justice, reason, authority, concur in sustaining our claim; if any thing further were required to recommend it to the favorable attention of the United States, something perhaps might be found in the circumstance that Virginia has dedicated this claim to the encouragement of learning, by vesting its proceeds in the literary fund, and, by a late act, has appropriated $50,000 of it to the equipment of the university, for its immediate commencement. The latter act will, at least, justify us in pressing this claim to the earliest possible adjustment, as the money will be immediately in requisition by the visiters of the university, and is indispensable to the successful execution of their measures.

With great respect, your very obedient servant,

C. JOHNSON.

JAMES PLEASANTS, Jun., Esq., *Governor of Virginia.*

A.

B.

Statement showing the balances remaining in the treasury of Virginia at the end of each fiscal year, from 1799 *to* 1812, *inclusive.*

TREASURY OFFICE OF VIRGINIA, RICHMOND, *February* 12, 1824.

From an examination of the accounts kept in this department, the following balances appear to have remained in the Treasury office at the termination of each fiscal year, from the 30th of September, 1799, to the 31st of December, 1812, each day inclusive, viz:

On the 30th of September, 1799, the sum of	$109,773 01
On the 30th of September, 1800, the sum of	96,290 63
On the 30th of September, 1801, the sum of	96,722 65
On the 30th of September, 1802, the sum of	87,521 57

On the 30th of September, 1803, the sum of	$161,641 79
On the 30th of September, 1804, the sum of	124,958 98
On the 30th of September, 1805, the sum of	128,700 40
On the 30th of September, 1806, the sum of	122,463 62
On the 30th of September, 1807, the sum of	137,539 88
On the 30th of September, 1808, the sum of	86,822 38
On the 31st of December, 1809, the sum of	141,391 20
On the 31st of December, 1810, the sum of	146,337 10
On the 31st of December, 1811, the sum of	168,214 25
On the 31st of December, 1812, the sum of	212,440 21

JERMAN BAKER,
Treasurer of the Commonwealth of Virginia.

No. 1.

The United States to the Commonwealth of Virginia, Dr.

For interest paid on loans, negotiated to defray such expenses of the late war as have since been acknowledged to be proper charges against the Government of the United States:

Paid to the Bank of Virginia, one year's interest on the loan of $350,000, from 29th March, 1813, to 29th March, 1814, at six per cent.	$21,000 00
Paid on the same claim, interest at the rate of seven per cent. per annum, from 29th March, 1814, to 7th November, 1816, two years seven months and eight days,	63,836 10
Paid on $325,000, (the balance of the $350,000, after deducting $25,000, redeemed on the 7th of November, 1816,) seven per cent. from 7th November, 1816, to 8th December, 1817, one year one month and one day,	24,709 02
Paid to the Farmers' Bank of Virginia, on $86,334 32, part of the loan of $400,000, negotiated under the act of 1st February, 1814, interest at 7 per cent. from 4th February, 1814, to 8th December, 1817, three years ten months four days,	23,233 47
Paid the Farmers' Bank, in 1815, on the loan of $200,000, negotiated under the act of 18th November, 1814, at 7½ per cent.,	9,338 99
Paid the Farmers' Bank, from July, 1815, to March, 1816, on the loan of $800,000, negotiated under the act of 29th December, 1814, at 7 per cent.,	44,679 40
Paid the Farmers' Bank, in May and July, 1816, on $536,052 19, borrowed under the act of 10th January, 1815, at — per cent.,	12,720 66
Paid the Literary Fund, from July, 1815, to November, 1817, on $6,200, borrowed under the last mentioned act, at 8 per cent.,	1,346 08
Paid the Farmers' Bank, in November, 1816, on $100,000, borrowed under last mentioned act,	1,033 37
Paid the Bank of Virginia, on $281,330 01, from the 8th December, 1817, to 17th August, 1818, eight months nine days,	13,621 05
Paid the Bank of Virginia, on $134,830, from 17th August, 1818, to 18th May, 1819, nine months one day, at 7 per cent.,	7,104 79
Paid the same, on $88,315 39, from 18th May, 1819, to 10th March, 1820, nine months twenty-two days, at 7 per cent.,	4,914 35
Paid the same, on $42,710 49, from 10th March, 1820, to 4th May, 1821, one year one month twenty-four days, at 7 per cent.,	3,438 15
Paid the same, on $12,710 49, from 4th May, 1821, to 29th April, 1822, eleven months twenty-five days, at 7 per cent.,	877 38
Paid the same, on $6,841 50, from 29th April, 1822, to 22d January, 1823, eight months twenty-three days, at — per cent.,	349 86
	$232,702 67

Note.—In this statement there is charged to the United States all the interest which accrued up to the 8th December, 1817, on the loans negotiated by this commonwealth during the war, except the interest on $313,665 68, part of the loan of $400,000 made by the Farmers' Bank.

This sum of $313,665 68 is not brought into this account, because it was applied to the payment of the State's quota of the direct tax.

The period of 8th December, 1817, is assumed as the proper period to which to charge *all* the other interest; because, until that time, Virginia was in advance to the United States constantly a greater sum than that for which all the other interest was paid.

Taking the whole sum which has been liquidated and paid by the United States as the criterion of the advances of this commonwealth, it will appear—

That the whole advances were	$1,781,330 01
Of which there were paid, at various times, from November, 1814, to the 8th December, 1817,	1,500,000 00
Leaving then a balance of	281,330 01

This balance being less than the amount of loans on which Virginia has since been paying interest, instead of charging the whole interest paid by her since that period, there is only charged, in this statement, the interest on so much of the loan as is equivalent to the balances remaining due to the commonwealth, from time to time. This will be seen by attending to the manner in which the above balance was extinguished, which is as follows:

1818, August 1, 17, By cash,	146,500 00
	134,830 01
1819, May 18, By cash,	46,514 62
	88,315 39

	Amount brought forward, - -	$88,315 39
1820, March 10,	By cash, - - - - -	45,604 90
		42,710 49
1821, May 4,	By cash, - - - - -	30,000 00
		12,710 49
1822, April 29,	By cash, - - - - -	5,868 99
		6,841 50
1823, January 22,	By cash, - - - - -	6,841 50

No. 2.

Statement showing, from time to time, the amount of moneys borrowed by the Commonwealth of Virginia, during the late war, on which she has been paying interest, exclusive of the $313,665 68, part of the loan of $400,000, applied to the payment of the State's quota of direct tax; also, showing the probable amount of advances by the commonwealth to the United States, at corresponding times.

REMARKS.

The account of this commonwealth against the United States for advances commenced with the war. On the 18th October, 1812, it amounted to $17,751 37; on the 26th February, 1813, to $31,683 09; on the 24th May, 1813, to $94,847 88; on the 14th December, 1813, to $382,141 78; early in February, 1814, to $444,049 56; on the 4th November, 1814, to $913,599 51, subject to a credit of $100,000, paid in Treasury notes; in the end, it amounted to at least $1,781,330 01, that sum having been liquidated and paid at the Treasury of the United States. As the war ended early in 1815, we may suppose that the whole, or nearly the whole, expenditure accrued by the end of that year.—See the annexed statement.

Statement showing the amount of advances by the Commonwealth of Virginia to the United States, at different periods, from the commencement of the late war to the 22d January, 1823.

October 18, 1812,	At this date the whole amount claimed, as per account rendered to the War Department, was - - - - - -	$17,751 37
February 26, 1813,	Whole amount, as per account also rendered to the Department of War, -	31,683 09
May 24, "	Whole amount, as per account then rendered to that Department, -	94,847 88
December 14, "	Whole amount, as stated by the committee of the House of Delegates, in their report of February 11, 1814, page 186 of Journal, - -	382,141 78
February, 1814,	Whole amount, as stated in the abovementioned report, - -	444,049 56
November 4, "	Whole amount, as stated by the Governor in his communication to the Assembly, page 50 of the Journal of 1814–'15, - - - [This amount is subject to a credit of $100,000, paid in Treasury notes, by order of the President, at the earnest solicitation of one of the Executive Council, Dr. Everette.]	913,599 51
December, 1815,	As the war ended in February of this year, we must suppose that most of the advance, subsequently to November 4, 1814, had accrued in the early part of the year 1815, and that the whole, or very nearly the whole, had accrued by the end of that year. The whole sum settled at the War Department, and paid at the Treasury of the United States, being $1,781,330 01, and the only part of that which had been refunded before the end of the year 1815 being the $100,000 in Treasury notes mentioned above, we may set down the whole amount of advance, at this date, at -	1,681,330 01
February 29, 1816,	$150,000 being then paid, leaves - - - - -	1,531,330 01
March 2, "	$250,000 being then paid, leaves - - - - -	1,281,330 01
March 7, "	$200,000 being then paid, leaves - - - - -	1,081,330 01
November 7, "	$350,000 being then paid, leaves - - - - -	731,330 01
May 18, 1817,	$250,000 being then paid, leaves - - - - -	481,330 01
December 8, "	$200,000 being then paid, leaves - - - - -	(a) 281,330 01

(a) This balance extinguished, as appears in the note at the foot of the statement of the interest account.

Amount of moneys refunded by the General Government to the State of Virginia.

November 16, 1814, - - - - - - -	$100,000 00
February 29, 1816, - - - - - - -	150,000 00
March 2, 1816, - - - - - - -	250,000 00
March 7, 1816, - - - - - - -	200,000 00
November 7, 1816, - - - - - - -	350,000 00
May 18, 1817, - - - - - - -	254,000 00
December 8, 1817, - - - - - - -	200,000 00
August 17, 1818, - - - - - - -	146,500 00
May 18, 1819, - - - - - - -	46,514 62

May 4, 1821, - - - - - - -	30,000 00
April 29, 1822, - - - - - - -	5,868 99
January 22, 1823, - - - - - - -	6,841 50
	$1,781,330 01

Letter from the President of the Bank of Virginia, stating the amount of moneys loaned by that bank to the State.

BANK OF VIRGINIA, *March* 17, 1824.

I hereby certify that the treasurer and auditor of the Commonwealth of Virginia borrowed of this bank, on the 26th of March, 1813, under an act of Assembly, passed on the 22d February preceding, entitled "An act authorizing a loan for the support of Government," the sum of three hundred and fifty thousand dollars, at the rate of *six* per cent. per annum; and that the same sum of $350,000 was reloaned to the commonwealth, at the rate of *seven* per cent. per annum, from the 1st day of February, 1814, under an act of Assembly, passed on the 24th of January, 1814, entitled "An act for extending the charter of the Bank of Virginia, and for other purposes."

JOHN BROCKENBROUGH, *President of the Bank of Virginia.*

Loans made by the Farmers' Bank of Virginia to the Commonwealth of Virginia, from February 14, 1814, *to the end of the year* 1816.

1814, February 21,	Loan under act of Assembly of 1st February, 1814, at 7 per cent., -	$400,000 00
1814, November 19,	Loan under act of Assembly of 18th November, 1814, at 7½ per cent., -	200,000 00
	Loan under act of Assembly of 29th December, 1814, at 7 per cent., paid, from January to July, 1815, per settlement with auditor, - -	800,000 00
	Loan made at 6 per cent., under act of Assembly of 10th January, 1815, authorizing a loan of $1,100,000, advanced, as per settlement with auditor, in the years 1815 and 1816, - - - - -	636,052 19
		$2,036,052 19

The above loans were reimbursed at the following periods:

1815, February,	$30,876 02	
1815, April,	15,000 00	
1815, June,	42,123 98	
1815, July,	68,000 00	
1815, October,	44,000 00	
		$200,000 00
1815, November,	580,000 00	
1816, January,	80,000 00	
1816, March,	140,000 00	
		800,000 00
1816, March,	36,052 19	
1816, April,	120,039 26	
1816, May,	218,944 73	
1816, June,	161,016 01	
1816, September,	10,000 00	
1816, October,	90,000 00	
		636,052 19

The stock for the loan of $400,000 was sold by the bank before any part of it was redeemed by the State.

FARMERS' BANK OF VIRGINIA, *March* 19, 1824.

WM. NEKERVIS, *Cashier.*

SIR: WASHINGTON, *April* 2, 1824.

In the character of a visiter of the University of Virginia, I beg leave to submit to your consideration a few remarks on a subject in which that institution is deeply interested. I allude to the unsatisfied balance still due to the State of Virginia on account of advances made by that State to the Government of the United States during the prosecution of the late war.

The Legislature of Virginia, at the session recently terminated, passed an act, whereby it appropriated, for the purpose of procuring the requisite library and apparatus for the university of the State, the sum of fifty thousand dollars, to be paid out of the first moneys which might be received from the General Government in further discharge of the debt still due to the commonwealth. The visiters of the university are required by law to assemble on the first Monday in April; and one of the first objects of the meeting is to make such preliminary arrangements as may be necessary for procuring suitable professors, and for putting the institution into speedy and successful operation. The importance of the appropriation recently conferred by the Legislature of Virginia, in the dawn of such an establishment, is too apparent to require the support of argument, or the aid of elucidation. Suffice it to say, that it is calculated to excite feelings of the most heartfelt interest among all the friends of science and literature; and to none can it be an object of more lively solicitude than the distinguished individuals with whom I have the honor to be associated at the board of visiters.

By the act to which we are indebted for this beneficent appropriation, it is provided that, so soon as satisfactory assurances shall reach the board of public works in Virginia that the claim of the State on the Government of the United States will ultimately be available to the amount of the appropriation, that board will have authority to anticipate the payment, by lending to the rector and visiters of the university an equivalent amount out of a fund set apart in that State, and consecrated to the purposes of internal improvement.

You must be sensible, sir, that, next to a successful issue, nothing can be more desirable than a prompt decision of this interesting question. I am not informed as to the degree of evidence which will be satisfactory to the board of public works in Virginia with regard to the ultimate validity of the claim. I take it for granted, however, that a decision of one branch of the General Government in favor of the justice of the claim, and the want of nothing but an act of appropriation by another department of that Government, will be sufficient to satisfy that board that there is no necessity to postpone the loan at the expense of the best and dearest interests of Virginia. It is not to be presumed that the requisite appropriation will not be made, by the Congress of the United States, to satisfy any fair claim on the justice and good faith of the Federal Government.

My object, therefore, sir, is to invite your attention to this subject with as little delay as your convenience will permit; and, pending the unavoidable delays of legislation, to procure from you such an expression of opinion on the merits of our claim as will satisfy the board of public works in Virginia that it will ultimately be established to an amount sufficient to fulfil the appropriation recently made to the University of Virginia.

It is proper that I should state, on the threshold, for your information, that I have no authority to make the present application, expressly delegated to me by the board of visiters of the university; nevertheless, I am so thoroughly persuaded that, in so doing, I shall be acting in conformity to the sentiments and views of all its members, that I do not hesitate to take upon myself the responsibility of the measure.

The merits of the claim of Virginia, accompanied by a statement of its present amount, and its details, will probably be presented to your view, through the regular organs of the State, with a degree of force and clearness infinitely beyond any thing which I can say upon the subject. Yet, as the question of its ultimate validity is one on which now mainly depends the prosperity of a most beneficent institution, whose interests are partly confided to my care, I trust, sir, that I may venture, without the appearance of officious arrogance, to suggest such arguments as occur to my recollection, in behalf of this claim, tending to recommend it to a favorable reception on the part of the Government of the Union.

You are aware, sir, that, with the exception of a small sum of principal, still suspended for the want of regular vouchers, the existing claim of Virginia is a claim for interest on the sums advanced to the General Government by the State for and on account of expenditures incurred in its necessary defence during the progress of the late war. What proportion of this claim consists of interest actually paid by the State on loans negotiated to defray the expenses of the war, I am not exactly informed; but, as I know that the amount is more than sufficient to satisfy the appropriation to the university, and as I consider this part of the claim as standing on higher ground than the residue, I would wish you to regard it as the exclusive subject of my present application.

It appears, then, from the present state of the claim, that the success of the appropriation to the University of Virginia depends essentially on the recognition by this Government of the principle that, in certain cases, it is

bound to refund the interest paid for moneys borrowed and expended for its benefit and accommodation, without previous authority expressly given by the Government.

To this principle I understand there are two objections:

First. It is alleged to be contrary to the established usage of the Government.

Secondly. The usage is believed to be founded in good policy.

First. In regard to the usage of the Government, I beg leave to remark, that it is not a usage to which the Government has uniformly and invariably adhered. Probably, upon investigation, it would appear that there had been several exceptions. Permit me to invite your attention to some exceptions, which, if I am not incorrectly informed, took place in regard to certain western contractors during the period of time that the present Secretary of the Treasury superintended the Department of War. Whether the rule be or be not founded in good policy, it would seem, therefore, that there are cases of departure warranted, in the opinion of the Government, by the existing laws of the United States.

Secondly. The usage, it is alleged, is founded in good policy, and ought not to be changed. I have sought for information as to the reasons on which this usage is bottomed; and I understand that the principal, if not the only reason, is, that the Government of the United States is supposed to be at all times ready to meet its engagements; and that the payment of interest would furnish an inducement to the public creditors to hold up their claims, and thereby prevent the timely liquidation of accounts, and the regular discharge of the public debts.

It is not my purpose, sir, to discuss the merits of the usage as a general system of policy; nor to attempt to disprove the general verity and soundness of the reason by which it is supposed to be justified and supported. My object does not require it; and I would not presumptuously intrude upon discussions not necessarily connected with my subject. My purpose simply is to endeavor to demonstrate, to your satisfaction, that the reason alleged in support of the existing usage of the Government does not apply to the claim of Virginia; and, consequently, that this claim constitutes a fit subject for an exception to the rule.

There are, sir, various grounds on which I could contend that the prevailing usage of the Department of War should not be applied to the claim of Virginia for a reimbursement of the interest actually paid by the State. But the one on which I propose now to rely is, that of the liberal conduct of Virginia towards the Government of the United States, from the commencement to the conclusion of the war.

I shall not pretend, sir, to enter into a comprehensive and complete history of the situation and conduct of the State of Virginia, throughout the period to which I allude. This subject, in its outline, and most of its details, is already known, and in the possession of the Government. That part of the conduct of the State to which I wish particularly to draw your attention is the course pursued by the General Assembly on the subject of the advances to the General Government, and more especially in regard to the very interest which forms the basis of my present application. There are some circumstances connected with the latter branch of the subject which bear, in my opinion, with direct and peculiar force on the question now under consideration.

The liberal spirit towards the Government of the Union which was always felt and uniformly displayed by the General Assembly of Virginia, will be best illustrated by reference to some conspicuous and forcible examples.

One of these took place at the close of the session of 1813–'14.

What, at that time, was the situation of Virginia?

Upwards of a year had elapsed since the enemy's fleet had entered the Chesapeake. Our commerce was cut off; our agriculture benumbed; our resources, both public and private, greatly curtailed. A powerful British squadron rode triumphant in our waters. Our maritime towns were threatened with conflagration. The slave population were instigated to rebellion. In despite of the exertions of a vigilant Executive and a brave militia, ever ready to meet the foe, the enemy having command of our waters, and choosing his points of attack, invaded our shores, and extended his ravages along the extensive line of our eastern borders. It was the avowed object of the enemy to make Virginia feel the worst effects of a war of which she had been one of the earliest, most steadfast, and decided advocates. Harassed by difficulties, foreign and domestic, the Government of the United States was unable to fulfil its own patriotic intentions, and to meet the exigencies of an extended empire. True to herself, and faithful to the Union, the State of Virginia, from the first moment of invasion, put forth her resources with a liberal and unsparing hand. From the most remote extremities of her territory, her citizens marched at the call of the law, to the defence of any and of every part of this extensive empire. In addition to the ordinary expenses of her Government, the State, by taxes and by loans, augmented her military contingent fund, and on all occasions was ready to anticipate or to support the Government of the Union. The experience of the past, and the prospect of the future, equally pointed to the policy of husbanding her peculiar resources, and of providing, by every possible expedient, for the defence of her maritime borders against a powerful enemy, during a war of indefinite continuance.

This rapid sketch will suffice to recall to your view the position of the State of Virginia at the close of the winter of 1814.

In such a situation, the financial relations of the State filled with inquietude the minds of some of her most respectable citizens. The abortive attempts theretofore made, through the executive branch of the Government, for the purpose of effecting an adjustment of our account, produced, as was admitted by all, from a want of neither zeal nor ability in the agency which had been employed, gave rise to the idea of enlisting the weight and authority of the General Assembly of Virginia on the side of an immediate settlement and discharge of the debt.

From these considerations the accompanying preamble and resolutions, presenting a lucid view of the claims of the State, and authorizing the appointment of commissioners, and convenient and accommodating terms of payment, were introduced into the House of Delegates by a distinguished member of the body, passed unanimously, and sent up to the Senate.

In an animated and protracted debate which arose in the Senate on this occasion, all the bearings of the proposed resolutions, as well upon the interests of the State of Virginia as upon those of the Government of the United States, were fully developed to the view of the body. They were advocated upon the ground that such a settlement and such terms of payment as those which were authorized by these resolutions were necessary to the State, and would be advantageous to both the Governments. They were opposed upon the ground that, although the terms of payment were accommodating to the Government of the United States, and reimbursement was desirable to the State, yet the measure, for various reasons, was not necessary, and might be productive of inconvenience to the General Government.

On this occasion, the question of interest upon our advances to the General Government was brought distinctly into view. And although it was contended, on the side of the advocates of the measure, that the apprehensions entertained of the hostile aspect under which it would exhibit the General Assembly of Virginia, in its relations to the General Government, were not justified by its character or tendency; and although it was attempted to be shown that the fears were visionary which were suggested as to the inconvenience that a demand of the interest might bring upon that Government, nevertheless, views of a very opposite description were zealously and confi-

dently expressed by those members of the Senate who rose on the side of the opposition. It was stated most earnestly, by the opponents of the measure, among many other arguments, "that it would have the aspect of arraying the State of Virginia against the General Government, which would produce an injurious impression in the other States and on the enemy; that a distinction ought to be drawn between the ultimate security of our claim and its immediate discharge; that we should, by moving at this time, move all the creditor States, whose claims might not be as small as they were represented; that, although Virginia might be willing to take stock, the other States might insist on immediate payment in full; that, even if they should be willing to take stock, the necessity of providing for the interest, *at the existing crisis*, might embarrass the General Government, or call for additional taxes, or affect the success of the loan of $25,000,000; that our peace establishment and the interest of the public debt already amounted to $12,000,000, and our revenue only to $10,000,000; that the revenue, on the side of the customs, would fall off, while the internal revenue could not be augmented without difficulty; and *that the amount of our claim had been funded, and there was no necessity, at this time, to press for payment on the General Government.*"

In despite of all the efforts of eloquence and of argument, the preamble and resolutions were rejected in the Senate. The subject attracted considerable attention at the time; and that the grounds here stated were mainly relied upon by the majority of the Senate, reference might be had, if necessary, to the author of the resolutions, now a distinguished member of the House of Representatives, and to the Attorney General of the United States.

In the present prosperous state of the national finances, it is difficult to conceive the state of things which could justify such a course of argument and such vindication. Nevertheless, the history of the times will furnish the defence of the Senate.

Having been a member at this period, and having participated in the rejection of this measure, I have a right to know the motives by which we were governed; and I can confidently affirm that, whatever may be the opinion now entertained of the direction then given to the fiscal concerns of the State, the spirit which guided our deliberations was no other than an affectionate and respectful solicitude for the financial credit of the Union, an anxious desire to avoid every possible appearance of distrust or apprehension on the part of the Legislature of Virginia, and a firm determination to support the National Government to the utmost extent of our ability; never doubting for a moment but that, at the first period of convenience, all our accounts would be fairly settled, and all our advances of principal and of interest would be amply and honorably reimbursed.

We were aware, sir, it is true, that the Executive of the State had sent, and might again send, forward agents to liquidate the accounts, and that our delegation in Congress would not forget the peculiar interests of the State which they represented; nevertheless, we were equally sensible that, in communicating through the ordinary channels of executive agency, the important point—*the time of reimbursement*—would more completely lie at the discretion of the Government; and that our delegation in Congress, constituting as they did a part of the National Legislature, could not and would not, by any indiscreet or untimely movement, cripple the credit of the Federal Government, and thereby impair its ability to sustain the war, to the declaration of which they had themselves been mainly instrumental.

Permit me now, sir, to request your attention to that part of the claim of Virginia which is founded on a loan made by the Executive of the State in the month of September, 1814, and subsequently sanctioned by the General Assembly. It would seem to me that the interest paid by the State on the loan which was then negotiated, fastens itself with irresistible force on the justice and good faith of the Government of the Union. The very impressive circumstances under which this loan was effected deserve well to be recalled to your recollection.

The metropolis of the Union had just fallen under the arm of the invader, and the capitol of the nation had been wrapped in flames. Flushed with victory, and exulting in the trophies recently won at our expense, the British army was descending to the Chesapeake, and threatened to strike at the metropolis of Virginia. The crisis called for vigorous measures. With a promptitude and energy demanded by the occasion, the Governor of Virginia called upon the people of the State to rally to his standard and meet the expected invaders. An increasing army was rapidly thrown between the metropolis of Virginia and the shores of the Chesapeake. On the 1st September, 1814, this impressive letter is sent to the Governor of Virginia by Mr. Monroe, then Secretary of War:

"The enemy have embarked on board their vessels on the Patuxent, and will, as I presume, in execution of their desolating system, proceed immediately to some other of our principal towns. Norfolk is known to be one on which they have fixed their attention. Baltimore and Richmond are others: against which they will move in the first instance will not be known until they land their men in a marked direction towards it. Be on your guard, prepared at every point, and in all circumstances, to repel the invaders."

Was it possible for the Federal Government to make a more powerful call upon the forces of the State? Had the Governor of Virginia turned a deaf ear to a warning like this, would he not have acted the part of a traitor? At a crisis like this our State treasury is exhausted, not even a dollar remaining. The United States are unable to furnish either supplies or money to meet the crying emergencies of the moment; funds must be obtained, or the forces disbanded, and the country thrown open to the invader.

It was in this embarrassed situation that I found the Governor of Virginia in my first interview with him after my arrival at his head-quarters. Unfolding to me the dangers of the State, and pointing my attention to the Secretary's letter, he requested my co-operation, as a member of the Senate, in procuring the funds indispensably necessary to prevent the disbandment of the army. In compliance with his wishes, I waited on the principal stockholders of the Farmers' Bank of Virginia, and, in the preliminary explanations which I made in conformity to his instructions, I relied on the contents of the letter recently received from the Secretary of War. A loan of about $200,000 was subsequently effected through the regular organs of the State; and the bank requiring the individual responsibility of the then Governor and Treasurer of the State, those officers did not hesitate at the condition demanded, relying for indemnity on the justice and magnanimity of their country. The Legislature of Virginia, at its ensuing session, proceeded with promptitude to assume the responsibility of the debt; and the interest which was paid to the bank for money thus borrowed, as I may say, at the instance of this Government, constitutes a part of the claim of Virginia now submitted to your consideration.

Suffer me now, sir, to invite your attention to the financial services of Virginia in the memorable winter of 1814–'15. This was a period calculated to test the loyalty of the State to the Government of the Union. We then contended single-handed against a powerful foe; his fleets covered the Chesapeake; his canvass whitened on all the rivers of Virginia. Strengthened by victorious legions from the continent of Europe, the enemy waged a savage warfare throughout the line of our eastern frontier. Now spread out into predatory bands, he wasted the shores of the Chesapeake, and steered his course on the midnight wave by the light of our flaming habitations. Next, concentrating his forces, he threatened the interior of the State, and menaced our principal towns and fortified positions. A brave militia, whose ranks had been recently thinned by the sultry suns of summer, next were wasted by marches and countermarches through the floods of autumn and through the snows of winter. The second year now hastened to its term since the British fleet had entered the Chesapeake; and now

the war seemed but just beginning, with every prospect of indefinite duration. That I do not charge the picture with fictitious colors, I appeal in my justification to your own candid recollections.

As this critical stage of the contest, what was the situation of your military chest in Virginia? There were periods at which it was totally exhausted. Even the most inconsiderable claims were unavoidably postponed for want of money by the regular and authorized agents of your Government. Instances fell under my own observation.

What, permit me to ask, was the spirit which at this time reigned in the General Assembly of Virginia, that leading branch of our Government, at once the index to the feelings of the people and the organ of its will? Did it murmur at the unequal pressure of the war, or of the want of adequate protection, or of the amount of its advances? Did it forfeit its pledges, or abandon its loyalty, or waver in its counsels, or oscillate in its course? Did it require the reimbursement of the million in arrears, or demand guarantees against unequal burdens for the future? Turn, I beseech you, to its records, and once more examine its course. No, sir, our coffers were still open to you, and our advances still continued. When your funds fell short, we hastened to supply the deficiency. Wherever you appeared weak, we endeavored to add to your strength; wherever you seemed naked, we sought to draw a veil over your infirmities, and to hide them from the eyes of the enemy. To insure the defence to which we were clearly entitled, we again and again went into the market and borrowed money, and funded the debts and paid the interest, until finally, at the close of the contest, the amount of our advances fell but little short of $2,000,000. All descriptions of politicians, both Houses of Assembly, all departments of the Government, enlightened citizens throughout the State, all mingled in joint counsels to devise the best means to supply the funds necessary to sustain the army and to maintain the war. The barrier between the two Governments appeared for the time to be prostrate. One common treasury seemed to exist between us.

In the midst of advances so heavy, and so well calculated to test the genuine feelings of the State, the General Assembly of Virginia continued to hold, to the last hour of the contest, this course of generous confidence, of delicate forbearance, of exalted devotion; turning a deaf ear to every proposition, however demanded by all the suggestions of ordinary prudence, which might be calculated in the most distant manner to draw into question the very amicable and liberal relations that always existed between the two Governments. As far, sir, as my recollection serves me, (for I write from memory, and without access or reference to all the documents on this subject,) it was not till some time after the storm was over, and your financial troubles at an end, that it adopted any resolutions whatsoever on this subject of its advances.

And I think myself warranted in declaring, that nothing could have been more grateful to the feelings of the people of Virginia than to discover in the event how completely their confidence was justified. It was, I assure you, with the most cordial satisfaction that we received from the present Attorney General of the United States his statement of the very impressive manner in which he was met by the present Secretary of the Treasury, under the auspices of the whole cabinet at Washington. With a promptitude and decision which did honor to the Government, the whole amount of our principal debt (with the exception of a small part not supported by proper vouchers) was unhesitatingly allowed and immediately discharged. The impression made in the State of Virginia was, I assure you, of the most pleasing and durable character, equally honorable, in my humble estimation, to both the parties concerned.

Nor has any thing yet occurred on the subject of our interest-claim to shake my convictions that it must and will eventually meet with the same liberal reception. This part of the claim, if I am not under a misapprehension, is now for the first time brought, in regular form, before the Government; and perhaps this furnishes the reason why its concomitant circumstances should heretofore have commanded so little of the public attention.

Having been a member of the General Assembly of Virginia throughout the period of the late war, I think myself well informed of the genius of its counsels and the spirit of its measures. Lest, however, I might labor under a delusion, I have made it my business to call on a distinguished member of the Senate, and one of the House of Representatives, from Virginia, who bore a conspicuous part in the transactions of the times, and have ascertained that they unite with me in these recollections, and concur in the views which I now present to you.

Having requested your decision on this interesting question, I have considered this narrative due to the character of Virginia and the justice of the Union.

I have the honor, sir, to be, with the highest consideration, your obedient servant,

JOSEPH C. CABELL.

JAMES MONROE, *President of the United States.*

18th CONGRESS.] No. 262. [2d SESSION.

CONDITION OF THE MILITARY ESTABLISHMENT AND THE FORTIFICATIONS.

COMMUNICATED TO CONGRESS, BY THE PRESIDENT OF THE UNITED STATES, DECEMBER 7, 1824.

SIR: DEPARTMENT OF WAR, *December* 3, 1824.

In compliance with your directions, I herewith transmit reports from the various branches of the military establishment, lettered from A to K, which contain a full statement of the administration of that portion of the public service which is confided to the Department of War. The reports afford satisfactory evidence that a high degree of excellence has been attained in the administration of the different branches of the Department. Not an instance of defalcation or loss has thus far occurred, and there is every reason to believe that the disbursements of the year will be made without the loss of a cent to the Government. The accounts have already been rendered for nearly all the money which has been drawn from the Treasury in the first three quarters of the year, on account of the army, fortifications, ordnance, and Indian affairs; and it is anticipated, with confidence, that the accounts of the whole of the disbursements of these quarters will be rendered before the termination of the year. The old un-

settled accounts of the Department, which, at the commencement of the present administration, amounted to $45,111,123, have been reduced to $3,136,991; and further accumulation is effectually prevented in the Department, by strict fidelity and punctuality in expenditure and settlement of accounts.

In order to improve the discipline of the artillery, eleven companies have been collected at Fortress Monroe, at Old Point Comfort, which have been formed into a corps as a school of practice for the artillery. The dispersed condition of the artillery rendered the measure necessary to the improvement of its discipline. By passing the whole corps, in succession, through the school, a degree of perfection will be given to the discipline of the artillery, nearly, if not quite, equal to that which could be attained, were it practicable to collect it into one body, instead of being dispersed, as it is, in garrisons in the different fortresses along the whole line of the coast. To carry the arrangement into full effect will require the aid of Congress. An appropriation, in particular, will be necessary to furnish horses for instruction in the light artillery exercise, which may be also used in instructing the cavalry drill; a branch of service in which the army is now without skill or instruction.

A board of officers has been constituted to revise the book of field exercise and manœuvres of infantry, which was adopted at the close of the late war, in order to a new and more correct edition, and to adapt it, as far as practicable, to the service of militia. It is proposed, also, to add to it a system of light infantry and cavalry drill, and to correct and enlarge the military rules and regulations, so as to render them as perfect as is practicable with our present experience.

The organization of the Indian Department has been much improved in the course of the year; the beneficial effects of which are already apparent in its improved administration.

The hostilities of the remote tribes on the Missouri still continue, and have extended in some degree to those on the Upper Missouri and the upper lakes. The continued hostility among the various tribes themselves in that quarter, it is believed, has contributed, in no small degree, to the murder of our citizens and depredations on their property which have occurred; and measures have been taken to effect, if possible, a general pacification among them.

The season was too far advanced, when the act passed, to carry into effect the intention of Congress in authorizing treaties to be held with the remote tribes on the Missouri, by commissioners to be appointed by the President, and to be accompanied by a military escort. The commissioners have, however, been appointed, (General Atkinson and Major O'Fallon, the agent on the Missouri,) and measures adopted to carry the provisions of the act into effect as soon in the spring as the season will admit. It is believed that much good will result from the measure, by giving increased security to our citizens and trade in that remote region; but it is feared that nothing short of permanent military posts will afford complete security to either.

The appropriation of the sum of $10,000, annually, for the civilization of the Indians, is producing very beneficial effects, by improving the condition of the various tribes in our neighborhood. Already thirty-two schools are established in the Indian nations, and for the most part are well conducted, in which, during the present year, nine hundred and sixteen youths of both sexes have been instructed in reading, writing, arithmetic, and all of the ordinary occupations of life. So large a body of well instructed youths, of whom several hundred will annually return to their homes, cannot fail to effect a beneficial change in the condition of this unhappy race.

The acts making appropriation for the repairs of Plymouth beach, the improvement of the entrance into the harbor of Presque Isle, on Lake Erie, and of the navigation of the Ohio and Mississippi, claimed the early attention of the Department. The execution of the first two of these works was placed under the superintendence of officers of the corps of engineers. The first is nearly completed, and preparatory arrangements have been made for the early execution of the second. An officer, also of the corps, was assigned to the execution of the act for the improvement of the navigation of the Ohio, so far as it authorized an experiment to be made in removing the sandbars which obstructed the navigation of that river. The officer was prepared to make the experiment, but the river remained too full during the fall for a fair trial. Under the other provisions of the act, directing measures to be taken to remove the snags, sawyers, and planters which obstruct the navigation of the Ohio and Mississippi, a contract has been formed with a gentleman experienced in their navigation, to free both of those rivers from all such obstructions, in conformity with the provisions of the act, for the sum of $60,000, to be paid on the execution of the work. In the contract, it is stipulated that it shall be executed under the superintendence and inspection of an officer of the corps of engineers.

In order to carry into effect the act of Congress of the 30th April last, authorizing the President "to cause the necessary surveys, plans, and estimates to be made of the routes of such roads and canals as he may deem of national importance in a commercial or military point of view, or necessary to the transportation of the public mails," a board was constituted, consisting of General Bernard and Colonel Totten, of the engineer corps, and John L. Sullivan, an experienced civil engineer. It became necessary, in giving orders to the board, under the act, to determine what routes for roads and canals were of "national importance," in the views contemplated by the act, as such only as the President might deem to be of that description were authorized to be examined and surveyed. In deciding this point, it became necessary to advert to our political system in its distribution of powers and duties between the General and State Governments. In thus regarding our system, it was conceived that all of those routes of roads and canals which might be fairly considered as falling within the province of any particular State, however useful they might be in a commercial or political view, or to the transportation of the mail, were excluded from the provisions of the act. The States have important duties to perform, in facilitating, by means of roads and canals, commercial and political intercourse among their citizens; and within the spheres of these duties, they are more competent to act than the General Government; and there can be no rational doubt but that, as the population and capital of the several States increase, these powerful means of developing their resources will receive from their respective Legislatures due attention. But, as numerous as this class of improvement is, and important as it may be to the General Government, in the discharge of the various duties confided by the constitution to it, there are other improvements not comprehended in it, of a more general character, which are more essentially connected with the performance of its duties, while they are less intimately connected with those belonging to the State Governments, and less within their power of execution. It is believed that this class, and this only, was comprehended in the provisions of the act. In projecting the surveys in this view of the subject, the whole Union must be considered as one, and the attention directed, not to those roads and canals which may facilitate intercourse between parts of the same State, but to those which may bind all of the parts together, and the whole with the centre; thereby facilitating commerce and intercourse among the States, and enabling the Government to disseminate promptly, through the mail, information to every part, and to extend protection to the whole. By extending those principles, the line of communication by roads and canals, through the States, the General Government, instead of interfering with the State Governments within their proper spheres of action, will afford (particularly to those States situated in the interior) the only means of perfecting improvements of a similar description which properly belong to them.

These principles being fixed, it only remained to apply them to our actual geographical position, to determine what particular routes were of "national importance," and which, accordingly, the board should be directed to examine, in order to cause surveys, plans, and estimates to be prepared, as directed by the act.

The first and most important was conceived to be the route for a canal extending from the seat of Government, by the Potomac, to the Ohio river, and thence to Lake Erie; and, accordingly, as soon as the board was organized, it was ordered to examine and cause this important route to be surveyed. Doctor William Howard and Mr. James Shriver, both of whom were well acquainted with the localities of the route, were associated as assistants with the board. Two topographical brigades (all that could be spared from the survey of the coast, for the purpose of fortification,) and one brigade of surveyors, under Mr. Shriver, were placed under the orders of the board.

The examination of the route was completed in September; but the survey will not be finished till the next season. That part of it, however, which is most interesting, the section of the summit-level of the Allegany, including its eastern slope, is completed, which, it is hoped, will enable the board to determine, during the present winter, on the practicability of the project. Should it prove practicable, its execution would be of incalculable advantage to the country. It would bind together, by the strongest bond of common interest and security, a very large portion of this Union; but, in order fully to realize its "importance in a national point of view," it will be necessary to advert to some of the more striking geographical features of our country.

The United States may be considered, in a geographical point of view, as consisting of three distinct parts; of which the portion extending along the shores of the Atlantic, and back to the Allegany mountains, constitutes one; that lying on the lakes and the St. Lawrence another; and that watered by the Mississippi, including its various branches, the other. These several portions are very distinctly marked by well defined lines, and have naturally but little connexion, particularly in a commercial point of view. It is only by artificial means of communication that this natural separation can be overcome; to effect which much has already been done. The great canal of New York firmly unites the country of the lakes with the Atlantic, through the channel of the North river; and the national road from Cumberland to Wheeling, commenced under the administration of Mr. Jefferson, unites, but more imperfectly, the Western with the Atlantic States. But the complete union of these separate parts, which geographically constitute our country, can only be effected by the completion of the projected canal to the Ohio and Lake Erie, by means of which the country lying on the lakes will be firmly united to that on the Western waters, and both with the Atlantic States, and the whole intimately connected with the centre. These considerations, of themselves, without taking into view others, fairly bring this great work within the provisions of the act directing the surveys; but when we extend our views, and consider the Ohio and the Mississippi, with its great branches, but as a prolongation of the canal, it must be admitted to be not only of national importance, but of the very highest national importance, in a commercial, military, and political point of view. Thus considered, it involves the completion of the improvements of the navigation of both of these rivers, which has been commenced under the appropriation of the last session of Congress; and also canals round the falls of the Ohio at Louisville, and Muscle shoals on the Tennessee river; both of which, it is believed, can be executed at a moderate expense. With these improvements, the projected canal would not only unite the three great sections of the country together, as has been pointed out, but would also unite, in the most intimate manner, all of the States on the lakes and the Western waters among themselves, and give complete effect to whatever improvement may be made by those States individually. The advantages, in fact, from the completion of this single work, as proposed, would be so extended and ramified throughout these great divisions of our country, already containing so large a portion of our population, and destined, in a few generations, to outnumber the most populous States of Europe, as to leave in that quarter no other work for the execution of the General Government, excepting only the extension of Cumberland road from Wheeling to St. Louis, which is also conceived to be of "national importance."

The route which is deemed next in importance, in a national point of view, is the one extending through the entire tier of the Atlantic States, including those on the Gulf of Mexico. By adverting to the division of our country, through which this route must pass, it will be seen that there is a striking difference in geographical features between the portions which extend south and north of the seat of Government, including the Chesapeake bay, with its various arms, in the latter division. In the northern part of the division, all of the great rivers terminate in deep and bold navigable estuaries, while an opposite character distinguishes the mouths of the rivers in the other. This difference gives greater advantage to improvement by canal in the northern, and less in the southern division. In the former it is conceived to be of high national importance to unite its deep and capacious bays by a series of canals; and the board was accordingly instructed to examine the routes for canals between the Delaware and the Raritan, between Barnstable and Buzzard's bays, and Boston harbor and Narraganset bay. The execution of the very important link in this line of communication between the Delaware and the Chesapeake, having been already commenced, was not comprehended in the order. These orders will be executed by the board before the termination of the season. The important results which would follow from the completion of this chain, in a commercial, military, and political point of view, are so striking, that they need not be dwelt on. It would, at all times, in peace and war, afford a prompt, cheap, and safe communication between all of the States north of the seat of Government, and greatly facilitate their communication with the centre of the Union. The States of New Hampshire and Maine, though lying beyond the point where these improvements would terminate, would not, on that account, less participate in the advantages, as they are no less interested than Massachusetts herself in avoiding the long and dangerous passage round Cape Cod, which would be effected by the union of Barnstable with Buzzard's bay.

In the section lying south of this, none of these advantages for communication by canals exist. A line of inland navigation extends, it is true, along nearly the whole line of coast, which is susceptible of improvement, and may be rendered highly serviceable, particularly in war, and on that account may be fairly considered of "national importance." The Dismal Swamp canal, from the Chesapeake bay to Albemarle sound, which is nearly completed, constitutes a very important link in this navigation. But it is conceived that, for the southern division of our country, the improvement which would best effect the views of Congress would be a durable road, extending from the seat of Government to New Orleans, through the Atlantic States; and the board will accordingly receive instructions to examine the route as soon as the next season will permit.

The completion of this work, and the line of canals to the north, would unite the several Atlantic States, including those on the Gulf, in a strong bond of union, and connect the whole with the centre, which would also be united, as has been shown, with those on the lakes and Western waters, by the improvement projected in that quarter.

These three great works, then, the canal to Ohio and Lake Erie, with the improvement of the navigation of the Ohio, Mississippi, and the canal round the Muscle shoals; the series of canals connecting the bays north of the seat of Government, and a durable road extending from the seat of Government to New Orleans, uniting the whole of the Southern Atlantic States, are conceived to be the most important objects within the provisions of the act of the last session. The beneficial effects which would flow from such a system of improvement would extend directly and immediately to every State in the Union; and the expenditure that would be required for its completion would bear a fair proportion to the wealth and population of the several sections of the country—at least as they will stand a few years hence. When completed, it would greatly facilitate commerce and intercourse among the States, while it would afford

to the Government the means of transmitting information through the mail promptly to every part, and of giving effectual protection to every portion of our widely extended country.

There are several other routes which, though not essential to the system, are deemed of great importance in a commercial and military point of view, and which the board will receive instructions to examine. Among these, the most prominent is the connexion, wherever it may prove practicable, of the Eastern and Western waters, through the principal rivers discharging themselves into the Atlantic and the Gulf of Mexico; for example, the Alabama and Savannah rivers with the Tennessee, James river with the Kenhawa, and the Susquehannah with the Allegany; which last will be more particularly adverted to in a subsequent part of the report. To these we may add, the route from Lake Champlain to the St. Lawrence, and from the river St. John, across Florida Neck, to the Gulf of Mexico. They are both deemed important; but the latter particularly so. Should it prove practicable, its beneficial effects would be great, comprehensible, and durable. The whole of the Atlantic and Western States would deeply partake in its advantages. Besides the facility of intercourse which it would afford between those States, our trade with Mexico, Guatemala, and the central parts of the continent, would not only be greatly facilitated, but rendered much more secure.

The board have, besides those already mentioned, examined, in conjunction with Pennsylvania commissioners, a route for a canal from the Allegany to the Susquehannah. In addition to the importance of this route to a large portion of the West and the State of Pennsylvania, it was thought to possess other and strong claims on the attention of the Government. It is believed to be one of the most promising routes to cross the Allegany by a canal communication; and should that by the Potomac prove impracticable, it might afford the means of effecting the great objects intended by the canal projected by that route.

When the various routes to which I have referred are examined and surveyed, and plans and estimates formed, in conformity with the directions of the act, it will present so full a view of the whole subject, as will enable Congress to commence and complete such a system of internal improvement as it may deem proper, with the greatest possible advantage.

In conclusion, I have to remark, that experience has shown that the corps of engineers is too small to perform the various duties which are assigned to it. Its duties have been more than trebled since its establishment, and are increasing every year. During the present year much inconvenience has been experienced for the want of a sufficient number of officers, notwithstanding every officer of the corps has been on active duty during the season.

I have the honor to remain, your obedient servant,

J. C. CALHOUN.

To the PRESIDENT OF THE UNITED STATES.

A.

SIR: HEAD-QUARTERS OF THE ARMY, WASHINGTON, *November* 20, 1824.

Agreeably to your instructions of the 1st instant, I have the honor to lay before you the returns and statements following, viz:

No. 1. A statement of the organization of the army, agreeably to the act of Congress of 2d March, 1821.

No. 2. A return of the strength of the army, from the last regimental and other returns received at head-quarters.

No. 3. A return showing the distribution of the troops in the Eastern Department.

No. 4. A return showing the distribution of the troops in the Western Department.

No. 5. A statement showing the number of men enlisted, the amount of money advanced for the purposes of recruiting, and the amount for which recruiting accounts have been rendered for settlement from 1st October, 1823, to 30th September, 1824.

By statement No. 5 it will be seen that $5,224 87 remains unexpended in the hands of recruiting officers. This sum is now in a course of application to the recruiting service; and there is no doubt, from the promptitude and correctness of the recruiting officers, that it will, when the proper time arrives, be regularly accounted for.

Brevet Major General Gaines is just completing a tour of inspection, embracing the posts on the upper and lower lakes; but his report has not been received.

During the early part of the year a tour of inspection was performed by Brevet Major General Scott, embracing the posts on the Florida gulf and the Mississippi river, commencing at Fort St. Philip, below New Orleans, and terminating at Fort St. Anthony.

During the months of March, April, and May, Colonel Wool inspected all the posts on the Atlantic coast between Savannah, Georgia, and Portsmouth, New Hampshire. During the months of June, July, and August, he inspected the posts of Sackett's Harbor, Niagara, Detroit, Sault de St. Marie, and Green bay.

Colonel Archer has inspected the posts of Baton Rouge, New Orleans, Fort St. Philip, Petite Coquille, Pensacola, and all the posts on the Atlantic frontier between Washington city and Fort Sullivan, Maine, including the national armory at Springfield, Massachusetts.

The reports of inspections, performed by the commanding officers of the artillery regiments, are not yet received.

The general condition of the army, the state of its discipline, administration, &c., are as favorable as could be expected. The infantry regiments have perhaps attained as much excellence as is compatible with the state of dispersion which naturally grows out of the physical relations of the country, and the exigencies of the public service. In the artillery regiments an important accession of scientific and experimental knowledge is to be expected from the school of practice which has gone into operation at Fortress Monroe.

In addition to the intelligence which I have above presented, in obedience to your instructions, I have thought proper to submit, for your consideration, some reflections upon a subject connected, in the most intimate manner, with the welfare of the army—I mean the evil of desertion; an evil which has grown to a serious magnitude, and exerts an unhappy influence upon the numerical force and efficiency of the army, upon its moral character, and upon the fund appropriated by the Government for its support. Its effect upon the numerical force and efficiency of the army is, by withdrawing from the ranks a large number of men, of whom the greater part succeed in eluding the vigilance of pursuit, and the residue are devoted to hard labor and imprisonment in garrison, which are the highest penalties awarded to the crime; in either case, their services as soldiers are lost to the army. Its effect upon the moral character of the army is, to degrade the spirit of the profession by relaxing its moral ties, and by merging the infamy of the crime in the multiplication of example. Its effect upon the fund appropriated to the support of the army is, by increasing the expenditures of the recruiting service, from the necessity of keeping the ranks of the army full, by providing a recruit, at a considerable expense, to supply the place of every deserter who eludes apprehension.

The comforts which the soldier enjoys from the liberal provision of the Government, his exemption from all arbitrary restraint, and the mildness and regularity which distinguish the administration of the army, leave no

imaginable cause for the prevalence of desertion but the inadequacy of the punishment annexed to it by law. In time of war, it is suppressed by the infliction of capital punishment; but it has not been customary to inflict the sentence of death upon deserters in time of peace. Before the late war, punishment by stripes operated as a partial, if not an efficient restraint; but this mode of punishment was abolished by law, at a time when it was deemed necessary, in order to engage individuals of respectable connexions and elevated spirit to enter the ranks, to expunge from the government of the army every feature which was repugnant to the moral elevation of man. It has been my opinion that it would become necessary, if the Government should continue to enlist into the army foreigners, who have generally been accustomed to the lash, and cannot easily be governed without it, to revive, by law, the punishment by stripes, under the discretion of courts-martial; but, as you have consented to the prohibition of their enlistment, it is at least due to the character of our native soldiery to make a further experiment to govern them without resorting to expedients which are not altogether in harmony with the genius of our institutions or the spirit of the age.

Experience having proved that the established system of punishment is inadequate to the suppression of the crime, and that it is vain to rely altogether upon the influence of moral obligation, I can conceive no other mode of securing the fidelity of the soldier than by creating an artificial interest which will bind him to the service. With a view to this object, I would recommend that provision be made, by law, to retain a portion of his monthly pay in the hands of the Government until the expiration of his term of enlistment, and to make an honorable discharge the condition of its payment. The smallest portion which I would advise to be retained is one dollar per month, and the largest portion two dollars. A sum smaller than the former would be inadequate to produce in the soldier the necessary interest, and a sum larger than the latter would make too serious an inroad upon his comforts. Assuming the medium (one dollar and fifty cents) as the proper standard, let us examine its influence upon the army and the public treasures. At the expiration of his first year's service, every soldier would have in the possession of the Government eighteen dollars; at the end of the second year, thirty-six dollars; and at the expiration of his term of enlistment, ninety dollars. The regular monthly increase of the sum in expectancy would be a constantly increasing motive to a faithful performance of his duties; and he would be confirmed in his course of fidelity and obedience to the laws by the consideration that an honorable discharge would put him in possession of a sum sufficient to sustain him in transferring his industry, if he should think proper, to a new pursuit. In the mean time, if he should desert, the sum retained from his pay would, in some cases, be sufficient, and in all cases go far towards enabling the Government to provide a recruit to supply his place. Thus, the expense of filling vacancies occasioned by a violation of the laws would principally fall, as in justice it ought, upon the offenders themselves, and not upon the public, against whom the offence is committed.

The more I reflect upon this subject, the more firmly I am strengthened in the conviction that the frequency of desertion will be materially abridged by the measure which I have the honor to suggest. If my position is correct, it will be apparent that the efficiency of the army will be augmented, that its moral character will be elevated, and that the branch of public expenditure heretofore referred to will be brought within the smallest limits to which, under the most favorable circumstances, it is susceptible of being reduced. If it should be found by experience that this measure is ineffectual, and that it is necessary, by severe and humiliating penalties, to punish, where interest and the sense of moral obligation are inadequate to restrain, it will be a consolation to reflect, when we are compelled to have recourse to expedients like these, that those of a milder character have been exhausted.

I have the honor to be, most respectfully, sir, your obedient servant,

JAC. BROWN.

Hon. J. C. CALHOUN, *Secretary of War.*

Amount of the above accounted for, or for which accounts have been furnished for the same period,	37,529 21
Balance in the hands of recruiting officers,	$5,224 87

ADJUTANT GENERAL'S OFFICE, *November* 10, 1824.

CHAS. J. NOURSE, *Acting Adjutant General.*

B.

QUARTERMASTER GENERAL'S OFFICE,

SIR: WASHINGTON CITY, *November* 27, 1824.

In compliance with your order, I have the honor to submit a statement of the funds drawn from the Treasury, and distributed to the officers of the Quartermaster's Department during the first, second, and third quarters of the present year; and, also, of the disbursements made by them during the same period. From reports received at this office for the month of October, it appears that the greater part of the balance reported on hand on the 30th of September had, during that month, been applied to the public service; and I confidently believe that not a cent of it will remain unaccounted for at the end of the year.

The accountability for property has been improved, but it cannot be perfected without legislative aid.

In my last annual report, I adverted to the necessity of increasing the number of officers of the department. I find no reason to change the opinion then expressed; on the contrary, the experience of the last year has demonstrated its correctness. If the department be worth retaining at all, it is certainly worth an efficient organization. As at present organized, the officers are so limited in number as to be entirely inadequate to the prompt discharge of the various duties required of them. I have the honor to be, &c.

THOS. S. JESUP,
Brigadier General, and Quartermaster General of the Army.

Hon. J. C. CALHOUN, *Secretary of War, Washington.*

Statement showing the amount of funds remitted to officers of the Quartermaster's Department, in the first three quarters of the year 1824, *and the amount for which accounts have been rendered for the same period.*

Amount in the hands of the officers of the department, at the close of the year 1823,	$24,750 05	
Amount of remittances towards the close of the fourth quarter of that year, which did not reach their destinations in time to be embraced in the statements from which the balances constituting the above amount are taken,	21,360 00	
Amount of remittances in the first quarter of 1824,	48,194 77	
		$94,304 82
Amount of remittances in the second quarter,	-	100,474 31
Amount of remittances in the third quarter,	-	100,824 00
Proceeds of the sales of public property authorized,	-	3,741 60
		299,344 73
Amount disbursed, per accounts rendered for the first quarter,	80,466 23	
Amount disbursed, per accounts rendered for the second quarter,	92,240 13	
Amount disbursed, per accounts rendered for the third quarter,	85,418 45	
		258,124 81
Remaining to be accounted for,	-	$41,219 92

NOTE.—Of the amount remaining to be accounted for above, $24,352 was remitted near the close of the third quarter, which, though included in the amount of remittances stated, did not reach its destination till some time in the succeeding quarter. The residue was, on the 30th September, deposited in the several banks designated for the reception of public funds. The property noticed as sold consisted of various small articles of public supplies, which had sustained damage by the casualties of service, or become useless.

QUARTERMASTER GENERAL'S OFFICE, *November* 27, 1824.

T. S. JESUP, *Quartermaster General.*

C.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE,

SIR: WASHINGTON, *November* 23, 1824.

In compliance with your orders of 1st inst. I have the honor to present to your view a statement exhibiting the moneys remitted and charged to contractors, and the assistant and acting assistant commissaries of subsistence, for the first, second, and third quarters of the year, amounting to - - - $298,660 27
And the disbursements made by them, amounting to - - - - 271,668 20

Leaving a balance to be accounted for in the fourth quarter of - - - $26,992 07

Of this sum ($26,992 07 remaining to be accounted for) $4,520 was remitted, in the last month of the third quarter, to the assistant commissaries at Fort St. Philip, St. Mark's, Tampa bay, Petite Coquille, Mackinac, the Sault de St. Marie, Cantonment Towson, Cantonment Gibson, and St. Peter's; which posts are so remote that there has not been sufficient time for the transmission and receipt of their accounts; there is no doubt, however, but they will be received in due course.

There will then remain in the hands of the assistant commissaries at the more numerous and adjacent posts the sum of $22,472 07 entirely applicable to the expenditures of the fourth quarter; and there is every reason to believe that the disbursements will be made for the whole amount within the year, so that no loss whatever will accrue to the Government.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Com. Gen. of Subsistence.*

The Hon. J. C. CALHOUN, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from the 1st of January, to the 30th of September, 1824, and the amounts accounted for by them; the moneys remitted to the assistant and acting assistant commissaries of subsistence, for the same period; the amounts charged to them, including the balances in their possession on the 31st December, 1823; sales at auction; sales to officers on the frontier posts; and the moneys accounted for by them in the first, second, and third quarters of the year.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington*, *November* 20, 1824.

GEORGE GIBSON, *C. G. S.*

* No accounts have been received, but there is no doubt that the amount has been expended, as the fresh beef for which the remittance was made has been issued.

D.

SIR: PAYMASTER GENERAL'S OFFICE, CITY OF WASHINGTON, *November* 27, 1824.

Agreeably to your instructions of yesterday, I have the honor to submit a statement of the receipts and disbursements of the Pay Department for the first three quarters of the present year; from which it appears the sum of eight hundred and thirty-nine thousand three hundred and eighty-seven dollars and forty-two cents has been drawn from the Treasury: of this sum seven hundred and eighty-two thousand one hundred and seventy-seven dollars and seventy-three cents has been disbursed in payment of the troops, and the accounts rendered; forty-three thousand eight hundred and seven dollars and sixteen cents has been deducted from the estimates furnished for the fourth quarter, leaving the balance of thirteen thousand four hundred and two dollars and fifty-three cents to be accounted for.

In consequence of the month of September being included in the muster, which takes place on the last day of October, the payments to enlisted men for that month cannot be made before the 1st of November; and, although advances are made within the first three quarters on account of the pay of officers for September, the accounts for that month are not due before the last of the fourth quarter. This will account for the amount stated to have been deducted from the estimates for the fourth quarter.

From the reports of paymasters I am confident that the whole of the troops are now paid to the 1st of September, and a considerable portion to the 1st of November; and that the paymasters will render vouchers before the close of the year, which will fully account for all sums advanced to them within the first three quarters.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

To the Hon. J. C. CALHOUN, *Secretary of War.*

Statement of the amount of money drawn from the appropriations for the Pay Department, and remitted to the disbursing officers, on account of payments for the first three quarters of the year 1824; *the amount unexpended and deducted from the estimates for the fourth quarter; the balance to be accounted for; and the periods to which the troops have been paid, and accounts rendered.*

Names of paymasters.	Am't of funds remitted in the first three quarters of the year	Amount unexpended and deducted from the estimates for the fourth quarter.	Balance remaining to be accounted for.	Periods to which the troops have been paid, and accounts rendered.	Remarks.
David S. Townsend,	$34,600 00	None,	None,	1st Sept. 1824, and partially to 1st Oct. 1824,	Balance due Paymaster Townsend, $11 63.
Edmund Kirby,	6,000 00	$2,190 94	None,	1st Sept. 1824, and partially to 1st Oct. 1824.	
Thomas J. Leslie,	88,000 00	2,204 12	None,	1st September, 1824.	
Charles B. Tallmadge,	125,700 00	12,044 09	None,	1st September, 1824.	
Timothy P. Andrews,	173,000 00	8,326 69	None,	1st Sept. 1824; officers to 1st October, 1824.	
Charles H. Smith,	55,700 00	2,826 25	None,	1st Sept. 1824, and partially to 1st Nov. 1824.	
Abraham A. Massias,	26,700 00	1,708 61	None,	1st Sept. 1824, and some officers to 1st Oct. 1824.	
Thomas Wright,	46,000 00	None,	None,	1st Sept. 1824, and some officers to 1st Oct. 1824,	Balance due Paymaster Wright, $96 55.
Daniel Randall,	16,000 00	None,	None,	1st September, 1824,	Balance due Paymaster Randall, $31 55.
Benjamin F. Larned,	50,500 00	12,336 71	-	1st September, 1824,	The unexpended balance has been turned over to Paymaster Hayden, on account of the payments for the fourth quarter.
Asher Phillips,	21,700 00	1,085 31	None,	1st March, 1824, and a few officers to 1st Nov.,	Five companies stationed at Fort Smith, &c. Arkansas, receive two payments in the year. Funds for the last payment are not furnished until after the expiration of the third quarter, and the accounts are not expected before December.
Thomas Biddle,	82,687 42	-	-	1st Sept. 1824, and some officers to 1st Oct. 1824,	Balance due Paymaster Biddle, $10,283 54.

PAYMASTER GENERAL'S OFFICE, *November* 27, 1824.

E.

SIR: SURGEON GENERAL'S OFFICE, *November* 3, 1824.

In compliance with your order of the 1st instant, I have the honor to report, that the amount disbursed in the Medical Department, during the first three quarters of the year, is as follows:

For medicines, stores, and other supplies, - - - - -	$13,713 07
To private physicians, - - - - - -	5,152 30
For postage and other contingencies, - - - - -	596 00
	$19,461 37

The whole has been settled and accounted for, except $72 09, which was the unexpended balance in the hands of the acting apothecary at New York, on the quarterly settlement of his accounts in September last.

With the exception of the amount paid to private physicians, (an expense that has greatly increased, and which is altogether unavoidable with the present number of the medical staff, and the present distribution of the army,) the average expense of the department, for the last three years, has been $2 50 per man, being less than at any former period; and no loss whatever has occurred during that time.

The supplies required for the year were promptly furnished, agreeably to the requisitions of the surgeons. They were of the best quality, and reached their several places of destination without loss or injury; and, from the returns, it appears that the quantity was abundantly sufficient to meet all probable demands.

Regular returns of public property have been received from all the posts. The whole has been satisfactorily accounted for; and the expenditures have been made with a due regard to economy, and to the comfort and recovery of the sick.

By the last returns, all the surgeons and assistant surgeons were on duty, or under orders for their respective posts, except four, two of whom are sick, one on furlough, and one under arrest; and the reports from various quarters are highly creditable both to the medical staff as a body, and to the individuals of which it is composed.

From the sick reports of the first two quarters of the year, no disease of importance appears to have prevailed at any of the posts. The number of deaths was fifty-three; of which thirteen were from consumption, and nine from intemperance; the remainder were single cases of various accidents and complaints, incident to the life and employments of a soldier.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. JOHN C. CALHOUN, *Secretary of War.*

F.

SIR: COMMISSARY GENERAL'S OFFICE, PHILADELPHIA, *November* 6, 1824.

In obedience to your instructions, dated on the 1st instant, I have the honor to enclose five statements, as follows, viz:

No. 1. Of moneys drawn from the appropriation for the Purchasing Department, during the first three quarters of the year 1824.

No. 2. Of moneys drawn from the appropriation for the purchase of woollens for 1825, during the same period.

No. 3. Of moneys received and disbursed, on account of the Purchasing Department, during the same period.

No. 4. Of moneys received and disbursed, on account of the appropriation for the purchase of woollens for 1825, during the same period; and,

No. 5. Comparative statement, showing the cost of clothing for the United States army, in the years 1823, 1824, and 1825.

I have the honor to be, sir, with great respect, your most obedient servant,

C. IRVINE, *Commissary General of Purchases.*

J. C. CALHOUN, Esq., *Secretary of War.*

COMMISSARY GENERAL'S OFFICE, PHILADELPHIA, *November* 6, 1824.

C. IRVINE, *Commissary General of Purchases.*

J. C. CALHOUN, Esq., *Secretary of War.*

G.

SIR: ENGINEER DEPARTMENT, *November* 20, 1824.

In pursuance of your instructions, dated the 1st inst., to report "the application of the appropriation of the last session, for fortifications, to the several works, and the expenditures necessary for their completion; and, also, a statement of the work performed on fortifications within this year, ending the 30th September last; the works remaining to be commenced, according to the plans of the board of engineers; the estimates of the board of engineers for those works; the progress of the board of engineers in its labors, comprehending the operations of the topographical engineers, from the commencement of the year; the progress of the board of internal improvements, comprehending the operations of the topographical engineers, under the act of the 30th of April last, to procure the necessary surveys, plans, and estimates, upon the subject of roads and canals; the act of the 24th of May last, to improve the navigation of the Ohio and Mississippi rivers; the act of the 26th of May last, for deepening the channel leading into the harbor of Presque Isle, and for repairing Plymouth beach; the condition of the Military Academy, including its present number, and the number which graduated last year; the amount drawn for the first three quarters of this year, under the several heads of appropriation, and the amount of accounts rendered and passed to the Auditor for settlement in the same period," I have the honor to make the following report, viz:

I beg leave to refer to the accompanying tables, numbered 1, 2, and 3, for part of the information above required.

No 1 exhibits "the application of the appropriation of the last session, for fortifications, to the several works, and the expenditures necessary for their completion." It shows that, of the amount appropriated, ($620,000,) the sum of $312,477 86 was expended in the first three quarters of the year, leaving the sum of $307,522 14 to be expended.

No 2 exhibits the amounts drawn for the first three quarters of this year, added to the amounts in the hands of agents on the 1st of January last, applicable to the several objects designated; and the amount of accounts relating to those objects, rendered and passed to the Auditor for settlement in the same period.

No 3 exhibits "the works remaining to be commenced, according to the plans of the board of engineers, and the estimates of the board of engineers for those works."

The work performed on fortifications within this year, ending on the 30th of September, will be found in the following summary statements, in relation to each fortification. Two of those fortifications (that at Brenton's Point, in the harbor of Newport, Rhode Island, and that at New Utrecht Point, in the harbor of New York,) were commenced this year.

The work at Brenton's Point was commenced under the authority of an appropriation of fifty thousand dollars, for purchasing the site and collecting materials. The site has been purchased and enclosed; the construction of a wharf, and other arrangements for collecting materials, have been commenced, and some materials have been collected.

The work at New Utrecht Point was also commenced, under the authority of an appropriation of fifty thousand dollars, for purchasing the site and collecting materials. The greater part of the land required for a site for this work is already owned by the United States. The small addition to be procured has not yet been obtained. The proprietor holds it at a price much above what is conceived to be its value; and several attempts to negotiate with him having failed, an appeal has been made, through the Governor, to the Legislature of New York, to appoint assessors to determine the value. Extensive arrangements for the collection of materials are in progress. The wharf has been repaired, and a railway, to extend from it to the top of the bank, a height of forty-five feet, has been commenced, together with trucks to be used upon it. Other arrangements have been made, and a few materials have been collected.

At Fort Monroe, the progress of the operations during the year has been steady and satisfactory. The work is of great extent, and yet all parts of it have been, in a more or less degree, advanced; and in some parts the main walls have been completed. Additional permanent quarters have been built, and the construction of a permanent hospital has been commenced.

It had been contemplated to lay the foundation of the walls of Fort Calhoun during this season, and arrangements were made accordingly, but they could not be carried into effect for the want of an officer to superintend them. No disadvantage, however, is likely to arise from the delay; on the contrary, if the mole (which is the pile of stones upon which the structure is to be built) has not thoroughly settled, which is possible, although not probable, there will be afforded additional time for it to acquire the requisite solidity.

The work at Mobile Point was conducted this year under favorable circumstances, and the results reported are very satisfactory, notwithstanding that some interruption was occasioned by the suspension of the operations at one of the brick-yards, which had been relied on for the supply of bricks. The difficulty of procuring bricks in sufficient quantities, and of proper quality, has heretofore constituted the chief obstacle to the prosecution of the work at Mobile Point. During the last year, the old brick-yards in the vicinity of Mobile Point have been enlarged and improved, and several new ones have been established. The effect of these changes is already manifest in the improvement of the quality, and the reduction of the price, of that material. The supply of materials on hand, with such additions as the existing sources of supply may be relied on to furnish, affords the fullest assurance that the difficulties heretofore experienced for the want of them are not likely to recur.

The operations at Chef Menteur have been very well advanced this year, although they have been retarded by the sickness which prevailed there during the summer and fall, which was so general that only one individual at the work escaped.

The sickness was still greater at Fort Jackson, on the Mississippi, and proved fatal to a number of workmen and military convicts employed at hard labor. In consequence of this circumstance, less work has been done than was expected; but arrangements have been made, calculated to impart additional vigor to the operations during the season favorable to their prosecution, and by that means to complete, before the ensuing spring, the expenditure of the residue of the appropriation.

I regret to state that the anticipation that Fort Delaware would be completed out of the appropriation of 1823 has not been realized. In making that representation in the report of last year, this department was governed by the report of Major Babcock, the superintending engineer; but experience has proved that his estimates were erroneous. It is also with regret that I state that the final inspection of the board of engineers upon the execution of the work has not been creditable to the officer. Besides the erroneous estimates, he had deviated from the plan in several particulars, to the injury of the work. His conduct was considered so reprehensible, that a court of inquiry, to investigate it, was ordered; and it being conceived that the opinion of the court laid the just foundation for further measures, a court-martial was ordered to try Major Babcock, on charges growing out of his conduct as superintendent; of which, however, he was acquitted, on the belief of the court that the errors were errors of judgment, and not intentional.

The occurrence has been one of mortification to the department, but it feels a thorough conviction that Fort Delaware is the only one of the fortifications which, on final inspection, will be found to be defective either in workmanship, or in the want of conformity to the plans. This particular work was commenced at an early period, before the commencement of the present system; and the errors that have been committed may, at least in some degree, be attributed to the incomplete state of the system under which it was commenced.

The foregoing exhibits the progress of the fortifications during the year, with the exception of some repairs that were made to Castle William, in New York harbor.

The officers composing the board of engineers for fortifications have been engaged, during this year, chiefly in the duties of the board for internal improvements, of which also they are members. During the early part of the year, they were employed in the consideration of a project for the defence of the eastern section of the coast of Maine; in preparing plans and estimates for fortifications for Portland, in Maine; Portsmouth, in New Hampshire; Beaufort and Cape Fear river, in North Carolina; and Charleston, in South Carolina. They also inspected Fort Delaware and Fort Washington. A portion of the topographical engineers, under their instructions, have been employed in the prosecution of surveys at St. Mary's, on the Potomac; on the Patapsco; and in the harbor of Charleston, in South Carolina, and its vicinity; and, also in the preparation of drawings relating to those surveys, and to others previously made.

Under the act of Congress of the 30th of April last, "to procure the necessary surveys, plans, and estimates upon the subject of roads and canals," the board of engineers for internal improvements have made the requisite examinations in relation to routes for canals contemplated to be established between the Chesapeake and Ohio, the Ohio and Lake Erie, (east of Cuyahoga and Great Beaver,) the Allegany and Susquehannah, the Susquehannah and Schuylkill, the Delaware and Raritan; and are now engaged in examining the routes between Buzzard's and Barnstable bays, and Narraganset bay and Boston harbor. The requisite surveys in relation to the above have been commenced by a portion of the topographical engineers, and by civil engineers, on the route between the Chesapeake and Ohio; and the greater part of those on the eastern slope have been completed.

Under the act of the 24th May last, to improve the navigation of the Ohio and Mississippi rivers, arrangements were prepared, under the superintendence of an officer of the topographical engineers, to carry into effect the first section, by making one of the required experiments over the sand-bar below Henderson, being one of those designated; but the river, when at its lowest stage last summer, being much higher than the ordinary level at the lowest stage, it was conceived that a fair experiment could not be made, and it was accordingly postponed until the state of the river should be more favorable. To carry into effect the second section, a contract has been made with Mr. John Bruce, of Kentucky, to remove all snags, sawyers, and planters in the Ohio, between Pittsburg and its junction with the Mississippi; and in the Mississippi, between the mouth of Missouri and New Orleans; the execution of which, during its progress, will be superintended by an officer of the corps of engineers, who has been ordered to Pittsburg to be in readiness for that service.

Under the act of the 26th of May last, making appropriations for deepening the channel leading into the harbor of Presque Isle in Pennsylvania, and for repairing Plymouth beach in Massachusetts, officers of the corps of engineers were assigned to superintend the fulfilment of those objects, but were prevented by unavoidable circumstances from entering upon their respective duties before the month of August. It was found, after collecting materials, and making other preliminary arrangements at Presque Isle, that the season had advanced too far, and the weather had become too cold, to authorize the commencement of the construction, the first stage of which would be driving piles, an operation that would require exposure in the water. The construction at Presque Isle, therefore, will not be commenced until the next spring, unless it should be found to be practicable to drive the piles through the ice in the ensuing winter. The success of a partial experiment, lately made, has thoroughly satisfied the engineer having the superintendence of the work of the feasibility and efficiency of the plan to fulfil the purposes for which it is intended.

The repair of Plymouth beach, although commenced too late to admit of its being completed this season, has been three-fourths finished, and has put the beach in a condition to afford very important, if not adequate, protection to the harbor, for the present.

The Military Academy not only continues to sustain the high character for discipline and scientific attainment which was exhibited in the last annual report, but has evidently improved in its general condition. At the last June examination, before a numerous and scientific board of visiters, a very favorable exhibition of the attainments of the cadets confirms this opinion. The number of cadets now at the academy is two hundred and fifty-four, and the number of those which were graduated and promoted into the army last year is thirty-one.

Notwithstanding the Military Academy progresses with remarkable success under the present system established for its government by the War Department, it is evident that the institution is susceptible of further improvements in its organization. These improvements have suggested themselves in the course of experience, and can be effected by legislative provision only.

This subject has been particularly noticed by the board of visiters who examined the Military Academy in June last. I take the liberty of presenting, herewith, a copy of their report, marked No. 4, with extracts from their journal of proceedings, numbered 5, 6, and 7; and beg leave to refer you to them, and also to my report and the accompanying documents on the same subject, dated the 21st of February last, which have been published among the State Papers of the 1st session of the 18th Congress, in the 6th volume, article No. 111.

From the growing importance, as well as from the extension of the duties assigned to the Engineer Department, it is evident that the number of officers attached to it is inadequate to the fulfilment of all that is required of it; and, in consequence, the department is under the necessity of employing individuals in civil life, at a rate of compensation far above that paid to the regular officers of the department. I therefore respectfully submit to your consideration whether, under the increasing demands for the services of the engineers, an augmentation of their numbers would not at this time be expedient, both on the score of economy and the faithful execution of the enlarged duties required of the department. The whole number of the officers of the corps of engineers is twenty-two, and of the topographical engineers, ten; a small number, when compared with the importance, extent, and variety of objects committed to the direction of the Engineer Department.

Respectfully submitted.

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

The Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

Exhibiting the application of the appropriation of the last session, for fortifications, to the several works, and the expenditures necessary for their completion.

Designation of the several fortifications.	Application of the sums appropriated in 1824.				Expenditures necessary for their completion.
	Amount appropriated.	Amount issued from the Treasury in the first three quarters.	Amount expended in the first three quarters.	Amount applicable to the fourth quarter.	
Fort at Brenton's Point, harbor of Newport,	$50,000	$28,500 00	$24,811 11	$25,188 89	$680,166 52
Fort at New Utrecht Point, harbor of New York,	50,000	5,000 00	2,077 63	47,922 37	374,995 32
Fort Monroe,	95,000	74,296 85	71,447 49	23,552 51	426,459 02
Fort Calhoun,	90,000	55,445 68	39,058 73	50,941 27	348,638 87
Fort at Mobile Point,	125,000	76,071 33	66,731 36	58,268 64	380,387 28
Fort at Chef Menteur,	100,000	78,527 82	66,899 04	33,100 96	158,124 43
Fort Jackson, at Plaquemine Turn,	110,000	54,029 16	41,452 50	68,547 50	244,497 23
	$620,000	$371,870 84	$312,477 86	$307,522 14	$2,613,268 67

Remark.—The expenditures under the appropriation of this year, although stated for the first three quarters, were necessarily made, principally, in the third quarter; because the appropriations, from the lateness of the period they were made, were not available until late in the second quarter. This will explain why the amount expended has not been greater.

No. 2.

Exhibiting the amounts drawn in the first three quarters of this year, added to the amounts in the hands of agents on the 1st of January last, applicable to the several objects designated; and the amounts of accounts relating to those objects, rendered in the same period, and passed to the Auditor for settlement.

Designation of the objects.	Aggregate of the amount in the hands of the agents on the 1st of Jan. last, and the am'ts drawn in the first three quarters of 1824.	Amounts of accounts rendered for the first three quarters of 1824, and passed to the Auditor for settlement.
Fort at Brenton's Point, harbor of Newport,	$28,500 00	$24,811 11
Fort at New Utrecht Point, harbor of New York,	5,000 00	2,077 62½
Fort Delaware,	17,412 84	17,437 05
Fort Washington,	10,958 46	10,222 82½
Fort Monroe,	101,076 83	101,583 48
Fort Calhoun,	57,102 09	39,058 73
Collecting materials for a fort at Mobile Point,	5,000 00	5,000 00
Fort at Mobile Point,	105,644 49	87,373 68½
Fort at Chef Menteur,	93,909 04	66,899 04
Fort Jackson, at Plaquemine Turn,	60,533 70	41,452 50
	485,137 45	395,916 04½
Topographical reconnoissances, repairs, and contingencies,	12,172 49	7,406 12
Military Academy,	10,080 00	8,964 12
Purchase of Gridley's farm,	10,000 00	10,000 00
To procure the necessary surveys, plans, &c. upon the subject of roads and canals,	16,379 00	1,994 12½
To improve the navigation of the Ohio and Mississippi rivers,	2,575 00	
For deepening the channel leading into the harbor of Presque Isle,	1,000 00	1,104 56½
For repairing Plymouth beach,	10,000 00	
	$547,343 94	$425,384 97½

Remarks.—The difference between the amount drawn and the amount expended at Fort Calhoun was occasioned by the suspension (in consequence of there being no officer to superintend their execution) of operations contemplated to be carried on in the third quarter. The operations at Mobile Point, and at Fort Jackson, being retarded during the summer was the cause of the differences between the amounts drawn and the amounts expended at those places. The difference at Chef Menteur arises from the accounts of the third quarter not having been rendered, in consequence of the sickness of the officer.

The surveys for roads and canals are still going on, and the accounts relating to them will not be rendered before they are stopped for the season.

The rendition of the accounts for Plymouth beach has been delayed until the operations should be closed for the season.

No. 3.

Exhibiting the works projected by the Board of Engineers which have not been commenced, and the estimates of their cost.

First class.—To be commenced as soon as possible.		Second class.—To be commenced at a later period.		Third class.—To be commenced at a remote period.

	3,126,972 46	Fort Trumbull, ditto, -	77,445 21	2d class, 12 works, -	4,727,177 63
		Fort Griswold, ditto, -	132,230 41	3d class, 4 works, -	1,416,575 58
			4,727,177 63		$9,270,725 67

Remark.—The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

No. 4.

Sir: United States Military Academy, West Point, *June* 19, 1824.

In compliance with your invitation, the undersigned, acting as a board of visiters, have attended the examination of this institution, and have now the honor to report their proceedings, which will be found in the annexed journal, to which they add the following remarks:

1st. The position of the United States Military Academy combines advantages possessed by few, if any, other places, for the preservation of health, the enforcement of subordination, and the attainment and diffusion of knowledge in the elementary and higher branches of fixed and moral science, all important to our civil institutions, military defence, and national character. The cadets, coming from every section of the country, contribute much, in their mutual and united efforts in the pursuit of this knowledge, to the extirpation of local prejudices and sectional antipathies; and they carry with them, in return, feelings and principles of enlarged patriotism, with habits of temperance and industry, added to an education the most useful to themselves and to the republic, for whose service they are destined.

2d. The examination, generally, has been conducted with a patient minuteness, that has given to each cadet ample means to develop the character and extent of his acquirements in the various branches of study. Every individual of the first and second, and most of the third class, afforded undoubted evidence of previous application, and approved progress in their studies and other duties assigned to them, respectively. The cadets not only afforded satisfactory evidence of their accurate knowledge of the most important branches of the fixed sciences, upon which they were extensively examined, but many of them exhibited, moreover, a facility and perspicuity of expression and illustration, manifesting the most promising traits of a rich elocution. Among the cadets belonging to the upper classes, the shades of difference in their attainments, and by which their relative rank is fixed, appear, in many cases, to be so slight as to render it difficult for the board of visiters to settle the question of rank; they, however, concur in the opinion, that the arrangement of each class, in the accompanying catalogue, is substantially correct.

3d. The course of instruction in the French language appears to have resulted in giving the several classes a good knowledge of its grammar, and a facility in rendering the sentences into English, sufficient to enable them to pursue their military studies, without inconvenience, in that language.

4th. In the drawing school, the board has examined numerous and very satisfactory examples of proficiency in topography, landscape, and plan drawing.

5th. The important advantages arising from the connexion of mathematical science with military education being universally acknowledged, it is a cause of peculiar satisfaction to the board of visiters to be enabled to state, that in every branch of mathematical knowledge which has occupied the attention of the cadets, the most satisfactory proofs have been afforded that their attainments reflect honor upon themselves and the institution in which their education is received. An accurate and familiar acquaintance with this essential part of the course of education is not merely derived from the immediate examination of the abstract mathematics, but the inference is also forcibly and conclusively deduced from the readiness and facility with which they have been applied to the various branches of natural philosophy. In the pure mathematics, the evidences of their advances are derivable from the accuracy and rapidity of their operation upon the black board; the ease with which the various substitutions arising out of the different values in the calculations have been effected; the variety of expression necessary to be employed; the methodical arrangement in the demonstrations of the propositions, the correctness of the results, and the intelligence evinced in assigning the rationale for every step of the operation. A close attention to the examinations has convinced the board that the cadets are familiarly acquainted with a considerable portion of differential and integral calculus, the application of algebra to geometry, the two trigonometries, descriptive geometry, and the other parts of elementary mathematics. If it were necessary to refer to any particular portion of the mathematical course, we would, with satisfaction, allude to the discussion of curved lines and transformation of rectilinear co-ordinates; the general discussion of the equations to the three distinct classes of curves of the second order; to the fine theory

of perspective; the application of the differential calculus to the theory of curved surfaces and to transcendental curves; and that of the integral calculus to the quadrature of curves, and their rectification to curved surfaces, and the measurement of their volumes.

The ready application of mathematical knowledge to every section of natural philosophy, to military and civil engineering, has afforded the most ample proofs that the means of deriving practical utilities from physical science are possessed by the cadets of the institution. The variety, range, difficulty, of the questions proposed by the examiners, the general correctness and judgment in the answers, the evident ease and facility of reply, connected with a logical precision, which could only be obtained by patient and intense application of the mental powers, are accurate tests that the different sections of this important branch of the course have been conducted with skill and perseverance. Where so much excellence has been apparent, it is, perhaps, unnecessary to allude to any particular department of the physical course. We will, however, presume to affirm that the propositions relating to accelerated and retarded motion, to the theory of projectiles, strength of materials, theory of arches, spouting of fluids, oscillation of floating bodies, and physical astronomy, were illustrated and demonstrated under circumstances of peculiar excellence. The propositions relating to the attraction of solids, from Newton's Principia, were demonstrated with much ability.

It accords with the sentiments of the board to state, that the attainments witnessed in the mathematical and physical classes were, if possible, discovered in a higher order in the sections of military and civil engineering. It was satisfactorily exhibited, by the diversity of questions proposed, that the very essential knowledge relating to mortars, cements, uses of wood, its defects, construction of arches, and determination of the voussoirs on the principles of descriptive geometry to the mode of constructing roads, head-gates of dams, locks, and canals, uses and relative strengths of the different kinds of iron, classification of soils in regard to foundations, and the operation of piling, had been acquired.

It will, perhaps, assist in forming conceptions of the acquirements of the class, by stating a few propositions, to whose constructions and demonstrations the board gave the strictest attention.

In *civil engineering*, to explain the *appareil of a groin*, formed by the intersection of an *annular* vault with a *radient* vault; to explain the appareil of the common groin and of the cloistered ceiling; to explain the appareil of an oblique rampart vault.

In *military engineering*, to explain the *defilement* of a fortified front on irregular ground; to explain Mouze's system of mines, and the theory of mining generally; to explain the construction of Mouze's front in fortification.

In all the demonstrations and elucidations of civil and military engineering, the evident and important advantages arising from the course of descriptive geometry adopted in the academy were forcibly exposed. In this branch, the profound attainments possessed by the cadets were exhibited in a high degree of perfection, by the constructions performed on the black board. The precision in drawing the lines by hand, without the assistance of rulers, and the correct relative proportions of the parts of the figures, are proofs of judgment and much industry.

The exhibition which the class of engineering has made before the board, of the general principles of theoretic military defence, and civil and military constructions, has been highly satisfactory. The course of instruction in this class embraces—

1st. A development of the theory of that description of the science of war which depends upon the selection of proper positions for defence by fortifications, and upon the planning and adaptation of these works to the positions, including the estimates of the expense of construction, called engineering.

2d. An illustration of the maxims of military defence and offence.

3d. A theoretic explanation of the construction of fortifications and of civil constructions, embracing canals, roads, bridges, and public edifices.

4th. The graphic execution of the various systems of plans for these constructions and for ornamental architecture. In the demonstration of which we have seen the application of descriptive geometry, and modern simplification of perspective and plane drawing, and of resolving solids and their sections to planes. In the course of this examination of this class, the large majority have discovered an intimate acquaintance with the theories as laid down in the text books, or explained by the professor and assistant.

This course is the first step of application of the mathematical theory to that description of practice which is essential to a just arrangement, in the minds of students, of the theory of engineering to practical use; and, when we consider the rising demand in our country for civil engineers, we must admit that the full endowment of this branch of study would be a great national economy; we therefore would advise that, to this course, there should be added the mathematical execution of models in stone cutting, and carpentry and machine making, to effect which it would be necessary to provide a workshop, tools, and materials, a teacher in machine draughting, and a master model-maker, two assistant teachers of engineering, and a drawing chamber and a modelling room, both to receive light from the ceiling. We are of opinion that the grade of merit in the academic scale of this branch is too low to excite a proper degree of emulation in the whole graduating class to obtain eminence in the minute parts of the course; especially when it is considered that this is the peculiarly professional branch for which the institution was first intended, and also that eminence in attainment in this department fixes the cadet's particular pursuit in life. We would also observe that it does not appear to us as desirable to continue the practice of taking cadets in this course for assistant teachers in other branches; such employment deprives the best of them of the time to give an undivided attention to the course. It were better, as a general rule, to offer sufficient inducement to graduates to take the station of assistant teachers.

In the course of natural and experimental philosophy, the theory of mechanics and of astronomy, and of physics generally, has been ably illustrated by the class pursuing this branch at the black board. But it appears to us that more attention should be paid to the practical illustration of this course, especially in astronomy; to which desirable end a further endowment of the profession is requisite in an increased number of instruments and apparatus, such as are exhibited upon an accompanying memorandum of those now in the academy, and such, also, as we conceive to be necessary to add to the present collection.

In the department of history, moral science, and geography, the board observe that the students have acquired a commendable collection of facts; but the board feel it a duty to state that the minds of these young men do not appear to have been sufficiently directed to a philosophical view of these branches of history and moral science. For the more convenient accommodation of the professors of chemistry and philosophy, in giving instruction to their classes, the board deem it desirable to have two rooms constructed and added to the present academy, of about forty by thirty feet each, the expense of which would be about $4,000.

Comfortable quarters are wanting for the professor of chemistry, and for the officer of the staff connected with the supplies, transportation, and keeping the academic property. Such quarters could be erected for about $6,000.

The *discipline* of this institution is of the first order. Its excellence is demonstrated—

1st. By an exemplary *police*, pervading every department from the kitchen to the barracks, from the necessary refreshments of the table to the higher vocations of the military and academic staff.

2d. By the various courses of instruction, as well moral as scientific and military, both theoretical and practical; affording conclusive evidence of zeal, vigilance, and superior qualifications on the part of the superintendent, and great industry, subordination, and promise on the part of the cadets.

The drill.—The position of the cadets under arms, and their movement in company and battalion exercise, were found to be strictly conformable to the regulations governing them, and to present an aspect of regular tactical knowledge on the part of the cadets, unequalled by any troops the board of visiters have ever seen. The evolutions of the line were performed with all the accuracy and professional ability that the very limited number of cadets could possibly admit. The field artillery, as well as the rifle exercise, were likewise performed in a manner highly creditable to the institution.

We have the honor to be, very respectfully, your obedient servants,

EDMUND P. GAINES,
Major General, and President of the Board.
JOSEPH S. JOHNSTON,
THOMAS LEVINS,
JOHN CHESTER,
A. S. H. BURGESS,
JOSEPH G. SWIFT,
HENRY R. WARFIELD,
N. TOWSON,
JAMES T. AUSTIN,
WILLIAM H. SUMNER.

To the SECRETARY OF WAR.

No. 5.

Extracted from the Journal of the board of visiters.

The subjects which were before the board on the last evening were resumed, and, after discussion, it was unanimously

Resolved, as the opinion of this board, That suitable provision ought to be made by law for the establishment of a professorship of chemistry and mineralogy, upon a similar foundation to the other professorships of the academy.

2d. *Resolved*, That suitable provision ought to be made by law for equalizing the pay and emoluments of all the professors of the Military Academy.

3d. *Resolved*, That it is expedient that a highly accomplished chaplain and teacher of ethics should always be employed in the Military Academy, who, in addition to his other duties, may be required to instruct the cadets in grammar and English composition.

No. 6.

Apparatus required for the Military Academy.

Pneumatic apparatus.—Electrical machine, with its accompanying apparatus; six mountain barometers; rain and wind gauges, and hygrometer; air pump, with its accompanying apparatus; Leslie's differential thermometer.

Galvanic apparatus.—Atwood's machine; apparatus for the collision of bodies; pendulum apparatus.

Instruments for surveying.—Pentagraphs; set of levelling instruments.

Optical apparatus.—Two repeating circles; three of Hadley's sextants, graduated to ten seconds; a mural quadrant; orrery and planetarium; instruments to illustrate horology and dialling; portable equatorial instrument; camera obscura; photometer.

Hydrostatic apparatus.—Full sets of models for hydrodynamics; hydrometers; models to illustrate the construction of canals, locks, and sluices; models for arches and the different modes of centering; models to illustrate the strength of various materials; models to illustrate the friction of wheel carriages.

Chemical apparatus.—A hydropremiatic apparatus, with gas-holders, receivers, deflagrating jars, &c., complete; apparatus for submitting gases to the action of electricity, (see plate 9, fig. 84, Henry's Chemistry;) apparatus for procuring gases without the possibility of their escaping into the room, (see plate 2, fig. 17, Henry;) four galvanic troughs, in addition to the two now belonging to the academy, or Hare's calorimeter and deflagrator; Leslie's photometer; an oval copper boiler, for exhibiting the most important facts respecting latent caloric, (see plate 5, fig. 46, Henry;) an oxygen and hydrogen blowpipe; Wedgewood's pyrometer.

No. 7.

Extract from the Journal of the board of visiters.

The committee who were appointed to take into consideration the expediency of equalizing the rank, pay, and emoluments of the several principal professors of the Military Academy, the subject of the pay and emoluments of the several assistant professors and teachers, and that of the superintendent, with instructions to report what ought hereafter to be allowed to each for their services, have made diligent inquiries into all the subjects committed to them, and are fully satisfied that the preservation of that harmony among the instructors, which is important to the success of a literary institution, and the substantial and permanent advantages of the institution itself, require that the principal professors in each branch of instruction should stand on the same footing, both as it regards their rank and pay.

There are many considerations in favor of such an arrangement, which will readily present themselves to the board; the most prominent of which is, that every professor will in consequence be content to remain in that station to which he shall be appointed, and for the duties of which, after long experience in the same, he is best qualified. Whereas now, every vacancy which happens in a branch, to the professor of which higher rank and emoluments are attached, causes each of those of subordinate grade to seek promotion, and their known qualifications are such that the selection will most probably be made from among them; consequently, successive vacancies take place in the subordinate professorships, to all of which new appointments must be made of persons who in all cases are less qualified than their predecessors for the performance of the duties required by their new offices. However much the present organization and the practice under it may tend to the diffusion of general knowledge among the professors in every branch of science, yet there can be but little doubt that the effect is to prevent the attainment of that elevated standard in each, which the course of instruction prescribed for the institution requires.

Your committee, therefore, on this part of their inquiry, recommend that all the professors of the academy (including the professor in the branch of chemistry and mineralogy which the board have recommended should be organized) shall, during their continuance in office, have the brevet rank, pay, and emoluments of majors of cavalry; and that each assistant professor shall, during his continuance in office, have the brevet rank, pay, and emoluments of a captain of infantry, if not an officer of the army; and if taken from the army, then so much in addition to his pay and emoluments as shall be equal thereto.

On the subject of the employment and compensation of the other teachers and assistants at the academy, your committee recommend that the principal teacher of the French language should have the brevet rank, pay, and emoluments of a major of infantry; and that there should be two assistant teachers, with the rank, pay, and emoluments of captains of infantry; that the teacher of drawing should have the rank, pay, and emoluments of a captain of infantry, and the sword and riding master that of a lieutenant of infantry; that there should be employed one modeller, with the pay of fifty dollars per month; one fire-worker and one armorer, with the pay of thirty dollars per month each.

Your committee also recommend that the superintendent should be authorized, under the direction of the Secretary of War, to enlist one sergeant, two corporals, and twelve privates, to be employed as laborers in the service of the academy, and who shall have the same pay and emoluments as are allowed to non-commissioned officers and privates of the army. The necessity of this provision is strongly recommended for the purpose of carrying into effect the police arrangements of the institution, assisting the several professors in their various experiments, taking charge of the halls, of the barracks, the laboratory, and public rooms, the actual inspection of which by the board your committee think must have convinced them of the necessity of some alterations in this branch of economy. Laborers must be employed for these and other necessary purposes; and the expense by the mode proposed will be less than by any other, while the responsibility and subordination of the persons employed will be greater.

Your committee have made special inquiry into the duties of the officers of the army who are detailed for duty at the Military Academy, and are fully of the opinion that there are but few, if any, officers of whom so much extra service is required. Their police duties, as superintendents of the different barracks, are of the most irksome and unpleasant kind, and their confinement almost incessant:

Wherefore it is recommended that each officer so detailed shall be allowed ten dollars a month in addition to his pay in the line.

In deciding upon the course which it was proper for them to pursue on the subject of the allowances which are made to Lieutenant Colonel Thayer, the superintendent, of whose attainments in science, as well as of whose diligence, impartiality, and economy in the administration of the affairs of the academy, they cannot express themselves in terms too strong for their belief, the committee are under some embarrassment. The information they have obtained, as well as their own observation, convinces them that there is no literary institution in the country which is so attracting to strangers and foreigners as this, most of whom, when they visit it, are introduced, by letter or otherwise, to the notice and attention of the superintendent. The rules of the academy also prevent the cadets from leaving it, excepting under special circumstances, more than twice during their academic course, to see their parents and friends. This necessarily makes the visits of those who are most interested in the health and prosperity of the pupils more frequent here than at any other seminary. The officers of the army, also, who are the graduates of the academy, seek opportunities of paying their respects to their old instructors, and of indulging in all those delightful associations and reflections which a visit to this distinguished seat of science must always create. From these, and many other causes connected with his situation, which expose the superintendent to very unusual expenses for an officer of his rank, your committee are most deeply impressed with the necessity of increasing the emoluments derived from his present rank and station. But the modesty and devotedness to the interests of the institution of which he has the charge has led the superintendent, in the most urgent manner, to solicit of the committee that no motives personal to himself or relating to his duties or obligations should induce them to bring his situation into the public consideration.

While, on the one hand, the committee would most willingly comply with Colonel Thayer's requests, when the public interest was not concerned, so, on the other, being sensibly impressed with its superior obligation, they feel themselves imperiously bound to reject all personal considerations in this, as they have in every other case which has been the subject of their inquiry, and to govern themselves by the true and permanent interests of the institution, without regard to that of the individuals who may be affected by the measures they have recommended. They are fully convinced that the public justice, as well as its interests, demand an increase of the superintendent's emoluments. They, therefore, recommend that hereafter the superintendent of the Military Academy, during his continuance in office, be allowed the rank, pay, and emoluments of an inspector general.

H.

SIR: ORDNANCE DEPARTMENT, WASHINGTON, *November* 25, 1824.

In compliance with your instructions of the 1st instant, I have the honor to communicate, herewith, the papers numbered 1, 2, 3, 4, 5, and 6, containing the statements required, viz:

No. 1 exhibits an account of the remittances, through this department, in the year 1823; showing the amount, under each head of appropriation, received by each disbursing officer; the amount of accounts rendered by them; and the balances remaining in the hands of each at the close of the year. By this statement it appears that the total amount of money remitted through this department, in the year 1823, was - - - $666,460 84

The amount of accounts rendered and settled, during the same time, - - - 639,157 55

The balance remaining in the hands of disbursing officers at the close of the year, - 27,303 29

and that the whole of this balance was accounted for in the first quarter of the present year; no case of defalcation having occurred during the year.

No. 2 exhibits an account of the moneys transmitted to the several disbursing officers, at the armories and arsenals, during the first three quarters of the present year; the amount of the accounts rendered by them during the same period; and the balances remaining unexpended in the hands of each at the close of the third quarter.

By this statement it appears that the total amount of moneys transmitted was - - - $354,387 41

The amount of accounts rendered, - - - - - 339,101 84

The amount remaining unexpended in the hands of disbursing officers at the close of the third quarter, and applicable to the fourth quarter, - - - - 15,285 57

The accounts of all the disbursing officers and agents of this department have been rendered up to the 30th of September last, and have been deposited in the Auditor's office for settlement.

No. 3 shows the number and description of arms and accoutrements procured, and of the expenditures made, under the act for arming and equipping the militia, during the first, second, and third quarters of the present year.

The arms procured are as follows, viz: 7,485 muskets, 2,800 rifles, and 17 pieces of ordnance, with cannon balls, accoutrements, &c.

The amount drawn from the Treasury on this account is - - -	$142,341 08
Amount collected on account of advances made on contracts, prior to the year 1819, -	8,930 00
Total amount,	$151,271 08

No. 4 exhibits an apportionment of the arms procured under the law for arming the militia, during the year 1823; by which it appears that fifteen thousand stands of arms have been apportioned to the militia of the several States and Territories, in quotas proportioned to the number of militia in each, respectively. The arms embraced in this apportionment have not yet been distributed, except in a few instances; but they are all in readiness for delivery, and will be distributed whenever required by the proper authorities of the respective States, to whom they are due.

Of the arms which were apportioned prior to 1823, and remained undistributed at my last annual report, about twenty-seven thousand have been delivered; leaving about four thousand yet to be delivered, and which are waiting the orders of the States to which they are due.

No. 5 exhibits an account of the work done, and supplies procured, at the several armories and arsenals, from the 1st of October, 1823, to the 30th of September, 1824.

By this statement it will be seen that 23,859 muskets have been manufactured at the national armories during the year. This number is equal to the average annual product of the armories, but is less than the product of the last year by about two thousand stands. This diminution has been occasioned by fires, which destroyed one of the principal workshops at each of the armories, in the early part of the year. The damages occasioned by these fires have since been repaired, and both armories are now in full and complete operation.

In addition to the particulars exhibited in this statement, much other business has been done, which cannot be stated in a tabular form; such as the repair and preservaiton of the arsenals, workshops, and enclosures; the improvement of the public grounds, and the preservation of the depots generally. These objects have received due attention, and the public buildings, and other property pertaining to this department, are generally in a good state of preservat ion.

No. 6 shows the kind and quantity of ordnance and ordnance stores issued from the arsenals and depots, for the supply of the army and military posts, during the first three quarters of the present year.

By the latest returns from the lead mines on Fever river, which embrace the period from October 1st, 1823, to June 30th, 1824, it appears that, during that period, 138,644 pounds of lead have been produced; and that 17,222 pounds have been delivered to the United States, on account of rents, and deposited in the public storehouses at St. Louis. The number of lessees at work during the same period was ten. No leases have been granted, and no mines have been worked, on public account, in any other section of the country than those above stated, on Fever river.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance service.*

Hon. JOHN C. CALHOUN, *Department of War.*

No. 1.

Statement of the money expended through the Ordnance Department in the year 1823.

WAR DEPARTMENT, PENSION OFFICE, *December* 4, 1824.

J. L. EDWARDS.

J.

SIR: WAR DEPARTMENT, SECTION OF BOUNTY LANDS, *December* 3, 1824.

In obedience to your instructions, I herewith hand you abstracts Nos. 1 and 2: the first exhibiting a statement of the transactions of this office, from its commencement to the 22d November, 1824; the second, a report of the business of the office for the year ending 30th September, 1824.

I have the honor to be, sir, very respectfully, your obedient servant,

WM. M. STEUART, *Clerk.*

The Hon. J. C. CALHOUN, *Secretary of War.*

No. 1.

Abstract of the number of warrants issued for military bounty lands, for services in the late war, up to the 22d November, 1824, *inclusive, viz:*

1st. Authorized by the acts of December 24th, 1811, and January 11th, 1812, - -	25,347
2d. Authorized by the act of February 6, 1812, - - - -	129
3d. Authorized by the act of December 10th, 1814, - - - -	1,017
4th. Authorized by the act of March 5th, 1816, - - - - -	268
Total number of warrants of these cases, - -	26,761
Number of warrants of the 1st and 2d description 25,476, of 160 acres each, - -	4,076,160
Number of warrants of the 3d description 1,017, of 320 acres each, - - -	325,440
	4,401,600
Number of warrants of the 4th description 268, (Canadian volunteers,) - - -	74,032
	4,475,632

N. B.—In this class of claims, officers received land in a different proportion from privates.

Return of claims included in the above statement, which have been deposited in this office since the war.

Discharges and posthumous claims,		32,122
Whereof, number admitted, for which warrants issued, under the 1st, 2d, and 3d classes,	26,493	
returned to the applicants for further evidence, or definitively rejected,	5,155	
remaining on file, awaiting further evidence,	474	
	32,122	
Return of "Canadian Volunteer" claims, deposited in the office since March 5, 1816,		436
Number admitted, on which warrants have been granted,	268	
Number rejected, not entitled to land,	40	
Number still remaining on file, awaiting further evidence of service, &c.,	128	
	436	
The number of claims for five years' half-pay pension, in lieu of bounty land, under the several acts of Congress granting that option, that have been deposited in the office from the 16th April, 1816, the date of the first act, to the 4th March, 1822, the day of the expiration of the third and last act, is		1,631
Disposed of as follows, viz:		
Admitted, and certificates sent to the Pension Office,	1,184	
Rejected, not being entitled to that option,	429	
Suspended, until it can be ascertained to what regiment the soldier was attached,	18	
	1,631	
The number of claims for revolutionary bounty land, under the several acts of Congress passed since the burning of the War Office, in the year 1801, that have been deposited in the office, is		5,622
Disposed of as follows, viz:		
Number admitted, for which warrants have been issued,	1,070	
Number rejected, not being entitled to land, or which had been previously satisfied,	4,455	
Number remaining on file, awaiting additional documents, or authority to receipt for the warrants,	97	
	5,622	

Warrants issued since April, 1803, included in the above statement.

1st. class.	To major generals,	3 of	1,100	acres each,		3,300
2d. do.	brigadier generals,	3 of	850	do.		2,550
3d. do.	colonels,	8 of	500	do.		4,000
4th. do.	lieutenant colonels, hospital surgeons, &c.,	14 of	450	do.		6,300
5th. do.	majors and regimental surgeons,	22 of	400	do.		8,800
6th. do.	captains and surgeons' mates,	99 of	300	do.		29,700
7th. do.	lieutenants and adjutants,	91 of	200	do.		18,200
8th. do.	ensigns,	13 of	150	do.		1,950
9th. do.	privates,	817 of	100	do.		81,700
		1,070			Acres,	156,500

DEPARTMENT OF WAR, SECTION OF BOUNTY LANDS, *December* 3, 1824.

WILLIAM M. STEUART, *Clerk.*

No. 2.

Abstract of the number of warrants issued for military bounty lands, for services in the late war, from November 22d, 1823, to the 22d November, 1824, inclusive, viz:

1st. Authorized by the acts of December 24, 1811, and January 11, 1812,		190
2d. Authorized by the act of February 6, 1812,		2
3d. Authorized by the act of December 10, 1814,		7
	199	
Number of warrants of the 1st and 2d description 192, of 160 acres each,		30,720
Number of warrants of the 3d description 7, of 320 acres each,		2,240
		32,960

Return of claims which have been deposited in the office from the 1st of October, 1823, to the 30th September, 1824, inclusive, viz:

Discharges, &c.,		398
On file, at date of last report,		606
		1,004
Whereof, number admitted, for which warrants issued,	205	
Number returned to the applicants for further evidence, or rejected,	325	
Remaining on file, awaiting further evidence of service, &c.,	474	
	1,004	

The "Canadian Volunteer" claims still remain suspended, awaiting further evidence of service, &c.

The claims for five years' half-pay pension, in lieu of bounty lands, also remain suspended, awaiting proof of service, &c.

The number of revolutionary claims on file at the date of the last report was		123
Received from 1st October, 1823, to the 30th September, 1824, inclusive,		218
		341
Disposed of as follows, viz:		
Rejected, not being entitled to land, or which had been previously satisfied,	202	
Admitted as being entitled, but awaiting additional documents, or authority to receipt for the warrants,	17	
Suspended, and still on file,	97	
Warrants issued, (amounting to 4,650 acres,)	25	
	341

[NOTE.—For statement K, see Indian Affairs, volume 2.]

18th CONGRESS.] No. 263. [2d SESSION.

NATIONAL ARMORY ON THE WESTERN WATERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 18, 1825.

To the House of Representatives of the United States: WASHINGTON, *January* 18, 1825.

I herewith transmit to the House of Representatives a report of the Secretary of War, with a report made to that Department by the commissioners who were appointed under the act of 3d March, 1823, entitled "An act to establish a national armory on the Western waters."

JAMES MONROE.

SIR: DEPARTMENT OF WAR, *January* 17, 1825.

I transmit, herewith, a report of the commissioners appointed under the act of the 3d of March, 1823, entitled "An act to establish a national armory on the Western waters."

The commissioners appointed under the above-mentioned act were Colonels William McRee, Roswell Lee, and Major George Talcott, who proceeded to execute its provisions, under the instructions of this Department, of which the enclosed papers, marked A and B, are copies.

The cause of the delay which has occurred in making their report will be fully seen by reference to the report itself.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE UNITED STATES.

A.

SIR: WAR DEPARTMENT, WASHINGTON, *April* 26, 1823.

The President has been pleased to appoint you to perform the duties required by "An act to establish a national armory on the Western waters," a copy of which act is herewith enclosed. The President has also appointed Lieutenant Colonel Roswell Lee, superintendent of the United States armory at Springfield, and Captain George Talcott, on ordnance duty at the United States arsenal at Pittsburg, to be associated with you on this service. Upon your acceptance of this appointment, you will please to notify Lieutenant Colonel Lee and Captain Talcott of the time and place at which you may think it advisable to assemble, preparatory to entering upon the duties pointed out by the act.

In order that the intention of the act may be fulfilled in the most ample manner, and all objections which may be urged in favor of other sites be met, so as to insure the adoption of the one which may be recommended, it is considered proper that all the sites on the "Western waters," of which you may be informed, and of the suitableness of which any reasonable expectations may be entertained, should be examined. It is considered necessary, also, that the report of these examinations should contain a notice of each of the sites examined, and exhibit the opinions of the board respecting the suitableness of each, respectively, and the facts and reasons upon which those opinions are formed.

The districts of country which your examinations should embrace, and to which they should be limited, under the term "Western waters," is submitted to the judgment of yourself and associates. It is considered, however, that the examinations should be extended at least to all the sites upon the Ohio river, or upon any of its tributaries.

I transmit, herewith, a communication from the Ordnance Department, exhibiting its views respecting the situation of a site for an armory, which is submitted for your consideration. Any information which has been, or may be received, pointing out the position of any sites deemed suitable for an armory, will be communicated to you by the Ordnance Department.

Your compensation, while in the discharge of the duties of this appointment, will be eight dollars per diem, and an allowance for travelling expenses equal to that allowed to a colonel of the army. The per diem will commence at the date of your acceptance of this appointment, and will continue until your duties under it shall cease. The compensation of Lieutenant Colonel Lee and Captain Talcott will be two dollars per diem, and the travelling allowance due to their respective stations in the public service, in addition to the compensation which they now receive. The per diem to commence at the time of their commencing their duties under this appointment, and to continue as long as they may be engaged upon these duties.

Respectfully, I am, sir, your most obedient,

J. C. CALHOUN.

Col. WILLIAM McREE, *Wheeling, Virginia.*

B.

SIR: ORDNANCE DEPARTMENT, *April* 24, 1823.

The "act to establish a national armory on the Western waters" does not specify the scale or extent of the armory for which a site is to be selected. A resolution of the Senate, calling for information respecting a Western armory, required an estimate "of the cost of erecting, on the Western waters, such an armory as that at Springfield or Harper's Ferry." From the terms of this resolution, and of the report made in obedience thereto, both of which preceded, and in some degree led to, the passage of the act above mentioned, it is inferred that Congress contemplated the selection of such a site as would be suitable for an armory of equal extent to those already established. It is, therefore, conceived that the officers charged with the examination of the various sites should be instructed to examine all such as may be supposed to be suitable for an armory upon a similar scale to those above mentioned, viz: an armory properly adapted for the fabrication of twelve thousand muskets per annum. This, it is conceived, should be the minimum; but it would be desirable to possess such a site as would admit of an enlargement of the establishment hereafter, if the public interest should render it necessary.

The principal points deemed most worthy of consideration in the location of an armory may be briefly enumerated as follows, viz:

First. A sufficient power for driving all the necessary machinery. This should be constant, and at command, and not liable either to be obstructed by floods, or to fail by droughts. These are most essential conditions, and no site can be suitable where the moving power is uncertain, or liable to failure from any ordinary cause. The question whether steam power may not be advantageously employed as a substitute for water power, to a certain extent, is deemed worthy the consideration of those who will examine the sites.

Second. A healthy position, and one where subsistence may be cheaply obtained. These points are important, inasmuch as the price of labor at the establishment must, ultimately, in a great measure, be determined by them.

Third. A position at which materials and supplies required for consumption at the armory may be obtained at low prices, and with facility and certainty.

An estimate of the principal materials required for annual consumption at an armory manufacturing twelve thousand muskets per annum is enclosed herewith. In forming an estimate of the comparative advantages of the several sites which may be examined, a reference to this estimate of materials will be important; for, with respect to the article of coal alone, a difference of circumstances, which shall occasion a difference of price equal to one cent per bushel, will occasion a difference of one thousand dollars per annum in the expenditures of the armory.

Fourth. A position from whence the arms manufactured at the armory may be conveniently distributed to the various points in the Western country which the public service may require. This consideration, although important, is considered subordinate to those which have been already enumerated, for the main purpose of an armory is the fabrication of small arms; and it is not considered indispensable that a depot, for the collection and distribution of other military supplies, should be connected therewith. Those circumstances, therefore, which may affect the quality of the arms, or the cost of manufacturing them, it is conceived, should form the primary considerations in the location of an armory. The materials required annually for the supply of an armory, according to the enclosed estimate, are about nine hundred and sixty-six tons weight; the arms manufactured annually will weigh about eighty tons; therefore, the expense of transporting materials, compared with that of transporting the arms an equal distance, will be as twelve to one.

The act requires an estimate of the amount necessary for purchasing each of the sites which may be examined. On this subject I would remark, that the limiting of the purchase of land for public works to a small quantity, and just sufficient for purposes immediately contemplated, has not unfrequently proved greatly disadvantageous to the public interest. I would therefore recommend that the estimates be calculated for the purchase of at least a section of land, or a quantity equal to one square mile. The act also requires an estimate of the amount necessary for erecting all necessary buildings for an armory. An estimate of the number, dimensions, and description of the buildings necessary for the manufacture of twelve thousand muskets per annum will be furnished.

The foregoing exhibits only what are deemed by this department the most important of the considerations connected with the selection of a site for a national armory.

It is considered unnecessary to give any further details, as the gentlemen appointed to make the examinations are, from their talents and experience, fully qualified for the able performance of the duties which have been confided to them.

I have the honor to be, sir, very respectfully, your obedient servant,

GEO. BOMFORD, *Lieut. Col. on ordnance duty.*

Hon. JOHN C. CALHOUN.

Estimate of the quantity of materials required for annual consumption at an armory calculated for the manufacture of twelve thousand muskets per annum.

	Tons.
Refined iron, about	120
Steel, of various kinds,	12
Brass and zinc,	2
Emery,	1
Grindstones,	80
Sand,	20
12,500 rough walnut stocks,	44½
12,000 files, assorted,	3
100,000 bushels of charcoal, or one-sixth of the quantity of pit coal,	500
150 cords of wood,	150
500 gallons of spermaceti oil,	2
100 gallons linseed oil, and four barrels of tar,	1
Band and buff leather,	¼
Woollen rags,	½
2,000 bushels of old shoes,	8
50 coal baskets,	½
Fire clay,	20
30 reams of sand paper,	¾
20 reams wrapping paper, for wadding,	¼
Writing paper and stationary,	¼
Tallow and candles,	¼
Total,	966

PHILADELPHIA, *January* 13, 1825.

The commissioners appointed by the President of the United States, under the act of Congress passed 3d March, 1823, entitled "An act to establish a national armory on the Western waters," respectfully present their report.

The task of arranging the various data, and estimating the expense, with the "advantages and disadvantages" of the several sites examined, has been more arduous, and has occupied more time, than was anticipated even by ourselves.

Very respectfully, we are, sir, your obedient servants,

W. McREE,
ROSWELL LEE,
G. W. TALCOTT.

To the SECRETARY OF WAR.

REPORT.

The undersigned commissioners, appointed by the President of the United States, under the act of Congress passed the 3d of March, 1823, entitled "An act to establish a national armory on the Western waters," assembled at Pittsburg, Pennsylvania, the 1st of June, 1823, and proceeded to view, and cause surveys to be made, of those sites which were generally considered to possess the necessary requisites.

The large proportion of the whole quantity of materials annually required at an armory, which it will be necessary, in all cases, to transport across the mountains, and partly from the seaboard, furnished a sufficient reason, independent of any other, for restricting our examinations to sites within reach of convenient navigation; they were, accordingly, confined to those water-courses falling into the Ohio, or on their tributaries, below the head of ascending navigation of the principal streams, with one exception, which will be mentioned in its place.

The examinations were not completed till near the close of December, and the board assembled at Pittsburg at the end of that month. The returns of the surveys, levellings, &c., were not all received until the month of March following, when it was found impracticable to complete the necessary estimates for the several sites before the adjournment of Congress; and they separated in June with the intention of resuming their labor in sufficient season to lay their report before the present session of Congress.

The deep interest felt by the people of the Western States, and the importance of the subject to the nation at large, have made it an imperative duty to exhibit all the facts in their possession which are considered necessary or useful in deciding the location of the armory.

The sites on Shoal and Cypress creeks, in Alabama; Harpeth river, in Tennessee; at the falls of the Ohio; north bend of the Ohio, below Cincinnati; the falls of the Muskingum, at Zanesville; falls of Big Beaver; and at the Ohiopile falls of the Youghiogeny river, in Pennsylvania, were found to unite considerations in their favor, that, under the considerations attending this inquiry, called for a more particular statement of their respective advantages and disadvantages; and have made it necessary to spread such a mass of details, without which it would be difficult, if not impossible, to form a just estimate of their true value.

Those sites which were found, on examination, so deficient in essential particulars as to render an estimate of the cost of improving them unnecessary, are noticed in the appendix to this report; to which paper reference is also made for such statements and information as could be most conveniently embraced in that mode.

The average number of muskets now manufactured at the national armories is about 12,000 stands, each, per annum. That number has, therefore, been taken as the basis of all our arrangements and estimates of the expense at the several sites hereafter mentioned.

To aid in forming a more correct idea of the advantages and defects of the several sites that will be described, it may be necessary to state the following particulars, explanatory of the requirements that are essential for an armory, as regards the extent of the water power, the necessary space for the buildings, and the general accommodation of the establishment. The measure of the water power used at the national armory at Springfield, Mass. has been taken as a standard. It is equal to that which, in the usual estimation of millwrights, is required for operating about twelve pairs of five feet burr mill-stones; but, after making the necessary deductions, is found to be less than 1,032 cubic feet of water per second, falling from the height of one foot, and acting by its gravity, or near double that quantity when acting by percussion.

The number of buildings that will be required is sixty-one; of which thirty-two are dwellings for workmen, and seven for the officers of the establishment. The aggregate length of the workshops, storehouse, and offices, is 1,016 feet by 40 feet broad, exclusive of the space between them.

The number of workmen, of different descriptions, required to manufacture 12,000 stands of arms annually, is estimated at two hundred and fifty.

The quantity and kind of materials that will be annually required in the fabrication of that number, are shown in statement A of the appendix.

It is considered unnecessary to offer any general view of the character and habits of the water-courses of the Western country. The degree, as well as manner, in which they particularly affect the water power at the several sites, will be mentioned in the following description:

Shoal and Cypress creeks, in Alabama, are rapid and permanent streams, and afford a number of advantageous sites for the application of their water power to machinery. Shoal creek empties into the Tennessee river opposite the Great Muscle shoals, nine miles above the town of Florence. It is not navigable, nor is the communication by water from its mouth to the foot of the Muscle shoals considered practicable, to any useful extent. The military road leading to Florence crosses the creek about nine miles from the town, and about eight miles above its junction with the Tennessee. The United States have reserved a tract of land seven miles square at the forks of the creek, twenty-three miles from Florence, containing iron ore of an excellent quality, and in large quantities, lying convenient to fuel, and an ample water power for reducing it and forging the iron. The greatest natural fall that can be employed at any one point between the southern boundary of the reservation and the forks of the creek does not exceed seven feet. The freshets rise to a considerable height, and the bottom lands resemble those of other water-courses that are subject to overflow; but below the military road the bed of the stream becomes wider, its descent is also increased, and the current is confined for the most part within its banks, during the highest rises. A material change is accordingly observed in the nature of the bordering low grounds. The character of the surface is equally altered; and the bottoms, properly so called, cease altogether. At every bend of the creek, the shore on the concave side is high and abrupt, and sometimes precipitous. The opposite side generally presents an inclined plane, rising gradually from the margin of the stream, and extending back to a considerable distance. Several of these positions were examined, and levels taken at one of them, called the Iron shoals, four miles below the military road. The whole fall is eight feet five inches in twelve hundred yards. The creek is five hundred feet broad at the head of the rapids, and its bed and both shores are of rock.

The extreme rise of its freshets at Brush run, where the workshops would be placed, is stated to be ten feet; a dam ten feet high would therefore give a head and fall of near eight feet at the wheels, free from interruption of high water. The cost of the canal, forebays, races, &c. would be very moderate. The water might be taken from above the dam and conveyed to the works, on the same level with, or at any required depth below, the surface of the ground. The building of a weir and permanent water-tight stone dam would comprise the chief part of the expense that would be required to improve the site.

A greater fall might, perhaps, be obtained nigher to the Tennessee river; but the immediate neighborhood of the Muscle shoals is said to be extremely unhealthy, and it is by no means certain that the Iron shoals, or any point below the military road, would be altogether beyond their influence.

Cypress creek empties into the Tennessee below the great Muscle shoals, and two miles below Florence. It is navigable one mile and a half from its mouth, with boats drawing two feet and a half water, for five or six months in the year. Its shores resemble those of Shoal creek, below the military road, in almost every respect that has relation to the use of its water: if there is any difference, it is rather in favor of the former. Its slopes are, in some cases, even more gentle and uniform. The most advantageous site for an armory is at Clopper's mills, three or four miles from Florence, and about three miles from the Tennessee by land. A fall of fourteen feet and a half can be obtained in the distance of 1,470 yards. The highest rise of the creek, at the point where the works should be placed, is stated at ten feet. A dam eight feet high would, therefore, give a head and fall of near twelve feet, that may be used on breast-wheels, free from interruption. The bed and both shores of the creek, at the head of the rapids, are of rock, and afford a secure position for the dam. The surface of the ground through which the canal would pass is perfectly at command, and the depth of the excavations may, therefore, be regulated at pleasure. It will be proper, however, to take the canal through deep cuttings, as far as the point at which a weir would be placed, in order to secure it against the effect of any accident that might happen to the head-gate, near the dam, during a freshet.

The quantity of water which either of these creeks furnishes at its lowest stage could not be ascertained. At the time they were examined, the volume of Shoal creek appeared to be a third greater than that of Cypress; either of them, however, contained several times the quantity that would be necessary, with a head and fall of ten feet; and those most acquainted with both, and best qualified to form correct opinions on the subject, were confident that there is little or no difference in the quantities delivered by the two streams, when each is at its lowest stage. So far, therefore, as these circumstances may authorize any conclusion, it appears that the power which may be employed at Clopper's mills is greater than any that can be obtained on Shoal creek. In other respects, the position at Clopper's mills is preferable. It is considered to be healthy, and has the advantage of being within convenient distance of the Tennessee river.

The following estimate will show the probable quantity of labor and materials that will be required at this site:

EXCAVATIONS OF EARTH.

For the forebays and races:	
5,734 cubic yards, from 10 to 12 feet deep, at 14 cents per yard,	$802 77
4,103 cubic yards, from 2½ to 5 feet deep, at 8 cents per yard,	328 28
For canal:	
10,500 cubic yards, 18 feet deep, at 22 cents per yard,	2,310 00
25,140 cubic yards, 9 feet deep, at 12 cents,	3,016 80
6,690 cubic yards, 11 feet deep, at 15 cents,	1,003 50
For the weir:

Purchase of ——— acres of land, including Clopper's mills water rights,	15,000 00
Aggregate,	$232,365 25

This estimate is founded on two assumptions: first, that eleven feet head and fall may be employed on breast-wheels, without being interrupted by freshets; and, second, that the quantity of water at the lowest stage of the creek is not less than 138 cubic feet per second; both of which are indeed probable, but neither of them certain. In case that part of the fall which may be employed on breast-wheels should prove to be less than what is here supposed, and the volume of water no greater, it would be necessary to employ a portion of the remaining part (ten feet) on reaction wheels; and, consequently, the surface of the water in the canal, as far as the first workshop, must be permitted to rise and fall with that of the stream above the dam, at least to the height of four or five feet: hence the excavations of the forebays, races, and of the canal, might require to be augmented to twice, and the masonry (excepting for the weir) to four times the amount stated in the estimate. In like manner, a deficiency in the quantity of water that is assumed would compel a resort to the same remedy, and be attended with similar consequences, admitting the power in each case to be sufficient, when so employed.

There is also considerable uncertainty in relation to the prices; in some instances no specific information could be obtained.

The United States own a quantity of vacant land in the immediate neighborhood of Clopper's mills, and seven or eight quarter-sections adjoining the tract which includes the site. Stone coal has not been found nearer than the Cumberland mountains, and the expense of its transportation would probably exclude the use of it at the armory.

The Tennessee river is navigable for steamboats from Florence to Ohio six months in the year, and from Waterloo, thirty miles below, at all seasons. Keelboats run the whole year, and sometimes ascend the Muscle shoals.

Colbert's shoal, on which there are twenty-two inches depth of water at the lowest stage of the river, is the only impediment to the navigation between Florence and Waterloo.

From the mouth of Bear creek, near Waterloo, to Cotton Gin Port, on Tombigbee, is 60 miles on a direct line; thence to Columbus, the river may be navigated by keelboats several months in the year.

From Florence to Columbus, by the military road, is 121 miles; and 135 miles to Tuscaloosa, at the falls of Black Warrior, by the road now in use. The navigation of the Black Warrior, below Tuscaloosa, and the Tombigbee, below Columbus, is stated to be good at all seasons for keelboats, and a part of the year for steamboats.

NARROWS OF HARPETH RIVER, TENNESSEE.

Twenty-two miles above its mouth, the Harpeth river makes a circuit of four and a half or five miles, embracing, and nearly insulating, at high water, about 1,000 acres of land. The neck which joins this tract to the country on the right of the river is called the "Narrows;" it is a limestone ridge, several hundred yards long, varying from 60 to 150 yards broad at its base, and from 60 to 250 feet high. The whole descent of the river, in its course from the upper until it reaches the lower side of the Narrows, is 17 feet; a tract of bottom land of several hundred acres terminates at this point; and a lagoon or bayou, which runs along the foot of the ridge, and separates it from the bottom, at a medium stage of water, empties into the river at the same point. One hundred and forty yards above the mouth of the bayou, a tunnel, 96 yards in length, 15 feet wide, and 6 feet high, has been excavated through the ridge. The bottom is here between 1 and 200 yards wide, including the bed of the bayou, and is the site which has been proposed for a national armory. On the plan H No. 2 is a section of the tunnel, and profile of the ground, on a line passing over the lower part of the site, from the outlet of the tunnel to the river. The average elevation of the ground along this line, between the bayou and the river bank, is 9 feet; its greatest elevation above low water mark is 12 feet; and no where within the limits of the site is the surface three feet higher. The highest rise of the Harpeth, as well as the height of its ordinary freshets, has not been satisfactorily ascertained. The surveyor who was employed to take the levels at the Narrows is one of the oldest settlers in that neighborhood, and believes that he has seen it rise to the height of 33 feet above low water, but at a point 24 miles *above* the Narrows. A mile and three quarters *below* the Narrows, he found a water mark, left by the freshet of 1808, to be more than 29 feet high, and a rise that took place in the winter of 1822 he states to have been 18 feet, a quarter of a mile below the Narrows. These statements, however, have been controverted. We have received, through a most respectable channel, certificates of individuals residing at the Narrows, or in its vicinity, in which it is asserted that the highest rise of the Harpeth, in the last thirteen years, did not exceed 16 feet. Several gentlemen from Nashville were also employed to ascertain the greatest known elevation of the river, who report 21 feet to be the height of the water mark which they measured, and which is said to have been made by the greatest freshet that has occurred within the recollection of the oldest inhabitants. It is also mentioned that considerable obstructions to the current existed at that time, (1808,) which have since disappeared; and it is hence inferred that an equal rise of the river cannot be anticipated for the future.

We cannot question, and do not doubt, the accuracy with which these measurements were made, but we are constrained to infer the probability of some error in the data on which they were founded. Our personal observations corroborate the statements made to us by the surveyor. We traversed the river bottom from the outlet of the tunnel to the river bank, and thence in various directions; the character and general appearance of the ground gave ample evidence, in our opinion, of frequent, if not annual inundations. The alluvion deposite on the bark of the trees was sufficiently recent to be removed in some instances by the hand; and similar appearances, supposed to be water marks, were observed above our heads, and higher than we could reach, although on horseback. All the

documents relating to this site that have been transmitted to us are marked H, numbered from 1 to 15, and accompany the report.

From the mouth of the lagoon before described, the river pursues nearly a straight course along the foot of the ridge for more than 600 yards, when it changes its direction to the left, leaving between it and the hills to the right a body of high level ground, sufficiently elevated and extensive for all the purposes of an armory; its surface is 45 feet above low water, and works might be conveniently placed on the banks of a bayou that forms an island in front of the site. To convey the water to this point, it would be necessary to build a river wall, extending from the outlet of the tunnel to a ravine that empties into the river, at the upper end of the site; its dimensions will depend on the greatest heights to which the Harpeth may be supposed to rise. If it is assumed to be 25 feet below the Narrows, and that 4 feet head is employed on the wheels when the river is at that elevation, the least height of the wall should not be less than 31 feet above the level of low water; its length will be 2,136 feet, including the returns at the two ends connecting it with the cliff above the tunnel, and with the ravine that communicates with the head of the canal.

The length of the canal will be only 640 feet, or 20 feet longer than the range of workshops; but the mass of the excavations will be 33 feet deep, besides a large portion of the river bank that must be removed to the average depth of 10 feet.

The supply of water in the Harpeth, during its lowest stage, is not known; the quantity, however, is considered to be sufficient in the dryest seasons; and, by using reaction wheels, the power will be rendered permanent without a dam. The probable cost of occupying the site below the Narrows is estimated at $357,940, viz:

Excavation of 105,283 cubic yards of earth, for canal, forebays, races, &c., at different depths, from 12 to 33 feet,	$28,630 90
MASONRY.	
For forebays, races, river wall of the shops, 13,068 perches, at $2 16 per perch,	$28,226 88
For arches and flagging, 188 perches, at $4 32,	812 16
For canal wall, and river wall, from the tunnel, 33,373.05 perches, at $2 16,	72,085 78
Two bridges over canal, at $100 each,	200 00
Four bridges over forebays, at $25 each,	100 00
Head-gate to the tunnel, thirty feet high, including masonry, fixtures, &c.	698 18
Sixty-one buildings, including officers' quarters, thirty-two dwellings for workmen, offices, and workshops, with fixtures for machinery,	164,030 02
Tools and machinery,	14,522 00
Miscellaneous articles,	1,549 00
	$310,854 92
Add for contingences, ten per cent.	31,085 49
	$341,940 41
Purchase of 450 acres of land, and water privileges,	16,000 00
Aggregate,	$357,940 41

It is to be observed of this site, that the fall employed is the whole descent of the river in the distance of five miles, which differs but little from the rate of its descent, either above the head or below the outlet of the tunnel. It is probable, therefore, that the river rises equally high at both places; and, when at its greatest elevation, that the column of water, pressing against the outer side of the head-gate, will be fourteen feet higher than the column which sustains it within.

Any accident that might happen to destroy or remove the gate, or in any other wise give a free passage to the water, at that time, would be followed by the immediate ruin of the river wall, and would put a stop to the operations of the armory.

The danger might be removed, however, by the use of additional head-gates, to divide the pressure of the column of water; and would be preferable to a weir, which at this place would not cost less than twelve or fifteen thousand dollars.

The mode of conveying the water to the workshops, by means of a river wall, is an inconvenience attending the position of the present tunnel, which remains to be noticed. The wall must be placed in the bed of the river, and the current would strike against it near the mouth of the lagoon, at an angle of forty degrees. We should prefer to abandon this tunnel, and to open another, through the hills, entering about five hundred yards above the head of the old tunnel, and taking it direct to the ravine near the workshops. Its length would not exceed four or five hundred yards; and allowing the excavation to be made sufficiently high to leave the roof as it ought to be above the surface of the water, when at a medium, or even a higher stage, it would probably cost less than the river wall, but would require equal precautions against accidents to the head-gate. Two hundred thousand acres of vacant lands lie adjacent to the site, and all within five miles of it has been appropriated by an act of the State Legislature to the use of the General Government, in case the armory should be located at the Narrows.

The resources of the neighboring country, in reference to the wants of an armory, consist chiefly of fuel, (fire wood,) building timber, and iron. Several furnaces and forges are in operation within a few miles of the site. A ton of iron, from the works of Colonel Napier, was sent to the armory at Springfield, during the last season, and proved, on trial, to be equal in quality to any that is found in commerce, and only inferior in the refining to the best warranted Salisbury iron, made especially for that armory, and for which twenty dollars per ton extra is paid.

The distance from the Narrows to the Cumberland river is less than ten miles on a straight line, and about twenty miles to Nashville; the road leading from the latter place to Charlotte passes within a mile or two of the site. Harpeth river is said to be navigable from one to four months in the year, for boats drawing three feet water. Steamboats ply on the Cumberland river during five months in the year; keelboats about ten months, and sometimes the whole year. It is never obstructed by the ice, unless by that of the Ohio, near its mouth; and the general character of its navigation below Nashville is said to equal that of the Ohio between Pittsburg and Louisville.

The falls of the Ohio are occasioned by an irregular bed of horizontal limestone, about two miles broad, that forms a natural dam twenty-five or thirty feet high above its base, and extending obliquely across the river, from between Shippingport below, and Louisville above the falls, on the Kentucky side, to the upper end of Clarksville below, and Jeffersonville above them, on the Indiana side.

The course of the Ohio, until it passes Jeffersonville, is nearly parallel to the upper limit of this obstruction; opposite to Louisville, the river changes its direction to the right, and, after passing over the bed of limestone, to the foot of the falls, it again changes it direction between Clarksville and Shippingport, resuming very nearly its original course, and leaving Shippingport on a point of low bottom to its left.

Louisville stands on an elevated plain, nearly opposite to the head of the falls. A short distance below the town the high ground recedes from the river, leaving an intermediate body of low bottom land, that extends and gradually enlarges, in the direction of Shippingport, where it is nine hundred or a thousand yards wide. The upper side of the bed of limestone quits the Kentucky shore at the lower end of Louisville, making an acute angle with the course of the river bank above, and leaving a secure and tolerably commodious harbor in front of the town, and extending upwards as far as the mouth of Bear Grass creek. The termination of this harbor or basin is the point from whence the water must be taken to any site on the Kentucky side. The rock near the head of the falls is left bare at low water, for a considerable distance from the shore, on both sides of the river. It is exposed for ten or twelve hundred yards below the basin, and five or six hundred yards in front of it, and before Louisville, forming a level plain about a foot above low water, and connecting Corn Island, near the head of the falls, with the Kentucky shore. On the opposite side, below Jeffersonville, it extends to a greater distance along the margin of the river, but has a less width.

The right bank of the river, from Jeffersonville, nearly as far as Clarksville, is high, and not subject to overflow, with the exception of a narrow strip of low bottom, eighty or one hundred yards broad, in places that will be noticed hereafter. Near the upper end of Shippingport, and immediately at the foot of the falls, is Rock Island. It is the first of a succession of low islands that extend more than a mile up the river, and terminate in a reef of rocks that reaches to the head of the rapids. This chain of islands and reef divides the river into two unequal channels, with very unequal descents, as far as Rock Island. The Kentucky channel is again divided, but in a manner that will not affect the use of the water power, and therefore does not require to be described.

Fourteen hundred yards below the head of the falls, the descent in the channel next to the Indiana shore is 17 feet; and immediately opposite, on the Kentucky side of the river, the descent is only 7 feet. This difference of level continues to the forebay of Tarascon's mills, at the upper end of Shippingport, where the whole descent is only 8 feet 4 inches, and is the largest portion of the falls that can be employed at an armory, without going near to Portland, about half a mile below Shippingport, where the ground affords sufficient space for the buildings. Thus, there are three sites at these falls: one above Tarascon's mills; another between Shippingport and Portland; and the third below Jeffersonville, Indiana: all very differently circumstanced, and will require to be considered separately.

But as the height and continuance of the periodical rises of the river, and particularly the relation which subsists between the successive rises immediately above and below the falls, in connexion with the height of the whole fall at low water, will influence materially the expense, if not the security of the works, as well as the term of interruption to the power at each of these sites, it will be proper, in the first instance, to present such facts and circumstances concerning them as are in our possession, and which governed in the estimates.

The highest rise within the recollection of the inhabitants is stated from 35 to 37 feet at Louisville, and from 56½ to 61 feet at Shippingport. A plan and profile of the bed of the river next the Kentucky shore, between Louisville and Shippingport, from a survey by Mr. Torren in 1819, makes the height of the freshet in 1817 to be 35 feet above low water at the mouth of Bear Grass creek, and 60 feet 7 inches at Shippingport. Mr. Flint, the engineer employed by the Ohio Canal Company, states the rise at Jeffersonville in 1815 to have been 37 feet above the lowest stage in 1819, which accords exactly with the measurement from water marks at Bear Grass and Jeffersonville, made by the surveyor, under our direction.

The falls have been frequently surveyed, and levels taken to determine their height, but generally without ascertaining the stage of water at the time, otherwise, it would seem, than by estimate or conjecture, and from which the whole descent of the river, at extreme low water, is then calculated; hence it is variously represented from 22½ to 27 feet. So, also, the height of the greatest rise at Shippingport appears to be generally inferred from its height at Louisville, where the low water marks may be ascertained and measured from, with more certainty and ease than below. The greatest portion of the whole fall, actually measured by any individual, appears to have been done by Mr. Flint in 1819, who found the difference of level, between the surface of the river at Jeffersonville and the northwest point of Rock Island, near the upper end of Shippingport, to be 24 feet 5½ inches, when the river was at its lowest stage in that year, and only 8 inches depth of water on the bar at the head of the falls.

Mr. Torren, on his plan and profile, above referred to, lays down the whole fall, at extreme low water, at 26 feet, but expressly as calculated at 4½ inches depth of water on the bar, which is the least depth ever known upon it. The calculation, then, must have been made subsequent to the survey in 1819, at which period the least depth of water on the bar was ascertained to be greater than what he states it.

But as his levellings were carried to a point below Rock Island, and as the Ohio river was subsequently lower than in 1819, his estimate of the whole fall (if it be taken for a period of extreme low water) will correspond sufficiently with the levellings of Mr. Flint in 1819, and may be considered as the nearest approximation to the truth which a comparison of all the data in relation to the subject will admit.

The ratio between the rise of each successive foot at Louisville, and the corresponding rise at Shippingport, counting from any given stage of the river up to its greatest elevation, is not known. It has been determined, however, with sufficient accuracy, to an extent that will be useful in the present inquiry.

In 1809, Mr. Nicholas Berthoud, of Shippingport, with the assistance of another gentleman at Louisville, ascertained, from a series of daily observations, the relative rise of the river at both places, for several successive feet above low water. Each foot of rise above the falls, during the first three feet, was accompanied by a uniform rise of 4 feet below; making the whole rise below 12 feet, and 3 feet above. The ratio then changed, and continued to decrease. At the seventh foot rise above, the whole rise below was 24 feet; and at the ninth foot above, it was about 28½ feet below. Some doubts, however, were expressed to us as to the accuracy of these memoranda after the seventh foot. The actual difference of level between the surface of the river at Louisville and Shippingport, at the commencement of these observations, was not known. Nor is the circumstance very essential, as it can be determined with sufficient exactness for the present purpose from other data. The levellings and measurements of Mr. Flint show that the ratio of 4 for 1 only begins at a certain elevation of the river; and that, when the fall was more than 24 feet in 1819, and the depth of water on the bar was less than 1 foot above extreme low water, the ratio was less than 2 for 1.

The whole descent from Louisville to Shippingport must, therefore, have been less than 24 feet at the commencement of Mr. Berthoud's observations in 1809. If 24 feet be taken as the fall at that time, it will appear that the whole descent of the river was only 7 feet, when the rise observed at Louisville was 7 feet; and, by continuing to diminish the ratio for the 3 succeeding feet above that rise, in the same degree that it is found to diminish in the 3 feet preceding it, the fall will be 3½ feet when the river at Louisville is 10 feet above its level, at the time the observations were begun: from whence it will follow, that the power at an armory below Shippingport will prove

inconvenient, if not inefficient, in its operation, when the river shall have attained but little more than one-fourth its greatest elevation at Louisville, and that it will cease altogether before the river shall have attained to one-third its greatest elevation at that place. These results are much more favorable to the duration of the power than those derived from another respectable authority. A scale constructed by the engineer, Mr. Brooks, to show the action of the water on the falls, makes the whole difference of the level between Louisville and Shippingport to be only 3 feet, when the rise on the bar, at the head of the falls, is 7 feet above extreme low water; at which period the whole fall is laid down at 24 feet. The power, according to this scale, would, therefore, be totally interrupted when the river shall have reached one-fifth of its greatest height at Louisville. We have adopted the observations of Mr. Berthoud, however, as more authentic; and it has governed in the calculations for the canals, walls, &c. for the different sites. Both scales are placed in the appendix.

SITE BELOW SHIPPINGPORT.

This site embraces the outlets between Shippingport and Portland, and will admit of using whatever portion of the whole fall may be found most advantageous.

The ground is sufficiently extensive, and, although that part next the river is first on low bottom, it is but seldom overflowed, and is covered but a few feet by the highest freshets. The embankments necessary to secure it from this inconvenience will cost but little, and may be made secure; and in case any accident should happen to them during the freshet, the consequences could not be serious. These remarks, however, only apply to that part of the ground adjoining Portland: near to Shippingport, the river bottom is much lower; but, as the object of the estimate is to determine the least expense which would attend the occupation of any site below this place, the works are supposed to be located as near to it as a ravine at its lower end will permit; and the length of the canal is reduced several hundred yards in consequence. The water would be conveyed to this site from the lower end of the basin, before Louisville, by a canal 3,355 yards long. In the first 773 yards, it will pass through the rock plain that connects Corn Island with the shore at low water; the remaining part of the distance will be through the low bottoms, to the lower end of Shippingport; and thence parallel to the river bank, in the direction of Portland, as far as the position of the last workshop.

Estimate of the expense for an armory below Shippingport.

EXCAVATIONS OF EARTH.	
For forebays, races, &c.:	
17,785 cubic yards, from 16 to 20 feet deep, - - - -	$4,077 26

	$394,813 66
Two hundred acres of land, embracing lots of Shippingport and Portland; value not known.	
Aggregate,	

It is proper to mention a circumstance that may add materially to the expense of occupying this site. We have no information respecting the position of the rock below the surface of the ground, other than what is furnished by the experiments of Mr. L. Baldwin, who surveyed a route for a navigable canal round the falls in 1815, under the direction of the Ohio Canal Company, and bored the ground in nine different places on the line of the location, to ascertain the distance of the rock below its surface. The route of the proposed canal, for an armory below Shippingport, follows a straight line from the point where it first enters the low bottom at Louisville, until it reaches the lower end of Shippingport, and would pass very nearly over the same ground with that located by Mr. Baldwin.

We have, therefore, adopted his profile and sections of the ground, reducing the points at which his borings were made to corresponding points on the straight line. It appears, from this profile, that the surface of the rock

gradually declines in the direction of Shippingport, and, at the distance of 700 yards from the river, sinks below the level of low water above the falls; the last boring is at a point 290 yards from the river, and the surface of the rock is there 7 feet below that level. The straight line of the canal continues 220 yards beyond this point, to within 70 yards of the river, below Shippingport, and thence 300 yards parallel to the river bank, in the direction of Portland. The surface of the rock in the latter distance is assumed in the estimate to be nine feet below the level of low water in the canal, and the dimensions of the walls are regulated accordingly.

There is no other reason for supposing it may be found at that depth, along this part of the route, than what may be inferred from the borings of Mr. Baldwin.

It certainly does not extend to the river at the site; nor is it any where exposed to view at the river bank below Shippingport, and it may terminate several hundred feet above the workshops; in which case the additional quantity of masonry that would be required, beyond the amount stated in the estimate, might exceed eighteen thousand perches.

SITE ABOVE SHIPPINGPORT, NEAR TARASCON'S MILLS.

This site is near the upper side of Shippingport, and five hundred and seventeen yards above Tarascon's mills the whole descent of the river is eight feet.

It has the advantage over that below Shippingport of a secure rock foundation, elevated several feet above low water, on which to build the river wall and other masonry.

The water would be taken, as in the former case, from the basin before Louisville. The canal would pass 1,058 yards through the rock plain, between Corn Island and the shore, to where it enters the bottom land; and from thence it will pursue a straight course 1,400 yards, to the workshops, through the low river bottom. The earth, in these distances, averages 19.36 feet above the surface of the rock; the rock averaging 3.97 feet above the level of low water at Louisville.

In whatever manner the fall at this site may be divided between the descent of the canal and the head employed on the wheels, the excavations must necessarily be great.

In the estimate of the expense, the wheels are supposed to be placed only six inches above low water, which is necessary to leave the head employed on them, the power that is assigned to it at that stage of the river. The rest of the fall is divided between the descent of the canal and the head employed on the wheels, and will require more than 500 cubic feet of water per second. This distribution of the fall is made exclusively with a view to economize the expense of the excavations, and will evidently be inconvenient, even with reaction wheels, and impracticable with any other kind. They will remain submerged not less than nine or ten months in the year, and frequently the whole year.

Estimate of the expense for an armory at the site above Shippingport.

EXCAVATIONS OF EARTH.

For forebays, races, &c., at the workshops, 26,893.4 cubic yards, from 14 to 28 feet deep, -	$7,022 85
For the canal, 103,910.9 cubic yards, averaging 17.1 feet deep, at 21 cents per yard, -	21,821 29
42,581.75 cubic yards, averaging 29.5 feet deep, at 36 cents per yard, - - -	15,329 43

OF ROCK.

For forebays and races, 1,619.99 cubic yards, from 6.5 to 9 feet deep, - - -	1,342 88
For the canal, 25,282.4 cubic yards, averaging 5 feet deep, at 66 cents per cubic yard, -	16,686 38
30,689.1 cubic yards, averaging 13.54 feet deep to bottom of canal, under 17.15 feet of superincumbent earth, at $1 37½ per cubic yard, - - - - -	42,197 51
4,640 cubic yards, 11.79 feet deep, under 29.5 feet of earth, at $1 60 per cubic yard, -	7,424 48
Embankment at the upper and lower sides of the site, 12 feet average height, 42,854.9 cubic yards of earth required, at 15 cents per yard, - - - - -	6,428 24

MASONRY.

Walls for forebays and races, (vaulted,) 717.25 perches, at $3 per perch, - -	2,151 75
For the arches, 852.58 perches, at $4 75, - - - - -	4,049 76
River and canal walls at the workshops, 17,527 perches, at $2 75 per perch, - -	48,199 38
Head-gate for the canal, 45 feet, including masonry, &c. - - - -	2,841 96
Two bridges over the canal, $100 each, - - - - -	200 00
Buildings and fixtures for the machinery, - - - - -	172,617 32

Deduct for stone excavated from the canal, and used in building the walls, 19,068.88 perches, at 75 cents per perch, - - - - - -	14,322 66
	$350,061 57
Contingent expenses, estimated at 10 per cent., - - - -	35,006 15
300 feet of land fronting on Mill street, and between it and the Ohio river, at the upper end of Shippingport, J. A. Tarascon, owner, offers at $50 per foot, - - -	15,000 00
100 acres of Lytle's land, offered at - - - - -	105,000 00
Aggregate, - -	$505,067 72

One hundred acres of land additional required for the site, price not known, including about three acres divided into out-lots, number and extent of lots not known, rated at $20 per foot, front on the streets.

The excavations in this estimate can only be diminished by diminishing the head of water on the wheels, and augmenting the descent of the canal by the difference, in order to obtain a less area for its transverse section, by increasing the velocity of the current in a greater ratio than the quantity of water; but this would be a substitution of one inconvenience for another.

Besides, the head employed on the wheels is already reduced to four feet at extreme low water, and the velocity of the current in the canal is between four and five feet per second through the rock, where the depth of the excavation is greatest; and if this velocity could even be increased at low water, it would cause it to be too great at the period when a rise in the river should raise the water in the canal above the surface of the rock, and bring it in contact with the earth sides above.

Levels were taken on four different lines, extending across this site from the river bank to the high ground in the rear. The greatest elevation of the surface on either of these lines is 6.66 feet below the level of the highest rise of water at Louisville. The greatest average elevation of the surface on any of these lines is 11.56 feet below the same level.

The highest part of the site is near the position occupied by the workshops and other buildings; and the distance from the river to the nearest part of the high ground back of it is 850 yards.

The excavations from the canal will be sufficient to make the embankment on the side next to and between it and the river. From the point where the canal first enters the river bottom to the nearest high ground, (a distance of 1,050 feet,) and from its termination at the workshops to the nearest part of the high ground back of Shippingport, (a distance of 2,491 feet,) the embankments will average 15 and 12½ feet in height, respectively. The utility of these embankments may justly be questioned, unless their dimensions are made sufficiently great to prevent all hazard of accident. To omit them altogether would be attended with great inconvenience during the prevalence of a flood that should rise above the surface of the site, although but little danger might ensue to the works. On the contrary, whatever convenience they might afford during the continuance of ordinary freshets might be dearly paid for by any accident that should open a passage to the water when the river was at an elevation equal to that of 1815. During the high freshets the water can be admitted into the canal only to within eight or nine feet of the extreme elevation of the river, without flooding the site. The difference in the pressure of the two columns of water at the elevation of 42 and 34 feet, respectively, on the outer and inner sides of the head-gates, would then be such as to warrant serious apprehensions for their security, and would either require the use of additional head-gates to divide the pressure, or to subject the site to the inconvenience of partial inundation. A plan has been proposed for using the water at this site different from that which we have adopted, and which it may be proper to notice. It is to build a wall in the bed of the river, extending from the upper workshops to the foot of the falls, a distance of 727 yards, and at a sufficient distance from the works to permit the intervening space to be used as a tail-race, and by damming out the river opposite to the works, to enable breast or undershot wheels to operate, until they are stopped by the refluent water from below the falls. The object might no doubt be accomplished by the means suggested, and the duration of the power prolonged materially beyond the period at which it would be interrupted, if these wheels were left exposed to the rise of water in front of the works. The use of reaction wheels, however, answers an equal or better purpose, without the aid of the river wall. Besides, the proposed plan would compel the United States to purchase the whole of Mr. Tarascon's very valuable property along the margin of the river, including Rock Island, for which he asks $200,000; and this in addition to the quantity of ground that is at present required for the site.

SITE BELOW JEFFERSONVILLE.

It has already been stated that the descent of the river on the Indiana shore is 17 feet at a point 1,400 yards below the head of the rapids. The ground at this place is high bottom, that never overflows, and affords an advantageous position for the erection of the necessary buildings for an armory. A narrow bench or strip of low bottom extends along the front of the high ground as far up as Jeffersonville, and is sufficiently wide below the head of the rapids and at the site to afford convenient space for the canal and workshops.

Between this bench and the river, at low water, the rock is left bare to the distance of 1 or 200 yards. According to the plan adopted in the estimate for this site, the canal will pass about 800 yards through this bed of rock, from a point 180 or 200 yards above the head of the rapids to where it enters the low river bottom, and from thence to its end the distance is 676 yards. The surface of the rock in the first 800 yards averages less than 18 inches above low water at the head of the canal. In the remaining 676 yards its average height is about four feet, under superincumbent earth that varies from 17 to 24 feet deep.

The excavations of earth from the canal would be sufficient to raise the embankment next the river to a level with the adjacent high ground, and the workshops might be placed nearly at the same height with the rest of the buildings.

Estimate of the expense for an armory below Jeffersonville.

EXCAVATIONS OF EARTH.

For forebays and races, 9,839.82 cubic yards, of different depths, - - -	$1,549 24
For canal, 35,924.4 cubic yards, averaging 17 feet deep, at 21 cents per yard, - -	7,544 12
27,592 cubic yards, averaging 24 feet deep, at 28 cents per yard, - - -	7,725 76

OF ROCK.

For forebays and races, 4,670.38 cubic yards, of different depths, - - -	3,946 73
For canal, 11,209.3 cubic yards, from 3 to 6.43 feet deep, 75 cents per yard, - -	8,406 97
10,225.34 cubic yards, 11.04 feet deep, under 24 feet depth of ground, at $1 50 per yard, -	15,337 95

MASONRY.

Walls for forebays and races, (vaulted,) 439.757 perches, at $3 per perch, - -	1,319 27
River wall, piers, and walls for canal next the workshops, 13,480.519 perches, at $2 75 per perch,	37,071 41

Two bridges over canal, $100 each, - - - - - -	200 00
Head-gate, 44 feet high, including masonry, &c. - - - -	2,181 96
Buildings, including fixtures for machinery, &c. - - - -	168,570 25
Tools and machinery, including miscellaneous articles, - - - -	16,071 00
	$273,974 42

Brought forward, - - - - - - -	$273,974 42
Deduct for stone excavated from canal and used in the walls, 14,772.85 perches, at 75 cents per perch, - - - - - - -	11,079 64
	262,894 78
Contingent expenses, at 10 per cent., - - - - -	26,289 47
87¼ acres of land, offered at different prices, from $30 to $100 per acre, amount to - -	5,785 00
Hughes & Co's. mill and water rights, - - - - -	12,000 00
312¾ acres additional, price not known, estimated at $40 per acre, - - -	12,510 00
Aggregate, - -	$319,479 25

A greater head of water is employed on the wheels at this site, and a greater descent allowed to the canal, without inconvenience to the works, than the whole amount of fall can furnish at the site above Shippingport. These advantages, together with the circumstance of its requiring a much shorter canal, give to it a great superiority as regards the relative expense of establishing an armory at the two sites, and as relates to its security; it is exposed to no hazard that is not common to all situations on the margin of a large river that is subject to equal high rises with the Ohio. The water may be admitted into the canal on a level with the highest freshets, without interfering with any of the buildings, or producing any serious inconvenience to the works. The power will be interrupted sooner than at the site between Shippingport and Portland, and probably not so soon as at that above Tarascon's mills. The difference in this respect, however, cannot be estimated, nor can it be considerable. Supposing the power to continue effective at the site near Portland until the rise at Louisville exceeds 9 feet, the power at the site above Tarascon's mills will probably continue to be efficient, until after the rise of the Ohio below Shippingport exceeds 24 feet. And, at that stage, the descent of the river, at any two opposite points, taken on the Kentucky and Indiana sides, will no longer be in the same ratio as at low water, but may approach nearer to that of the respective distances of these points, below the head of the falls; consequently, the power at Tarascon's mills, with horizontal reaction wheels, may continue effective for as long a period as at the site below Jeffersonville, although the former has only eight feet fall at low water, and the latter seventeen. There is an inconvenience attending all of these sites that has not yet been adverted to. The Ohio river, at its higher stages, carries, in its course over the falls, large quantities of sand, gravel, and stones of considerable size. Judging of the extent of its agency in these operations from the evidences which are exposed at different places, at and below the falls, at low water, on both shores, there is great reason to apprehend that the upper part of the canals, where they pass through the rock plain, would be more or less obstructed, or perhaps entirely filled, by the deposite left by the river during a single freshet. The evil, if it should exist to the extent here supposed, would require an expensive and inconvenient remedy. On the Kentucky side of the river, the course of both the proposed canals, where they are thus exposed, is nearly in the direction of the current, and would retain whatever it might convey into them. They may, therefore, require to be secured by a mole or pier, extending from the basin before Louisville to where they are taken into the low river bottom. These piers would require a head-gate, communicating with the shore at their junction with the basin. The same expedient might likewise be found necessary for the canal at the site below Jeffersonville, although its position may possibly admit a more simple and less expensive remedy.

The length of time that the operations of an armory would annually be interrupted at these sites, by the high water of the Ohio, cannot be determined with much certainty. It is stated to us that Mr. Tarascon's mills were stopped during six months in 1822–'3; that the ordinary period of the interruption, however, does not exceed three or four months. The forebay of the mills is eight feet below the head of the falls, and therefore does not furnish a criterion in this respect. But it has been shown that the power will most probably cease to be efficient at the site below Shippingport before the rise at Louisville is ten feet, and that it will be totally interrupted when the river rises above that height. According to the testimony of the pilots at Louisville and Jeffersonville, it appears that the depth of water on the bar continues at or above the depth of 6 feet from three to four months in the year, and continues four weeks at the depth of 20 feet, and six weeks at the depth of 10 feet.

Plans S and L, No. 1, exhibit profiles of the two canals at Louisville.
Plans S and L, No. 2, exhibit sections of the same.
Plans S and L, No. 3, exhibit sections of embankments for the same.
Plans S and L, No. 4, exhibit a copy of L. Baldwin's profile.
Plan L, No. 2, exhibits profile and sections of canal, 2d project.
Plan J, No. 1, exhibits profile of canal at Jeffersonville.
Plan J, No. 2, exhibits sections of the same.
No 5 is a map of the falls of Ohio.

NORTH BEND OF OHIO RIVER, FIFTEEN MILES BELOW CINCINNATI.

The Great Miami river, eight or ten miles above its mouth, adjacent to the village of Cleves, approaches near the North Bend of the Ohio. The intervening ground is chiefly a lofty ridge, depressed at one point to 137 feet above the level of the Ohio, and falling off to the bottom lands on each side. It declines somewhat abruptly towards the Ohio, but leaves a broad plat of high bottom land, well situated for the location of the buildings necessary for an armory. The least distance of the Miami from the Ohio is at a point below Cleves, and is about 1,500 yards. The difference of level in the waters of the two rivers is here 28¾ feet. The bottom lands extend from this point upwards, including the village of Cleves, and along the left bank of the Miami to the mouth of Jordan creek, a distance of 3,000 yards. The average elevation of this bottom, taking the most advantageous route for a canal, is 21.5 feet above the level of the Miami, at the mouth of Jordan creek, where the level of the water is 9.875 feet higher than at the point nearest the North Bend below Cleves. The bed of the Miami, when exposed to view, is composed of gravel and loose stones to a considerable depth, evidently changing their position frequently, according to the action of the current at its various stages of elevation, which appears to have been a powerful agent in their accumulation.

Sections of the river were taken at three points, which exhibit ten feet for the greatest depth at two of the places, and eleven feet at the third.

The rock bottom of the river, on which a dam must be founded, will, therefore, probably be met with at not less than ten feet below the surface of the water. It is proposed to take the water from the river near the mouth of Jordan creek, raising its surface ten feet with a dam, which will increase the whole fall to forty-eight feet, and reduce the amount of excavations for the canal.

The left bank of the Miami presents, at this point, a high bottom for the abutment of a dam. The river is three hundred and sixty feet wide at low water, being much narrower than at any point below. The bottom land on the right bank is also higher than at the other places, where sections were taken. It is, however, but fourteen feet high at the distance of eight hundred feet from the river, and would require an embankment or extension of the dam to that distance.

The length of a canal from the mouth of Jordan creek to the high ridge will be 92,270 feet; average depth of cutting in that distance, above the level of the dam, 11.62 feet. A tunnel through the ridge would be 1,817 feet long, entering the hill under a depth of about 36 feet of earth. We have no precise data for estimating its expense, but the cost will fall much below that of an open cut, as the ground is in one place, for the distance of 100 yards, more than 80 feet, and averages, throughout the whole distance, more than 50 feet above the level of the dam; an open cut would therefore require the removal of several hundred thousand cubic yards of earth, if the ridge should contain no rock. Indeed, the rock no where presents itself to view at the surface. The formation of the adjacent hills, however, leaves but little doubt of its existence; but, at what depth, or in what state, can only be ascertained by experiment; but, under all probable circumstances, the cost of a tunnel will fall much below that of an open cut.

From the outlet of the tunnel to the site of the workshops, the canal would be open a distance of 264 feet, and the cutting would average 15 feet above the level of the dam.

Estimate.

Excavation of 304,133.25 cubic yards of earth, averaging from 16 to 24 feet depth,			$74,063 50
Excavation of rock for tunnel, 1,817 feet long, 13 by 11.36 feet, estimated as consisting of rock alone, 9,932.7 cubic yards,			40,000 00
Walls for forebays, races, and canal, including arches, 12,409.71 perches,			25,191 70
Wall at mouth of ravine, to shield the river bank from the washings of the tail-races, 1,818.18 perches,			3,636 36
Dam, 400 feet long, 20 feet high, of large stone, dressed, including covering and filling,			29,000 00
Embankments, 800 feet long each, 22,133 32 cubic yards,			2,766 66
Head-gates to canal, bridges over forebays and canal,			597 92
Buildings and fixtures for machinery,			137,556 86
Tools, machinery, and patterns,	$14,522 00		
Miscellaneous articles,	1,549 00		
			16,071 00
			$328,884 00
Contingent expenses, estimated at ten per cent.,			32,888 40
Six hundred and forty acres of land, at $20,			12,800 00
		Aggregate,	$374,572 40

This site offers, in several respects, peculiar advantages. The extent and fertility of the adjacent country, and its proximity to Cincinnati, will assure to it a plentiful supply of provisions, and the command of all necessary supplies of materials and labor.

The navigation of the Ohio is free from many of the impediments which exist at higher points. The health of the place is comparatively good; and the volume of water afforded by the Miami, at its lowest stage, is abundant.

The highest known rise of the Ohio, at North Bend, is stated at 57 feet. The highest rise of the Miami near Jordan creek is said to be 15 feet. These great rises, however, do not occur annually, and are said to last for only a short period. The whole fall obtained, with the aid of the dam, is 48 feet. The least efficient head of water being 4 feet, and 1 foot of the fall used in the descent of the canal, the works would not be stopped by a rise in the Ohio, until it reached the height of 43 feet; and that, with the Miami at its lowest stage, (an occurrence by no means probable,) giving to the Miami a rise of only 3 feet above its extreme low stage, when the freshets occur in the Ohio, will permit the continuance of operations till the rise of the latter equals 46 feet. If the Miami should rise to one-third its greatest height, the works would not be stopped by a rise of 48 feet in the Ohio. The elevation of the Miami to one-half of its greatest rise would continue the operations with the Ohio, at an elevation of 50 feet; and if the rises of the Miami and Ohio should be simultaneous, and proportionate to their respective greatest elevations, the power would be permanent.

From the best information that could be obtained, it appears that the usual height of the winter and spring freshets is from 35 to 45 feet at Cincinnati; and that the water remains at above 40 feet elevation for about fifteen days, annually. It is therefore probable that the interruption of the power by high water will not constitute a serious objection to the site, if a dam can be erected to raise the surface of the Miami 10 feet.

The hazards of a dam 20 feet high, across the Miami, a rapid and powerful stream, with an average fall of about 4 feet per mile, for some distance above and below, are not easily estimated. The point selected for its erection is probably the best that can be found. Placing it further down the stream, where the right bank is lower, would not only increase the hazard of its loss, but would reduce the whole amount of fall, and increase the depth of cutting for the canal.

Placing it higher up will compel a resort to a river wall along the left bank, under a high bluff, for conveying the water down to Jordan creek, where the canal would enter the bottom land.

The extreme rise of the Miami, near Jordan creek, is said to be 15 feet. The high bottom, not now subject to overflow, is at the distance of about 800 feet from each abutment; and, instead of embankments, it may be found indispensable to extend the dam, or build heavy walls of masonry for a part or the whole of the distance, at an expense greatly beyond the sum estimated for a dam 400 feet long, with the embankments.

Several situations were examined on Licking river, Kentucky, within ten or twelve miles from its mouth. An abstract of the levellings taken at each of them is placed in the appendix; and, together with the sections of the ground exhibited on the accompanying plans, will show the height to which the rapids or falls at those sites are severally covered by the freshets of the Ohio, independent of the rises in the Licking, and render a particular description of them unnecessary. The only position below Falmouth, near the forks of the river, at which an adequate or permanent power can be obtained, by means of any dam that it would be safe, or perhaps practicable to erect, is at the mouth of Bowman's creek, twenty-three miles from the Ohio river. The highest rise of the Ohio does not cover the rapids at this site.

We did not examine it; but, from the returns of the surveyor who took the level, it appears that a fall of 14.5 feet may be obtained in the distance of three and a quarter miles; and that it would be necessary to take a canal nearly two miles through a river bottom, that averages 31 feet high above low water, to where the fall could be employed. An armory, at a site so circumstanced, would probably cost above $400,000.

SITE AT ZANESVILLE, OHIO.

The Muskingum river, as it approaches Zanesville, runs in a southwesterly direction till it reaches the falls. In passing them, it changes to a southeasterly course, forming nearly a right angle in its progress to Slagoe's run, where it bends away in a more southerly direction. The town of Zanesville occupies the angle formed by the river, stretching along its left bank, opposite and below the falls. Adjoining the lower part of the town, the river bank is narrow, affording barely sufficient space for the location of a canal and workshops. The second bank rises about 20 feet higher than the first, and affords a plat of about 20 acres, extending back a short distance, to the foot of the hills at its eastern extremity, but gradually widening towards the northwest. Licking creek enters the Muskingum from the westward, in the bend of the river at the falls, and above the town of Putnam, which occupies the right bank of the river, extending downwards, opposite and below Zanesville. The falls are now the property of an incorporated company, who have erected a dam 5½ feet high, cut a canal for the supply of mills, &c., and sold portions of the water power on both sides of the river.

This company has offered to the United States so much of the water as may be necessary for the uses of an armory, and the entire control of the stream when at a low stage, on the single condition that the Government construct a permanent stone dam and lock for the passage of boats over the falls.

Should an extension of the establishment, at a future period, require all the water which the site affords, it will involve the necessity of purchasing the entire rights and privileges of the company, which they offer at $80,000. The natural fall in the river, from the head of the rapids to Slagoe's run, a distance of 1,300 yards, is nine and a half feet. It is proposed to erect a stone dam seven feet high, nearly in the place occupied by the company's dam, take the water out at a point about 60 feet above Granger's mills, and cut a canal from thence, through the town, to within 500 feet of Slagoe's run, a distance of 1,056 yards. The canal will pass 1,023 feet through rock, averaging 16.35 feet deep, with 12.66 feet of superincumbent earth. From the termination of the rock to the end of the canal, the sides will be walled, and the bottom flagged; the distance is 2,145 feet, and average depth of earth 21.38 feet. From the dam to the site, the canal passes through the town of Zanesville, and requires to be walled on both sides, for the purpose of occupying a less width of ground and providing against the accumulation of obstructions. From the first workshop to the end of the canal, a wall on the side of the shops is indispensable, and the narrowness of the river bank warrants the use of one on the opposite side, although the expense is increased, as will appear by a reference to the calculations.

The public spirited citizens of Zanesville, aware of the expense of cutting a canal through the town lots, from the great value of both land and buildings, have determined to furnish, free of expense to the Government, all the ground necessary to be occupied by the canal, in its passage from the dam to the proposed site. The town authorities have also assumed the expense of bridging the streets and alleys wherever it may be requisite; therefore, the amount necessary for these objects is not embraced in our estimate. To render the abutment of the dam on the right bank more secure, and also to save the expense of constructing head-gates, and a race for supplying them, it has been considered advisable to purchase out the mills and water rights on the west side of the river, and they are included in the estimate accordingly. The dwellings for workmen are omitted in the estimate, and are dispensed with, from motives of economy. All those who cannot be accommodated in the buildings now erected, and included in the purchase of the site, must reside in the town.

A list of the lands, amounting to $331\frac{35}{100}$ acres, with numerous dwellings and other buildings, marked Plan Z No. 1, exhibits a description of the property to be purchased, including several coal banks; and the title bonds procured by the committee of the town, from nearly all the owners, assure to the Government the price to be paid for the same.

Plan Z No. 2 shows the boundaries of the lands, and the location of the workshops.

Plan Z No. 3 exhibits a profile and sections of the canal, at several points.

Estimate for Zanesville.

Excavation of earth for canal, forebays, races, and river wall, 122,956.4 cubic yards of earth, averaging from three to twenty-two feet deep,		$29,001 75
Rock for canal, 6,161.4 cubic yards, averaging 16.72 feet depth, under 12.66 feet of earth,		7,393 68
Walls for canal, forebays, races, flagging, piers, arches, and river wall, 39,787.02 perches,		79,950 04
Head-gates to canal, and bridges over forebays and canal,		500 00
Dam and wing, 963 feet long, 7 feet high, of large dressed stone, filling, covering, &c.,		26,000 00
Lock, 90 feet long and 20 feet wide,		5,000 00
Workshops and fixtures for machinery,		48,910 49
Tools, machinery, and patterns,	$14,522 00	
Miscellaneous articles,	1,549 00	
		16,071 00
		212,826 96
Contingent expenses, estimated at 10 per cent.,		21,282 69
$331\frac{35}{100}$ acres of land, and buildings of various descriptions, sufficient to quarter the officers and part of the workmen,		70,864 00
Jackson's mills, valued at		8,000 00
Aggregate,		$312,973 65

The whole fall obtained with a dam seven feet high is sixteen and a half feet.

The great rise of the Muskingum in 1817, just below the dam, is stated to have been 19.25 feet, while, at the lower bridge, it rose 23.166 feet. The fall in this distance is seven feet at low water, which gives more than three feet difference of level at the time of highest water; and as the difference must be greater between the water above the dam, and the river at Slagoe's run, it may equal four feet, which is the least efficient head that will operate reaction wheels at high water advantageously. Zanesville is 80 miles above the mouth of the Muskingum by water, and 60 miles by land. The river is navigable for keelboats drawing 30 inches of water, for two months, and for those drawing 18 inches eight or ten months in the year. The impediments to navigation from ice may be considered to exist about two months, annually. Of the shoals, the rocks at Duncan's falls, nine miles below Zanesville, are considered far the worst.

Levels were taken and profiles constructed for the purpose of estimating the expense of using the waters of the Muskingum at a site below Putnam; but the cost of a dam across Licking creek, a high river wall along the foot of the cliffs below the mouth of that stream, and its consequent insecurity, with the deep cutting and length

of canal necessary to convey the water to the lower part of the town, where only a site could be procured on favorable terms, made the whole expense exceed the cost of the site below Zanesville, and caused the project to be relinquished. Plan P exhibits the profile of the ground, and sections of the canal and river wall.

FALLS OF BIG BEAVER, PENNSYLVANIA.

These falls continue about five miles from their commencement to the junction of the Beaver with the Ohio river, twenty-eight miles below Pittsburg. The whole descent is fifty-seven feet, at low water, in the two rivers. The highest rise immediately at their junction is thirty-five feet, leaving twenty-two feet fall that is above the height of any freshet that has occurred, and independent of any rise in the Beaver.

There are several advantageous sites along the falls at which water power may be employed. The most desirable, as regards its position, is on the left bank of the river, and about two miles above its mouth. The power which it affords is ample; and a more favorable arrangement of the ground than it offers, for the erection of workshops and other buildings, could hardly be contrived. But the great elevation of the ground, for seven or eight hundred yards below the point where it would be proper to build a dam for the purposes of an armory, would render the use of a river wall or tunnel, to convey the water that distance, unavoidable; and either expedient was considered more objectionable, on the score of its insecurity and expense, than any inconvenience that might attend a situation higher up the river, on account of its greater distance from the Ohio.

The next most favorable position is at the village of Brighton, near the mouth of Walnut river, on the right bank of the river, and three and a half miles from the Ohio. It has the command of a greater power; and, in some respects, has peculiar advantages, which, with the reasons before stated, give it a preference over the one below it.

The distance from the head of the falls to the mouth of Walnut run is about a mile and a half, and the descent is twenty-two feet at low water. The highest rise of any freshet at the latter place is 11.75 feet; leaving 10¼ feet difference of level between the surface of low water above the falls and the highest rise of the river at the mouth of Walnut run. The Beaver is confined, at the head of the falls, and for some distance below, by a range of steep hills on its left, and a high and nearly level bed of rock on the opposite side, that terminates perpendicularly at the water's edge.

Descending from this point, the river makes a bend to the right, embracing, in its course to the mouth of Walnut run, a wide and elevated plain, lying between it and the hills to its right. The village of Brighton is at the lower end of this plain, where it rises gradually from the river to the height of 40 feet above low water. The surface of the rock that forms the right bank of the river at the head of the falls is about 31 feet above the low water at that place. Following the course of the river, downwards, it gradually declines in height; and at the distance of 500 yards, it disappears below the surface of the ground. From thence, to the site at Brighton, the ground presents an inclined plane towards the river; and for the greater part of the distance is sufficiently at command as relates to the depth of cutting that may be required for a canal.

In the plan for this site, it is proposed to erect a stone dam, eight feet high, at the head of these falls; to take an open canal from above it, through the rock plain, and thence, nearly parallel to the course of the river, as far as Brighton; and to establish the workshops on the left bank of Walnut run. The difference of level between the top of the dam and high water at the site is 18.25 feet; which gives 16.6 feet head and fall, that is employed on two overshot and two breast-wheels placed above the level of the highest freshets.

The dam will rest on a level rock foundation, about eighteen inches below the surface of low water; and will have the solid rock, on both sides of the river, for its abutments. A waste way, or weir, may be opened through the rock, from the canal to the river, at any point that may be preferred. We have placed it about 2,000 feet below the head of the canal, where the surface of the rock is about 8 feet above the highest rise of the river, immediately opposite, and 4 feet above the level of the dam. It is near seven times wider than the canal, and its position secures it from any hazard or inconvenience. Whatever may be the height of a freshet above the dam, nearly all the surplus water, supposing it to have free ingress into the canal, must be discharged over the weir, and the level of the water in the canal below it can never rise two feet above its ordinary height; and, if necessary or desirable, the water in the canal, near the workshops, may be kept at all seasons within a few inches of a uniform level.

Estimate of expense for an armory at Brighton, on Big Beaver.

EXCAVATIONS.

Of earth, for forebays, races, &c., 16,960.53 cubic yards, at different depths, from 3 to 26 feet, -	$3,275 91
For canal, 1,236.3 cubic yards, 2 and 2½ feet deep, at six cents per cubic yard, - -	74 17
15,619.8 cubic yards, 12 feet deep, at seventeen cents per yard, - - -	2,655 36
27,042 cubic yards, 7 feet deep, at ten cents per cubic yard, - - -	2,704 20
19,447.69 cubic yards, 14 feet deep, at nineteen cents per cubic yard, - - -	3,695 06
Of rock, for canal, 21,534 cubic yards, averaging 19.7 feet, at $1 10 per cubic yard, -	23,687 40
245.3 cubic yards, 4.6 feet deep, under 7 feet depth of earth, at ninety cents per cubic yard, -	220 77
607.2 cubic yards, 8.2 feet deep, at eighty cents per cubic yard, - - -	485 76
948 cubic yards, 4 feet deep, at sixty cents per cubic yard, - - - -	568 80

MASONRY.

For forebays, races, and side wall, 3,934.09 perches, at $1 68½ per perch, - -	6,628 93
275.15 perches, for flagging, at $3 37 per perch, - - -	927 25
Walls, for canal, 1,369 perches, at $1 68½ per perch, - - - -	2,306 76
Stone dam, 8 feet high, 520 feet long, water tight, stones of large dimensions, hammer dressed, including covering, and filling, and guard dam during its construction, - - -	13,031 39
Head-gate, - - - - - - -	142 84
Two bridges over canal, at $100 each, and four over the forebays, at $25 each, - -	300 00
Buildings, including officers' quarters, dwellings for workmen, offices, &c., workshops, with fixtures for the machinery complete, - - - - -	138,497 05
Tools and machinery, patterns, miscellaneous articles, &c., - - - -	16,071 00
	215,272 65
Contingent expenses, estimated at ten per cent., - - - -	21,527 26
1,356 acres of land, with water privileges, mills, &c., including Broadhead's claims, and settlers' rights,	43,050 00
Aggregate, -	$279,849 91

The principal proprietor of the land which includes the site declines selling a part, with the exclusive water right, for a less sum than is demanded for the whole tract. It is supposed that the title to a small portion of it is disputed; but, both as regards its quantity or situation, it is considered of no consequence to the site.

About fifty buildings are erected on the several tracts embraced in the estimate, including three grist mills, one saw mill, a forge, one two story stone dwelling-house, and several frame dwelling-houses. They would be of little or no use to an armory, except to accommodate the hands during the erection of the works. Those that are now worth any thing will ultimately be in the way, and must be removed; the rest may be considered as useless. Stone coal abounds in the adjacent hills, but the veins which have been hitherto discovered do not exceed two and a half or three feet in thickness; the coal will therefore cost more, and is probably inferior to that of Pittsburg. In the estimate of the annual expenditure of an armory at this place, the coal is supposed to be brought from the Ohio river. In case a vein of four or four and a half feet thick should be found near the river, within four or five miles above the dam, coal will not cost above two cents and a half or three cents per bushel, delivered at the works. Provisions and building materials are abundant, and labor cheap. The quantity of water which the Beaver furnishes, at its lowest stage, probably exceeds 135 cubic feet per second; the estimate of its volume is made from data obtained at Pugh's mills, a mile and a half below Brighton. An armory at Brighton will require 66 cubic feet per second, with the head and fall of 16.6 feet on breast and overshot wheels, exclusive of the forge, which will be operated by a reaction wheel below the others. It is more than probable, therefore, that the river will afford, at its lowest stage, at least twice the power that is required for an armory, without resorting to any portion of the fall, which is below the level of high water, except for the forge.

Keelboats navigate the Beaver as high up as Pugh's mills, within a mile and a half of the site at Brighton, about ten months in the year. Steamboats may ascend to the same place from two to four months in the year. The Beaver and Ohio are generally closed with ice from one to six weeks; both have been known to continue open all winter oftener than they have been closed for six weeks.

Plans B, Nos. 3, 4, 5, and 7, exhibit profile and sections of canal at Brighton, location of the buildings, plan and section of the dam, section of the river, and plan of O. Ormsby's lands.

OHIOPILE FALLS OF THE YOUGHIOGENY RIVER.

Where the Youghiogeny enters the gap of the northern range of Laurel Hill ridge, it makes a circuit of near two miles round a neck or tongue of land on its right, about three-fourths of a mile in length, and from 3 to 600 yards broad, that projects from the foot of a mountain in its rear. At the upper side of this tongue, and near the extreme point of the mountain, is the commencement of the Ohiopile falls and rapids, which terminate at the lower side, opposite to the point at which they begin, and 600 yards distant from it, in a straight line. The whole descent is 87½ feet; the highest rise of any known freshet is 10 feet above, and 20 feet below the falls, leaving 67 feet fall, free from interruption by the highest freshets. The area of the neck exceeds a hundred acres, and its general surface is sufficiently uniform for all the purposes of a site. The ground, on its lower side, next the foot of the falls, is advantageously disposed in steps or benches of sufficient width, and at convenient distances below each other, for the erection of buildings, and the successive application of the water to machinery, in any manner that may be desired. Forty feet of the whole fall may thus be employed, at a trifling expense. The bank then becomes steep, and nearly perpendicular, and the remaining part of the fall could not be conveniently used, without extensive excavations of the rock. To convey the water to this site, from above the falls, will require a canal of 700 yards in length; the first 400 yards pass through a strip of river bottom; the deepest cutting along the whole route is 30 feet, and occurs in passing a narrow ridge, near the middle of the neck, consisting principally, as is supposed, of rock. A dam four feet high across the river will be necessary to procure a depth of water at the head of the canal sufficient to prevent it from being choaked with ice, or obstructed by drift of any kind. The quantity of water which the river furnishes at this place, during an extreme dry season, is probably equal to its volume at Connelsville, fifteen miles below, where (estimating from data obtained at one of the iron works within six miles of that place,) it appears to have been not less than 80 cubic feet per second, and perhaps exceeded 100 cubic feet per second during the uncommon drought in 1823. The great fall, and the mode in which the water may be employed at Ohiopile, render the question concerning the difference of its volume at the two places one of very little consequence. In the following estimate, the rock is supposed to reach within four feet of the surface of the ground, from the point where the canal leaves the river bottom to its termination near the workshops.

Estimates.

Excavations of earth, for canal, forebays, and races, 17,078 cubic yards, from 3 to 13 feet deep, -	$2,747 60
Excavations of rock, for canal, basin, forebays, and races, 8,660.2 cubic yards from 3 to — feet deep, - - - - - - -	9,157 62
MASONRY.	
Walls for the basin, forebays, races, and weir, 1,478.7 perches, at $2 per perch, - -	2,957 40
Head-gate, 17 feet high, - - - - - - -	187 84
Dam, 4 feet high, - - - - - - - -	6,300 00
Four bridges, - - - - - - - -	175 00
Sixty-one buildings, including dwellings for officers and workmen, offices and workshops, with fixtures for machinery, &c., - - - - - -	147,330 51
Machinery and tools, - - - - - - -	14,522 00
Miscellaneous articles, - - - - - - -	1,549 00
	$184,926 97
Contingent expenses, estimated at 10 per cent., - - - -	18,492 69
640 acres of land, value not known, not to exceed $2 per acre, - - -	1,280 00
Aggregate, -	$204,699 66

If we regard the site at these falls in reference to the security of the works that might be erected on it, the perfect command of its water power, and the cheapness with which it may be employed, it surpasses any that has come under our observation. An additional excavation of 10,500 cubic yards of earth, and 900 of rock, estimated to cost less than $3,000, would enlarge the canal sufficiently to convey the whole volume of the river to the works

at low water, which would furnish three times the power requisite for the armory, and still leave unemployed a fall of more than 20 feet, that is altogether free from any interruption by freshets.

To these advantages are opposed its geographical position and its want of convenient communications. Surrounded on all sides by mountains, the adjacent country but sparsely inhabited, and, with the exception of fuel, (including stone coal,) affording few or no resources for an armory; it is without the means of water conveyance, and, as yet, without roads. Connelsville, fifteen miles distant by land, is the nearest point from whence boats descend the Youghiogeny, and from that place its navigation is irregular and precarious, and, it is believed, cannot be relied on more than two months in the year. Brownsville is the nearest point on the Monongahela, and is twenty-eight miles distant.

The national road passes within seven or eight miles of the falls, and a good road leading to it may be opened at a moderate expense per mile. After ascending the mountain, (10 or 1200 feet) the ground is sufficiently even, and otherwise favorable.

Much of the supplies for the armory, including nearly all the provisions for the workmen, must be drawn from the neighborhood of Connelsville and Uniontown; and if to the cost of opening convenient roads is added that of a permanent bridge over the Youghiogeny, at the falls, the site will no longer be conspicuous for its economy.

On the left bank of the river, near the head of the falls, is a site, in some respects preferable to the one just described; it would, perhaps, be still less expensive, and would communicate with the national road without the necessity of building a bridge over the Youghiogeny. It is doubtful, however, if the power which it affords might be sufficient. The fall is only 30 feet at low water, and terminates at a point where the river is deep, and has but little descent for some distance below. It is, therefore, probable that the freshets rise at that place to more than half the height of the whole fall, and reduce the power to less than one-fourth of that obtained at the lower side of the neck.

How far the weight of the preceding objections ought to be lessened by the probability of any future canal across the mountains, passing down the valley of the Youghiogeny river, is a consideration that does not properly come within the province that has been assigned to us.

We should present a very imperfect view of the relative advantages of the foregoing sites, were our examinations confined to the original cost of erecting the necessary buildings of an armory at each, and of applying the water power to its machinery. The difference in their annual expenditures will be far more important than that of their first cost; and, although it may not be practicable to show the whole, or even the greater part of the amount of these differences, yet there are several objects of yearly expenditure, (iron, fuel, and transportation, in particular,) of which the cost, in each instance, may be stated with sufficient accuracy to serve for a comparative estimate. It is seldom, and only to a small extent, that iron is made in the Western country of equal quality to that from the Juniata works, and, wherever this is the case, the Juniata iron regulates the price. The best iron made near the site on Harpeth river costs more than the Juniata iron may be delivered for, by contract, brought by the way of Pittsburg. The neighborhood of iron works to any of the sites we have examined will, therefore, not lessen the cost of that material at the armory, whatever advantage the circumstance may offer as a resource against accident or delay in the regular supply from Pittsburg. The cost of its transportation, or an equivalent sum, must be paid at all the sites below that place.

The following statement will show the annual expense of fuel and transportation of 122½ tons from Pittsburg, including the iron; and, in order to present the whole question of the relative cost of the several sites at one view, the estimated cost of the armory at each is recapitulated.

	Annual expense of fuel and trans'n.	Cost of the armory.
Beaver,	$2,693	$279,849
Zanesville,	3,697	312,973
North Bend,	4,974	374,572
Falls of Ohio, (Jeffersonville,)	5,922	321,184
Falls of Ohio, (Louisville,)	5,922	505,067
Narrows of Harpeth,	8,087	357,940
Cypress creek, (Alabama,)	8,764	232,365
Ohiopile falls of the Youghiogeny river,	-	204,699

We have no means of estimating the cost of transportation or of fuel, with correctness, at Ohiopile; the latter item, however, would probably cost less than at Beaver. Stone coal is estimated at eight cents the bushel at North Bend, and ten cents at the falls of Ohio It has been sold for less at Louisville, but it is ascertained that a regular supply of Pittsburg or Wheeling coal cannot be obtained at either place for less than the estimated price. That procured from Eagle creek, and other points much below Wheeling, is of inferior quality, and would not be used. It appears, from the above exhibit, that the annual expenditure at the sites south of Zanesville, for the items therein enumerated, increases to an extent that is sufficient to exclude them from further consideration, as regards their comparative advantages, merely as manufacturing establishments; and they would, probably, constitute but a small part of the annual excess of expenditure at those sites. The cost of labor will comprise near two-thirds the amount of the whole yearly disbursements at an armory; and it must successively increase at Louisville, Harpeth, and Cypress in Alabama. The present prices of labor at those places can be of little or no avail, for the purpose of comparison between them and the sites of Cincinnati, Zanesville, Beaver, and Ohiopile. The description of mechanics that are employed at an armory cannot, certainly, at this time, be obtained at Florence in Alabama, and must be led to emigrate thither by the inducement of high wages. Nor is it at all probable that they would be found in sufficient numbers near Nashville. At Springfield and Harper's Ferry, an expert workman may earn from two to three dollars per day, which is evidence that, even at those armories, the number of first rate workmen is not equal to the demand for their services, or competition would long since have reduced the rates of their labor. The high price of provisions at Harpeth and Florence, compared with prices at and every where above Cincinnati, would, unconnected with any other cause, produce a much greater excess of expenditure at those places than what has been already shown must exist. The circumstance before stated, that Juniata iron can be carried to Nashville as cheap or cheaper than it is manufactured in that neighborhood, is strongly presumptive of the correctness of this assertion; and another and similar circumstance may be stated in its confirmation. The iron works near Harpeth have the advantage of good water power, fuel in abundance, and ore of an excellent quality, and in large quantities. The iron works on the waters of the Monongahela and Youghiogeny rivers labor under a comparative want of fuel for smelting the ore; and provisions in their immediate neighborhood are much dearer than at any point on the Ohio river above Louisville. Iron from those furnaces is taken to Pittsburg in the pig; it is there refined, rolled, and then manufactured into nails, for the same price at which bar iron is sold at the works near Nashville. Unless the profits in the latter case are very extravagant, the inference must be highly unfavorable, as regards the price of labor, and other causes of expense, at a manufacturing establishment on the Harpeth; and which must operate extensively at an armory where two hundred mechanics are employed, besides fifty or sixty common laborers;

and, so far as the price of provisions may influence that of labor, the position near Florence certainly offers no advantage, in point of economy, over that on Harpeth river.

The great commercial advantages that are united at the falls of the Ohio, and the unequalled command which that position affords of water communication with all parts of the Western country, have contributed more than the character of its water power to give repute and value to its manufacturing advantages. The difficulty and danger inseparable from the location of works immediately on the bank of a large river, subject to equal fluctuations in its volume with the Ohio, and rising to the height of 55 and 60 feet above its lowest stage, must be evident to all who are familiar with the use of water power. And when, to the expense and hazard attending the occupation of a site so circumstanced, is added the certainty of an annual interruption to the power of six or eight weeks' continuance, and a liability to a longer interruption, the objections to its employment at an armory appear to us to be conclusive and unanswerable. The advantages of the site at North Bend have been mentioned: as relates to the price of labor and provisions, they are, perhaps, equal to those of any site that has been examined. From its vicinity to Cincinnati, its resources, in a general point of view, are superior to most of them; and, in its command of the navigation of the Ohio, it is only inferior to Louisville. The cost of the water power, and the insecurity of the dam across the Miami, (more particularly the latter,) form the principal objections to it.

The water power at Zanesville would never be entirely interrupted, nor seriously incommoded for more than a few days in a whole season; and may therefore be considered permanent. The dam across the Muskingum may be made secure; and it is believed that the river affords water enough at all times to extend the operations of an armory to the production of 50,000 muskets per annum: and as the greater part of the workmen might reside in the town, without much inconvenience, the site is sufficiently spacious to receive the additional number of buildings that might be required for other purposes. To these advantages it unites those of fuel in abundance, provisions at the lowest rates, a number of manufacturing establishments now in operation, and convenient boat navigation to the Ohio river nine or ten months in the year.

In estimating the advantages of a place in reference to it, as a site for an armory, it is certainly proper to consider those resources that would be brought into activity by the stimulus they would naturally receive from the annual disbursements of an armory in the vicinity. At some of the sites that have been enumerated, the effect would be necessarily inconsiderable. But the country around Zanesville produces raw materials of several kinds, and iron ore among the rest; and a great amount of unemployed water power is found within a few miles. At Duncan's falls the power is equally great with that adjoining the town, and sufficiently constant to be valuable for manufacturing purposes; and that on Licking creek is never interrupted. Combining with its present advantages so many circumstances favorable to its future industry, this place offers many and strong considerations in favor of its adoption as a site for a national armory. The objections to it are chiefly relative, and arise from comparing it with a more perfect water power, and a more convenient and less expensive site. The description given of the position on Big Beaver, Pennsylvania, leaves but little to say on the character of its water power. The perfect command of the water at all times; the more convenient manner of applying it to the wheels, which the fall at that site allows; its entire freedom from interruption by droughts or freshets; and the security it offers to the whole establishment of an armory, from the dam to the last workshop, give it decided advantages, in these respects, over any water power that has been examined, with the single exception of that of Ohiopile. It has a further advantage over that at Zanesville, in the greater number and more convenient arrangement of the buildings; greater economy in the first cost, and subsequent annual expense; and the last that will require to be stated is the superior healthiness of its situation. Comparing it with Ohiopile, it is apparent that the advantages which would accrue to the armory from its position on the Ohio river, from its vicinity to, and consequent command of, the resources afforded by the town of Pittsburg, more than compensate for the additional cost of its water power.

STEAM POWER.

The peculiar, if not the most prominent advantage of steam power, in a general point of view, is the liberty it affords of employing it wherever a power may be required and fuel is at command. This independence of locality, however, is confined within certain limits, as regards its practical utility. It requires a complex machine in its production, liable to accidents and interruptions from causes that are also peculiar to it; which, indeed, are of little consequence where the necessary facilities exist for the repair or renewal of any of its various parts that may be injured or destroyed, but which, under less favorable circumstances in these respects, may be attended with serious inconvenience and delay. Its convenience, and even economy, therefore, do not depend exclusively on the cheapness of fuel; and, as the town of Pittsburg unites nearly all advantages that are either essential or may contribute to its economical employments, and to an extent equal, perhaps, to what they are found separately elsewhere, the use of steam power will be considered as confined to that place, while viewing an armory merely as a manufacturing establishment.

The capability of steam to propel machinery of any kind or to any particular extent no longer offers a subject for inquiry. The question at present is confined to its economy and the advantages attending its use at a particular place. The first cost of steam engines, and their annual expense, do not increase or diminish in proportion to the size of each engine: a considerable part of the expense is that of attendance, which is equal in every case, at least within those limits that concern the present inquiry. The economy of steam compared with water power will therefore mainly depend on the number of engines that are to be employed. For all purposes that require or will admit a concentration of the power, a single engine might be fully competent, and, employed at Pittsburg, would be cheaper than almost any water power. But the power required at an armory is only employed as auxiliary to the labor of a large number of mechanics; and the nature and necessary distribution of the work to be performed by them render a considerable division of the power indispensable to the convenience and economy of such an establishment.

It is satisfactorily ascertained that three engines or wheels will be indispensable; and to make the power, as it ought to be, subservient to the most advantageous arrangement of the work, will require the use of at least four engines or water-wheels in all cases.

The following estimate will show the probable cost of an armory near Pittsburg, with the first cost of an adequate steam power, as well as its annual expense:

Estimate.

Buildings, including officers' quarters, dwellings for the workmen, coal and engine houses, workshops, with fixtures for machinery, &c., - - - - - -	$140,598 51
Machinery, tools, patterns, &c., - - - - - - -	14,522 00
Miscellaneous articles, - - - - - - -	1,459 00
Four steam engines complete, erected and ready for operation, (appendix, statement E,) -	14,492 00
	171,071 51

Brought forward,	$171,071 51
Add for contingencies 10 per cent.,	17,107 15
To which may be added the capital necessary to renew the wearing parts of the engines, and render the power permanent, (not included in the estimate of annual expenses)	5,811 00
640 acres of land, at $50 per acre,	32,000 00
Aggregate,	$225,989 66
Estimated annual expense of four engines, including fuel, repairs, incidental expenses, and hire of four engineers, (statement F,)	$3,631 20

The foregoing estimate of the engines is made conformable to present Pittsburg prices.

The engines are constructed on the plan of high pressure, capable of operating with sixty pounds to the inch, but of sufficient dimensions to propel all the machinery at a pressure of thirty pounds, or less, to an inch.

We have been cautious in limiting the pressure of the steam to a less portion of the resisting force of the boilers than is found necessary, or any where practised, with engines of this description. In what concerns their safety from the force of the steam, we are satisfied that such as are proposed to be employed in the estimate will be accompanied with no greater hazard than those usually constructed to operate with a pressure of seven pounds to the inch. And, independent of their greater economy, we believe them preferable on several accounts: they are more simple in their construction, easily attended, less liable to get out of order, and the several parts more easily repaired and replaced when injured or worn out. The accidents that have occurred on board of steamboats afford but little ground for the apprehension of similar misfortunes on shore; the use of steam in those boats is necessarily accompanied by many, and frequently by almost every circumstance of disadvantage to the safety of the engines. And when it is considered that an engine in a manufacturing establishment is never exposed to equal, and not often to similar causes of injury or hazard; that it is fixed, and not liable to be injured by accidents or movements of any kind that are extraneous to it; that the force of the steam, compared with the strength of the engine, will be moderate and nearly uniform, we can perceive no valid objection to its employment at an armory.

The site which has been selected, in case the use of steam power should be adopted, is about a mile above the United States' arsenal on the Allegany river, and three miles and a half from Pittsburg. The ground is in every respect favorable, and includes several hundred acres of coal land. The arsenal will afford a convenient depot for the arms, and save the expense of erecting a building for that purpose.

The following statement exhibits the cost of an armory at Pittsburg and at Brighton, with the annual expense required for the manufacture of 12,000 muskets at each, exclusive of labor.

PITTSBURG.

Cost of the site, with buildings, fixtures, &c., including steam engines,		$225,989 00
Annual expense of the steam power,	$3,631 00	
Materials, (appendix, statement A,)	31,149 70	
Miscellaneous expenditures, (statement C, appendix,)	2,395 00	
Total annual expenditure, exclusive of labor,		37,175 70

BEAVER.

Cost of the site, with buildings, fixtures, &c.,		279,849 00
Annual cost of materials, including fuel, transportation, &c. (appendix, A,)	$32,127 00	
Miscellaneous expenses, including repairs to the water works, (appendix, statement C,)	3,487 00	
Total annual expense, exclusive of labor,		35,614 00

If these amounts are reduced to the same denominations, the difference in the expense of an armory at either place will appear trifling. The inconvenience to the site at Beaver, of its greater distance from Pittsburg, is embraced, for the most part, in the estimated additional cost of fuel and transportation. Under circumstances so nearly equal as regards their situation, and where both the steam and water power are as free from any characteristic inconvenience as would probably exist at any two points that could be named, it appears that a preference for either must depend chiefly on the degree of comparative insecurity and of occasional interruption that may be attributed to the use of steam. The total exemption from all hazard to the buildings and the workmen that is secured to an establishment at Brighton, on the Beaver, induces us to prefer the water power at that place.

The extent of the armory which it is proposed to establish in the Western country is not designated in the act of Congress; and although a power sufficient for the manufacture of 12,000 muskets has been taken as a standard in our estimates, it might be deemed expedient, and may be contemplated, to extend its operations to the production of 24,000. In this case it would be necessary to increase the number of workshops, and to repeat the divisions of the power; four additional water-wheels or engines would be required, and consequently the annual expense of the steam power would be doubled, while the whole cost of enlarging the canal at Beaver, with the necessary walls, forebays, races, &c. for the additional water works would not exceed $19,000; and the site at Brighton would have a decided advantage, on the score of economy, with the volume of water now furnished by the Beaver at that place. But it would be unsafe to rely on its furnishing more than 135 cubic feet per second; and in the event of a navigable canal between Lake Erie and the Ohio, passing along the valley of Beaver river, its volume would probably be insufficient during a dry season for the supply of the canal and for the manufacture of 24,000 muskets; and, on the hypothesis of extending the operations of the armory to the production of that number, the site should be rejected. Of the likelihood of both or either of these events occurring, we possess, of course, no means of forming a judgment, and have therefore confined ourselves to stating the extent of the preference to which we think the site is entitled, with those circumstances which might eventually render it objectionable. Another and very different view may be taken of the subject. The muskets are now chiefly manufactured complete in all their parts at the national armories; and our estimates have been based upon the supposition that the same system will be continued in the Western armory. It is believed, however, that the cheapest method of fabricating small arms is to contract with individuals for the greater portion of the component parts, and to be received, inspected, put together, and finished at the public armory, where all the machinery and hands required for performing the entire work are in operation, in the manufacture of a limited proportion of the whole annual amount to be produced. This mode would enable an armory to command the whole manufacturing resources of the country around it, and insures the same degree of perfection and uniformity that would result from having all the parts made at that establishment.

The power required for the manufacture of 12,000 muskets per annum would operate the necessary machinery for making 8,000, and such other machinery as would be required for putting together and finishing 10,000: supposing the component parts to be made by contract, the estimated additional expense, either at Pittsburg or Beaver, would be $6,000, including the cost of a workshop, with the necessary additions and alterations to the machinery and fixtures.

If the whole power embraced in the preceding estimates, for the manufacture of 12,000 muskets, were employed exclusively in stocking and finishing the parts of the muskets made by contract, it would be sufficient to complete 38,000 stands per annum, at an additional expense of $26,000, in buildings, fixtures, tools, and necessary alterations; and, in case of emergency, the number might be increased to 42,000. This arrangement would also lessen the divisions of the power, and two water-wheels, or engines, would suffice. An armory manufacturing 12,000 muskets, annually, or only 8,000, and finishing 10,000, might, therefore, continue to perform the same operations, and be extended so as to produce 50,000 or 56,000 per annum, by employing two additional steam engines at Pittsburg. At Brighton, the additional expense would be still less than that before stated for the entire manufacture of 24,000 muskets; and to whatever extent the system of contracting for the component parts of the muskets might be carried within those limits, the comparative economy of the water power at that site would be proportionately increased by the difference in the transportation of the parts of the muskets, and that of the raw materials; and by the difference at that place and Pittsburg in the cost of nearly all the fuel required in their fabrication. These advantages, however, rest necessarily on the supposition that the volume of water in the Beaver will be at the command of the armory; otherwise, the power it will afford must be considered as limited to the manufacture of 12,000 stands per annum, or an equivalent number manufactured and finished, in case any of the parts are made by contract.

It is evident that the important advantage of thus extending the operations of an armory, and at a short notice, to the production of any given number of arms, can only be obtained by locating it in the vicinity of a place possessing capital and the command of extensive water or steam power. It is certainly unnecessary to give a detailed account of the manufacturing resources of Pittsburg, for the purpose of comparing them, at this time, with those of any other place in the Western country. It may be proper to mention, however, that there are fourteen steam engines, from 20 to 80 horse power each, now in operation, either in the town or its immediate neighborhood, two of which were erected during the last season. Four of them are employed in forging, rolling, and slitting iron; three of these are of 80 horse power, and one of 40. Two others are about going into operation for different iron works. There are also two manufactories of steam engines, besides several establishments that are more or less extensively engaged in the working up of iron and other metals into various objects of commerce. The power actually employed in these, and other operations carried on by steam, exceeds that of the whole volume of the Muskingum at low water, with the head of eight feet.

A great advantage attending the use of steam power to a private manufacturer consists in the small capital required at the outset, while the annual expenses are paid from the profits of the work, as they accrue. An individual, with a capital of only $5,000 vested in the first cost of the power, actually employs one of which the present purchase is worth $20,000, or $25,000, even at Pittsburg; and more elsewhere, in proportion to the additional cost of fuel. This cause, perhaps, more than any other, enables steam to compete successfully with water power for ordinary manufacturing purposes, even where its whole purchase is considerably greater, and both employed at the same place.

Notwithstanding this circumstance can have no weight in comparing the relative expense of steam and water power at a national armory, yet the great facility it affords to individual skill and industry must be considered as assuring almost unlimited resources to such an establishment in the neighborhood of Pittsburg, where iron and fuel are cheaper than at any other place in the Western country.

We do not perceive any reasons of a military nature that can materially affect the relative value of the different sites, in consequence of their respective distances from the points at which the consumption of arms would probably occur in time of war.

To consider the relations of an armory in the same light with those of a magazine or an arsenal, we think would be an error; the means of production being the principal requisite for the one, and those of conveyance for the others. Even as regards the certain and regular supply of arms to troops that are in the field, the utility of its position may obviously depend much less on the shortness of its distance than on circumstances which may facilitate or retard its operations.

If we compare the communications of Pittsburg and Beaver with those of the sites below, the difference will be found to consist more in the distance than in the duration of their interruptions. This difference, however, is definite, or at least confined within certain limits; and the balance of the arms manufactured during that period may be disposed of immediately after. If the probable interruptions or delays to the progress of the works are compared, the disparity must be considerable. The healthiness of the country around Pittsburg, and its constant command of all the materials and labor that are either permanently or occasionally required at an armory, leave no room for any unfavorable anticipations in these respects.

But its most essential advantage is in its manufacturing establishments and other resources, which would secure to the Government, in case of emergency, the means of promptly extending the operations of an armory to the production of almost any required number of arms; and, in all material respects, the position at Beaver is considered as commanding the resources of Pittsburg.

By a comparison of the cost of materials and fuel used in the manufacture of the musket at Springfield, Massachusetts, and the probable cost at Beaver, we are satisfied that it may be manufactured at the latter place, or at Pittsburg, for more than fifty cents less than at Springfield, in 1823; in which year the musket cost less than at any former period.

This difference between the Eastern and the proposed Western armories, in the actual and estimated cost of the musket, is probably less than would exist.

All which is respectfully submitted.

W. McREE,
ROSWELL LEE,
G. W. TALCOTT.

PHILADELPHIA, *January* 12, 1825.

Remarks.

It will be observed that the cost of excavating earth for the tail-races, &c. at the workshops is stated in the estimates at less than the cost of other excavations from corresponding depths.

This is owing to the situation of the races, which enables the earth, for a considerable distance, to be removed horizontally, without taking it to the surface of the ground above.

The cost of the perch of masonry depends considerably on the distance to which the materials are to be transported. At Louisville, the carriage alone amounts to one dollar per perch. In computing the quantities of masonry for walls, the perch is estimated as containing 24.75 cubic feet.

Additional remarks.

The wages of the armorers at Springfield will average about thirty-four dollars per month; board is two dollars per week; in all cases the workmen find themselves; therefore, the wages paid by Government include board, washing, &c. In some instances, a first-rate hand, with great industry, will make two dollars per day.

One hundred tons of iron is the quantity put down in the estimates for making 12,000 muskets. This leaves a deficiency of twenty tons. The quantity that will be made from the scraps, borings, turnings, &c. is estimated at thirty tons, which makes up the deficiency, leaving ten tons for machinery and tools, waste, &c.

If there is any deficiency in the estimated quantity of stock, it is in the steel; but if that is of the best quality, and the scraps and worn out files are worked, the quantity will be sufficient for 12,000 muskets.

Explanation of the tables.

Table C No. 1 exhibits the amount and cost of excavation and masonry for forebays and races for the site at Cypress creek, near Florence, Alabama.

Table M No. 2, column C, shows the expense of buildings and fixtures at the above site.

Table H No. 1 exhibits the quantity and cost of excavation and masonry for forebays, races, and river wall at the site at Harpeth Narrows, in Tennessee.

Table H No. 2 shows the quantity and expense of buildings and fixtures for the above site.

Table S No. 1 shows the quantity and expense of excavations and masonry for forebays, races, and river wall at the site below Shippingport, falls of Ohio.

Table M No. 2, column S, shows the expense of buildings and fixtures.

Table L No. 1 shows the quantity and expense of excavations and masonry for forebays, races, and river wall at the site above Shippingport, near Tarascon's mills. The quantity and expense of buildings and fixtures are the same as at the site below Shippingport.

Table J No. 1 exhibits the quantity and cost of excavations and masonry for forebays, races, and river wall at the site below Jeffersonville, in Indiana, falls of Ohio.

Table M No. 2, column J, shows the expense for buildings and fixtures.

Table N No. 1 exhibits the quantity and expense of excavations and masonry for forebays, races, and river wall, for the site at North Bend, Ohio.

Table M No. 2, column N, shows the expense of buildings and fixtures at the above site.

Table T exhibits the quantity and cost of excavations and masonry for forebays, races, and side walls, for the site on Licking river, near Bowman's creek, Kentucky.

Table M No. 2, column T, shows the expense of buildings and fixtures for the above site.

Table Z No. 1 exhibits the quantity and cost of excavations and masonry for forebays races, and river wall, for the site at Zanesville, Ohio.

Table Z No. 2 shows the quantity of materials and expense of buildings and fixtures for the above site.

Table B No. 1 exhibits the quantity and cost of the excavations, and masonry for forebays, and races, for the site at the falls of Big Beaver creek, Pennsylvania.

Table B No. 2 shows the quantity of materials and cost of buildings and fixtures at the above site.

Table O No. 1 exhibits the quantity and cost of the excavations and masonry for forebays and races for the site at Ohiopile falls, on Youghiogeny river, Pennsylvania.

Having no statement of prices from that vicinity, the buildings and fixtures are taken at the Beaver prices, with the addition of 6 per cent.

Table marked M No. 1 exhibits the estimated quantity of materials necessary for the several buildings; one-eighth is added to the lumber and brick, for waste, &c.

Table P exhibits the prices of building materials and other articles, as obtained from respectable sources, the vouchers for which will be found in the papers for each site, marked P.

Table P No. 1, showing the quantity of materials, and cost of buildings, fixtures, &c., at Pittsburg, Pennsylvania.

APPENDIX.

Pugh's mills are situated on the Big Beaver, at Sharon, one mile and a half below Brighton; they have seven water-wheels, which are supplied by a canal 960 yards long. The whole of these works, with the exception of the saw mill, and also of the oil mill, (as it was understood at the time of our experiments,) continued to operate as usual during the driest part of the season in 1822, when the river was lower than at any former period within recollection. The quantity of water which the rest of the works employed was accordingly measured, and found to be 67 cubic feet per second. It was subsequently asserted that the oil mill had also continued to perform its ordinary work at the same time with the rest, which would increase the actual quantity flowing into the canal to 85 cubic feet per second. The dam at these mills does not extend entirely across the river, and was the cause of the saw mill being stopped, as the surface of the river could not be raised sufficiently high to throw the necessary quantity into the canal; and, according to the unanimous testimony of all who were questioned, (among whom were several experienced millwrights,) the volume of the river was estimated to be three times that in the canal. Admitting an error in judgment to the extent of one-half, in relation to the quantity in the river opposite the canal, and omitting to include the quantity employed by the oil mill, will make the whole volume of the river equal to 135 cubic feet per second, the quantity first stated. To ascertain the quantity of water used at these works, that portion of the canal was selected where its dimensions were most uniform, and its course nearly straight. The velocity of the water, while the mills were in operation, was measured with great care; the descent of the surface and area of sections, at the several stations, were determined as nearly as circumstances would permit.

Table of the greatest observed surface velocities of the current in the canal, at Pugh's mills, on Big Beaver; the corresponding mean velocities of the whole volume of water; the area of the mean transverse sections of the several stations; and the quantity of water flowing in the canal at that time; the gates of the oil mill and saw mill being shut when the experiments were made.

Stations. From	Stations. To	Distance between the respective stations.	Least time occupied by the float in passing the respective stations.	Greatest observed surface velocity per second.	Mean velocity, deduced from the surface velocity.	Area of the mean t'nsverse sec'n between the respective stations, in square feet.	Quantity of water deduced from each experiment, in cubic feet, per second.	Number of each station.	Area of the transverse sec'n of the canal at each station, in square ft.	Perimiter of the section in contact with the water, in feet.
1	2	66 feet	32	24.75	not comput'd					
2	3	66 feet	32	24.75	not comput'd			1	40.61721	20.43
1	3	132 feet	64	24.75	20.1427	40.1128	67.3585	2	40.030	20.56
3	4	66 feet	34	not comput'd	not comput'd			3	39.738	20.94
4	5	66 feet	33	24 inch's	19.471	44.1123	71.57	4	42.009	20.80
4	6	132 feet	69	22.95	18.5389	44.072	68.087	5	46.215	22.89
5	6	66 feet	36	-	17.9834	45.0137	67.59	6	43.991	21.78

From station 4 to 5 the velocity was the greatest, compared with the area of their transverse sections, and, therefore, gives the greatest number of cubic feet per second. But, passing the third station, the difference in the areas of the several transverse sections increases considerably, while the areas of the sections at first, second, and third stations are nearly equal, and the observed surface velocities between them were uniform. The quantity of water flowing in the canal, as deduced from the experiments made at those stations, is therefore considered as being the most correct.

An attempt was also made to determine the volume of running water, by measuring the descent of its surface, which gave 90 feet per second, or near 19 cubic feet more than the greatest amount derived from the surface velocity. But several causes interfered to destroy confidence in the result. In order to obtain a sufficient descent, to lessen the consequences of any error in the levelling, it was necessary to include a portion of the canal, where its dimensions varied, and where the velocity was, consequently, accelerated or retarded in a corresponding degree. After all, the whole descent was only $1\frac{3}{4}$ inch; and the means employed with which to measure from the surface of the water were too inaccurate to be relied on for such an operation—an error hardly exceeding the tenth of an inch at each end of the line would occasion a difference equal to that stated above. It was understood that the saw mill and oil mill had been stopped, for want of water, in 1822; the gates of both were, therefore, shut at the time the experiments were made. It has since been asserted, however, by those who had the management of the works, that the oil mill was never interrupted, during the lowest stage of the river, by that cause. If this statement is correct, the volume of water conveyed into the canal, as determined by the experiments, should be increased by the quantity required to operate the oil mill, which, computing from the head above the apertures at the wheels and the area of the aperture, is found to be 11.4 cubic feet per second, making the necessary deduction for the contraction of the column of water after it issues; and the whole quantity will then amount to 78.7 cubic feet per second. It is the opinion of those well qualified to judge, and who have had daily opportunities to observe and compare the volume of water in the canal with that of the river at its side, that the quantity in the canal, at a low stage of water, in ordinary seasons, does not exceed one-eighth the whole volume of the river; and that during the extreme low state of the river, in 1822, they believe the canal to have contained about one-third of that in the river. According to these data, it would appear that the whole quantity supplied by the river, during its lowest stage in 1822, was 236 cubic feet per second.

But, if we exclude the oil mill altogether, and suppose the quantity of water in the Beaver river to have been equal to the quantity employed at Pugh's works, as determined by the preceding experiments, the whole volume of the Beaver must then have been equal to 134 or 135 cubic feet per second.

Table of the quantity of water and power employed at Springfield.

Number.	Kind of wheel in use.	Whole quantity of water which issues on the wheel, expressed in cubic feet.	Whole effective head of water, or half the height of the column which issues on the wheel, added to the fall after it has issued, and before leaving the wheel, expressed in feet.	Measure of the power, or the whole effective head, multiplied into the whole quantity of water.

Deduct for wheels Nos. 10, 12, 18, 23, and 26, being not indispensable for the operations performed by them, and are supernumerary, - - - - -				92.00
				1,290.69

The foregoing table exhibits the quantity and power of the water employed, computing, according to the laws of gravity, from the dimensions of the several apertures at the wheels, and the mean height of the column of water issuing through each, without considering the influence of those causes which are known to operate in practice, and vary the results.

The trifling velocity of the spouting water renders the obstructions to its motion, from resistance of the air, too inconsiderable to merit particular attention, as regards the objects of the present investigation.

But the motion and direction of the particles of water in a reservoir, before and at the time of entering an aperture in one of its sides, occasions a material difference between the actual discharge and that computed from the theory of falling bodies. The friction, also, where the surface of the sides of the aperture is great compared with its area, adds considerably to this difference.

It has been ascertained, by a variety of accurate experiments, that the volume which flows through an aperture, placed in a vertical side of any vessel or reservoir filled with water, has its diameter contracted at a short distance from the orifice through which it issued; and that the area of its section, taken at right angles with its jet at the point of greatest contraction, is much less than the area of the aperture through which it issued.

The difference between these two areas, and the consequent difference in the quantity of water which actually flows, and the quantity which would flow if unimpeded by the cause before mentioned, varies, under different circumstances, from near 200 to 358 parts in 1,000.

This variation is found to be much less affected by the ratio between the perimeter and area of the aperture, or by the distance at which it is placed below the surface of the water in the reservoir, than by its position as it respects the sides and bottom of the reservoir, and by other arrangements, which may serve to conduct the water, and secure to it a less interrupted horizontal movement in the direction of, and passage through, the aperture.

Thus, an orifice placed in the side of a reservoir actually discharged 920, and in one instance 983 parts, when furnished with a conical or rather trumpet-shaped conductor, and only about 665 parts without it: by which it appears that the whole amount of obstruction, from friction and resistance of the air, did not exceed, and indeed could not equal the difference, or 80 and 17 parts in 1,000.

The difference in the proportions discharged in those cases where no conductor was employed is chiefly attributed to the nature of the surfaces of the apertures, and to the greater or less ratio between the area of the aperture and the area of its surfaces. In no two such instances, however, (within those limits which concern the present inquiry,) did this difference exceed 23 parts in 1,000.

It appears, then, that the computed body of water, at the national armory at Springfield, must exceed the actual amount employed by a quantity not greater than 335, nor less than 200 parts, in 1,000. To determine this excess with accuracy, for each wheel, would require the aid of data not in our possession; and to neglect it altogether, might occasion considerable errors in the estimate of the excavations and descent.

If we assume, however, the ratio between the actual and the estimated discharge, which may be found to hold in relation to the aperture of the largest dimensions employed at Springfield, and apply that ratio to the reduction of the whole amount deduced for all the apertures, we shall obtain a result somewhat greater than the actual quantity of water employed at that establishment, and yet approximate as near to it as may be done with prudence and safety.

Supposing the estimated discharge from the largest aperture is to the actual discharge as 1,000 is to 800, (which corresponds very nearly with the experiments,) we have 1,000 : 800 : : 335 : 268 for the whole quantity of water, and 1,290 for the power of that quantity.

STATEMENT A.

Estimate of the annual quantity and cost of materials required for the manufacture of 12,000 *muskets.*

AT PITTSBURG.

100	tons refined iron, at $130,	$13,000 00
26,880	pounds steel, assorted, at 14 cents,	3,763 20
4,480	pounds brass and zinc, at 15 cents,	672 00
2,240	pounds emery, assorted, at 12½ cents,	280 00
60	pounds borax, at 60 cents,	36 00
80	tons grindstones, at $20,	1,600 00
20	tons sand, at $1,	20 00
20	tons fire clay, at $1,	20 00
12,000	rough gun stocks, at 18 cents,	2,160 00
12,000	files, assorted, = 1,000 dozen, averaged at $3 50,	3,500 00
40,500	bushels pit coal, at 3 cents,	1,215 00
10,000	bushels charcoal, at 5 cents,	500 00
500	gallons spermaceti oil, at 75 cents,	375 00
100	gallons linseed oil, at 62½ cents,	62 50
4	barrels tar, at $4,	16 00
400	pounds buff leather, at 33 cents,	132 00
600	pounds band leather, at 30 cents,	180 00
500	pounds glue, at 30 cents,	150 00
2,000	pounds woollen rags, at 2 cents,	40 00
2,000	bushels old shoes, at 12½ cents,	250 00
30	reams sand paper, at $5,	150 00
20	reams wrapping paper, at $2,	40 00
50	coal boxes and baskets,	50 00
	Tallow and candles, 560 pounds, at 12½ cents,	70 00
	Transportation from Philadelphia of 47,600 pounds, at 3 cents, (See statement D,)	1,428 00
		29,709 70
	Browning materials, &c., estimated as at Springfield, 12,000 muskets, at 12 cents,	1,440 00
	Total,	$31,149 70

AT BEAVER.

Materials, as at Pittsburg, excluding fuel,	$29,434 70
Add 40,500 bushels pit coal, at 5 cents,	2,025 00
Add 10,000 bushels charcoal, at 4 cents,	400 00
Transportation of 122½ tons from Pittsburg, at $1 50 per ton,	183 75
Total,	$32,043 45

AT ZANESVILLE.

Materials, as at Pittsburg, excluding fuel,	$29,434 70
Add 40,500 bushels pit coal, at 5 cents,	2,025 00
Add 10,000 bushels charcoal, at 3 cents,	300 00
Transportation of 122½ tons from Pittsburg, (statement D,) at 50 cents per 100 pounds,	1,372 00
Total,	$33,131 70

NORTH BEND.

Materials, as at Pittsburg, excluding fuel,	$29,434 70
Add 40,500 bushels pit coal, at 8 cents,	3,240 00
Add 10,000 bushels charcoal, at 5 cents,	500 00
Transportation of 122½ tons from Pittsburg, (statement D,) at 45 cents per 100 pounds,	1,234 80
Total,	$34,409 50

FALLS OF OHIO.

Materials, as at Pittsburg, excluding fuel,	$29,434 70
Add 40,500 bushels pit coal, at 10 cents,	4,050 00
Add 10,000 bushels charcoal, at 5 cents,	500 00
Transportation of 122½ tons from Pittsburg, (statement D,) at 50 cents per 100 pounds,	1,372 00
Total,	$35,356 70

NARROWS OF HARPETH.

Materials, as at Pittsburg, excluding fuel,		$29,434 70
Add 172,000 bushels charcoal, at 3 cents,		5,160 00
Transportation of 122½ tons from Pittsburg to Nashville, (statement D,) at $1 per 100 pounds,	$2,744 00	
Transportation of same from Nashville to the works on the Harpeth, 122½ tons, at $1 50 per ton,	183 75	
		2,927 75
Total,		$37,522 45

CYPRESS CREEK.

Materials, as at Pittsburg, excluding fuel,	$29,434 70
Add 172,000 bushels charcoal, at 3½ cents,	6,020 00
Transportation of 122½ tons from Pittsburg to Florence, (statement D,) at $1 per 100 pounds,	2,744 00
Total,	$38,198 70

STATEMENT B.

Pay-roll of officers, mechanics, and laborers, according to the rates established at Springfield, Mass.

AT PITTSBURG, PENNSYLVANIA.

Exclusive of attendance, &c. on the steam engines.

Superintendent,	$1,492 00	
Master armorer,	746 00	
Three clerks, at $510 each,	1,530 00	
Paymaster and storekeeper,	862 00	
Paymaster's clerk,	504 00	
Five inspectors, or assistant master armorers, at $576 each	2,880 00	
Total for officers,		$8,014 00
Labor, estimated as at Springfield, on 12,000 muskets, paid by the piece for each component part of the musket, at $5 12,		61,440 00
Two forgemen, 208 days each, 416 days, at $1 per day,		416 00
Three helpers, 208 days each, 624 days, at 50 cents per day,		312 00
Labor, estimated as at Springfield, on 12,000 wipers, 12,000 screw-drivers, 1,200 ball-screws, and 1,200 spring vices,		2,604 00
Jobbers and men hired by the day,		11,300 00
Expense of three watchmen, one at $1 and two at 75 cents each,		912 50
Total,		$84,998 50

The jobbers are employed in making and repairing machinery and tools, in making all repairs to the works and buildings of the armory, browning the muskets, performing all extra and incidental labor, and attending to the police of the establishment.

Pay-roll of officers, mechanics, laborers, &c., at places where water power is employed.

Amount of pay-roll as at Pittsburg,	$84,998 50
Add for two millwrights,	700 00
Total,	$85,698 50

STATEMENT C.

Estimate of annual miscellaneous expenses at the different sites.

AT PITTSBURG.

Postage, stationary, and printing, at		$200 00
Forage, 12 tons hay, at $6 per ton,	$72 00	
200 bushels of corn, at 25 cents,	50 00	
		122 00
Extra team work, (hired)		600 00
Materials for repairs of buildings, &c.		600 00
Fuel for quarters, offices, and part of the workshops, 3,100 bushels pit coal, at 3 cents,		93 00
600 gun boxes, at $1 30,		780 00
Total,		$2,395 00

AT BEAVER.

Miscellaneous expenses, as at Pittsburg,	$2,395 00
Add to the cost of fuel at Pittsburg 2 cents per bushel for coal—3,100 bushels, at 2 cents,	62 00
For additional cost of gun boxes, at 5 cents each—600 boxes, at 5 cents,	30 00
Estimated annual expense of repairs to the water-works, the gearing, &c., including materials, on the average duration of the wheels,	700 00
Total,	$3,187 00

AT ZANESVILLE.

Miscellaneous expenses, as at Pittsburg,	$2,395 00
Add to the cost of fuel at Pittsburg 2 cents per bushel—for 3,100 bushels, at 2 cents,	62 00
Additional cost of 600 gun boxes, at 20 cents,	120 00
Estimated annual expense of repairs to the water-works, the gearing, &c., including materials, on the average duration of the wheels,	700 00
Total,	$3,277 00

AT NORTH BEND.

Miscellaneous expenses, as at Pittsburg,	$2,395 00
Add the difference between $93, the cost of fuel at Pittsburg, and $260, the cost of 260 cords of fire wood,	167 00
And additional cost of 600 gun boxes, at 20 cents each,	120 00
Estimated annual expense of repairs to the water-works, the gearing, &c., including materials, on the average duration of the wheels,	700 00
Total,	$3,382 00

AT FALLS OF OHIO.

Miscellaneous expenses, as at North Bend,	$2,682 00
Additional cost of 600 gun boxes, at 5 cents,	30 00
Estimated annual expense of repairs to the water-works, the gearing, &c., including materials, on the average duration of the wheels,	700 00
Total,	$3,412 00

AT THE NARROWS OF HARPETH, AND AT CYPRESS CREEK.

Miscellaneous expenses, as at falls of Ohio,	$2,712 00
Additional expense of 600 gun boxes, at 20 cents,	120 00
Estimated annual expense of repairs to the water-works, the gearing, &c., including materials, on the average duration of the wheels,	700 00
Total,	$3,532 00

STATEMENT D.

Weight of articles required annually at an armory, that are stated in the estimate of materials at the average price on the seaboard, and which must be transported across the mountains to Pittsburg.

	Tons.
Steel,	12
Brass and zinc,	2
Emery,	1
Files, 1,000 dozen,	3
Spermaceti oil,	2
Buff and band leather,	½
Glue,	¼
Sand paper,	½
Total,	21¼

Equals 47,600 pounds, at 3 cents, $1,428.

Weight of articles to be transported from Pittsburg to all places below.

	Tons.
Articles brought from Philadelphia to Pittsburg, as above,	21¼
One hundred tons of iron,	100
For wrapping paper and stationary,	1¼
Total,	122½

STATEMENT E.

Estimated cost of a steam power, for operating all the machinery required in the manufacture of 12,000 *muskets, annually, at Pittsburg—engines capable of working with* 100 *pounds to the inch.*

One steam engine, with boiler complete, 15-inch cylinder, of 45 horse power, when working with a pressure of 30 pounds to the inch,	$3,000 00
The fly-wheel and main shaft, estimated at 6 tons weight, with brass boxes for journals,	666 00
Timber and lever beam,	75 00
30,000 bricks, and laying, at $7 25,	217 50
140 perches masonry laid, at $2,	280 00
	$4,238 50
One steam engine, with boilers complete, 13-inch cylinder, of 33 horse power, when working with a pressure of 30 pounds to the inch, including masonry and furnace, and all other fixtures and appurtenances,	3,454 50
Two steam engines, with boilers complete, 11-inch cylinder, of 27 horse power, when working with a pressure of 30 pounds to the inch, including masonry and furnaces, and all other fixtures and appurtenances, each $3,127 50,	6,255 00
Four wells, digging and walling, average 50 feet each, at $96,	384 00
Four pumps for wells, at $40,	160 00
	$14,492 00
Add for contingencies 10 per cent.,	1,449 20
Total first cost, to put the steam power in operation,	$15,941 20

To which may be added, capital required to renew the wearing parts of engines, and render the power permanent, not included in the estimate of annual expenses, - - - 5,811 00

$21,752 20

STATEMENT F.

Estimate of the annual expenses of four steam engines for an armory at Pittsburg.

Working 313 days, at 160 bushels per day, is 50,080 bushels, at 3 cents per bushel, -	$1,502 40
Oil, tallow, smiths' work in repairs, 313 days, at 40 cents per day for each engine, is $1 60 per day, -	500 80
Packing pistons four times per annum, for each engine, is sixteen times, at $1 75, - -	28 00
Hire of four engineers, at $400 each per annum, - - - -	1,600 00
	$3,631 20

Estimate of the quantity and cost of materials for the dam at Beaver.

2,084.51 perches of hammered stone, of large size, dressed to dimensions, at $4 50 per perch, laid, -	$9,380 29
250 perches, at $2 per perch, at the wings, - - - - -	500 00
Cutting the stones, (grooves,) 1,600 running feet, at 75 cents per foot, - - -	1,200 00
266 bolts, 8 pounds each, at 8 cents per pound, - - - - -	170 00
Drilling 264 holes in cap stones, at 12½ cents each, - - - -	33 00
1,600 feet ranging timber, at 5 cents, - - - - -	80 00
5,300 feet plank, 3 inches thick, at $9 per thousand, - - - -	133 10
Excavations and levelling foundation, (rock) 530 cubic yards, at 50 cents, - - -	265 00
Excavation for the wings, 100 cubic yards, at 50 cents, - - - -	50 00
Gravelling and filling 1,000 cubic yards, at 20 cents, - - - -	200 00
Water cement and contingencies, and guard dam, - - - -	1,020 00
	$13,031 39

The price of $2 per perch for the masonry at the wings of the dam includes the expense of clearing the foundations of those walls.

It is believed that limestone, capable of making good water cement, may be obtained at several places on the Ohio; near Wheeling, Virginia, for instance.

[Here follow the scales of Mr. Berthoud, of Shippingport, and that copied from Mr. Todd's papers, supposed to have been constructed by Mr. Brooks, exhibiting the rise of water at the falls of Ohio, from ordinary low water up to ten feet, at Louisville.]

A brief explanation of the fixtures, (so termed) in the tables marked No. 2.

Cast iron.—For gudgeons and sockets, for water-wheels, for spur and pinion wheels, rings, slides, husks, &c., and beds for trip-hammers, forge, &c.

Wrought iron.—For bolts, nuts, and screws; straps and braces for water-wheels; bolts to secure the sills; and braces and straps to secure the harness for trip-hammers; bolts to secure the grinding, polishing, and drilling frames; for arbors, or shafts, for grindstones, drums, and pinion wheels; and cams or tappets for forge and trip-hammers.

Steel.—For facing the cams or tappets, &c.

Oak timber.—For sills, posts, and harness for forge and trip-hammers; sills and frames for grindstones; polishing frames; drilling frames; head and centre blocks, and shafts for water-wheels; and plank for work benches.

Pine boards and plank.—For lining, buckets, &c. for wheels, and for making drums, and apartments, drawers, &c. for keeping the parts of work and tools of the workmen.

Carpenter and millwright work.—For making the water-wheels, head and centre blocks, and drums; for framing the sills and harness for the hammers; frames for grindstones, polishing, and drilling; and making the drawers, apartments, &c.

Stone, brick, and lime.—For forges, or fires; for trip-hammers' forge, or other forges; for chimneys to the above forges and furnaces; for annealing and hardening work, and casting brass.

Fire-brick and clay.—For lining the inside of the furnaces.

Masons' labor.—For laying the stone and brick.

From the fixtures at Pittsburg, the expenses of water-wheels, gates, and head blocks are deducted, and the calculations are made to operate the armory by steam power at that site.

Machinery and tools.

Number of machines.	No. sets of tools.	Purpose.	Amount.
14	14	For trip-hammers and forge, - - - - - - -	$1,342 67
7	7	For boring barrels, - - - - - - - -	530 00
20	34	For drilling, milling, slitting, turning, &c., - - - - -	2,308 00
	10	For forging locks, - - - - - - - -	845 00
	8	For forging mounting, - - - - - - - -	711 55
	3	For forging bayonets, - - - - - - - -	225 00
	1	For forging ramrods, - - - - - - - -	20 00
	40	For filing locks, - - - - - - - -	1,213 00
	12	For filing mounting, - - - - - - - -	877 60
	5	For proving, breeching, filing, and sighting barrels, - - - -	177 50
6	34	For stocking muskets, - - - - - - - -	1,632 16
3	5	For making and repairing machinery and tools, - - - - -	1,877 66
	14	For finishing muskets, - - - - - - - -	219 36
9	9	For grinding, - - - - - - - - -	450 00
1	1	For boring bayonets, - - - - - - - -	50 00
	60	Anvils, not included in the above, - - - - - - - -	1,012 50
	153	Vices, not included in the above, - - - - - - - -	780 00
		Carpenters and millwrights' tools, patterns, &c., - - - - -	250 00
		Miscellaneous articles, - - - - - - - -	1,549 00
			$16,071 00

The miscellaneous articles consist of one fire engine, two hundred fire buckets, engine hose, twenty-four common buckets, six long ladders, two large scales for weighing iron and steel, one scale for weighing loads of grindstone, &c., six writing desks for offices, twelve chairs for offices, twenty-five account books, inkstands, tables, &c. for offices, six wheelbarrows, one wagon, one set of harness, and two horses.

The machinery and tools (the latter amounting to more than ten thousand in number) are not given in detail; it being deemed unnecessary, though the estimate of cost was made on each machine and tool separately, at the Springfield prices; to which has been added ten per cent., which it is believed will cover the whole expense.

At the following places, viz: the three sites at the falls of the Ohio river, the sites at the Narrows of Harpeth, at North Bend, at Licking river, (Bowman's creek,) and at Zanesville, it is proposed to use reaction wheels; they have been adopted from a conviction that every other kind of wheel, within our knowledge, would be liable to interruption from high water. From our limited knowledge of the power and principle of operation of these wheels, and the effect or amount of resistance caused by the friction of the wheel and part of the shaft running under a considerable depth of water, (as must sometimes be the case at several of the sites, particularly at the falls of the Ohio,) it was thought most safe to adopt fourteen wheels. Having obtained some further knowledge, from a more minute examination of the subject, as regards their power and capacity of operating under water with an efficient head, we are satisfied that seven reaction wheels will be sufficient for the operations of the armory. The tables, therefore, marked No. 1, exhibit the quantity of excavation and masonry, and the cost, first, for fourteen wheels with forge, and, lastly, for seven wheels. The estimates, however, are for seven wheels at the sites above named. In our first calculation, we omitted the forge at the sites, having one in the immediate vicinity; but, from our estimate, it was found that a forge would add to the economy and convenience of the establishment. It is, therefore, now included in the estimates for all the sites. The following is an explanation of the forebays and races, and the operations to be performed by each wheel.

Forebay No. 1 (marked 1 in the tables) conveys the water from the canal to two wheels, Nos. 1 and 2; they are separated by a triangular wall or pier, and of course there are two races, Nos. 1 and 2, (marked 1 and 2 in the tables,) which unite near the river wall; and the water from both races passes through the same arch or space in the wall, calculated for that purpose. Wheel No. 1 is calculated to operate six trip-hammers and five bellows: two for drawing iron and steel to the proper size for forging the component parts of the musket; one for welding and drawing scrap steel and old files; one for drawing and rounding ramrods; and two for drawing and rolling scalps for barrels.

Wheel No. 2 is to operate eight light hammers and eight bellows, for welding barrels.

Forebay No. 2 (marked 6 in the tables,) conveys the water to wheels Nos 3 and 4, the same as described in forebay 1. The races are marked 10 and 11 in the tables. These wheels are calculated to operate nine large grindstones, for grinding all parts of the musket requiring that operation.

Forebay No. 3 (marked 7 in tables) conveys the water to wheels Nos. 5 and 6, (races 5 and 6, marked 12 and 13 in tables,) calculated to operate machinery for boring, turning, and milling barrels; boring, turning, and milling bayonet sockets; for drilling, milling, slitting, turning, and polishing all parts that require it; and the machinery for turning the stock, boring for the barrel, letting in the lock, and other operations in stocking the musket.

Forebay No. 4 (marked 8 in tables, same as 5 in size; race 14 in tables, same as 9 in size,) is to conduct the water to wheel No. 7, which is to operate the forge hammers for working over the scrap iron and bad steel, and making such draughts as may be required for machinery and tools. In cases where a variety of operations are to be performed by one wheel, it is calculated to have governors (so called) to regulate the motion of the wheel. These machines are calculated to raise the gate, and give additional power, by increasing the column of water on the wheel when the motion is too slow, and depress the gate and diminish the column when the motion of the wheel is too rapid. By this means, a regular and nearly uniform motion is preserved in the operation of all the wheels and machinery.

At Cypress, four breast-wheels are calculated to be used, and one undershot or reaction wheel.

Forebay No. 1 conveys the water to wheel No. 1, which is calculated to operate six trip-hammers and five bellows, (as per note for reaction wheels.)

Forebay 2 conveys the water to wheel No. 2, which is to operate eight light trip-hammers and eight bellows for barrel welding.

Forebay 3 conducts the water to wheel No. 3, which is to operate nine large grindstones.

Forebay 4 conducts the water to wheel No. 4, which is to operate machinery for boring, turning, drilling, milling, slitting, polishing, &c.

Forebay 5 is to conduct the water to the wheel which operates the forge-hammers' operations, as heretofore described.

The races are marked the same as the forebays.

The site at the falls of Big Beaver creek is calculated for two overshot, two breast, and one undershot or reaction wheels.

Forebay No. 1 is to convey the water to wheel No. 1, (breast,) which is calculated to operate six trip-hammers and five bellows: two for drawing iron and steel to the proper size for forging the component parts of the muskets; one for welding and drawing scrap steel and old files; one for drawing and rounding ramrods; and two for drawing and rolling scalps for barrels.

Forebay No. 2 conveys the water to wheel No. 2, (breast,) which is to operate eight light trip-hammers and eight bellows for welding barrels.

Forebay No. 3 conveys the water to wheel No. 3, (overshot,) to operate nine large grindstones for grinding all parts of the musket requiring that process.

Forebay No. 4 conveys the water to wheel No. 4, (overshot,) which is to operate the machinery for boring, turning, and milling barrels and bayonet sockets; for drilling, milling, slitting, turning, and polishing all the component parts that require it, and the machinery for stocking.

Forebay No. 5 is to convey the water to wheel No. 5, (undershot,) to operate the forge-hammers for working over the scrap iron, and making such draughts as may be necessary for machinery, tools, &c. The races are to conduct the water from the wheels of corresponding numbers.

At the falls of Youghiogeny, (Ohiopile,) it is calculated to use three breast and two overshot wheels.

Forebay No. 1 conducts the water to wheel No. 1, (breast.)

Forebay No. 2 conveys the water to wheel No. 2, (breast;) operations the same as at Beaver.

Forebay No. 3, at the end of race 1, conducts the water to wheel No. 3.

Forebay No. 4, at the end of race 2, conveys the water to wheel No. 4; operations same as at Beaver.

Forebay No. 5, leading from race 2, is to convey the water to the forge wheels. A basin receives the water from the canals, and forebays 1 and 2 conduct it from the basin to the wheels, as above stated. It is supposed when wheels 1 and 2 are in operation, the water will be sufficient to keep in motion the other wheels which are placed on the

next bench below; but to avoid any difficulty on that account, and to furnish water for the lower wheels, when the upper wheels stop, a race leading from the basin to each of the races 1 and 2 will at all times furnish an abundant supply. It is also believed that the water from the upper wheels may be carried over the lower wheels by means of a conductor (to be raised and replaced at pleasure by means of a lever) when the lower wheels are stopped, and the upper ones in motion; but it may be necessary to have a space near the top of the forebays to serve as a weir to let off the surplus water, and races of moderate dimensions to conduct it into the races below the wheels; the expense for which was not included in the estimate; the amount, however, will be small.

A list of the various operations in the manufacture of a musket, as now practised at the United States armory, Springfield, Massachusetts.

The barrel.

Cutting scalps, by water.
Drawing scalps, by water.
Rolling scalps, by water.
Welding barrel, by water.
Nut boring barrel, by water.
Counter boring barrel, by water.
Smooth boring barrel, by water.
Turning barrel, by water.
Milling barrel, by water.
Drawing barrel, by water.
Breeching barrel, manual.
Proving barrel, manual.
Filing barrel, manual.
Studding barrel, manual.
Straightening barrel, manual.
Finish boring barrel, by water.
Drilling vents barrel, by water.
Polishing barrel, by water.
Browning barrel, manual.
Forging breech-pin, manual.
Milling breech-pin, by water.
Cutting screw-pin, manual.
Filing screw-pin, manual.

Bayonets.

Forging bayonets, manual.
Tempering bayonets, manual.
Boring bayonet socket, by water.
Turning bayonet socket, by water.
Milling bayonet socket, by water.
Grinding bayonet blades, by water.
Grinding flutes, by water.
Cutting and fitting socket, manual.
Polishing bayonet, by water.
Browning bayonet, manual.

Ramrods.

Drawing ramrods, by water.
Rounding ramrods, by water.
Heading ramrods, manual.
Tempering ramrods, manual.
Straightening ramrods, manual.
Grinding ramrods, by water.
Polishing ramrods, by water.
Cutting screw, manual.

Bands.

Cutting upper band, water.
Welding upper band, manual.
Drilling upper band, water.
Sighting upper band, manual.
Filing upper band, manual.
Grinding upper band, water.
Polishing upper band, water.
Browning upper band, manual.

Middle bands.

Forging middle bands, manual.
Trimming middle bands, water.
Filing middle bands, manual.
Grinding middle bands, water.
Riveting swivel to middle band, manual.
Polishing swivel, water.
Browning swivel, manual.

Lower band.

Cutting lower band, water.
Welding lower band, manual.
Filing lower band, manual.
Grinding lower band, water.
Polishing lower band, water.
Browning lower band, manual.

Swivels.

Forging swivels, manual.
Trimming swivels, manual.
Punching swivels, manual.
Filing swivels, manual.
Turning swivels, water.
Polishing swivels, water.
Browning swivels, manual.

Guards.

Forging guard plates, manual.
Trimming guard plates, water.
Filing guard plates, manual.
Drilling guard plates, water.
Countersinking guard plates, water.
Forging guard bows, manual.
Milling guard bows, water.
Filing guard bows, manual.
Riveting guard bows, manual.
Grinding guard, water.
Polishing guard, water.
Browning guard, manual.

Trigger.

Forging trigger, manual.
Trimming trigger, water.
Filing trigger, manual.
Polishing trigger, water.
Hardening trigger, manual.

Side plates.

Cutting side plates, water.
Filing side plates, manual.
Punching side plates, water.
Grinding side plates, water.
Polishing side plates, water.
Browning side plates, manual.

Band springs.

Forging band springs, manual.
Milling band springs, water.
Filing band springs, manual.
Polishing band springs, water.
Browning band springs, manual.

Breech plate.

Forging breech plate, manual.
Trimming breech plate, water.
Punching breech plate, water.
Countersinking breech plate, water.
Filing breech plate, manual.
Grinding breech plate, water.
Polishing breech plate, water.
Browning breech plate, manual.

Side screws.

Forging side screws, manual.
Turning heads side screws, water.
Slitting heads side screws, water.
Milling side screws, water.
Cutting screws, manual.
Hardening screws, manual.

Tang-pin.

Forging tang-pin, manual.
Slitting tang-pin, water.
Milling tang-pin, water.
Cutting screw tang-pin, manual.
Hardening screw tang-pin, manual.

Breech plate screws.

Forging breech plate screws, manual.
Slitting breech plate screws, water.
Milling breech plate screws, water.
Cutting screw breech plate, manual.
Hardening screw breech plate, manual.

Guard screws.

Forging guard screws, manual.
Slitting guard screws, water.
Milling guard screws, water.
Cutting guard screws, manual.
Hardening guard screws, manual.

Lock plate.

Forging lock plate, manual.
Grinding lock plate, water.
Drilling lock plate, water.
Trimming lock plate, water.
Filing lock plate, manual.

Hammer.

Forging hammer, manual.
Trimming hammer, water.
Drilling hammer, water.
Filing hammer, manual.

Brass pans.

Casting pans, manual.
Boring pans, water.
Filing pans, manual.
Fitting pans, manual.

Cock.

Forging cock, manual.
Trimming cock, water.
Drilling cock, water.
Punching cock, water.
Filing cock, manual.

Tumbler.

Statement of the dimensions, excavations, and masonry, for canals at the several sites.

REMARKS.

In calculating the descents of the canals, the velocity of the current is supposed to be uniform from the commencement, which is not exactly the case; some distance being passed over before the resistance of the sides and bottom is in an equilibrium with the accelerating force; and whenever the descent is augmented, this difference is repeated. No correction is made for the effect of a change of direction; where the canal passes through earth, the velocity allowed is so small that the whole descent is generally too inconsiderable to affect either the excavations or the head of water on the wheels in any material degree, and indeed is less than the probable errors that occurred in taking the levels. In those cases where the canal is taken through rocks, and a considerable velocity given to the current, its course varies but little from a straight line. The canal at Zanesville makes the greatest angle in any case where the velocity is greater than 12 inches per second; and there the circumstance is of no consequence. It is necessary, however, to allow for other causes of difference that would far exceed, in their practical effect, those just enumerated. The increased perimeter of the canal, compared with its area, occasions obstructions to the current, of various kinds, and, at the commencement of winter, by ice. It is frequently remarked of the Western streams, that they are liable to be reduced nearly as low by frost as by drought. To meet all these contingencies, an allowance is made, in calculating the descent, of half an inch per foot for the increase of the perimeter; and an addition of 12 inches to the depth, and 12 inches to the width of the canals, is made in estimating the excavations. The allowances, however, vary in different cases. They are greatest at those places that unite sufficient advantages to bring them fairly into competition as sites for an armory; and at others, where the object was merely to show the least amount of excavation that would evidently be indispensable, they were omitted altogether.

The quantity of excavations required for a canal to convey a given quantity of water at a certain distance below the surface of the ground may be diminished in a greater ratio than the cost per cubic yard will increase, by augmenting its depth, and contracting its width at bottom, until, in fact, the transverse section becomes a triangle. But it is evident that a canal so constructed would be attended with serious inconvenience; and it is believed that the width at bottom should not be less than the least depth of water which it is intended to contain.

The sections of the different canals have been regulated, in this respect, by the same considerations which are stated above to have governed in making allowances for obstructions, &c. Thus, the excavations for the canals at Zanesville, Beaver, Ohiopile, Cypress, and North Bend, are considerably increased—for Zanesville, Beaver, and Ohiopole, in particular; and at Beaver, the velocity, where the canal passes through earth cutting, is reduced to 9 inches per second, instead of 12, as estimated elsewhere. At Bowman's creek, the least velocity is 12 inches per second, and 18 at the falls of Ohio. No allowance is made, in either case, for obstructions to the current; these canals having the same dimensions as the columns of water in motion, with velocities due to their respective descents.

SITE ON CYPRESS CREEK, NEAR FLORENCE, ALABAMA, AT CLOPPER'S, OR SCHLATTER'S MILL.

Site No. 2.

The site at H B, below Clopper's mill, is two and a half miles from the Tennessee river; and the foot of the mill dam is 53 feet above the low water of that river, and 36 feet above its highest rise.

From the foot of the mill dam at A, to B, the whole fall is 14 feet 8 inches.

The extreme rise of Cypress creek is stated at 10 feet.

The surface of a dam, 8 feet high at A, would, therefore, be 12 feet 8 inches above the level of the highest rise of the creek, near the last water shop, at B.

From all the testimony that has been collected, it appears unnecessary to employ the difference of level between high and low water at B, for the purpose of increasing the power of the site. Breast wheels may not only be employed without hazard of interruption, but will, most probably, be sufficient, without resorting to the use of reaction wheels, which would add considerably to the quantity and expense of the excavations.

The canal will pass through a clay soil, and the velocity of the current will not exceed 12 inches per second. The descent is, therefore, inconsiderable; 18 inches will then be sufficient to free the wheels from tail water, to include both the descent of the canal and the small difference of level that will exist between the surface of high water in the creek, opposite the first and last water shops, and 11 feet head and fall may be employed on the wheels.

The forge will be included in the estimate for this site. The power required is 1,032, and the quantity of water for four breast wheels 138 cubic feet per second, nearly.

From the dam at A, to the proposed position for the water shops, the surface of the ground is an inclined plane, descending with great regularity towards the river, and leaving it optional to take the canal, along the whole route, at any required depth below the surface.

It will be proper, however, to take the canal from a point above the dam, where the ground is higher than the greatest elevation of the creek, which cannot exceed 8 feet. If the extreme rise below the dam is only 10 feet, the average depth of cutting above the level of low water in the canal will, therefore, be assumed at 10 feet for the first 150 yards, which will be amply sufficient to include all the excavation that may be necessary in taking the canal round the dam to where the ground has any given elevation; and from thence to the last water shop the depth of cutting may be assumed at pleasure, and without risk.

Excavations of canal earth.

Plan C.

I. From A, at the head of the proposed canal, to D, where the ground is at command, the distance is assumed, and it is believed without hazard, at 450 feet.

The width of the canal, at bottom, will be taken equal to the depth of water contained in it.

Then $\sqrt{\frac{138 \times 2}{5}} = \sqrt{55.2} = 7.43$ feet, the least depth of water. $7.43 + .67 = 8$ feet depth of canal below the surface of the water, including $\frac{67}{100}$ of a foot for obstructions, which is also the width at bottom.

1. Average depth of ground above the level of the dam = 10 feet.
2. Depth of canal below the level of the dam = 8 "

Mean depth of earth to be excavated = 18 feet.

$\frac{18 \times 3}{2} + 8 = 35$ feet, mean width of canal.

$35 \times 18 \times 450 = 283500$ cubic feet.

94500

10500 cubic yards, averaging 18 feet deep.

II. From D to the first water shop at H $= 4422 - \overline{450 + 620} = 3352$ feet.

1. Average depth of ground above the level of the dam = 1. feet.
2. Depth of canal below the level of the dam = 8. "

Mean depth of earth to be excavated = 9. feet.

$\frac{9 \times 3}{2} + 9 = 22.5$ feet, mean width of canal.

$9 \times 22.5 \times 3352 = 678780$ cubic feet.

226260

25140 cubic yards, averaging 9 feet deep.

III. From H to the last water shop at B = 620 feet; the surface of the water in the canal will be 2 feet below the surface of the ground; when,

1. Average depth of ground above the level of the dam = 2. feet.
2. Depth of canal below the level of the dam = 8. "

Mean depth of earth to be excavated = 10. feet.

The side of the canal next the water shops will be walled. Then $\frac{10}{4} = 2.5$ feet, mean thickness of side wall.

$2.5 + \frac{2.5}{4} = 3.125$ feet, or 3.2 nearly; thickness of wall at its base.

$3.2 + 1.2 = 4.4$ feet, width of foundation.

2.75 feet, depth of foundation.

$8 - \frac{1.2}{2} = 7.4$ feet, width of bottom of canal between the inner edge of the foundation and base of the opposite bank.

$\frac{10 \times 3}{4} + 7.4 = 14.9$ feet, mean width of the solid to be excavated, comprised between a line perpendicular to the inner edge of the foundation of the side wall and opposite bank of the canal.

$14.9 \times 10 = 149$ square feet; area of its transverse section.

$10 + 2.75 = 12.75$ feet; depth from the surface of ground to bottom of foundation.

$\frac{12.75}{2} + 4.4 = 10.775$ feet; mean width of the solid to be excavated, including the space to be occupied by the side wall and its foundation.

$10.775 \times 12.75 = 137.38$ square feet; area of its section.

$149 + 137.38 = 286.38$ square feet; area of the transverse section of the whole solid.

$620 + 10.775 = 630.77$ feet; whole length of the solid to be computed.

$286.38 \times 630.77 = 180639.9$ cubic feet.

60213.3

6690.3 cubic yards, averaging 11 feet deep.

RECAPITULATION OF EARTH TO BE EXCAVATED.

1. From A to D = 10500 cubic yards, averaging 18 feet deep.
2. From D to H = 25140 cubic yards, averaging 9 feet deep.
3. From H to B = 6690 cubic yards, averaging 11 feet deep.

Total, 42330 cubic yards.

Masonry of canal.

From H to B = 620 feet, length of side wall. To which must be added the width of the canal at the surface of the ground, and the breadth of the foundation of the fall, which will include the end wall, nearly:

$\frac{10 \times 3}{2} + 10 + 4.4 + \frac{10}{8} = 30.65$ feet; length of end wall.

$620 + 30.65 = 650.65$ feet; whole length of wall to be computed.

$2.5 \times 10 = 25$ square feet; area of the transverse section of wall above the foundation.

$2.75 \times 4.4 = 12.1$ feet; area of the section of the foundation.

$25 + 12.1 = 37.1$ square feet; area of the transverse section of the whole wall and foundation.

$37.1 \times 650.65 = 24139.1$ cubic feet; or, 975.3 perches.

SITE AT THE NARROWS OF HARPETH RIVER, TENNESSEE.

It is proposed to convey the water from the outlet of the tunnel at B (plan H) to the mouth of the ravine at G, by means of a side or river wall along the base of the hill. Assuming the highest rise of the Harpeth to be 25 feet above low water, between the tunnel and ravine, and that 4 feet head may be employed on the wheels at that time, it will follow that the wall must be built near 31 feet high to be secure.

The water will be taken into the ravine at G; from thence, to the head of the canal at T, the bottom of the ravine is supposed to be sufficiently low to render any excavation unnecessary, except for the foundation of the side wall.

The mean elevation of the Harpeth, during the winter and spring, is stated to be 3 feet; the whole fall at the water shops is 18 feet (nearly) at low water: reaction wheels may operate, therefore, with a head of 13 feet, without inconvenience; and as the supply of water is presumed to be sufficient with that head, a dam may be dispensed with, unless the whole fall should prove to be less than four 4 during a high state of the river. But the opposite evil is most to be apprehended, and may have to be provided against. It will be adverted to at the close of this estimate.

Excavation of the canal.

Plan H.—Profile on line T to E.

13 feet head on the wheels; forge and saw mill omitted.

150 cubic feet of water required per second; the velocity and descent are trifling, and not considered.

I. From T, at the head of the canal, to the last water shop at E, is 640 feet. To this distance must be added the mean width of the transverse section of the solid, which includes the space to be occupied by the end wall and its foundation.

The average elevation of the ground from T to E is 44 feet (nearly) above low water at corresponding points of the river; therefore, 44−18=26 feet is the average height of the ground above low water in the canal. Also, 25+4−18=11 feet is the difference of level between high and low water in the canal, and determines the height of the side wall, which should be a foot higher, or 12 feet above low water in the canal, supposing always only 4 feet water in the wheels when the river is swollen to its greatest (assumed) elevation below the tunnel. Allowing 6 feet for the least depth of water in the canal, the whole height of the side wall above its foundation is then 12+6=18 feet, and 26+6=32 feet for the average depth of the excavation from the surface of the ground to the bottom of the canal.

$\frac{150}{6}$=25 feet, the mean width of the column of water.

$25-\frac{3\times6}{4}-\frac{6}{16}$=21.875 feet, mean width of canal at bottom.

21.875−.75=21.125 feet width from the inner side of the foundation to the base of the opposite bank of canal.

$\frac{32\times3}{2}$+21.125=69.125 feet, width of canal at surface from the ground, exclusive of the base to the talus of the wall, and of the foundation which projects beyond it.

$\frac{69.125+21.125}{2}$=45.125 feet, the mean width.

45.125×32=1444 square feet, area of transverse section.

Again: $\frac{18}{4}$=4.5 feet, mean thickness of the side wall.

$4.5+\frac{18}{16}$=5.625 feet, or 5.6 nearly, thickness at its base.

5.6+1.5=7.1 feet, or 7 feet nearly, thickness of the foundation, and 3 feet the depth of the foundation.

$\frac{32+3}{4}$+7=15.75 feet, mean width of that portion of the transverse section of the whole solid which embraces the side wall and its foundation.

15.75×35=551.25 square feet its area; and

1444+551.25=1995.25 square feet, the area of the transverse section of the whole solid to be excavated.

640+15.75=655.75 feet, length of the solid.

655.75×1995.25=1308385.18 cubic feet, or 48458.71 cubic yards of earth, averaging about 33 feet deep.

II. Excavations for the foundation of the side wall from G to T.

The average height of this wall will be 22 feet, nearly, above its foundation.

$\frac{22}{4}$=5.5 feet, mean thickness of the wall.

$5.5+\frac{22}{16}$=6.875 feet, thickness at its base.

6.875+1.5=8.375 feet, thickness of the foundation; 3 feet mean depth of foundation.

8.375×3=25.125 feet, area of its section (nearly.)

25.125×76=1909.5 cubic feet; or 70.5 cubic yards, averaging 3 feet deep.

The height of the ground has been stated at 44 feet, and the height of the canal wall at 18 feet; the water shops will be about 30 feet above low water; there is, consequently, a body of earth between the canal and the river which it will be necessary to remove, extending the whole distance from T to E. The area of that portion of its transverse section, which has not been included in calculating the excavations of the canal and river wall *of the shops*, is about 780 square feet: the whole solid is, therefore,

780×615=479700 cubic feet, or 17766.6 cubic yards, averaging near 12 feet deep.

Masonry.

1. Canal wall from T to E,=640 feet; 2. End wall at E,=43 feet (nearly;) making 683 feet.

From which must be deducted for four forebays, viz:

3 forebays of 12 feet width, each	=36 feet.
1 forebay of 8 feet width,	8 feet.
	44 feet.

683−44=639 feet, actual length of canal wall to be computed.

4.5×18=81 square feet, area of the transverse section of the wall above its foundation.

7 × 3 = 21 square feet, area of the section of foundation.

81 + 21 = 102 square feet; area of transverse section of the whole wall.

102 × 639 = 65178 cubic feet, or 2633.45 perches.

The length of the side wall in the ravine, from G to T, is 76 feet, nearly, viz: 106 − 30.

5.5 × 22 = 121 square feet, area of its section above the foundation.

8.375 × 3 = 25.125 square feet, section of the foundation.

121 + 25.125 = 146.125 square feet, area of the transverse section of the whole wall.

And 146.125 × 76 = 11105.5 cubic feet, or 448.7 perches.

River wall, from the outlet of the tunnel to the mouth of the ravine at G, including the turn of the wall at each end, is 2,142 feet. It will necessarily vary in its dimensions, as it changes its relative position in respect to the direction of the current acting against it. Its average height will be 31 feet above its foundation, and the area of its probable mean transverse section, including the foundation, may be taken at 350 square feet, without much error.

350 × 2142 = 749700 cubic feet, or 30290.9 perches.

Some excavation will be required for the wall; but, as advantage will be taken of the bayou, from the outlet of the tunnel to where it empties into the river at O, the quantity must be trifling, except for the foundation, which will have an area of 45 square feet for its probable mean transverse section.

Consequently, 45 × 2142 = 96390 cubic feet, or 3570 cubic yards, of earth to be removed.

RECAPITULATION.

1. *Excavation of earth.*

	Cubic yards.
1. For foundation of the river wall, from the tunnel to G,	3570.
2. For foundation of side wall from G to T, averaging 3 feet deep,	70.
3. For the canal from T to E, averaging 33 feet deep,	48458.71
4. Earth to be removed from the surface between the canal and river, averaging 12 feet deep,	17766.6

2. *Masonry.*

	Perches.
1. Canal wall, from T to E,	2633.45
2. Side wall, from G to T,	448.7
3. River wall, from the tunnel to G, faced with hammered stone,	30290.9

SITE BELOW SHIPPINGPORT, FALLS OF OHIO.

Plans S and L, No. 1.—Profile No. 1.

I. Dimensions of the transverse section of the column of water in the canal, from *b* to K, (Plan S, Prof. No. 1,) when even with, or barely over the average surface of the rock, in that distance: and the velocity $1\frac{1}{2}$ foot per second.

The average height of the rock above low water level is = 2.73 feet. When the rise of the Ohio is 3 feet above the falls, the rise below is 12 feet: the water in the canal will then be even with the surface of the rock; and the whole difference of level at that time is $24 + 3 - 12 = 15$ feet. (See table.)

The descent of the surface of the water in the canal will then be near 6 inches; the head on the wheels $14\frac{1}{2}$ feet; and the quantity of water required for the works 142.34 cubic feet, or 143 nearly.

	Feet.
Descent from A to *b*, at low water, (bottom of canal,)	= .5
Descent from *b* to K, at low water = 1 foot, half the difference between the descent of bottom of canal and surface of water, at the time of 3 feet rise above the falls $= \frac{1 - .5}{2}$	= .25
Least depth of water in canal at lowest stage,	4.
Average height of rock above low water level,	2.73
Mean depth of the column of water,	7.48

$\frac{143}{1.5} = 95.33$ square feet for the area of the mean transverse section; and $\frac{95.33}{7.48} = 12.74$ feet, nearly, for the breadth; the sides being perpendicular.

II. Dimensions of the transverse section of the column of water from *b* to K, above the surface of the rock, when the head on the wheels is 4 feet or less, and velocity 18 inches per second. When the rise above the falls is 9 feet, the rise below is $28\frac{1}{2}$ feet. The whole difference of level is then $24 + 9 - 28\frac{1}{2} = 4\frac{1}{2}$ feet.

The descent of the surface of the water in the canal will be 6 inches nearly; the head on the wheels 4 feet nearly; and the quantity of water required = 516 cubic feet per second.

$\frac{516}{1.5} = 344$; the area of the section from the surface of the water to bottom of canal.

But the area of this section includes that of the section through the rock just before determined: consequently, $344 - 95.33 = 248.67$ square feet is the area of that portion of the section above the surface of the rock.

To the difference between the height of the rise in the river when the water in the canal is even with the average surface of the rock, and the height of the rise when the head on the wheels is only 4 feet, should be added half the difference of the descent from *b* to K, at each period. Neglecting this difference, and taking half the descent in the former case, the altitude becomes $9 - 3 + \frac{5}{2} = 6.5$ feet, which is greater than the truth; and will therefore require a less excavation. Hence, the mean breadth of this portion of the section is $\frac{248.67}{6.5} = 38.25$ nearly. Again: the base of the slope to the sides of the canal above the rock is once and a half its altitude to the surface of the water; from thence to the surface of the ground, the base is equal to the altitude: therefore, $38.25 - \frac{3 \times 6.5}{2} = 28.5$ feet; the breadth at bottom, or surface of the rock: and $38.25 + \frac{3 \times 6.5}{2} = 48$ feet; the breadth at the surface of the water.

The mean depth of earth from the surface of the ground to the rock is 16.72 feet.

$16.72 - 6.5 = 10.22$ feet, the distance from the surface of the water to that of the ground: and,

$48 + 10.22 \times 2 = 68.44$ feet is the width of the excavation at the surface of the ground.

And then, according to the hypothesis, are the dimensions of the mean transverse section of the canal between *b* and K, requisite to convey the necessary quantity of water to the works at the two stages of the river, which limits the size of the canal at all others.

III. Dimensions of the transverse section of the canal from K to its end at L, when the head on the wheels is 4 feet or less, and the velocity of the current 18 inches per second.

	Feet.
1. Descent in bottom of canal from A to *b*,	.5
2. Descent from *b* to K,	1.
3. Least depth of water in the canal during a low stage of the river,	= 4.
Making the whole depth of the bottom of the canal at K below the level of low water,	= 5.5

Nothing is allowed for the descent of the bottom from K to L, because the canal will preserve a uniform width to the last water shop; and the trifling descent necessary, in this distance, will occur in the diminished depth of water at the lower end, where the consumption of it ceases.

The whole depth of the bottom of the canal at K, below the level of low water mark, added to the elevation of the water above it, when the rise of the Ohio is 9 feet above the falls, will be the depth of the column of water between K and L, nearly, when the head on the wheels is 4 feet or less, viz:

	Feet.
1. Depth of bottom at K, below low water, - - - - - - -	5.5
2. Rise in the Ohio above the falls, when the head on the wheels is 4 feet, - - -	9.
	14.5
From which should be deducted the descent at the surface at that time, or near 6 inches from *b* to K,	.5
Leaving the actual depth of the column of water, - - - - - -	= 14.

The quantity of water required to a head of 4 feet is 516 cubic feet per second: the velocity of the current is taken at 18 inches per second; therefore,

$\frac{516}{1.5} = 344$ square feet for the area of the section.

From K to L there is no rock; the side next the river will be walled; the base of the slope to the side, which is of earth, is once and a half its altitude to the surface of the water: from thence to the surface of the ground the base is equal to the altitude.

The base of the talus to the wall is one-eighth of its altitude.

$\frac{516}{1.5} = 344$ feet; the area of the section, of which the depth is 14 feet, as before determined.

$\frac{344}{14} = 24.57$ feet; the mean breadth of the section.

$24.57 - \frac{3 \times 14}{4} - \frac{14}{16} = 13.195$ feet, the breadth at bottom of canal; and $24.57 + \frac{3 \times 14}{4} + \frac{14}{16} = 35.945$ feet; the breadth at surface of the water.

The average height of the ground above the level of low water, from K to L, is = 20.66 feet.

The depth or distance below the level of low water to the bottom of the canal is = 5.5 feet.

$20.66 + 5.5 - 14 = 12.16$ feet height from the surface of the water in the canal to the surface of the ground, when the rise of the Ohio is 9 feet above the falls.

$35.945 + 12.16 + \frac{12.16}{8} = 49.625$ feet, the breadth of the canal at the surface of the ground; the side next the river being of masonry, and the opposite side of earth.

The dimensions of the transverse section of the canal at low water, from A to *b*, as well as the position of the wheels, depend on the quantity of water which can be conveyed along the portion of the canal from K to L, at that stage of the river.

When the river is at its lowest stage, the depth of water in the canal from K to L is 4 feet, nearly.

The breadth of bottom, as just before determined, is 13.195 feet. $13.195 + \frac{3 \times 4}{4} + \frac{4}{16} = 16.445$ feet, the mean breadth of the transverse section. $16.445 \times 4 = 65.78$ square feet, the area of the section. The velocity of the current cannot exceed 1½ foot per second, as before. $65.78 \times 1.5 = 98.67$ cubic feet per second, which requires 21 feet head on the wheels. The least depth of water in the canal, from A to *b*, is 4 feet; the descent assigned to that distance is 6 inches; and the corresponding velocity to that descent, with a breadth of 11 feet, is 27.3 inches per second nearly, which gives 99.88 cubic feet. The velocity in the canal, from *b* to K, at low water, with the assigned descent to that distance, and uniform depth of 4 feet, is but little more than 22 inches, which gives 93.73 cubic feet nearly. Consequently, the surface of the water will be depressed at K, and the velocity increased to 2 feet nearly, or one-tenth of a foot nearly be added to the descent of the bottom of the canal, beyond what has been assigned.

These dimensions are obviously less than what would admit a practical application. No allowance is made, as in all other cases, for an extension of the perimeter, from irregularities, &c., nor any thing for accidental or other interruptions to the current, such as ice, &c. And a greater velocity is allowed to the current from K to L, with 4 feet head on the wheels, than would be admissible in practice.

It is assumed, that the river at *b*, during a rise of 3 feet, is at the same elevation as at A, which is not the case. And near 23 feet of the whole fall at low water is employed in the descent of the canal, or on the wheels, which will leave them submerged frequently more than ten months in the year, and occasionally the whole year through. Hence, the dimensions that have been determined are less than would be required in practice with a fall of 23 feet; and the fall employed is greater than the convenience and permanency in the operations of the machinery would admit.

But the dimensions of the canal from *b* to K are calculated to convey the necessary quantity of water with 1½ foot velocity per second when the rise in the river is 3 feet above the falls, and 12 feet below, with 14½ feet head on the wheels, and the water in the canal even with the surface of the rock; consequently, if the velocity of the current is proportionably increased, the wheels may be placed 12 feet above low water mark, or higher, without any other alteration in the dimensions of the canal from *b* to K, or from A to *b*, except an increase in the descent, corresponding to the increased velocity which may be required. The additional excavation of rock would be in some degree compensated on this line by an equal diminution of earth above it; for the whole area of the transverse section would remain nearly the same as before. A considerable increase, however, in the quantity of earth to be excavated would be necessary from K to L, because the canal is calculated, in the whole of that distance, to convey no more water than is necessary for the greatest practicable head on the wheels which the site affords at low water, viz: 23 feet. But the cost would, in this case, be far more than counterbalanced by the advantages. It is not necessary, however, to go into the investigation; the present object being merely to find the minimum excavation of an adequate canal, for the greatest head which can be employed with any security or convenience; or rather, a limit, known to be less than the truth, yet as near to it as may be safely attempted; which, it is believed, has been done.

Excavation of rock.

Plan S.—Profile No. 1.

I. From A to *b*=2320 feet, through bare rock.

1. Depth of the column of water at low stage of the river, - - - - = 4. feet.
   Average depth from the surface of the rock to the level of water, - - - = .5
   Half the descent in the bottom of the canal from A to *b*, - - - - = .25

   Mean depth of the excavation, - - - - - - - = 4.75
   The breadth of the canal, as before determined, - - - - - 11.

   52.25

$4.75 \times 11 \times 2320 = 121220$ cubic feet.

40406.66

4489.62 cubic yards.

II. From *b* to K=7672 feet; average depth above the rock = 16.72 feet.

1. Descent in bottom of canal from A to *b*, - - - - - - = .5 feet.
2. Half the descent from *b* to K, - - - - - - - = .5
3. Estimated least depth of water in the canal, - - - - - = 4.
4. Average depth of rock above the level of low water, - - - - = 2.73

   Mean depth of the excavation, - - - - - - - = 7.73

The breadth of the canal before determined is 12.74 feet. $7.73 \times 12.74 \times 7672 = 755540$ cubic feet, or 27982.96 cubic yards.

Excavation of earth.

I. From *b* to K=7672 feet.

1. Breadth of the mean transverse section at bottom, or on top of rock, - - = 28.5 feet.
2. Breadth at surface of the water when the head on the wheels is 4 feet, - - = 48.

$\frac{48+28.5}{2}$=38.25 feet, the mean breadth of the mean transverse section, between the surface of the water in the canal and surface of the rock.

Mean depth of this portion of the section, - - - - - - = 6.5

$38.25 \times 6.5 = 248.625$ square feet, the area.

II. From surface of water in canal to surface of the ground, base of the slopes being equal to their altitude.

1. Breadth at surface of water, as above, - - - - - - - = 48.
2. Breadth at surface of ground, - - - - - - - = 68.44
3. Depth from surface of the ground to the water, - - - - - = 10.22

$\frac{48+68.44}{2}$=58.22 feet; the mean breadth above the water.

$58.22 \times 10.22 = 595$ square feet, the area.

$595 + 248.625 = 843.625$ square feet, which is the area of the whole section from the surface of the ground to the rock.

Area of the mean transverse section above the rock = 843.625 square feet.
$843.625 \times 7672 = 6472290.95$ cubic feet; equal to 239714 cubic yards.

From K to L=858 feet.

The canal in this distance will be walled on the side next the river; the opposite side will be of earth.

The base of the talus to the wall is one-eighth its height.

The base of the slope to earth bank opposite is once and a half its altitude from the bottom of the canal to the surface of the water, and from thence to the surface of the ground the base will be equal to the altitude.

For greater convenience, the area of the transverse section will be estimated in two parts.

I. Between a perpendicular raised from the inner edge of the foundation of the wall to the surface of the ground and the opposite bank.

The average height of the ground above low water mark, - - - - = 20.66 feet.
Average depth below low water, - - - - - - - 5.5

Making the whole depth, - - - - - - - - - = 26.16

$\frac{26.16}{4}$= 6.56 feet, mean thickness of the wall down. $\frac{26.16}{8}$=3.28 feet, the base of the talus.

$6.56 + \frac{3.28}{2} = 8.2$ feet, the thickness of the wall at its base.

$8.2 + 1.5 = 9.7$ feet, the breadth of the foundation of the wall.

The breadth of the canal at bottom is 13.191 feet.

$13.191 - \frac{1.5}{2}$=12.441 feet, the distance between the perpendicular at the edge of foundation and the base of the slope to the opposite bank.

14 feet is the depth from the surface of the water, when there is 4 feet head on the wheels, to the bottom of the canal; therefore, $\frac{3 \times 14}{2} + 12.441 = 33.441$, breadth of the excavation at the surface of the water.

$\frac{33.441+12.441}{2}$=22.941, the mean breadth, and $22.941 \times 14 = 321.174$ square feet, the area of the section from surface of the water to the bottom of the canal.

From the surface of the water to the surface of the ground is $26.16 - 14 = 12.16$ feet: the base of the slope is here equal to the height; therefore, $33.441 + 12.16 = 45.601$ feet, the breadth of the section at the surface of the ground.

$\frac{45.601 + 33.441}{2} \times 12.16 = 480.575$ square feet the area.

480.575 + 321.174 = 801.749 square feet, the area of the whole section.

II. Second part of the transverse section of the canal, viz: between the perpendicular and the bank next the river, including the space occupied by the wall.

	Feet.
Depth from surface of ground to bottom of canal,	= 26.16
Depth of foundation of the wall,	3.5
Whole depth,	29.66
The breadth of the foundation is	9.7

The base of the slope to the bank is only half its altitude.

$\frac{29.66}{2} + 9.7 = 24.53$ feet breadth of the excavation at top.

$\frac{24.53 + 9.7}{2} = 17.16$ feet the mean breadth.

17.16 × 29.66 = 508.9656 square feet for the area.

508.965
801.749

1310.714 square feet for the whole area of the mean transverse section.

1310.714 × 858 = 1124592.61 cubic feet, or 41651.5 cubic yards.

This does not include the small solid at the end of the canal.

RECAPITULATION.

Earth to be excavated from *b* to K = 239714 cubic yards, averaging 16.72 feet.
Do. K to L = 41651 do. do. 28 do.

Total excavation of earth, = 281365 cubic yards.

Masonry.

Side wall of canal from K to L, including end wall. The end wall of the canal will be estimated to have the same dimensions with the side wall. The depth from the surface of the ground to the bottom of the canal, at its end, is, indeed, near seven feet greater than the average depth from K to L. This difference, however, will be considered as compensated by the diminished thickness of that portion of the end wall which extends into the slope of the earth bank of the canal. The length of the end wall will be equal to the breadth of the canal at the surface of the ground, added to the breadth of the foundation of the wall.

$$35.945 + 12.16 + \frac{12.16}{8} = 49.675 \text{ feet.}$$

858 + 49.675 = 907.6 feet, for the whole length of the wall.
Breadth of the foundation = 9.7 feet.
Depth of foundation = 3.5 feet.
3.5 × 9.7 = 33.95 square feet, the area of the transverse section of the foundation.
Mean thickness of the wall above the foundation = 6.56 feet.
Mean height of the wall - - = 26.16 feet.
26.16 × 6.56 = 171.6 feet, nearly, the area of the transverse section above the foundation.
33.95 square feet, area of transverse section of foundation, as above.
171.6 square feet, area of section of the wall above foundation.

205.55 square feet; whole area of mean transverse section, including foundation.

205.55 × 907.60 = 186557.18 cubic feet.

205.55

SITE BETWEEN LOUISVILLE AND SHIPPINGPORT.

[*Eight feet head and fall.*]

Plan L 2.—Profile No. 3.

It is proposed to ascertain the minimum dimensions of a canal that will furnish this site with the necessary quantity of water for a head of 4 feet on the wheels, when the river is at its lowest stage.

Six or seven inches must, of necessity, be left to free the wheels from tail water; otherwise the effective head on the wheels will be diminished to that extent, and the canal will no longer supply the required quantity for the reduced head.

The whole fall, therefore, which may be employed to give velocity to the water in the canal, cannot be practically greater than 41 or 42 inches.

If this fall is distributed between A S and S Z, with a view to the least expense in the excavation, it will afford a velocity of 3 feet per second from A to S, and 4.3 feet per second from S to Z, nearly; and the descent will be 12.32 inches, and 28.84 inches, in those distances, respectively. Allowing a small extension (in estimating the velocity) to that portion of the perimeter in contact with the column of water in motion, for irregularities, &c., the excavations will then be as follows:

1. *Rock.*

I. From A to S, distance = 3175 feet.

Velocity 3 feet per second; 12.32 inches descent = 1.026 feet.

Four feet head on the wheels; 516 cubic feet of water required; 4 feet least depth of water in this distance. As nearly the whole transverse section of the canal through this rock plane will be occupied by the column of water, the depth cannot be increased without also increasing the expense.

$\frac{516}{3 \times 4} = 43$ feet, the breadth of the canal.

	Feet.
Average height of rock above the level of low water,	= .5
Half the descent from A to S,	.513
Least depth of water in canal,	4.
Mean depth of excavation,	= 5.013

Or 5 feet, nearly.

$43 \times 5 \times 3175 = 682625$ cubic feet, or 25282.4 cubic yards; averaging 5 feet deep.

II. From S to V = 3581 feet.

516 cubic feet of water required.

4.3 feet per second velocity.

Descent from S to V = 28.84 − 4.25 = 24.59 inches, or 2.04 feet.

	Feet.
1. Average depth of rock above level of low water,	= 4.5
2. Descent in canal from A to S,	1.027
3. Half the descent from S to V = $\frac{2.04}{2}$	1.02
4. Least depth of water in the canal from S to V,	7.
Mean depth of excavation,	= 13.547

$\frac{516}{4.3 \times 7} = 17.14$ feet, nearly, breadth of canal through the rock.

$13.5 \times 17.14 \times 3581 = 828607.59$ cubic feet, or 30689.1 cubic yards.

III. From V to Z, at end of canal = 620 feet.

4.3 feet velocity per second.

Descent 4.25 inches = .355 of a foot, nearly.

	Feet.	
1. Average depth of rock above level of low water,	= 1.55	
2. Descent from A to V = $\frac{24.59 + 12.32}{12}$	3.07	nearly.
3. Half the descent from V to Z, $\frac{.355}{2}$	.177	
4. Least depth of water in canal,	7.	
	=11.797	

Breadth of canal = 17.14 feet.

$11.79 \times 17.14 \times 620 = 125289.9$ cubic feet, or 4640.3 cubic yards; averaging 11.79 feet deep, under 29.5 feet of superincumbent earth.

2. *Earth.*

I. From S to V = 3581 feet.

1. Average depth of earth to surface of rock = 17.14 feet.
17.14 feet = width of canal through the rock from S to V.
2.86 feet, added for two berms at the base of the slopes.

20.00 feet mean width of excavation at surface of the rock.

The base to the slopes of the earth banks of the canal is once and a half their altitude.

$17.14 \times 3 + 20 = 71.42$ feet, the width of the canal at the surface of the ground.

$\frac{71.42 + 20}{2} = 45.71$ feet, the mean width of the mean transverse section.

$17.14 \times 45.71 \times 3581 = 2805594.9$ cubic feet, or 103910.9 cubic yards; averaging 17.14 feet deep.

II. From V to Z = 620 feet.

1. Average depth of earth from surface of the ground to surface of the rock = 29.5.

From V to Z is the distance occupied by the water shops; and a side wall next the river is required, as in all other cases. The opposite bank of the canal will be left in its natural state, with a slope of once and a half its altitude.

$\frac{29.5}{4} = 7.375$ feet, or 7.3 nearly, the mean thickness of the side wall.

$7.3 + \frac{7.3}{4} = 9.1$ feet, thickness of the wall at its base.

The base to the slope of the bank next the wall is only one-half its altitude.

The berm at the base of the side wall is 4 feet, and at the base of the bank opposite 1.5 foot nearly. The breadth of the excavation through the rock is 17.14, as before.

Hence, the width of the excavation at bottom, or at the surface of the rock, becomes $17.14+9.1+4+1.5 = 31.74$ feet. And the width at the surface of the ground,

$31.74 + \frac{3\times29.5}{2} + \frac{29.5}{2} = 90.74$ feet.

$\frac{90.74+31.74}{2} = 61.24$ feet for the mean breadth of the solid to be excavated.

And $61.24\times29.5 = 1806.58$ square feet for its area.

If to the distance from V to Z = 620 feet, is added the mean width of the transverse section of the space to be excavated for the end wall, it will give the whole length of the solid to be excavated, from V to the end of the canal, sufficiently near.

The end wall will be higher and thicker at its base than the mean section of the side wall, because the rock is presumed to be somewhat lower at that point. Assuming it to be the same,

And $9.1 + \frac{29.5}{4} = 16.4$ nearly for the breadth of the transverse section, embracing the wall, and the earth to be excavated back of it,

$620+16.4 = 636.4$ for the whole length of the solid.

$636.4\times1806.58 = 1149707.51$ cubic feet, or 42581.75 cubic yards; averaging 29.5 feet deep.

Masonry.

I. From V to Z = 620 feet, length of side wall.

If the length of the end wall is taken equal to the mean width of the canal, including the side wall, the area of its transverse section will be equal to the area of the section of the side wall, nearly.

$9.1+4+17.14+\frac{29.3}{4} = 53.84$ feet for the length of the end wall.

$620+53.84 = 673.84$, whole length of wall to be computed.

$7.3\times29.5\times673.84 = 145841.44$ cubic feet, or 5892.58 perches.

From which deduct for four forebays, viz: 3 of 8 feet wide, and one of 4 feet wide, 103.23

5789.35 perches.

Plan L.—Profile No. 2.

1. *Excavations of rock.*

I. From A to S = 3175 feet. Descent at 5 = 5.11 inches.

Average height of rock above low water, at A,	= .5 feet.
Half the descent of the canal from A to S $\frac{5.11}{2} = 2.55$ inches,	.21
Least depth of water in the canal,	4.
Average depth of excavation,	= 4.71 feet.
Breadth of canal,	= 64.4 feet.

$4.71 \times 64.4 \times 3175 = 963053.7$ cubic feet, or 35668.6 cubic yards.

64.4	303.324
	3175
1884	1516620
1884	2123268
2826	303324
303.324	909972
	3)963053.700
	9)321017.9
	35668.6 cubic yards.

II. From S to V = 3581.8 feet. Descent from S to V = 12.15—1.795 = 10.35 inches, nearly.

	Feet.
1. Average height of the rock on this line above low water, at A,	= 4.5
2. Descent from A to S of the canal = 5.11 inches,	.425
3. Half the descent from S to V = $\frac{10.35}{2}$ = 5.17	.426
4. Least depth of water in the canal,	7.
Average depth of excavation,	= 12.351
Breadth of canal,	= 24.58

24.58 × 12.35 × 3581.8 = 1087304.414 cubic feet, or 40270.5 cubic yards.

III. From V to Z = 620 feet. Descent from V to Z = 1.795 inch.

1. Average height of the rock on this line above low water level, at A,	= 1.55
2. Descent of canal from A to V = 10.35 + 5.11 = 15.47 inches, nearly	1.29
3. Half the descent from V to Z = $\frac{1.79}{2}$ = .84 of an inch, nearly	.07
4. Least depth of water in canal,	7.
Average depth of excavation,	= 9.91
Breadth of canal,	= 24.58

9.91 × 24.58 × 620 = 151024.436 cubic feet, or 5593.497 cubic yards.

RECAPITULATION OF ROCK EXCAVATIONS.

1. From A to S, less than 5 feet deep = 35668.6 cubic yards.
2. From S to V = 40270.53
3. From V to Z = 5593.49 } averaging 11 feet deep, under an average depth of 19 feet of earth.

45864.02

Excavations of earth.

I. From S to V = 3581 feet.

	Feet.
1. Average depth of earth to the rock in this distance,	= 17.14
2. Width of canal through the rock from S to V,	24.9
3. Add for two berms at the base of each talus,	2.85
Mean breadth of excavation at bottom,	= 27.75

17.14 × 3 + 27.75 = 79.17 feet, for the breadth of the excavation at the surface of the ground.

$\frac{79.17 + 27.75}{2}$ = 53.46 feet for the mean breadth of the mean transverse section.

Therefore, 53.46 × 17.14 × 3581 = 3281270 cubic feet, or 121528.5 cubic yards.

II. From V to Z = 620 feet.

Average depth of earth above the surface of the rock in this distance = 29.5 feet.

$\frac{29.5}{4}$ = 7.375 feet = mean thickness of the side wall.

1.843 feet = half the talus.

9.218 feet = the thickness of the wall at its base on the rock.

The canal will have but one side walled. The base of the slope to the earth will then be half its altitude on the side next the wall; and once and a half its altitude for the opposite side. Again: the breadth of the canal through the rock is 24.58 feet, as before, from S to V; to which must be added a berm of 3 feet at the base of the wall, and 2 feet at the base of the slope, to the side opposite, which is of earth. Hence, the breadth of the excavation of earth at bottom, or at the surface of the rock, becomes: 24.58 + 9.218 + 3 + 2 = 38.798 feet. Its breadth at the surface of the ground is $38.798 \times \frac{29.5}{2} + \frac{29.5 \times 3}{2}$ = 97.798 feet. And the mean breadth of the mean transverse section, $\frac{38.798 + 97.798}{2}$ = 68.298 feet.

The prism to be excavated at the end of the canal will have $\frac{29.5}{4}$ + 9.218 = 16.593 feet, nearly, for the mean breadth of its transverse section, which must be added to the distance from V to Z, in order to include the whole quantity of earth to be excavated, nearly.

Then, 620 + 16.593 = 636.593 feet, the whole length of the solid; and 68.298 × 29.5 × 636.59 = 1282595.16 cubic feet, or 47503 cubic yards; averaging 29.5 feet deep.

RECAPITULATION OF THE EXCAVATIONS OF EARTH.

121528 cubic yards, from S to V, averaging 17.14 feet deep, at 20 cents per cubic yard.
47503 cubic yards, from V to Z, averaging 29.5 feet deep, at 30 cents per cubic yard.

Masonry of canal.

I. From V to Z = 620 feet.

If the mean width of the canal below the top of the wall is added to the thickness of the wall at its base, the sum will be equal, very nearly, to the mean length of the end wall, computing it to have the same mean transverse section with the side wall, viz:

$38.798 + \frac{3 \times 29.5}{4} + 9.218 = 70.116$ feet, length of end wall. And $620 + 70 = 690$ feet, nearly, for the whole length of wall.

$29.5 \times 7.375 = 217.5625$ square feet, the area of the mean section.

$217.5625 \times 690 = 150118.1$ cubic feet, or 6065.3 perches.

SITE BELOW JEFFERSONVILLE, FALLS OF OHIO.

From the lower end of Jeffersonville to *h* on plan at the head of the proposed canal, the fall at low water is 6 inches. From *h* to low water mark opposite D, where the first water-wheel will be placed, the fall is 15.83 feet; and from thence to low water mark in the basin, opposite the last water-wheel, the fall is 1.4 foot: making the whole fall at this site, from the head of the canal to the last water-wheel, 17.23 feet.

It is asserted that the rise in the basin opposite F is 2 feet for 1 foot rise at Jeffersonville, counting from low water. The difference of level between those two points is 17.23 feet; therefore, when the rise in the Ohio at Jeffersonville is 7 feet, the rise in the basin is 14 feet; and the whole fall, or difference of level at that time is $17.23 + 7 - 14 = 10.23$ feet. Also, the basin opposite F is near 7 feet above the level of low water at Shippingport.

Now, according to Mr. Berthoud's observations, when the rise of the Ohio at Louisville is 7 feet, the rise at Shippingport is 24 feet, and the whole fall in the river between those two places at that time is only 7 feet: there is, then, an error in the statement of the ratio between the rise of the river at Jeffersonville and at the basin referred to.

The fall which really exists between those points, at any one stage of the river above low water, must obviously be a less portion of the whole fall between Louisville and Shippingport at that time, than it is during low water. Indeed, when the river is more than ordinarily high, the descent between any two points must be to the whole descent from the head to the foot of the falls, nearly, as the distances. If the fall from *h* to F, at any given elevation of the river above its low stage, is supposed to bear the same ratio to the whole fall between Louisville and Shippingport at that time which it does at low water, viz. 17.23:: 24, it will exceed the truth. Hence, when the rise at Jeffersonville is 5 feet, the rise at Shippingport 18.5 feet, and the difference of level between Louisville and Shippingport 10.5 feet, the difference of level between *h* and F must be less than 7.54, which is the ratio, nearly. If, then, $7\frac{1}{4}$ feet be taken as the fall from *h* to the last water shop, when the rise is 5 feet at *h*, it will probably still exceed the truth. From *h* to where the proposed canal will enter the river bank at *a*, is a rock plane, bare at low water, and of an average elevation of 1.75 feet above low water at *h*. From *a* to the end of the canal, the rock has an estimated average elevation of 4 feet above low water level at *h;* and from *a* to where the side of the canal next the river will be walled at D, the average elevation is nearly 5 feet.

From D to the end of the canal, the rock averages less than 4 feet above low water at *h;* the side next the river will be walled; and as the canal will preserve its whole breadth from that point to the last water shop, and as the quantity of water conveyed per second diminishes continually after passing D, while the space occupied by it remains the same, no variation of the velocity of the water will be estimated on account of the diminished height of the rock.

Since the whole length of this canal will have its bottom and sides to the height of 10 or 12 feet of rock, any required velocity may be given to the current at low water, and all deposition in the canal speedily and safely removed. A much greater velocity may also be permitted, when it is in contact with the earth slopes of the canal above the surface of the rock, than would be admissible under almost any other circumstances than those described. Two feet may be allowed, without immediate hazard to the banks of the canal, when the water is even with the surface of the rock. A berm of 2 feet on each side, together with the talus to the sides, will reduce this velocity at the period when there is 4 feet head, or less, on the wheels. The dimensions of the canal will then approach to what are deemed the least that are practicable, consistent with economy and convenience in any case.

The object of this investigation is not to prove what is the absolute minimum cost of a canal which may barely supply the requisite quantity of water, without reference to the convenience of the works, but to ascertain, as near as may be done the dimensions that are necessary to improve whatever advantages the site may offer, with the least hazard of obstruction to the machinery. Now, the head which exists at that stage of the river where the water first comes in contact with the earth slopes of the canal, is also the greatest which can be advantageously employed when the river is at its lowest stage, and will therefore govern the dimensions and descent of the canal. If the wheels were placed much lower than this limit, they would not only be longer under water, but, the head employed on them being greater, they would necessarily be much more liable to accidents, more difficult to repair, and in some instances it would be altogether impracticable, until they should be nearly uncovered by the receding of the river. Besides, the power is already separated from the weigh, more than 40 feet; and this distance would be increased, and, with it, a serious objection to the site, without any corresponding benefit to the works, and but comparatively trifling economy in the excavations.

SITE NEAR JEFFERSONVILLE, FALLS OF OHIO.

Plan J.—Profile R B.

From N to H, (prof. R B,) is 2178 feet through bare rock, which averages only 1.75 foot above low water. The velocity might be increased at pleasure in this distance; but it is to be observed that the average depth of the excavation is less than 6 feet, and the cost per cubic yard will therefore not exceed 75 cents; that the descent employed between N and H, is added to the depth of the excavation from H to the end of the canal; that in this last distance the rock will average 11.34 feet above the bottom of the canal, with an average of 19 feet of superincumbent earth, and 24 feet between D and I; which doubles the cost of excavating each cubic yard. Therefore, to equilibriate the expense of these excavations, and also to lessen the disadvantage to the works of employing a greater descent, the velocity from N to H will be limited to 4 feet per second. The depth of the canal being given = 4 feet, the breadth becomes 17.81 feet, and the descent 1.2 foot, including the descent from R to N.

SITE BELOW JEFFERSONVILLE.

Plan J.—Profile R B.

From H to I, (profile R B,) is 2028.84 feet. The average depth of the rock has been stated at 4 feet above the level of low water; and when the rise of the river at h (plan —) is 5 feet, the water in the canal will be even with its surface. The head on the wheels will then be, at most, $7\frac{1}{4}$ feet; the least quantity of water required 285 cubic feet; and the velocity of the current about 2 feet per second. The least dimensions of a canal, which will conform to these conditions, and supply an equal quantity of water, during the low stage of the river, the head on the wheels being also $7\frac{1}{4}$ feet, must admit near 5 feet depth of water at that time, with a velocity of 5 feet per second, which gives a breadth of 12 feet, and requires a descent from H to I of 2.24 feet, nearly.

Canal excavations.

$7\frac{1}{4}$ feet head on the wheels at low water.
285 cubic feet of water required.

Rock.

Plan J.—Profile R B.

I. From R, at the head of the canal, to N = 333.3 feet, the river is only 3 feet deep. The breadth of the column of water must therefore be $\frac{285}{3 \times 4} = 23.75$ feet, the velocity being 4 feet per second.

The breadth of the canal at N is 17.81 feet, and depth 4 feet.

Supposing the surface of the rock to slope uniformly from N to R, which is nearly the case, its section, in the direction of its length, will be a triangle, having its base 4 feet, and perpendicular 333.3 feet. The whole solid to be excavated will be equal to half of a prism of those dimensions, and 17.81 feet broad; and a triangular pyramid containing less than 100 cubic yards.

	Feet.
1. Breadth of canal at N,	= 17.81
Add incidental obstructions, &c.	2.19
Total breadth,	= 20.

	Cubic yards.
$20 \times 3 \times 333.3 = 19998$. cubic feet,	= 740.6
To which add for the pyramid,	95.
Total excavation from R to N,	= 835.6

II. From N to H = 2178 feet.

	Feet.
1. Average depth of rock above the level of low water,	= 1.75
2. Depth of water in the canal,	4.
3. Half the descent from N to H, added to the whole descent from R to N,	.68
Whole depth of excavation,	= 6.43

Here, as between R N, the allowance for obstructions, &c. will be made by increasing the breadth of the transverse section, as the least expensive; which will be taken, as before, at 20 feet.

$6.43 \times 20 \times 2178 = 280090.8$ cubic feet, or 10373.7 cubic yards.

III. From H to I = 2028.84 feet.

	Feet.
1. Average depth of rock above the level of low water,	= 4.
2. Descent from R to H,	1.2
3. Half the descent from H to I,	1.14
4. Least depth of water in canal,	5.
Whole depth of excavation,	= 11.34

The velocity is 5 feet per second, and the breadth of the canal 12 feet. The same considerations do not hold in enlarging the dimensions of the canal from H to F, as before, from R to H, and no allowance is made.

$11.34 \times 12 = 136.08$ feet = area of the section; and $136.08 \times 2028.84 = 276084.54$ cubic feet, or 10225.3 cubic yards.

SITE NEAR JEFFERSONVILLE.

Plan J.—Profile R B.

Canal excavations of earth.

I. From H to D, where the first water wheel is placed, = 1408.8 feet.

	Feet.
1. Breadth of canal through the rock,	= 12
2. Breadth of two berms, one on each side, $1\frac{1}{2}$ foot each,	3
3. Breadth of excavation at surface of rock,	15
4. Average depth of earth above the rock,	17

The base of the slope of each bank of the canal is once and a half the height: consequently,
$3 \times 17 + 15 = 66$ feet for the breadth of the excavation at the surface of the ground; and
$\frac{66 + 15}{2} = 40.5$ feet for the mean breadth of the mean transverse section; therefore,
$40.5 \times 17 = 688.5$ square feet for the area; and $688.5 \times 1408.8 = 969958.8$ cubic feet, or 35924.4 cubic yards.

II. From D to I, at end of canal = 620 feet.

Mean depth of earth from the surface of the ground to the rock = 24 feet, which is also the height of the side wall from D to I.

$\frac{24}{4} = 6$ feet, the mean thickness of the wall.

1.5 foot = half the base of the talus.

7.5 feet = breadth of the wall at its base.

The depth of the cutting through the rock, from D to I, averages 11.34 feet. The sides are perpendicular, and the mean velocity of the current is 5 feet per second.

The security of the wall, therefore, will require it to be placed about 4 feet from the edge of the rock, which will be sufficient to insure it against the effects of the current, with the velocity it would have in case any portion of the intermediate rock should be worn or sapped by its action.

The berm, at the base of the slope on the side of the canal opposite to the wall, will remain, as before, = 1.5 foot.

The breadth of the canal through the rock = 12 feet; therefore, $12 + 4 + 1.5 + 7.5 = 25$ feet for the breadth of the excavation of earth at the surface of the rock.

The base, to the slope of the earth on the side where the wall is to be placed, need not exceed what is barely necessary to sustain the bank while the walls are erecting: half the height is sufficient for that purpose. The base of the slope on the opposite side continues to be once and a half the whole height.

$\frac{24}{2} + 25 + \frac{3 \times 24}{2} = 73$ feet for the breadth of the excavation at the surface of the ground.

$\frac{73 + 25}{2} = 49$ feet for the mean breadth of the excavation; and

$49 \times 24 = 1176$, the area; $1176 \times 620 = 729120$ cubic feet, or 27004 cubic yards; averaging 24 feet deep.

III. Excavation of earth at the end of canal, not included in the foregoing estimate.

This excavation will consist of a prism and two pyramids. The mean breadth of the transverse section of the prism is equal to one-half the sum of twice the breadth of the wall at its base, added to half its height, viz:

$\frac{7.5 \times 2 + 12}{2} = \frac{27}{2} = 13.5$ feet.

The length of this solid is equal to the length of the end wall of the canal added to the breadth of the wall at its base, viz:

$41.5 + 7.5 = 49$ feet.

24 feet the depth of earth above the surface of the rock.

$49 \times 24 \times 13.5 = 15876$ cubic feet, or 588 cubic yards.

The several small solids at the angles, omitted, are inconsiderable.

RECAPITULATION.

Excavation of earth.

	Cubic yards.
1. From H to D,	= 35924.4
2. From D to I,	27004.
3. At end of canal,	588.
Total excavation of earth,	= 63516.4

Masonry of the canal.

Plan J.—Profile R B.

From D to I, at end of canal = 620 feet.

The end wall of the canal will be the same average height as the side wall. Its whole length will be equal to the width of the canal at the surface of the ground added to the thickness of the wall at top; but that portion of it which extends into the slope of the earth will necessarily diminish in its breadth to less than half its former mean thickness. The whole length of this wall will, therefore, be taken equal to the mean width of the canal, having the same transverse section as the side wall.

Mean width of canal, including the thickness of the wall, viz:

$12 + 4 + \frac{24 \times 3}{4} + 7.5 = 41.5$ feet, which is the length of the end wall, nearly.

$620 + 41.5 = 661.5$ feet, length of wall having the same transverse section.

Height of the wall = 24 feet; mean thickness = 6 feet.

$6 \times 24 = 144$ square feet for the area; $144 \times 661.5 = 95256$ cubic feet, or 3848.7 perches.

Deduct for 4 forebays, viz: 3 of 8 feet wide each, and 1 of 4 feet wide, - 70.47

3778.23

SITE AT NORTH BEND, ON THE OHIO RIVER.

	Feet.
Difference of level between low water of the Miami river, at the mouth of Jordan's creek, and low water of the Ohio, at North Bend,	38.62
Height of proposed dam on the Miami, near Jordan's creek,	10.
Whole fall, or difference of level between low water of the Miami, above the dam, and low water of the Ohio,	48.62

The forge will be included in the estimates for this site. The power required is 1032. The greatest head employed on the wheels is 15 feet. The corresponding quantity of water is 138 cubic feet per second. The least efficient head will be 4 feet; and the quantity of water, then required, 516 cubic feet.

Excavations of the canal.

Plan N.—Profile C R.

Earth.

I. From C, at the head of the canal, to B, at the head of the tunnel, is 9270.36 feet.

In the whole of this distance the canal passes through a level river bottom. The mean velocity of its current will, therefore, not exceed 12 inches per second.

1. Average height of the surface of the ground above the level of the dam = 11.62.

The width of the canal, at its bottom, will, in this case, be equal to the depth of water which it contains during the lowest stage of the Miami; therefore,

$\frac{\sqrt{138}\times 2}{5} = \sqrt{55.2} = 7.43$ feet, nearly; the least depth of water in the canal, and least width of its bottom, which should be augmented to 8 feet, to allow for impediments and obstructions of all kinds. Then,

$8 + 11.62 = 19.62$ feet, whole depth of earth to be excavated.

$3 \times 19.62 + 8 = 66.86$ feet, breadth of canal at surface of the ground.

$\frac{66.86 + 8}{2} = 37.43$ feet, mean width of mean transverse section of canal.

And $37.43 \times 19.62 \times 9270.36 = 6807929.89$ cubic feet, or 252145.55 cubic yards of earth to be excavated; averaging 19.62 feet from surface of ground to bottom of canal.

Tunnel.

II. From B, at the entrance of the tunnel into the hill, to its outlet at a point corresponding to L, in the ravine, (profile C R,) the distance is 1817 feet, nearly.

The velocity of the current through the tunnel cannot exceed 4 feet per second, when the head on the wheels is 4 feet, without giving a greater depth to the column of water when the head is 15 feet, and the Miami at its lowest stage, than would otherwise be necessary or expedient; and requiring a greater descent than would, in all probability, be compensated by the difference, if any, in the cost of the excavation.

When the head is 4 feet on the wheels, the quantity of water required is 516 cubic feet per second. Therefore, the least dimensions of the transverse section of the tunnel that will convey this quantity with a velocity of 4 feet per second will be nearly a square; of which $\frac{\sqrt{516}}{4} = \sqrt{129} = 11.35$ feet, is the length of one of its sides.

If the bottom of the tunnel is placed $4\frac{1}{2}$ feet below the level of the dam, the same descent that will give a velocity of 4 feet to the current when the depth of the column of water is 11.35 feet, will also be amply sufficient, at the lowest stage of the Miami, to give the requisite velocity when the head on the wheels is 15 feet.

Hence, the bottom of the tunnel and the top of its roof will have the same inclination; and the descent employed will not add to or affect the excavations.

It will be proper, however, to give a greater elevation to the roof than what is assigned to the surface of the column of water, both to avoid an increased resistance to the current and consequent augmentation of the descent, as well as to secure the roof from the long continued action of the water when the velocity is 4 feet per second.

The whole height will then be assumed at 13 feet, or 1.64 foot above the surface of the water, when the Miami is between 6 and 7 feet on the dam and 4 feet head on the wheels.

Then, $11.36 \times 13 \times 1816 = 268186.88$ cubic feet, or 9932.07 cubic yards.

This estimate is based upon the supposition that the tunnel will pass entirely through solid rock, and that no additional excavation will be required on account of shafts and arches.

Excavations of earth.

III. From the end of the tunnel, at a point corresponding to L, in the ravine, (prof. C R,) to the first water shop at a point corresponding to H, (prof. C R,) is 4 chains, nearly, on a straight line = 264 feet.

The dimensions of the canal below the level of low water will here be the same as those assigned to it from C to the head of the tunnel.

	Feet.
1. Supposed average depth of earth above the level of the dam, - - -	= 15
2. Least depth of water in canal, including an allowance for probable obstructions, -	8
3. Whole descent from head of canal to L, - - - - -	1 nearly.
Mean depth of earth to be excavated,	= 24

$\frac{3 \times 24}{2} + 8 = 44$ feet, mean width of mean transverse section of canal.

$44 \times 24 \times 264 = 278784$ cubic feet, or 10317.9 cubic yards; averaging 24 feet deep.

IV. From H, on plan N, (corresponding to H on prof. C R,) to the last water shop at E, is 620 feet.

	Feet.
1. Average depth of earth above the level of the dam, - - - -	= 10
2. Least depth of water in canal below the level of the dam, (including allowance for obstructions,)	7
3. Descent of canal, - - - - - - - -	1 nearly.
Mean depth of the bottom of the canal below the surface of the ground,	= 18

$\frac{18}{4} = 4.5$ feet, mean thickness of side wall.

$4.5 + \frac{4.5}{4} = 5.625$ feet, thickness of wall at its base.

$5.625 + 1.75 = 7.375$ feet, width of the foundation. 3 feet, depth of the foundation.

Then, $\frac{138}{6.5} = 21.23$ feet, mean width of the column of water at its lowest stage.

$21.23 - \frac{6.5 \times 3}{4} - \frac{6.5}{16} = 15.96$ feet, nearly, least width of the column of water at bottom.

$15.96 + .5 = 16.46$, or 16.5 feet nearly, width of canal at bottom.

$16.5 - .75 = 15.75$ feet, width from the inner edge of the foundation of the side wall to the base of the opposite bank of the canal.

$15.75 + \frac{3 \times 18}{2} = 42.75$ feet, mean width of the solid contained between a perpendicular, raised from the inner edge of the foundation of the wall to the surface of the ground and opposite bank of the canal.

$42.75 \times 18 = 769.5$ square feet, area of its transverse section.

Again: $18 + 3 = 21$ feet, depth from the surface of the ground to the bottom of the foundation of the side wall.

$7.37 + \frac{21}{4} = 12.62$ feet, mean width of the solid to be excavated, embracing the space to be occupied by the side wall and its foundation.

$12.62 \times 21 = 265.02$ square feet, area of its transverse section.

$769.5 + 265.02 = 1034.52$ square feet, area of the transverse section of the whole solid to be removed.

$620 + 12.62 = 632.62$ feet, the whole length of the solid.

$1034.52 \times 632.62 = 654354.59$ cubic feet, or 24235.35 cubic yards.

Masonry.

$\frac{18 \times 3}{2} + 7.375 + 16.5 = 50.875$ feet, mean length of end wall, supposing it to have the same transverse section with the side wall.

$620 + 50.875 = 670.875$ feet, whole length of wall, from which must be deducted the width of 8 forebays, viz:

		Feet.
Reduced to half the number.	6 forebays, 10 feet mean width, each,	= 60
	2 forebays, 6 feet mean width, each,	12
		= 72

$670.875 - 72 = 598.875$ feet length of wall, to be computed; $4.5 \times 18 = 81$ square feet, area of transverse section above the foundation.

$7.375 \times 3 = 22.125$ square feet, area of transverse section of foundation.

$81 + 22.125 = 103.125$ square feet, area of the whole transverse section.

$598.875 \times 103.125 = 61758.98$ cubic feet, or 2495.3 perches.

Add for reduction in the number of forebays, 150.

2645.3

SITE ON BOWMAN'S CREEK, NEAR LICKING RIVER, KENTUCKY.

Plan T.—Profile A B.

A dam 15 feet high across Licking river, near the mouth of Cruizer's creek, will give 8 feet fall at D, where the canal enters the valley of Bowman's creek. The intermediate ground is river bottom. The velocity of the current in the canal will, therefore, not exceed 1 foot per second. The descent requisite will be too inconsiderable to affect the excavations in any material degree; and the whole fall of 8 feet will be considered as employed on the wheels.

Excavations of earth.

I. From A to D, distance 9784.5 feet. The base of the slope to the banks of the canal will be once and a half their altitude; the width of the canal at bottom equal to half the depth of water contained in it during the lowest stage of the river.

258 cubic feet is the quantity of water to be delivered per second: therefore, $\sqrt{\frac{258}{2}} = 11.357$ feet, or 11.36, the depth of the column of water.

The average depth of earth above the level of the dam is 16.746 feet; consequently, $16.746 + 11.36 = 28.1$ feet, nearly, is the average depth of earth to be excavated on the whole route A D.

$28.1 \times 3 + \frac{11.36}{2} = 89.98$ feet, width of canal at the surface of the ground.

$\frac{11.36}{2} = 5.68$ feet, width of canal at bottom.

$\frac{89.98 + 5.68}{2} = 47.83$ feet, mean width of canal; and

$47.83 \times 28.1 = 1344.023$ square feet, area of the mean transverse section; and

$1344.023 \times 9784.5 = 13150593$ cubic feet, or 487059 cubic yards; averaging 28.1 feet deep from surface of the ground to bottom of the canal.

II. From D to B, at end of canal, 620 feet distance. A side wall next the water shops will be required here, as in other cases.

The bottom of the canal in this distance will be 7 feet below the level of the dam. A greater depth would reduce the excavation to less than what is required for the embankment on which to raise the workshops above the level of ordinary high water at the dam; and a less depth is not supposed to be essential.

	Feet.
1. Average depth of earth above the level of the dam,	= 3
2. Least depth of water in the canal,	7
Whole depth to be excavated,	= 10

The level of high water at the mouth of Cruizer's creek is 22 feet above the bottom of the canal. A dam 15 feet high would cause the freshets of Licking to rise several feet higher at that point, and would most probably afford a head of 4 feet on the wheels at the water shops, until the river should reach the greatest elevation which it is known to have formerly attained. It would, therefore, be necessary to give at least an equal height to the side wall, viz: 22 feet above the bottom of the canal.

$\frac{22}{4} = 5.5$ feet, the mean thickness of the wall.

$\frac{5.5}{4} + 5.5 = 6.875$ feet, thickness of the wall at its base. 3 feet, depth of its foundation.

And $\frac{258}{7} - \frac{3 \times 7}{4} - \frac{7}{16} = 31.169$ feet, nearly, breadth of canal at bottom.

$31.169 - .75 = 30.419$ feet, breadth of that part of the bottom of the canal between the foundation of the wall and the base of the opposite bank.

$\frac{10 \times 3}{2} + 30.419 = 45.419$ feet, width of the excavation at the surface of the ground, between a perpendicular raised from the inner side of the foundation of the wall and the opposite side of the canal.

$\frac{45.419 + 30.419}{2} = 37.919$ feet, mean width.

$37.919 \times 10 = 379.19$ square feet, area of the transverse section.

$10 + 3 = 13$ feet, depth from the surface of the ground to the bottom of the foundation of side wall.

8.375 feet, thickness of the foundation wall.

$8.375 + \frac{13}{4} = 11.625$ feet, mean width of the transverse section.

$11.625 \times 13 = 151.125$ square feet, area of the transverse section, including the space to be occupied by the side wall and its foundation.

$379.19 + 151.121 = 530.311$ square feet, area of the whole transverse section of the solid to be excavated between D and the last water shop.

$620 + 11.625 = 631.625$ feet, whole length of the solid, including the part to be excavated on account of the end wall.

$631.625 \times 530.311 = 334957.68$ cubic feet, or 12405.84 cubic yards; averaging about 11 feet deep.

Masonry.

	Feet.
1. Length of side wall from D to B, at end of canal,	= 620.
2. Mean height of the wall above its foundation,	22.
3. Mean thickness,	5.5

$5.5 \times 22 = 121$ square feet, area of the transverse section.

8.37 feet, width of the foundation; 3 feet, depth of the foundation.

$8.37 \times 3 = 25.11$, area of the transverse section.

And $121 + 25.11 = 146.11$ square feet, area of the whole transverse section of the wall, including the foundation.

If the length of the end wall is taken equal to the width of the canal at the surface of the ground, its mean transverse section will be equal to that of the side wall, nearly. Then, $620 + 47.419 = 667.419$ feet, will be the whole length of the wall. From which must be deducted for 8 forebays, viz:

		Feet.
Reduced to half the number.	6 forebays, mean width each 10.75 feet, - - - -	= 64.5
	2 forebays, mean width each 6.75 feet, - - - -	13.5
	Making	= 78.

667.419 — 78 = 589.419 feet, nearly, for the length of wall to be computed.
146.11 × 589.4 = 86118.224 cubic feet, or 3479. perches of masonry.
Add for reduction in number of forebays, 230.23

3709.23

The length of the end wall is assumed to be equal to the width of the canal at the surface of the ground, because of the necessity of its extension, in the present case, in consequence of the elevation of the high water in the canal above the surface of the adjacent grounds. At Louisville, and in some other instances, the effective head on the wheels ceases before the water reaches the surface of the ground; and any further rise is supposed to be prevented by means of the head-gates, or the whole establishment would be inundated.

In all other cases the canal walls extend no higher than the natural elevation of the ground.

Recapitulation.

1. *Excavations of earth.*

	Feet deep.
1. From A to D = 487059 cubic yards, averaging - - - - -	28.1
2. From D to B = 12405.8 cubic yards, averaging - - - - -	11.

2. *Masonry of canal.*

	Perches.
1. From D to end of canal, - - - - - - - -	= 3479.
2. Add - - - - - - - - - -	230.23
	= 3709.23

CANAL AT ZANESVILLE.

Excavations of earth.

I. From H I, at the end of the rock, (Plan Z No. 3.—Profile A C,) to the last water shop at C.

$\frac{2}{}$

	Feet.
1. Whole distance to be computed, - - - - - - -	2145.
2. Descent of canal in that distance, - - - - - - -	.96

I. *Between the side walls of canal.*

	Feet.
1. Mean depth of earth from surface of ground to low water level, - - -	= 14.7
2. Half the descent from H I to end of canal, - - - - -	.48
3. Whole descent from head of canal to H I, - - - - -	.7
4. Depth to be occupied by flagging, - - - - - - -	.5
5. Depth of water when free from ice, &c. - - - - - - -	5.
Mean depth of earth to be excavated, from surface of ground to bottom of canal, contained between the foundations of the two side walls, - - - - - - -	= 21.38

The velocity is 3 feet per second when the column of water is 4 feet deep. The breadth of the canal is, at bottom, 20.25 feet; and as the foundations project 9 inches beyond the walls at each side, the excavations for which will be computed separately, the whole breadth of the space to be excavated within the side walls, and between the foundations and surface of the ground, is 20.25 — 1.5 = 18.75 feet.

Therefore, 18.75 × 21.38 = 400.865 square feet, for the area of the mean transverse section of the space between the walls.

II. *Of the space embracing the walls and their foundations.*

	Feet.
1. Mean depth of excavation within the walls, as before, - - - -	= 21.38
2. Depth of foundations, - - - - - - - -	3.
	24.38
Depth occupied by the flagging to be deducted,	.5
Whole depth, from surface of the ground to the bottom of the foundations,	= 23.88

Again: breadth of the foundations = 8 feet; and the breadth of the foundations added to one-fourth of the whole height of the wall is equal to the mean breadth of the trapezoid of which the transverse section consists.

$8 + \frac{23.88}{4} = 13.97 = 14$ feet, nearly, the mean breadth.

23.88 × 14 = 334.32 square feet, area of the section, embracing one side wall from the bottom of the foundation to the surface of the ground, and 334.32 × 2 = 668.64 square feet, area of the two sections, including both side walls.

Hence, 400.865 + 668.64 = 1069.52 square feet, area of the mean transverse section of the whole solid to be excavated from H I to end of canal.

1069.5 × 2145 = 2294120.4 cubic feet, or 84967.4 cubic yards.

III. *Excavation at end of canal.*

The solid to be excavated at the end of the canal may be resolved into a prism and two pyramids.

1. *Prism.* Its length, equal to the length of the foundation of the end wall of the canal, added to twice the breadth of the foundation.

Its transverse section is a trapezoid, having the same altitude as the end wall, and a mean breadth equal to one-fourth the height of the wall added to the breadth of its foundation.

2. Two rectangular pyramids at the angles, the height of each equal to the whole depth of the excavation, and the length of the sides of the base equal to half that depth.

1. *Prism.*

$20.25 + \overline{8 \times 4} = 52.25$ feet for the length.

	Feet.
1. Depth of ground from its surface to low water level,	= 12.1
2. Descent from head of canal to I,	.72
4. Descent from I to end of canal,	.96
4. Depth of water in canal,	5.
5. Depth of foundation,	3.
Whole depth from surface of ground to bottom of foundation,	= 21.78

$21.78 \times \left(\frac{21.78}{4} + 8\right) = 292.832$ square feet, area of the transverse section.

292.8 × 52.25 = 15298.8 cubic feet.

2. *Pyramids.*

21.78 feet = height. 10.89 = length of each side of the base.

$\frac{10.89 \times 10.89 \times 21.78}{3} \times 2 = 1722$ cubic feet, the contents of both pyramids.

15298
1722

17020 cubic feet; or

630 cubic yards to be excavated on account of end wall.

84967
630

85597 cubic yards, from H I to end of canal, including excavations for the end wall.

IV. *Of the earth resting on the surface of the rock from* H I *to head of canal.*

I. From H I to B D = 114.8, nearly.

1. Section at H I, (*Prof.* A C.)

2

	Feet.
1. Depth of earth from surface at I to level of low water,	= 18.
2. Descent from head of canal to I,	.72
3. Least depth of water in canal,	5.
Whole depth of earth from the surface of the ground to bottom of canal at H I,	= 23.72

20.75 = breadth of canal at bottom. 7.41 = thickness of wall at the base.

20.75 + 7.41 × 2 + 23.72 = 59.29 feet, breadth of the excavation at the surface of the ground.

$\frac{59.29 + 20.75 + 7.41 \times 2}{2} = 47.43$ feet, the mean breadth of the section.

47.43 × 23.72 = 1125 square feet, the area of the section.

2. Section at B D.

	Feet.
1. Depth of earth from surface of the ground to the rock,	= 17.5
2. Breadth of canal through the rock,	12.2

12.2 + 3 = 15.2, breadth between the inner sides of the walls at their bases, including a berm of $1\frac{1}{2}$ foot in front of each.

$\frac{17.5}{4} + \frac{17.5}{16} = 5.718 = 5.72$ feet, nearly, the thickness of the walls at their base.

15.2 + 5.72 × 2 + 17.5 = 44.14 feet, width of excavation at surface of the ground.

$15.2 + 2 \times 5.72 = 26.64$ feet, width of excavation at bottom, or surface of the rock.

$\frac{44.14 + 26.64}{2} = 35.39$, the mean breadth of the section.

$35.39 \times 17.5 = 619.32$ square feet, the area.

Distance between H I and B D = 114.8 feet, nearly.

$\frac{619.32 + 1125}{2} \times 114.8 = 100123.96$ cubic feet, or 3708.2 cubic yards, for the contents of the solid between H I and B D.

V. From B D to V W. Distance, 380.16 feet.

3. Section at V W.

	Feet.
Depth of earth from surface of ground to the rock, - - - - -	= 12.6

$17 = 12.2 + 4.8$ feet, distance between the inner bases of the two walls, including the two berms, which are 2.4 each at that height.

The walls terminate at V, where they are not more than 3 feet high; but they have a bank eight feet higher to sustain, which requires the breadth to be proportionate; 3 feet may be taken for the thickness at the base.

$17 + 3 + 3 = 23$ feet for the breadth of the excavation at the surface of the rock.

$23 + 12.6 = 35.6$ feet, breadth of excavation at surface of ground.

$\frac{23 + 35.6}{2} = 29.3$ feet for the mean width.

$29.3 \times 12.6 = 369.18$ square feet, the area of the transverse section at V W.

619.32 = area of the section at B D, as before.

$\frac{619.32 + 369.18}{2} \times 380.16 = 187894$ cubic feet, or 6959 cubic yards, for the contents of the solid contained between B D and V W.

VI. From V W to head of canal, the whole distance is 528 feet; but the mean distance, with 12.66 feet uniform depth of ground, is 479 feet, nearly, viz:

$$1023 - 380.16 + 114.84 + \frac{99}{2} = 478.5.$$

The average height of the rock in this distance is supposed to be 10 feet; the surface of the ground remaining nearly the same as on the line located, of which ——— is the profile; therefore,

$\frac{22.95' + 22.37}{2} - 10 = 12.66$ feet for the mean depth from surface of ground to the rock.

	Feet.
1. Breadth of canal through the rock, - - - - - -	= 12.2
2. Two berms, - - - - - - - -	3.
Breadth of excavation at bottom,	= 15.2

There are no walls between these two points; consequently,

$15.2 + \frac{12.66 \times 3}{2} = 34.19$ feet, breadth of surface of ground.

$\frac{15.2 + 34.19}{2} = 24.69$ feet for the mean breadth of the mean transverse section.

$24.69 \times 12.66 = 312.57$ square feet for the area.

$312.57 \times 478.5 = 149564.74$ cubic feet, or 5539.4 cubic yards, for the contents of the solid between V W and head of canal, profile A C.

2

Excavations of rock.

Plan Z No. 3.—Profile A C.

2

I. From the head of the canal at A to B, where the line of low water level intersects with the rock.

2

1. Below the line of low water level from A to B.

2

$1023 - 114.8 = 908.2$ feet distance.

	Feet.
1. Least depth of water in canal, - - - - - -	= 5.
2. Allowed for obstructions, &c. - - - - - -	1.
3. Half the descent, nearly, at B, - - - - - -	.35
Mean depth below the low water level,	= 6.35

12.2 = breadth of the canal from A to B.

2

$12.2 \times 6.35 = 77.47$ square feet, area of the transverse section.

$77.47 \times 908.2 = 70347.24$ cubic feet.

II. From N to I = 114.8 feet, nearly.

5 + 1 = 6. feet, depth of water at B N.
.72 = descent at N.

6.72 = whole depth of canal below the line of low water level at B N.

	Feet.
1. Breadth of canal at B N,	= 12.2
2. Breadth of canal at S I, where the rock terminates,	= 20.25

The solid, of which B N I is a section, consists of a triangular and rectangular pyramid.
12.2 × 6.72 = 81.984 square feet, area of the base of the rectangular pyramid.
$\frac{81.984 \times 114.8}{3}$ = 3137.25 cubic feet for its contents.
$\frac{114.8 \times 20.25}{2}$ = 1162 square feet for the area of the base of the triangular pyramid.
$\frac{1162 \times 6.72}{3}$ = 2603.66 cubic feet for its contents.

2603.66
3137.25

5740.91 cubic feet, the whole quantity of rock between B N and I.

III. Above the line of low water level.

Plan $\frac{A \text{ V B Z.}}{2}$—Profile $\frac{A \text{ C.}}{2}$

1. Considering the solid of which V Z B is the section as half of a rectangular prism,
A B = 908.8 feet.
$\frac{2}{}$
Chs. Chs. Chs.
Z B = 7.5 — 1.74 = 5.76 = 380.16 feet, or 380.2 feet, nearly.
V Z = 10 feet, the mean depth of the rock from its surface to the line of low water level.
$908.8 - \frac{380.2}{2}$ = 713.7 feet, length of the whole solid.
713.7 × 12.2 × 10 = 87051.4 cubic feet.

2. For the foundations of canal walls, viz: from I to V, (profile $\frac{A \text{ C.}}{2}$)

Distance = B V + B I = 520 feet—(assumed.)
Average breadth = 5.16 feet.
Average depth = 6. feet.
5.16 × 6 × 520 = 1609.92
2

3219.84 cubic feet for both foundations.

RECAPITULATION OF THE ROCK TO BE EXCAVATED.

		Cubic feet.
1. Below the level of low water, from the head of the canal, to B,		70347.24
2. From N to I,		5740.91
3. Above the level of low water—		
1. From $\frac{A}{2}$ to B,	87051.4	
2. From $\frac{I}{}$ to V, for foundations,	3219.84	
		90271.24
Or 6161.4 cubic yards.		166359.39

Masonry of the canal.

I. From the end of the canal, at the last water shop, to H I, distance = 2145 feet.

	Feet.
1. Mean depth of earth from surface of the ground to level of low water,	= 14.7
2. Half the descent from end of rock at I, to end of canal,	.48
3. Whole descent from head of canal to I,	.72
4. Least depth of water in canal, from I to the last water shop,	5.
Mean height of the walls above the foundations,	= 20.9

$\frac{20.9}{4}$ = 5.2 nearly, mean thickness of walls.
20.9 × 5.2 = 108.68 square feet, area of mean section of the walls above foundations.
$5.2 + \frac{5.2}{4} + 1.5 = 8$ feet, breadth of the foundations.
8 × 3 = 24 square feet, area of their mean sections; and
108.68 + 24 = 132.68 square feet, which is the area of the mean transverse section of the whole wall, including the foundation.
2145 × 132.68 = 284598.6 cubic feet for each side wall.
2

And 569197.2 cubic feet in both side walls of the canal.

End wall of the canal.

The height of the surface of the ground at the lower end of the canal is only 12.1 feet above the level of low water; but the rise of the river above the dam, and, consequently, the height of the water in the canal, will exceed that amount; the height of the end wall will, therefore, be taken at the mean height from I to the end of canal.

The dimensions and area of its transverse section will also be the same, viz: 132.68 square feet, including the foundation.

The length of this wall is equal to the breadth of the canal at bottom added to twice the thickness of the wall at its base, added to the base of its talus, nearly; omitting to compute the small solids formed by the talus at the angles, and also the projection of the foundation at the outside of the corners.

$20.25 + \overline{6.5 \times 2} + 2.6 = 35.85$ feet the whole length of the wall.

$35.85 \times 132.68 = 4756.578$ cubic feet for its contents.

569197.2
4756.57

573953.77 cubic feet of masonry, from H I to end of canal, including the end wall.

From this amount must be deducted for 4 forebays, which it includes, viz:

3 forebays, 8 feet wide at bottom; 1 forebay, 4 feet wide at bottom.

The base to the talus of the walls of these forebays is one-eighth the altitude.

The mean width at their entrances, or junction with the canal, is 10.6 feet for the forebays that are 8 feet wide at bottom, and 6.6 for the one that is 4 feet wide at bottom, which are the lengths of the solids to be deducted for the respective forebays. The area of the transverse section of the side walls, including the foundation, is 132.68 square feet.

$132.68 \times 10.6 \times 3 = 4219.224$
$132.68 \times 6.6 = 875.668$

5094.892 cubic feet.

573953.77
5094.892

568858.878 cubic feet, or 22984.197 perches.

II. From H I to B D, (Prof. A C.)

2

From the centre of the canal at B or N to its centre at S or I, measured on a horizontal plane, the distance is 114.84; the length of the wall connecting the corresponding points at the sides of the canal will be taken at 115 feet, as sufficiently near, without computing it.

1. Section at H I.

	Feet.
1. Depth of earth from the surface at I to low water level, - - - - -	= 18.
2. Descent from head of canal to I, - - - - - -	.72
3. Least depth of water in canal at I, - - - - - -	5.
Whole height of the wall at H I,	= 23.72

$\frac{23.72}{4} = 5.93$, mean thickness of wall.

$23.72 \times 5.93 = 140.65$ square feet for the area of its transverse section.

2. Section at B D.

	Feet.
Depth from surface of ground to the rock at B D, - - - - - -	= 17.5

$\frac{17.5}{4} = 4.375$ feet, mean thickness of wall.

$4.375 \times 17.5 = 76.56$ square feet, area of its section.

$\frac{140.66 + 76.56}{2} = 108.6$ square feet, the area of the mean transverse section between H I and B D.

115 feet, length of each wall. $115 \times 2 = 230$; and $230 \times 108.6 = 24978$ cubic feet, the contents of both walls, nearly, between H I and B D.

III. From B D to V W.

These walls will be 3 feet high at V W, and will extend horizontally to their junction with the walls at B D; the area of the transverse section at V W will be $3 \times 2.5 = 7.5$ square feet, nearly.

At B D the height will be 13 feet, nearly, and the area of the transverse section $13 \times 5 = 65$ square feet, nearly, having near 5 feet depth of superincumbent earth to sustain.

$\frac{7.5 + 65}{2} = 36.75$ square feet for the area of the mean transverse section of each side wall, between B D and V W.

From B D to V W the distance, at the side of the canal, is 381 feet, nearly; $2 \times 36.75 \times 381 = 28003.5$ cubic feet contained in the two walls between B D and V W; therefore,

$24978. + 28003.5 = 52981.5$ cubic feet, or 2140.6 perches, for the contents of the two walls, from H I to V W.

Flagging at bottom of canal.

In order to preserve the bottom of the canal from the effects of the current, it will be necessary to flag or cover it 6 inches deep, with rough stone, from I, at the termination of the rock, to the end of the canal, E; the distance 2145 feet.

Breadth of canal at bottom, exclusive of the projections of the foundations, viz: $20.25 - 3 = 17.25$.
$2145 \times 17.25 = 37001.25$ cubic feet, or 1414 perches.

In the preceding estimate of the canal at Zanesville, the side walls are continued on both sides from V to the last water shop. The reasons which require their construction from V to the limits of the armory, do not hold in an equal degree within the bounds of that establishment. From M to the end of the canal, the side opposite the line of the workshops may, without much inconvenience, be left without any wall. The velocity of the current, however, in this distance, must be reduced to 1 foot per second; and the quantity of earth to be removed will, therefore, be augmented.

The following estimate will show the extent of the proposed economy, and the alterations it will require in the dimensions of the canal from M to its end:

Excavations of earth.

I. From M to last water shop = 910 feet, with side wall next the river.

To put the expense of the masonry and excavations of earth nearly in equilibrium, the depth of the water must be increased to 7 feet, and its breadth at bottom becomes 35 feet, nearly. Then,

	Feet.
1. Mean depth of earth from the surface of ground to low water level from M to end of canal, -	= 13.
2. Descent of canal at I, - - - - - - - -	.72
3. Descent from I to M, nearly - - - - - - -	.55
4. Least depth of water in canal when free from obstructions, - - - -	7.
Mean depth from surface of ground to bottom of canal, omitting to compute the trifling descent from M to end of canal, which is required to give a velocity of 1 foot per second to the current, -	= 21.27

Masonry.

$\frac{21.27}{4} = 5.31$, nearly, mean thickness of the walls.

$\frac{5.31}{4} + 5.31 = 6.63$, nearly, thickness of walls at their base.

$6.63 + 1.5 = 8.13$, thickness of foundations.
3. feet depth of foundations.
$21.27 \times 5.31 = 112.94$ square feet, area of the transverse section of the wall above foundation.
$8.13 \times 3. = 24.39$ square feet, area of transverse section of foundations.

137.33 square feet, area of the transverse section of the wall, including foundation. The length of this wall is 910 feet, to which must be added the length of the end wall, equal nearly to the mean width of the canal, computing the area of its transverse section to be uniform, and equal to that of the side wall.

$\frac{21.27 \times 3}{2} + \frac{21.27}{8} + 35 = 69.56$, breadth of canal at surface of the ground.

$\frac{69.56 + 35}{2} = 52.28$ feet, the mean width of canal, and which is the mean length of end wall, nearly.

$910 + 52.28 = 962.28$, whole length of wall.
$962.28 \times 137.33 = 132149.9$ cubic feet, from which must be deducted for the forebays, viz:

6 forebays, mean width = 10.66 feet, nearly, each.
1 forebay, mean width = 6.6 nearly.

$6 \times 10.66 + 6.6 = 70.62$
$112.94 \times 70.62 = 7975.82$ cubic feet.

132149.9
7975.82

124174.08 cubic feet required for the side wall next the river.

No deduction is made for the foundations of the side wall opposite the entrance of the forebays, because the bottom of each forebay will be near 3 feet above the bottom of the canal, in the present case, and will require a wall of that height for its security. The foundation of the side wall is nearly equivalent to the quantity of masonry that will be necessary for that purpose.

Excavations of earth.

1. Area of that portion of the transverse section contained between the bottom of the canal.

$\frac{21.27 \times 3}{2} + 35 - .75 = 56.15.$

$\frac{56.15 + 34.25}{2} \times 21.27 = 961.4.$

$\frac{21.27}{4} + 8.13 \times 21.27 = 258.86.$

$961.4 + 258.86 = 1220.26$ square feet, the area of the mean transverse section of the solid to be excavated from M to end of canal, and $1220.26 \times 910 = 1210426.6$ cubic feet, its contents.

The excavation for the end wall will be $258.86 \times 52.28 + 2 \times 8.13 = 17819.922$ cubic feet, nearly. Omitting to compute the small solids at the angles.

1210426.8
17819.92

1227245.82 cubic feet, which is the whole quantity of earth to be excavated from M to end of canal, when only one side wall is employed.

The quantity to be excavated in the same distance, with two side walls, as before calculated, is

1069.52 × 910 = 973263.2 cubic feet; and
15298.8 for the end wall.

988562. cubic feet from M to end of canal.

The quantity of masonry, as before calculated, for the two side walls, is,
132.68 × 910 × 2 = 241477.6 cubic feet for side wall; and
4756.56 for the end wall.

246234.16
Deduct for forebays, 9314.136

Leaving, - 236920.024 cubic feet.

236920 cubic feet, with two side walls from M to end of canal.
124174 cubic feet, with only one side wall.

112756 cubic feet difference, or 4555.8 perches.

1227245.85 cubic feet of earth to be excavated, with one side wall.
988562. with both walls.

238683.85 cubic feet difference, or 8877.1 cubic yards.

By which it appears that 4555.8 perches of masonry will be saved by constructing only one side wall from M to end of the canal; and that an additional excavation of 8877 cubic yards of earth will be necessary. Also, a saving of

$\frac{910 \times 19.75}{2 \times 24.75} = 363.1$ perches of rough stone for flagging.

SITE AT THE FALLS OF BEAVER, NEAR THE OHIO.

16.6 feet, whole head and fall employed on the wheels: equal to 14.5 feet virtual head, acting, by its gravity, on two overshot and one breast-wheel.
66 cubic feet of water required per second.
Mean velocity of the current through the rock, from A to S, and from T to V, is 2 feet per second.
Mean velocity where the canal passes through earth is 9 inches per second.

		Feet.
Descent from A to X, - - - - -	= 7.27 inches	= .606 nearly.
Descent from X to N, - - - - -	= .71	= .06 nearly.
Descent from T to V, - - - - -	= inconsiderable.	
Whole descent through rock -	= 7.98	= .666

These velocities and descents are calculated on the hypothesis that the column of water in motion is 1 foot less in depth and in width than the canal. Consequently, neither the descent nor velocities will be equal to what are stated above whenever the canal is free from obstruction, or is less obstructed than is here supposed. The small velocity allowed to the current, where the canal passes through earth, requires a descent less than the probable errors of the instrument employed to take the levels, and is too inconsiderable, at any rate, to affect the estimates to an extent worth notice. It may be omitted with safety in calculating the excavations of earth; and, from V to W, and on G P T, it is omitted altogether, including the descent through the rock: for the descent of the canal no longer adds to the depth of the excavation from V to the first water shop, in consequence of the disposition of the ground, which leaves it optional to increase or diminish the cutting at pleasure.

Excavations of canal.

1. Rock.

Plan B No. 3—Profile A. E.

I. From A, at head of canal, to X, where the level of low water at the dam intersects the surface of the rock. Distance = 2457 feet.

	Feet.
1. Average depth of rock above the level of the dam, - - - - -	15.42
2. Least depth of water in canal below the level of the dam, - - - -	3.
3. Half the descent from A to X, - - - - - - -	.3
4. Add for obstructions, &c. - - - - - - -	1.
Mean depth of rock to be excavated, - - - - - -	= 19.72

Width of canal = 12 feet.
19.72 × 12 × 2457 = 581424.48 cubic feet, or 21534.2 cubic yards, averaging 19.72 feet deep.

II. From X to N, where the surface of the rock intersects with the bottom of the canal = 240 feet.

	Feet.
1. Least depth of water in canal at X, below the level of the dam, - - - -	3.
2. Descent at X, - - - - - - - - - -	.6
3. Add for obstructions, &c. - - - - - - - - -	1.
Depth of rock to be excavated at X, - - - - - - -	= 4.6

At S it is nothing.

The width of the bottom of the canal at S is nearly the same as its width through the rock. If, then, the inclination of the surface of the rock is supposed to be uniform from X to S, where it sinks below the bottom of the canal, the solid to be excavated will be the half of a prism, viz:

$\frac{4.6 \times 12 \times 240}{2} = 6624$ cubic feet, or 245.3 cubic yards.

III. From T to V = 165 feet.

	Feet.
1. Average depth of the rock above the level of the dam,	= 3.48
2. Least depth of water below the level of the dam,	3.
3. Add for obstructions,	1.
4. Whole descent, including half the descent from T to V,	.8 nearly.
Mean depth of rock to be excavated,	= 8.28

Width of canal 12 feet. $8.28 \times 12 \times 165 = 16394.4$ cubic feet, or 607.2 cubic yards; averaging 8.28 feet deep.

The rock is averaged and taken at a uniform depth from T to V; consequently, the width of the canal is also estimated to be uniform. The rock declines rapidly, however, and, it is believed, sinks below the bottom of the canal in a much less distance than is here assigned. The canal will widen as the surface of the rock is depressed, and the difference between the solid, now supposed to consist of rock, and the actual quantity of it which may be excavated, will more than compensate for the increased width, and removal of the additional quantity of superincumbent earth at T and V.

RECAPITULATION OF THE ROCK TO BE EXCAVATED.

1. From A to X = 21534.2 cubic yards, 19.72 feet deep.
2. From X to N = 245.3 cubic yards, 2.3 feet deep; 6 feet of earth.
3. From T to V = 607.2 cubic yards, 8.28 feet deep.

607.2
245.3

852.5 cubic yards, averaging 8.3 feet deep, at —— per yard.
21534.2 cubic yards, 19.72 feet deep, at —— per yard.

Excavations of earth.

I. From Y, where the rock first disappears from the surface, to X, where it sinks below the level of the dam, the distance is 495 feet; the mean depth of earth is less than $2\frac{1}{2}$ feet. The whole solid is, therefore, too inconsiderable to require an exact calculation of the pyramids, &c. which compose it; computing from its mean depth, gives

$12 + 3 + \frac{2.5 \times 3}{2} \times 495 \times 2.5 = 20882.8$ cubic feet, or 762.3 cubic yards; averaging $2\frac{1}{2}$ feet deep.

II. From X to T = 2475 feet.

	Feet.
1. Average depth of earth above the level of the dam,	= 5.75
2. Least depth of water in canal below the level of the dam,	5.
3. Descent of canal at X,	.6 nearly.
4. Half of the descent from X to T,	.1 nearly.
5. Add for obstructions,	1.
Average depth, including the rock from X to N,	= 12.45

The mean velocity of the current is 9 inches per second; therefore, $\frac{66}{\cdot 75} = 88$ square feet, the area of the transverse section of the column of water.

$\frac{88}{5} = 17.6$ feet, the mean width of the column.

$17.6 - \frac{3 \times 5}{2} = 10.1$ feet, least width of the column of water at bottom.

$10.1 + 1 = 11.1$ feet, width of canal at bottom.

$12.45 \times 3 + 11.1 = 48.45$ feet, width of canal at the surface of the ground.

$\frac{48.45 + 11.1}{2} = 29.775$ feet, mean width of the mean tranverse section of the canal.

$29.78 \times 12.45 \times 2475 = 917905.72$ cubic feet, or 33996.5 cubic yards, including the rock between X and the bottom of the canal at N, which has been calculated separately, and must, therefore, be deducted from the above amount.

33996.5
245.3 cubic yards of rock.

33751.2 cubic yards of earth, averaging 12.45 feet deep.

III. From V to the first water shop at W = 2390 feet.

	Feet.
1. Average depth of earth above the level of the water in the canal,	= 2
2. Least depth of water in the canal,	4
3. Add for obstructions,	1
Mean depth of earth to be excavated,	= 7

$\frac{88}{4} = 22$ feet, mean width of the column of water.

$22 - \frac{4 \times 3}{2} = 16$ feet, width of the column of water at bottom.

$16 + 1 = 17$ feet, width of canal at bottom.

$17 + \frac{7 \times 3}{2} = 27.5$ feet, mean width of canal.

$27.5 \times 7 \times 2390 = 460075$ cubic feet, or 17039.8 cubic yards, averaging 7 feet deep.

From V to W the descent does not affect the excavations, and were, therefore, omitted in estimating the dimensions. From V to the first water shop, the ground admits of placing the canal nearly at will, so far as regards the cutting.

IV. From W, to the last water-shop at E, is 580 feet. (Plan B No. 3, profile A E.)

The canal to be walled on the side next the water shops.

1. Average depth of earth above the level of the dam,	- - - - -	7.05 feet.
2. Least depth of water in the canal,	- - - - - -	4.
3. Whole descent at W, including half the descent from W to E,	- - -	.9 nearly.
4. Add for obstructions,	- - - - - - -	1.
Making the average depth of canal	-	= 12.95 feet,

or, 13 feet, nearly, from W to E, below the surface.

$\frac{13}{4} = 3.25$ feet, mean thickness of the side wall.

$3.25 + \frac{13}{16} = 4.062$ feet, thickness of the wall at its base, or 4.1, nearly.

$4.1 + 1.2 = 5.3$ feet, breadth of the foundation of the wall; its depth is taken at 3 feet; (soil, a light loam.)

The velocity of the current is 9 inches per second, and the area of the transverse section of the column of water is therefore $\frac{66}{.75} = 88$ square feet, as before. Then,

$\frac{88}{4} = 22$ feet, the mean width of the column.

$22 - \frac{4}{16} - \frac{3 \times 4}{4} = 18.75$ feet, least width of the column of water at bottom of canal.

$18.75 + 1 = 19.75$ feet, width of canal at bottom.

$19.75 - .6 = 19.15$ feet, width of the bottom, exclusive of that part of the foundation which projects beyond the base of the side wall into the canal.

$19.15 + \frac{3 + 13}{2} = 38.65$ feet, width of canal at surface of the ground, exclusive of the talus of the wall, and projection of the foundation.

$\frac{38.65 + 19.15}{2} \times 13 = 375.7$ square feet, area of that part of the transverse section contained between a perpendicular raised from the inner edge of the foundation to the surface of the ground, and the opposite side of the canal.

$13 + 3 = 16$ feet, the depth from the surface of the ground to the bottom of the foundation of the wall.

$\frac{16}{4} + 5.3 = 9.3$ feet, the mean width of the solid to be excavated, which includes the space occupied by the side wall and its foundation.

$9.3 \times 16 = 148.8$ square feet, area of its transverse section.

$375.7 + 148.8 = 524.5$ square feet, the area of the whole transverse section of earth to be excavated.

If the mean width of the solid, which includes the space to be occupied by the side wall and its foundation, be added to the distance from W to the last water shop at E, it will include the solid to be excavated at the end of the canal on account of the end wall, (nearly;) therefore, $580 + 9.3 = 589.3$ feet, is the whole distance to be excavated; and, $589.3 \times 524.5 = 309087.85$ cubic feet, or 19447.69 cubic yards, averaging 14 feet deep.

Masonry of the canal.

From W to E, at the end of the canal, is 580 feet, and is the length of the side wall. The length of the end wall at E is equal to the width of the canal at the surface of the ground, added to the breadth of the base of the side wall, nearly.

19.75 feet, width of the canal at bottom.

13 feet, average depth of the canal.

$\frac{13}{8} + \frac{3 \times 13}{2} + 19.75 = 40.87$ feet, width of canal at surface of the ground; and

$40.87 + 4.1 = 44.97$ feet, length of the end wall.

$580 + 44.97 = 624.97$ feet, length of the two walls; from which must be deducted for four forebays, two with 13 feet, and two with 8 feet, mean width, each, viz: $\overline{13 \times 2} + \overline{8 \times 2} = 42$ feet.

$624.97 - 42 = 582.97$ feet, whole length of wall to be computed.

3.25 feet, mean thickness of the wall above its foundation.

13 feet, mean height of wall above the foundation; and

$13 \times 3.25 = 42.25$ square feet, the area of its transverse section.

5.3 feet, width of the foundation.

3 feet, depth of the foundation.

$5.3 \times 3 = 15.9$ square feet for the area of its transverse section.

$42.25 + 15.9 = 58.15$ square feet, the area of the transverse section of the whole wall, including the foundation; and

$582.97 \times 58.15 = 33899.7$ cubic feet, or 1369.6 perches, its solid contents.

THE WIER.

It is proposed to place a wier at M (plan B and profile A E,) 2,000 feet from the dam, where the canal may approach within 80 feet of the river bank, and where the intermediate body of rock is covered with earth from 2 to 4 feet deep. The surface of the ground is here 6 feet, and the surface of the rock about 4 feet above the level of the proposed dam.

The mean width of the wier is 80 feet: its bottom to be on a level with low water at the head of the canal, and, consequently, several feet higher than the greatest elevation of the Beaver, at the point where the waste or surplus water of the canal will be discharged. The solid to be excavated may be considered as equal to a prism of the above dimensions, (which it is, nearly:) the inclination of the surface of the ground towards the river differing but little from the slope of the bottom of the wier; therefore,

$80 \times 80 \times 6 = 38400$ cubic feet, or 1422.2 cubic yards, is the solid to be excavated, of which two-thirds are rock; which, consequently,

$\frac{1422.2 \times 2}{3} = 948$ cubic yards of rock, averaging 4 feet deep, with 2 feet earth on the surface; and

$\frac{1422.2}{3} = 474$ cubic yards of earth, averaging 2 feet deep.

The foregoing estimate for the canal at Beaver is made conformable to the levels taken on two routes, from the head of the falls to Walnut run, and which pass within a few feet of the same point between the mound (plan B No. 3,) and the river bank, viz: from A to T, (plan B No. 3, profile A E, No. 3,) the depths of the excavations conform strictly to the levels exhibited on the profile No. 2, plan B No. 2. From T to V, the levels exhibited on the profile A E, No. 3, were adopted; and from V to W, (plan B No. 3, profile A E, No. 3) the depths were taken less than those exhibited on profile No. 2, and greater than those on profile No. 1; the surface of the ground leaving it optional to take the canal along any line between the two. The first of these routes (profile B No. 1) was a trial route; the other (profile B No. 2) was located previous to the investigation for determining the quantity of water in the Beaver during its lowest stage; and had for its principal object to obtain a uniform cutting or depth of ground five feet above the level of the dam: under an idea that our inquiries concerning the least quantity of water which the stream afforded might result in showing the utility, if not necessity, of employing the whole fall, including the difference between the high and low water level at Walnut run to be employed on reaction wheels, using the tail water of the breast and overshot wheels when the river should be low; and shutting off the tail water and applying the surplus water of the canal, during a freshet, or simultaneous high rise of the Beaver and Ohio.

It has been subsequently ascertained that there is no necessity for resorting to this power at all, and no advantage to be derived from the extensive use of it for the purposes of the armory now contemplated.

There is no longer any reason to prefer taking the canal through the ground much higher than the dam.

From G, plan B No. 2, profile No. 2, to the mound at C, where all these routes are made to pass, and to intersect or approach near each other, the surface of the ground is an inclined plane, descending towards the river bank, and admits of taking the canal from G to T with the same depth of cutting, it is believed, as from V to W. The route No. 1 passes obliquely over this plane; and the profiles Nos. 1 and 2 exhibit the character of its surface with sufficient exactness to show that the excavations may be diminished so as not to exceed an average of two feet of earth above the level of the water in the canal.

The descent, therefore, will not affect the depth of the excavations, and will not be considered in the estimate.

The distance from G to T is 90 poles, or 1485 feet, on the route which has been estimated. The proposed route G P T, between those two points, will probably increase the distance to 95 poles, or 1568 feet nearly. From G, at the commencement of both routes, the first 10 poles on either side will not afford any material difference in the depth of ground: the distances, therefore, to be compared are 80 poles, or 1320 feet, on the old route, and 85 poles, or 1403 feet nearly, on G P T.

The average depth of ground above the level of water in the canal will be taken at 2 feet: the dimensions and area of the canal will therefore be the same as from V to W, viz:

$27.5 \times 7 = 192.5$ square feet for the area of the mean transverse section.

$192.5 \times 1403 = 270077.5$ cubic feet, or 10002.8 cubic yards, to be excavated on the proposed route G P T, averaging 7 feet deep.

The area of the mean transverse section of the canal, on the old route between G and T, as before calculated, is 370.871 square feet: the average depth of the bottom of the canal is 12.45 feet. Therefore,

$370.871 \times 1320 = 489549.72$ cubic feet, or 18131.47 cubic yards; averaging 12.45 feet deep on the route located from G to T, and included in the preceding estimates.

	Cubic yards.
1. The whole quantity to be excavated from X to T is - - - - -	= 33751.2
2. Deduct from G to T, as above, - - - - - - -	18131.4
Leaves	15619.8

averaging 12.45 feet deep; and 10002.8 yards on the route G P T, averaging 7 feet deep; or a difference in favor of the proposed alteration of 8128.6 cubic yards, averaging 12.45 feet deep, and more than 5 feet difference in the depth of excavating 10002 yards.

It is also probable that the canal may be taken out several perches lower down the stream, without any disadvantage. The reason for placing it in its present position was in order to be certain of having sufficient room to build the dam at a proper distance above the falls.

RECAPITULATION.

1. *Excavations of earth.*

1. From Y to X,	762.3	cubic yards, averaging	2.5 feet deep.
2. From X to T,	15619.8	cubic yards, averaging	12.4 feet (old route.)
	10002.2	cubic yards, averaging	7. feet deep on G P T.
3. From V to W,	17039.8	cubic yards, averaging	7. feet deep.
4. From W to E,	19447.69	cubic yards, averaging	14. feet deep.
5. Wier at M,	474.	cubic yards, averaging	2. feet deep.
Total,	63345.79	cubic yards.	

2. *Rock.*

1. From A to X, 21534. cubic yards, averaging 19.72 feet deep.
2. From X to N, 245.3 cubic yards, averaging 4.6 feet deep, under 7 feet of earth.
3. From T to V, 607.2 cubic yards, averaging 8.28 feet deep.
4. Wier at M, 948. cubic yards, averaging 4. feet deep.

Total, 23334.5 cubic yards.

3. *Masonry.*

1369 perches.

SITE AT THE OHIOPILE FALLS OF YOUGHIOGENY RIVER.

The fall at this site is greater than what is necessary; and a canal that would suffice to convey the requisite quantity of water during the driest season for a head of 50 or 60 feet, on two successive sets of wheels, might be too small to preserve the greater part from being frozen during the winter. Its dimensions must, therefore, be regulated almost exclusively with a view to obviate obstructions or inconvenience which may arise from this cause. It is believed that running water seldom or never freezes deeper than a foot in this climate. Whenever it acquires greater thickness, it is most probably in consequence of accumulation on the surface, and not from its formation at the under side. If, then, the canal is made 5 feet deep below the level of the dam, and 4 feet wide at bottom, the space occupied by ice, 1 foot thick at the surface and 6 inches at the sides, would still leave an area of 36 square feet to the transverse section, which would admit the passage of a sufficient column of water with a mean velocity of only 9 inches per second, to supply a head of 39 feet acting by its gravity.

Excavations.

1. Earth.

Plan O.—Profile A D.

I. From A, at the head of canal, to where the rock is supposed to begin at R = 1229 feet.

	Feet.
1. Average depth of earth from surface of ground to low water level,	= 8
2. Depth of water in canal,	5
Mean depth of excavation,	= 13

$\frac{13 \times 3 + \overline{2 \times 4}}{2} = 23.5$ feet, mean width of canal.

$23.5 \times 13 \times 1229 = 375459.5$ cubic feet, or 13905.9 cubic yards; averaging 13 feet deep.

II. From R, to end of canal at B, where the basin or penstock will be placed = 878 feet, nearly.

It is assumed that the rock is only 4 feet below the surface of the ground along the whole of this line, which is a more unfavorable supposition than the appearance of the ground, and the trees growing on it, would warrant.

	Feet.
1. Width of canal through the rock,	= 12
2. Two berms at the base of the earth slopes, 1.5 foot each,	3
Width of earth to be excavated at the surface of the rock,	= 15

$4 \times 3 + 15 = 27$ feet, width of canal at surface of the ground.

$\frac{27 + 15}{2} = 21$ feet, mean width of excavation.

$21 \times 4 \times 878 = 73752$ cubic feet, or 2716.7 cubic yards; averaging 4 feet deep.

2. Rock.

III. From R to B = 878 feet.

	Feet.
1. Average depth of rock above the level of the dam,	= 11.47
2. Least depth of water in canal,	3.
3. Add for ice, &c.	1.
Mean depth of rock to be excavated,	= 15.47

Width of canal, 12 feet.

$12 \times 15.47 \times 878 = 163869.9$ cubic feet, or 6069.2 cubic yards; averaging 15.47 feet under 4 feet of superincumbent earth.

Recapitulation.

1. *Excavations of earth.*

1. From A to R, 13905 cubic yards, averaging 13 feet deep.
2. From R to B, 2716 cubic yards, averaging 4 feet deep.

2. *Excavations of rock.*

6069.2 cubic yards of rock, (sandstone,) averaging 15.47 feet deep.

SITE BELOW PUTNAM, ON THE MUSKINGUM RIVER.

17.1 feet fall, from surface of a 7 foot dam to end of canal.
13 feet head on the wheels.
150 cubic feet of water required.
12 inches per second velocity of the water in canal when it passes through earth.

Excavations of earth.

Plan P.—Profiles A F and F I.

I. From A to B = 996.6 feet.

	Feet.
1. Height of surface of the ground above the level of the dam, on the line A B,	= 8.533
2. Least depth of water in the canal,	7.75

Making the breadth of the bottom of the canal equal to the whole depth of water contained in it at the lowest stage, will give very nearly a section of the least expensive excavation. The expression of the area of that part of the canal below the level of the low water at the dam becomes

$\frac{3a + 2a}{2} \times a = 150$, where a = the depth.

$5a^2 = 300$, and $a = \sqrt{\frac{300}{5}} = 7.7459 = 7.75$ nearly, for the depth of the canal below the level of the dam, and its breadth at bottom.

Thus, $8.53 + 7.75 = 16.28$ for the whole depth of the excavation.
$16.28 \times 3 + 7.75 = 56.59$ feet for the breadth of the excavation at the surface of the ground. And
$\frac{56.59 + 7.75}{2} = 32.32$ feet for the mean breadth of the section of the canal. Consequently,
$32.32 \times 16.28 \times 996.6 = 524371$ cubic feet, or 19421 cubic yards; averaging 16 feet deep.

II. From C to D = 957 feet.

	Feet.
Average height of surface of ground above the level of the dam,	= 2.617

There the small elevation of the ground above the low water level in the canal will not influence its dimensions. The least depth of water will be taken at 4 feet, which determines the breadths and whole depth of excavation, viz:

$\frac{150}{4} = 37.5$ feet, the mean breadth of the section occupied by the water.

$37.5 - \frac{3 \times 4}{2} = 31.5$ feet for the breadth of canal at bottom.

$31.5 + \overline{3 \times 4 + 2.617} = 51.351$ feet for the breadth of the canal at the surface of the ground. And
$\frac{51.351 + 31.5}{2} = 41.42$ feet for the mean breadth of the excavation.
$2.617 + 4 = 6.61$ feet for the depth; consequently,
$6.61 \times 41.42 \times 957 = 262007$ cubic feet, or 9815 cubic yards, with 6.61 feet average depth.

Excavations of rock.

IV. From E to X = 620.4 feet.

	Feet.
Average height of the rock above the level of the dam,	= 7.9

The velocity of the current in this distance may be increased at pleasure. The dimensions of the excavation will, therefore, be taken at the adopted minimum for such cases, as it regards the expense, viz:
12 feet breadth of the canal; 4 feet least depth of water.
Then, $7.9 + 4 = 11.9$ feet, whole depth of excavation, and
$11.9 \times 12 \times 620.4 = 88593.12$ cubic feet, or 3281 cubic yards, at an average depth below the surface of the ground of $7.9 + 16.253 = 24.15$ feet.

The velocity through the rock, in this case, becomes $\frac{150}{48} = 3.125$ per feet second.

Excavations of earth.

V. From E to X = 620.4 feet.

	Feet.
1. Average depth of earth from the surface of the ground to the rock,	= 16.253
2. Average breadth of canal through the rock,	12.
3. Add for the breadth of the two berms,	3.
Average breadth of the excavation at the top of the rock,	= 15.

$16.25 \times 3 + 15 = 63.75$ feet for the breadth of the excavation at the surface of the ground.
And $\frac{63.75 + 15}{2} = 39.375$ feet for the mean breadth of the mean section.
$39.375 \times 16.25 = 639.84$ feet for its area.
$639.84 \times 620.4 = 396956$ cubic feet, or 14702 cubic yards; having an average depth of 16.25 feet.

VI. From X to H = 4191 feet.

	Feet.
Average depth of earth above the level of the dam,	20.4

Here the breadth of the canal at bottom may be taken at its minimum, viz: one-half the depth of the column of water below the level of the dam; and the expression of the area of the section below that level becomes $\frac{4a^2}{2} = 150$, and $a = \sqrt{\frac{300}{4}} = \sqrt{75} = 8.66$ feet, nearly, when a is taken equal to the depth.

And $8.66 + 20.4 = 29.06$ feet for the whole depth of the excavation.

$\overline{29.06 \times 3} + \frac{8.66}{2} = 91.51$ feet for the breadth of excavation at the surface of the ground: therefore,

$\frac{91.51 + 4.33}{2} = 47.92$ feet for the mean breadth of the mean section of the canal from X to H.

Therefore, $47.92 \times 29 \times 4085 = 5676842.8$ cubic feet, or 210253.4 cubic yards.

1. The dimensions and area of that portion of the transverse section of the ground to be excavated, which is contained between a perpendicular raised from the inner edge of the foundation of the wall and the opposite side of the canal, are as follows:

	Feet.
1. Depth of earth above the level of the dam, - - - - - -	= 18.15
2. Depth below the level of the dam to the bottom of the canal, - - - -	10.68
Whole depth of ground to be excavated,	= 28.83

$\frac{28.83 \times 3}{2} + 5.34 = 48.585$ feet, breadth at surface of the ground.

$\frac{48.585 + 5.34}{2} = 26.962$ feet, the mean breadth.

$26.962 \times 28.83 = 777.31$ square feet for the area.

2. Dimensions and area of that portion of the transverse section of the earth to be excavated which is contained between the perpendicular and the bank next the river, viz:

	Feet.
1. Depth of earth from the surface of the ground to the bottom of the canal, - -	= 28.83
2. Depth of foundation of the wall, - - - - - - - -	3.5
Total depth,	= 32.33
3. Breadth of foundation, - - - - - - - - -	= 8.775

VII. From H to I, at end of canal = 586 feet.

	Feet.
Average depth of earth above the level of the dam, - - - - - -	= 18.15

The canal from H to I will be walled, as in other cases, on the side next the river. The base of the earth slope, opposite the wall, continues the same as before, viz: once and a half its altitude; the base of the talus to the wall is one-eighth its altitude; the breadth of the canal at bottom is half the depth of the column of water at a low stage of the river. The velocity of the water is 1 foot per second: the quantity to be conveyed 150 cubic feet per second.

Hence, $\frac{5a}{2} + \frac{a}{8} \times a = 150 \times 2 = 300$; where a is taken equal to the depth; and $a^2 = \frac{300 \times 16}{42} = 114.3$ feet, nearly; and $a = \sqrt{114.3} = 10.68$, nearly.

	Feet.
1. The highest rise of the river, above the dam, is - - - - - -	= 11.
2. The depth of water in canal, as found above, is - - - - - -	10.68
The greatest depth of water in the canal, which is also the height of the side wall,	= 21.68

$\frac{21.68}{4} = 5.42$ feet, the mean thickness of the wall.

1.355 feet, half the talus.

6.775 feet, thickness of the wall at its base.
2. feet, extension of the foundation beyond the base.

8.775 feet, thickness of the foundation; and
3.5 feet, depth of the foundation.

VIII. From H to I = 586 feet.

A base to the slope of the earth bank, which will barely retain it in its position during the erection of the wall, is all that is necessary; half the altitude is sufficient for that purpose: therefore,

$\frac{32.33}{2} + 8.775 = 24.94$ feet breadth at top.

$\frac{24.94 + 8.775}{2} = 16.857$ feet for the mean breadth.

$16.857 \times 32.33 = 544.98$ square feet for the area.
$723.39 + 544.98 = 1268.37$ square feet for the area of the whole transverse section; and
$1268.37 \times 586 = 743264.82$ cubic feet, or 27528.32 cubic yards.
Omitting to estimate the prism and pyramids at the end, as of comparative small value, and unnecessary for the occasion.

RECAPITULATION OF EXCAVATIONS.

	Cubic yards.
1. Averaging 6.61 feet deep, at 10 cents per cubic yard.	
From C to D, 9815 cubic yards, at 10 cents, - - - - =	9815.
2. Averaging 16.25 feet.	
From A to B, - - - - - - -	19421.
From E to X, - - - - - - -	14702.
3. Averaging 30 feet deep.	
From X to H, - - - - - - -	210253.4
From H to I, - - - - - - -	27528.3
Total,	= 281719.7

Side or river wall from D to E 35 feet high, mean thickness 10 feet, length 1254 feet, contents 12666.66 perches.

Masonry of the canal.

Side wall from H to I = 586 feet.

The end wall may be taken equal in length to the mean breadth of the transverse section of the canal below the level of high water, added to the breadth of the side wall at its foundation, viz:

$\frac{21.68 \times 3}{2} + 6.775 = 39.295.$

586 + 39.295 = 615.29 feet for the whole length of the wall; the mean thickness of which is 5.42 feet, and height 21.68 feet.

615.29 × 5.42 × 21.68 = 72299.98 cubic feet.

The foundations are 8.775 feet broad, and 3.5 feet deep.

8.775 × 3.5 × 615.29 = 18897.09 cubic feet.

72299.98
18897.09

Total, 91197.07 cubic feet, or 3680 cubic perches.

NOTICES OF SEVERAL SITES EXAMINED.

Stonefort, at the forks of Duck river, Tennessee.

Our return route from Alabama passed near to this place, and was the occasion of its being visited. It is more remarkable on account of its singular military antiquities, than the advantages of its position for an armory. It is, perhaps, the only instance among the remains of ancient fortifications, in this country, that discovers any evidence of the agency of water having been artificially employed and combined with other means of permanent defence.

The local situation of the ground is favorable, and the water from both forks of the river might be employed at one point with perfect security to the works. The fall was estimated at sixty feet, or more, in the distance of a mile; and although the quantity of water furnished by the two streams, during a dry season, could not be ascertained, it is probable that they would afford sufficient power.

Its distance from navigation, and the limited resources of the country around it, render a more particular description of the site unnecessary.

The nearest point from whence boats descend the river is said to be at Shelbyville, twenty miles below; and even from Columbia the navigation is only occasional, and attended with too much uncertainty to be relied on for the purposes of an armory. Supplies would arrive by the way of Nashville, and be transported a distance of sixty-five miles by land.

The falls of Caney Fork of the Cumberland are about fifty-two miles by land, above the junction of the two rivers, and fifty-three from Carthage. They consist of two principal falls, about one hundred and fifty yards apart, and a rapid of considerable descent at the foot of the lower fall. The power which they afford, at the stage of water when it was examined, is among the greatest we have met with. The whole fall cannot be less than sixty or eighty feet; but there is no site for an extensive establishment, and the position does not afford sufficient space for the necessary buildings, without ascending to the summit of the hills.

From the upper to the lower fall, and below the foot of the last rapid, extending as far as could be observed, the right bank of the river consists of high limestone cliffs, occasionally overhanging their base. A high and steep hill side occupies the intervening distance between the lower fall and foot of the lower rapid, and barely affords sufficient room to place the water shops.

The left bank of the river is even more unfavorable. Keel-boats occasionally ascend the Caney Fork to Allen's ferry, supposed to be twelve or fifteen miles below the falls, and might, it is said, proceed to the foot of the rapid, during the greatest part of the year. However, the communication would probably be by land to Carthage, on the Cumberland river, one mile below the mouth of Caney Fork.

Falls of Fallingwater, a branch of the Caney Fork of Cumberland.

These falls are four miles above the mouth of Fallingwater, and thirty-seven miles by land from Carthage, on the Cumberland river. The whole descent is probably more than one hundred and fifty feet in less than half a mile. One cascade alone is sixty or eighty feet high.

The Fallingwater is of the smallest class of mill streams, on which it would be prudent, under any circumstances, to establish an armory. It is liable to be reduced so low as to render the extensive employment of its water power greatly inconvenient, and nearly impracticable. According to the best information we could obtain, it is probable that the quantity of water which it furnishes has, at times, been less than eight cubic feet per second. It would therefore require to be used on a number of wheels in succession, and those of the largest dimensions; four, at least, would be indispensable, and each from thirty to forty feet in diameter. The ground, however, does not admit of this arrangement, without an expense altogether disproportioned to the advantages of the site. Below the falls, the

stream is bounded on both sides by steep hills and high precipices, which continue about two miles, before ground sufficiently low can be obtained to apply the water as often as might be necessary; and it is doubtful if an open canal could be taken half of that distance, in consequence of high intervening ridges, which terminate abruptly at the water edge of the stream.

The west fork of Red river, near Clarksville, Tennessee; Fountainville powder works, on Lynn Camp; and falls of Rough creek, (branches of Green river, Otter creek, and Doe run, emptying into the Ohio below Louisville;) Fourteen Mile creek, in Indiana, and Elk Horn, a branch of the Kentucky river, were severally examined, and found to be deficient of water during dry seasons, and, in some instances, liable to be interrupted by freshets. Doe run is a diminutive, but remarkably fine mill stream. It has a great fall, fluctuates but little in its volume of water, has the advantage of being near the Ohio river, and its power might be sufficient, if the whole fall could be employed at one point. But there is no convenient site below the village of Little Fork, and not sufficient fall above or near to it; nor could the water be taken further down than that place without tunnelling, or resorting to aqueducts to convey it round the cliffs immediately bordering the stream. The falls of Sinking creek, nine or ten feet, were not examined; they are near its mouth, and subject to interruption from the back water of the Ohio.

Big Blue river, in Indiana,

Empties into the Ohio about forty miles below Louisville, a mile and a half above the town of Leavenworth, and has an excellent harbor at its mouth.

Two sites were examined on this stream, but neither of them was found to possess sufficient power. The upper site affords the greatest; it has 13.32 feet fall at low water; the highest rise of any freshet is stated to be sixteen feet. The lower site has only seven and a half feet fall.

The mills of Mr. Leavenworth afford a tolerable measure of the quantity of water which the river furnishes at its extreme low stage. They are twelve miles above the upper site. The proprietor states that, during two or three months in 1821, the supply of water at that point was not sufficient to enable one pair of four foot stones to perform their usual grinding. The head and fall employed at the wheels was not recollected, but the dam is nine and a half feet high. Now, taking the head only at eight feet, and applied on an undershot wheel, the quantity of water could not exceed eighteen cubic feet per second. Between these mills and the upper site, the river receives an accession nearly (or quite) equal to its whole volume, from the Big Fish spring. Hence, the whole volume supplied by the river at the upper site was probably less than thirty-six cubic feet per second. A dam fifteen feet high at this site would increase the fall to twenty-eight and one-third feet at low water; and, supposing all that portion of it which would not be liable to interruption by the highest rise of the river, viz: twelve and one-third feet, to be employed with overshot wheels, and the remaining part of the fall to be applied on reaction wheels, viz: sixteen feet during a low stage of water, and an equivalent power at all other times, (which is practicable,) then the whole virtual head employed on the wheels would be nineteen feet nearly, (omitting to make any allowance for the descents of the canal, races, &c., or to free the wheels,) and the whole quantity of water requisite for an armory would be fifty-four cubic feet per second, nearly; leaving a deficiency of eighteen cubic feet per second, equal to one-half the volume of the stream, with a virtual head of nineteen feet, to be remedied by increasing the height of the dam, which would not only be objectionable on account of the hazard and expense, but nearly impracticable, from the circumstances of the ground.

Licking river, in Kentucky,

Empties into the Ohio opposite Cincinnati; and possesses, in a high degree, many of the characteristic features and habits of the Western rivers. It is long, passes through a narrow valley, and is subject to great extremes in its stages of elevation and depression. During several months it is navigable as high as Falmouth, where it forks, forty or fifty miles from the Ohio; and in the spring of the year boats descend from a much greater distance. Near its mouth are several ripples at low water; the most considerable are Three Mile and Six Mile ripples, so called from their respective distances from the Ohio river. Our attention was drawn to these ripples by the favorable representations made to us of the water power they were said to afford. But, judging from their appearance, in connexion with the reputed character of the river, and the probability of frequent interruptions by the back water of the Ohio, we were impressed with the belief that an adequate power could not be obtained at either of those places. The obvious advantages, however, of a position in the immediate neighborhood of Cincinnati, and also the circumstance that many of the most respectable inhabitants of that part of the country entertained opinions decidedly different from those we had been able to form on a cursory examination, induced us to direct such levellings and surveys as might satisfy us of the propriety of going into a more minute investigation of those sites, or show the inutility of paying any further attention to them. The following abstract of the levellings, it is believed, will render any additional remarks concerning those sites altogether unnecessary. It is proper to state, however, that the bed of the Licking is limestone, and could hardly be more favorable to the security of any dam it might be deemed necessary or advisable to erect on it.

The river was meandered from its mouth, and levels taken for several miles above the ripples in question; and it appears that at Three Mile ripple the whole descent in two miles and three-quarters is five feet four inches: the foot of the ripple is three feet above low water mark of the Ohio. The descent at Six Mile ripple is nine feet five and a half inches, and occurs in the distance of sixty-seven chains: the foot of this ripple is eight feet four inches above the low water of the Ohio. From the head of Six Mile ripple to the head of Deadman's ripple is four miles; and the descent in that distance is nine feet seven and a half inches: the foot of this ripple, therefore, is seventeen feet nine and a half inches above the level of low water in the Ohio. So that the entire fall in eleven miles, including all these sites, from the head of Deadman's ripple to the Ohio river, and during a stage of low water in both rivers, is twenty-seven feet five inches.

The highest rise of the Ohio at the mouth of Licking, that has been correctly ascertained, is forty-seven feet.

The highest rise of the Licking at these points, independent of any rise in the Ohio, is not known. Twelve miles higher up it was measured, and found to be thirty feet.

Levels were taken at a fourth site, on the left bank of the river, twenty-four miles above its junction with the Ohio. The whole fall is fourteen feet five and a half inches in three miles thirteen chains, beginning at the mouth of Cruizer's creek, and terminating near Bowman's creek. The highest rise of the river at this place is not known. A water mark near the mouth of Cruizer's creek was found to be thirty feet above low water; and, from this circumstance, it is inferred that the greatest rise below the rapids cannot be much less than forty feet, and may exceed that height.

The greatest elevation of the Ohio river at the mouth of Licking is within one foot of the level of Cruizer's creek, and more than thirteen feet above low water at the foot of the rapids.

The ground between the two creeks, near their junction with the Licking, is high river bottom and nearly level;

the average elevation of its surface above low water at Cruizer's creek exceeds thirty-one feet. The course of the canal would pass 3,261 yards through this bottom to the nearest part of the valley of Bowman's creek, where the water might be applied with most safety to the works, and with equal, if not greater, economy than on Licking river.

We did not examine this site; the foregoing facts, exhibited in the returns of the surveyor, rendered our inspection of it unnecessary. Its position offers no compensating advantages for the excessive expense that would evidently attend the occupation of it for an armory.

To aid in forming an idea of the probable cost, an estimate has been made on the hypothesis that the dam is to be built fifteen feet high, and the works to be placed on the banks of Bowman's creek, at the point nearest to the head of the falls, where eight feet may be employed on reaction wheels. This is done, however, for the sake of greater accuracy in the calculations, as the surveys and levellings furnish sufficient data for an estimate at that point only; for, if a head of eight feet, with reaction wheels, would suffice at low water, it might be unnecessary to take the canal across the river bottom, and the works might be established to greater advantage (as regards the expense) immediately on the banks of Licking, and nearer to the dam. But we have no correct information concerning the quantity of water in the river during its lowest stage, and such as could be procured does not warrant the supposition that the minimum quantity would be 258 cubic feet per second, which is the quantity required for a head of eight feet on reaction wheels. The works, therefore, would not be placed either at the point we have assumed, nor on the Licking river, but near the mouth of Bowman's creek, where a fall of sixteen or twenty feet may be employed. The height of the dam, however, would not be affected by changing the location of the works, and could not be lessened without augmenting the excavations to a degree that would increase the aggregate expense.

Estimate of the expense of locating the armory on Bowman's creek, 3,261 yards from the dam on Licking river, near the mouth of Cruizer's creek.

Excavations of earth for forebays, races, and wall, in line of shops and foundations, 15578.88 cubic yards, from 4 to 8½ feet deep,	$1,620 44
For canal.	
487059 cubic yards, 28 feet deep, at 28 cents per cubic yard,	136,376 52
12405 cubic yards, 11 feet deep, at 15 cents,	1,860 87
For masonry.	
Walls for forebays, races, and wall next the creek, 11596.29 perches, at $2 per perch,	23,192 58
For arches, 189.59 perches, at $4 per perch,	758 36
Canal wall at the shops, 3709.23 perches, at $2 per perch,	7,418 46
Head-gate of canal, near the dam, — feet high, including its wall and fixtures,	965 00
Two bridges over the canal, at $100 each,	200 00
Four bridges over the forebays, at $25 each,	100 00
Dam 15 feet high, 530 feet long, stones of large dimensions, hammer dressed, and covered,	30,367 32
Sixty-one buildings, including quarters for officers and workmen, workshops, with fixtures for the machinery, &c.	137,556 10
Machinery, tools, patterns, &c.	14,522 00
Miscellaneous articles,	1,549 00
Whole cost of labor, materials, machinery, tools, &c.	356,486 65
Add for contingencies 10 per cent.	35,648 66
For 640 acres of land, and water right, at $10 per acre,	6,400 00
Aggregate,	$398,535 31

By taking the canal half a mile further towards the mouth of Bowman's creek, sixteen feet fall might be employed on the wheels, which would have the effect to diminish the excavations of the canal, notwithstanding the increase of its length. But the quantity of masonry would be augmented more than one-half, in consequence of increasing their height by the difference of the fall, (eight feet,) supposing the existence of no other cause for enlarging their dimensions.

Whatever difference might be produced, therefore, in the distribution of the expense, by placing the works nearer to the mouth of Bowman's creek, and employing a greater head of water on the wheels, the whole amount could not fall any thing short of the above estimate. Further, by examining the calculations, it will be seen that the dimensions of the canal are, in fact, taken at less than what would be admissible in practice. Its width at bottom is only equal to half the least depth of water which it holds, and no allowance is made for obstructions. It is also to be remarked, that the prices of labor and materials, in the preceding estimate, are according to the Cincinnati rates; that the Licking is not navigable half the year; and that the distance by land from the Ohio is twenty-five miles. The maps marked T, and numbered from 1 to 6,* exhibit these several sites, with profiles of the ground through which the canals would be taken. No. 1 is a general map, embracing and connecting the whole. No. 6 contains the profiles of the ground along the route of the canal, between Cruizer's and Bowman's creeks, with sections of the canal.

Great Kenawha, Virginia.

The falls are ninety-four miles above its confluence with the Ohio; thirty-five miles, by water, above the town of Charleston; and a mile and a half below the mouth of Gauley river, which empties into the Kenawha on its right, and from the northeast. The whole descent at the falls is near twenty-one feet at low water. The great body of the river is precipitated over the rocks about fifteen feet at a single pitch, and portions of it eighteen or twenty feet, in several places. The river is confined, at this point, between a high mountain on its left, and a range of cliffs on the opposite side. A small triangular-shaped piece of bottom land, containing about twenty-five or

* Maps omitted; their publication not being considered necessary.

thirty acres, at Montgomery's ferry, on the left bank of the river, furnishes the only spot adapted to the erection of buildings for several miles below the falls. It is intersected near the middle by a rivulet from the mountain immediately in the rear; and a portion of it is liable to inundation. Between the falls and the upper end of this tract a point of the mountain is interposed, presenting a high and continued mass of rock for several hundred feet fronting the river, and projecting many yards beyond its base, which has been worn away by the constant action of the current. It would be most advisable to tunnel through this part of the mountain; perhaps it would also be the cheapest plan. In no other way, however, could the requisite quantity of water be safely conveyed to the site below. On the right bank of the river, and for several miles above and below the falls, there is an almost total deficiency of ground for sites. A dam eight feet high on the Gauley, three-quarters of a mile above its mouth, would raise the water of that river near twenty-three feet above the level of the Kenawha, at the head of the falls: but in the whole distance between the two points, (two and a quarter miles,) there are not thirty acres of ground that could be occupied.

The nearest site sufficiently extensive for an armory is four or five miles below the falls, on the right bank of the river; and the only means of conveying the water to it, which the nature of the intermediate ground will admit, are of the most expensive and insecure kind.

The cliffs which border on the river for several hundred yards below the falls barely afford room enough at their base for the passage of a common wagon road, and leave no other alternative but that of cutting a tunnel through the rock the whole distance, or resorting to the unsafe expedient of a high river-wall to confine the water. Other difficulties are then to be encountered. The canal would pass a considerable distance through narrow ground, along the margin of the river, composed, for the most part, of a loose aggregation of soil and rocks that have been detached from the hills and cliffs above, and therefore might require to be puddled, (sometimes to be walled, on the side next the river,) besides several expensive culverts and embankments on the subsequent part of the route.

The vast power at these falls could hardly be more unfavorably circumstanced for the purposes of a national armory, and it is scarcely less objectionable on the score of its position than of its localities. The bottoms of the Kenawha, that are uncommonly fine and extensive near its mouth, diminish in ascending the river; and five miles from the falls they nearly cease, as before stated. For thirty miles below, the whole country, it is believed, does not at this time furnish subsistence for the population.

The inhabitants of Charleston, and those dependant on the numerous salt-works above that place, draw a large portion of their supplies from the lower country, and even from the Ohio river. Provisions are therefore high, and will probably remain so.

The navigation of the Kenawha has been greatly improved by the board of public works of Virginia, and may be considered as constant between Charleston and the Ohio river. It is attended, however, with some inconvenience on account of the descent, which is forty-five feet in about fifty-eight miles; and from the falls to Charleston it is still greater: the distance is thirty-six miles by the course of the river, and the descent sixty-one feet, which must always render the ascending navigation tedious and expensive.

The head waters of the Kenawha pass through several counties of fine land; but below the junction of Greenbriar and New rivers the country affords no resources whatever for an establishment at the falls. The late civil engineer of Virginia, in his report to the board of public works in 1820, states, that in thirty-five miles next above Bowyer's ferry "ten acres of good land in a body rarely occurs;" and from Man's creek, a quarter of a mile below Bowyer's ferry, to the mouth of Gauley river, a distance of eighteen miles, that "not a trace of human industry or art is any where to be seen, except a part of a small field which approaches the river, at the mouth of Mill creek. Indeed, for a large portion of that distance, a spot of earth of sufficient dimensions for the groundplan of a moderate sized dwelling-house is rarely to be seen." This rugged and extraordinary region, which prevails between the upper country and the falls, also obstructs the water communication between them. From the junction of Greenbriar and New rivers to the falls is sixty-eight miles, and the descent in that distance is seven hundred and twenty-three feet, which is equal to, and probably greater, than the whole descent of the Ohio and Mississippi from Pittsburg to the Balize.

It is hardly necessary to make any comments on these facts, with the solitary exception of fuel. All supplies of consequence (perhaps even to the gun stocks) must be procured from a great distance, and a large portion of them by way of the Ohio.

Falls of Coal river.

The lower falls of Coal river are fourteen feet three inches high, and are five miles by water above its junction with the Kenawha, in which distance the descent of the river is said to be fifteen feet. The ordinary rises of the Kenawha vary from fifteen to thirty feet; its extreme rise is stated at forty feet, and is therefore near eleven feet higher than the head of the falls. The ground is advantageously disposed for the erection of water shops, and all the necessary buildings of an armory; but nothing certain or satisfactory could be ascertained concerning the quantity of water which the river affords in dry seasons, or the probable period that the power would be interrupted by freshets. At the time it was examined, however, the whole volume of the stream was judged to be insufficient.

The upper falls are about five miles above the lower, and do not exceed eight or ten feet in their whole descent. The quantity of water is also less; two streams discharge into the river between the upper and lower falls, and add about one-third to its volume.

Coal river, at its junction with the Kenawha, is twelve miles below Charleston.

The Little Miami, Paint creek, the Hockhocking, Licking creek, and Little Beaver, are among the most valuable mill streams in the State of Ohio. But, on examination, we were satisfied that neither of them would afford sufficient power during a dry season.

The Little Sandy, in Kentucky, has a fall of eight or nine feet at low water. It is within a mile of the Ohio, and therefore subject to serious interruptions from the back water of that river, as well as from its own freshets.

The Big Sandy has no fall of any consequence below the Tug Fork.

Not long since there was a considerable fall on the Guyandotte, in Virginia. A broad ledge of rock, extending obliquely across the stream, from the foot of the hills on its left bank to the opposite shore, made a natural dam eighteen or nineteen feet high, which backed the water for several miles. The fall no longer exists. A grist-mill and a considerable part of the adjoining bottom land were carried away by a freshet. In a few hours the current cleared itself a passage round the rock, which terminated abruptly at some yards distance within the bank. The river now flows in its new channel, a few yards to the right, and eighteen feet below the level of its ancient bed.

Mad river affords an abundant supply of water at all seasons, and numerous sites where it may be employed without interruption. Its distance, however, from useful navigation, and the deficiency of its neighborhood in some articles of primary consequence to a manufactory of arms, are considered as forming decided objections to it. The nearest point of the Ohio river is at Cincinnati, fifty-five miles distant by land, from whence it would be necessary to bring iron and other supplies; and, as the country does not contain stone coal, fuel also would be comparatively dear.

The White Water labors under similar disadvantages, and affords no site, it is believed, below its forks at Brookville, in Indiana, that is not liable to interruption from freshets. This stream, however, was not examined.

There are several rapids on the Wabash, below Vincennes, and not far from White Water river. It is said that a fall of fifteen or twenty feet can be obtained at one of these rapids, near Mount Carmel, by means of a canal from four to six miles in length, and at a moderate expense. As no fact or circumstance, then or since, within our knowledge, would warrant the expectation of obtaining an uninterrupted power at that or at any other point on the Wabash, below Vincennes; as the character and habits of that river, so far as they are known, rendered the contrary almost certain, and, at the same time, created other objections to the occupation of any site upon its banks; and, also, as it was well ascertained that the country in its immediate vicinage was yet inferior in those resources of most consequence to an armory, we did not perceive a sufficient motive for giving it an examination.

Duncan's falls, on the Muskingum, are nine miles below Zanesville. The whole descent is 8.75 feet in 2,504 yards, 5.37 feet of which occur in the first 600 yards. The ground below the fall, on the right bank of the river, is well adapted to the use of the water power, and affords an extensive and advantageous site. The position for the dam is also favorable. The bed of the river and both shores are of rock. But at the point where the left wing of the dam would terminate, and thence for 258 yards below it, the hills crowd upon the stream, and would require the erection of a river-wall along their base, to confine the water, and convey it to where the ground admits of taking it within the bank. The length of the canal, supposing the works to be placed near Duncan's run, below the foot of the last rapid, or Deadman's ripple, would be near 2,000 yards; the average elevation of the ground along its route, is —— feet above the level of low water at the head of the falls, which would therefore be the depth of the excavation; to be diminished or increased, however, by the difference, if any, between the depth of water in the canal and the height of the dam.

It is quite possible, and even probable, that no advantage would be derived from placing the works further down than the foot of the first rapid: from thence to the foot of the last rapid the descent in the surface of the river, when at its greatest height, or during its rise, may be too inconsiderable to add any thing to the power, or to lessen the period of its interruption; in which case, the whole length of the canal might be reduced to 6 or 800 yards. But, according to the least favorable hypothesis, as regards the expense, the dam, river-wall, and canal, (admitting the upper part to be made navigable for river craft,) and including a lock, would probably cost less than the dam and canal and water rights at Zanesville. Four hundred and ninety-four acres of land, with the exclusive privilege of the water, may be purchased for ten thousand dollars, besides two thousand dollars for the probable damage to Mr. Taylor's salt-works, on the left bank of the river, above the dam.

The objections to this position arise from the liability of the power to be interrupted by high water. The whole fall is nearly a foot less than at Zanesville, and occurs in a great distance; and that part of it which would probably be made use of is three feet less. There are considerable obstacles to the current, when the river is high, between the head and foot of the falls at Zanesville, and none immediately below them. There is no similar or apparently equal impediment at Duncan's falls; and the river contracts in its width below the first rapid, without enlarging proportionately below the last. Hence, it might happen that the power would frequently cease at Duncan's falls, with a dam eight feet high, while the efficient head of water on the wheels would seldom, if ever, be reduced to its minimum at Zanesville, with a dam only seven feet. Again: the descent from Slagoe's run to the head of Duncan's falls is five feet, at low water. A dam eight feet high at the latter place would interfere with the lower water privileges at Zanesville, render the mills at Putnam entirely useless, and destroy the ford across the river at that place. These effects might be attended with other difficulties, besides adding to the cost of the site at Duncan's falls, by the purchase of the water rights and other property that might be affected at Zanesville and Putnam.

Cheat river.

The greatest fall which can be obtained on this river, within convenient distance of navigation, does not afford a sufficient power at all seasons.

The site of Jackson's mills and iron-works is eight or nine miles from the mouth of the river. The greater portion of these extensive works were stopped during several weeks of the last year, (1823,) for want of water. A grist-mill with two pairs of four foot stones, and a carding machine, alone continued in constant operation. The head of water employed on the wheels is eight feet.

Youghiogeny river, below the Ohiopile falls.

Several sites were examined between Connellsville and the mouth of this river, including that at the Maria forge, immediately above the town. There is no certainty that the requisite supply of water for an armory could be obtained at any of these points without damming the river to an inconvenient and dangerous height.

The site at the Maria forge has much the greatest power; the whole fall is sixteen feet at low water. But a part of this fall, it is believed, could not be advantageously employed, and the localities of the site are objectionable on many accounts. At Oliphant's works, six miles below Connellsville, the forge was stopped for two months in 1822; and the supply of water, during that time, was only sufficient to operate two pairs of mill-stones and a saw-mill. The dam was tight, and head of water on the wheels six and seven feet, respectively. These works, therefore, afford a tolerable measure of the quantity of water in the river at that time.

Falls of Tygert Valley fork.

Those falls are six miles above the junction of the Tygert Valley fork with the Monongahela, and one hundred miles from Pittsburg. They are estimated to be thirty feet high, and consist of two perpendicular pitches of near fifteen feet each, and about one hundred feet apart. From the foot of the lower fall there is a continued rapid for about a mile, in which distance the descent is supposed to exceed twenty feet; making, altogether, fifty or sixty feet fall. The highest rise of the river at the head of the falls is stated to be sixteen feet. The rise below is unknown; but, according to the best information that could be procured, it appears that breast and undershot wheels cannot be employed without interruption from high water. It was also ascertained that the power of the stream, when at its owest stage, was not more than sufficient to operate four pairs of four foot mill-stones, with a head and fall of twelve feet; and, consequently, the whole fall of thirty feet, employed with reaction wheels, would not afford an adequate power for the armory. The ground is likewise deficient in extent. At no point within a mile and a half below the first fall could the workshops be placed contiguous to each other. In the greater part of this distance the shores of the river consist either of huge masses of detached rock or high precipices; and for eight hundred or one thousand yards tunnelling and high side walls are the only practicable means that can be employed to convey the water to where it may be taken into a canal; and, after all, suitable ground cannot be obtained for an establishment so extensive as an armory at any point within two miles of the falls.

18th Congress.] No. 264. [2d Session.

SURVEY OF THE WORKS AT FORT DELAWARE, AND PROCEEDINGS OF A COURT-MARTIAL ON MAJOR BABCOCK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 19, 1825.

SIR: DEPARTMENT OF WAR, *January* 19, 1825.

Pursuant to a resolution of the House of Representatives, instructing the Secretary of War to communicate to the House "copies of all such letters on file in the Department, or any part thereof, from Major S. Babcock, requesting inspections of the works carried on at the Pea Patch, in the Delaware river, or communicating the state and condition of such works; and, also, the proceedings of a court-martial ordered upon the said Major S. Babcock during the last year; together with the testimony taken by the said court, and the judgment by it pronounced in the case," I have the honor to transmit, herewith, a report of the chief engineer, which furnishes the information required.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

Hon. HENRY CLAY, *Speaker of the House of Representatives.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *January* 18, 1825.

In obedience to your instructions, I have the honor to present, herewith, to you "copies of all such letters on file in the Department, or any part thereof, from Major S. Babcock, requesting inspections of the works carried on at the Pea Patch, in the Delaware river, or communicating the state and condition of such works; and, also, the proceedings of a court-martial ordered upon the said Major S. Babcock during the last year; together with the testimony taken by the said court, and the judgment by it pronounced in the case," in conformity with the resolution of the House of Representatives of the 4th of January, 1825.

As the general court-martial was ordered in consequence of the unfavorable report made by the board of engineers, in May last, as to the condition of the works on the Pea Patch, after duly inspecting them, and in consequence of the opinion of a court of inquiry, confirming the report of the board of engineers, (which court of inquiry was assembled in May last at the Pea Patch, with directions to inquire into the state of the works at that place, and to ascertain in what particulars Major Babcock had deviated from the plans furnished him for his guidance in the construction of Fort Delaware, and whether the said works had been executed with due precision, solidity, and skill,) the report of the inspection made by the board of engineers, and the proceedings of the court of inquiry, being, in a degree, connected with the proceedings of the general court-martial held on Major Babcock, copies of them are presented, herewith, as necessary to a proper understanding of the case.

It may be proper to add, that, since the decision of the court-martial, the board of engineers have been directed to repair to the Pea Patch, and make careful examinations and estimates of the sums necessary to correct the errors committed by Major Babcock, and to report whether the work, with these corrections, and such additions as were necessary to complete it, would answer the object for which the fort was originally designed. The board have fulfilled this duty, and have reported that the sum of $11,715 55 will be sufficient to correct the errors referred to, and which, with the additional sum of $59,963 95, making $71,679 50, will complete the work according to the original plan, and make such additions as will be necessary to render it permanent and effective.

It may be proper to add, that the estimates on which Fort Delaware was built amount to $379,608 90; and that the expenditures, in addition to those which have been found necessary in the progress of the work, and not comprehended in those estimates, together with the estimates for the work now recommended for its entire completion, amount to $101,810 73; and that there has been expended on the work $398,024 58, according to the monthly reports of the superintending engineers, which added to the estimate of the sum necessary for its completion, comprehending the correction of errors of construction by Major Babcock, will make $469,704 08, which the work will cost when completed, and exceeding the estimates on which the work was built, together with the estimate of the items omitted in the original estimate, viz: $59,963 95, and $30,131 23.

The board also state, that, although they urge the above expenditure under a conviction of its necessity, they are happy to have it in their power to say that the objects thereof being accomplished, the fort may be considered as fully answering the purpose for which it was projected; and that, although many faults of construction are now visible, many of these may be remedied by skill, and none will finally remain which can be considered as at all injuring its efficiency.

The chief engineer thinks it also proper to explain, in this place, the ground on which he made the report that the sum appropriated by Congress in 1823 would be sufficient to complete Fort Delaware. Major Babcock, the superintending engineer, had been directed to report the sum which would be necessary for the completion of the work, founded on a detailed statement of the part of the work remaining to be done. In his report he estimated that the sum necessary for the completion was $58,000, which was recommended to Congress for that purpose, and was appropriated accordingly. In the fall of that year the chief engineer visited the fort, and was assured by Major Babcock that the sum appropriated was not only amply sufficient for its completion, but that a surplus of several thousand dollars would remain; and, relying on the full assurance of this representation, the report was made by the chief engineer that the work would be completed in the course of the year, and that the sum appropriated would be ample; which, however, turned out otherwise. The erroneous estimates of Major Babcock, and the misstatement on this point, constituted one of the charges against him when tried by the court-martial.

The chief engineer cannot but remark, that Fort Delaware is the only work which has proved defective on the final examination, either as it regards workmanship or the conformity to the plan. The other works have been pronounced, on the final inspection of the board, to have been executed in a superior manner; and he has the fullest assurance that, under the present organization and system of inspection, an instance similar to that of Fort Delaware will not again occur; but that, on the contrary, there is every reason to believe that the works now building will be so constructed as fully to effect their objects, and to do credit to the officers under whose superintendence they may be constructed.

Respectfully submitted.

ALEX. MACOMB, *Major General, Chief Engineer.*

To the Hon. JOHN C. CALHOUN, *Secretary of War.*

SIR: WASHINGTON, *May* 14, 1824.

On the 10th instant the board of engineers visited Fort Delaware, on the Pea Patch, in obedience to your orders of the 30th April; and they have now the honor to submit the following report as to the present state of that work, and the manner in which it has been constructed. The board will refer to the points on which, in your letter of yesterday, you required information, in the order in which they are stated in that letter.

The first point is, "whether or not that work has been built in conformity to the plan, and with proper solidity, precision, and symmetry; and, if not, in what respects these conditions have not been fulfilled." As the board were not particularly informed as to the nature of the inspection desired by the Engineer Department, and as they were required to hasten to this city, their examination was not so minute as to enable them to go into details as to deviations from the plan, or to refer to particular instances of want of solidity, precision, or symmetry. They, however, are under the painful necessity of reporting, first, that they did observe some deviations from the plans as to details, but they were not of great importance; secondly, that the evidences of the foundations of the fort being imperfectly secured are visible in many places, the piles not having been driven home, or to the complete resistance of the ram; thirdly, that some of the walls are out of line, and some of the piers out of plumb; and, fourthly, that the masonry, in general, is rough and unsightly.

As to the second point, viz: "Whether the appearance of the work would warrant the conclusion that their nonfulfilment has been produced by neglect or incompetency, or both, on the part of the superintending engineer, and, if not, by what other cause they may have been produced," the board are compelled to report, that they can in no way account for any want of conformity to the plans, or any want of precision and symmetry observed in the work, but by supposing want of attention on the part of the superintending officer; but they are disposed to believe that the fault of not driving the piles sufficiently may fairly be attributed to inexperience in that description of work.

The board take great pleasure in stating that no essential injury has resulted from the partial subsidence of the walls and piers; and that the superincumbent masonry having now probably completed the work which was left incompleted by the pile-driver, no further settlement of any consequence need be apprehended. The board observed that the mortar used appears to be very strong.

It is important to add, that the measures adopted to secure the island from abrasion seem to answer their object perfectly.

We have the honor to be, very respectfully, your most obedient servants,

JOSEPH G. TOTTEN,
Maj. Eng. Br. Lt. Col. and M. B. E.
BERNARD, *Brig. Gen.*

Brevet Maj. Gen. ALEXANDER MACOMB,
Colonel, Commandant U. S. Engineers.

Proceedings of a Court of Inquiry held at Fort Delaware and at New Castle, by virtue of the following order:

ENGINEER ORDER—No. 2.

ENGINEER DEPARTMENT, *Washington*, *May* 22, 1824.

The board of engineers, under the orders of this department, having recently inspected Fort Delaware, and it being stated in their report of that inspection that the work has not been executed in conformity to the plan, nor with proper solidity, precision, or symmetry, the President of the United States has directed that a court of inquiry, to be composed of officers of the corps of engineers, be ordered to ascertain the precise nature and extent of the objections to the manner of executing the works at Fort Delaware which have been represented in the report of the inspection made by the board of engineers above referred to; or of any other objections that may be discovered; the causes by which the same may have been produced; and whether or not, among those causes, are involved the want of skill, or of proper attention, or both, on the part of Major Babcock, the engineer who was intrusted with the superintendence of the construction of that work; and, if want of skill and proper attention on the part of Major Babcock be among those causes, in what instances they have occurred, and in what degree.

It is therefore hereby ordered, that a court of inquiry, to be composed of Lieutenant Colonel C. Gratiot, president; Lieutenant Colonel J. G. Totten, and Captain J. L. Smith, members; and Lieutenant G. Blaney, recorder, assemble at Fort Delaware, or New Castle, on the 27th instant, or as soon thereafter as practicable, to carry into effect the foregoing directions of the President of the United States; and particularly to ascertain if the foundations of the fort have been properly prepared; if the walls, and other parts of the work, have been built with due precision, regularity, and symmetry; and if the workmanship has been properly executed. As a preliminary step in this investigation, it will be necessary that the court, or some member or members thereof, make a minute and thorough admeasurement of the works of Fort Delaware.

The court, having performed the duty required by this order, will report in detail the result thereof to this department, together with their opinion thereon.

By order of the Secretary of War:
ALEXANDER MACOMB, *Maj. Gen., Chief Engineer.*

FORT DELAWARE, PEA PATCH, *May* 27, 1824.

The court met pursuant to the above order: Present, Captain J. L. Smith, member.

The court was adjourned to Wednesday, the 2d June next, to complete the measurement of Fort Delaware, and to give time for the absent members and the recorder to arrive; to meet either at Fort Delaware or New Castle, as the president may direct.

NEW CASTLE, *June* 2, 1824.

The court met pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Brevet Lieutenant Colonel J. G. Totten and Captain J. L. Smith, members; Lieutenant George Blaney, recorder.

The court, being duly organized, was sworn, in the presence of Major Babcock.

In consequence of the measurement of Fort Delaware not being completed, the court was adjourned to meet at Fort Delaware on Wednesday, the 9th June instant.

FORT DELAWARE, *June* 9, 1824.

The court met pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten and Captain J. L. Smith, members; Lieutenant George Blaney, recorder.

The court adjourned to meet again to-morrow morning at nine o'clock.

FORT DELAWARE, *June* 10, 1824.

The court met pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten, and Captain J. L. Smith, members; Lieutenant George Blaney, recorder.

AULEY PARKE, a witness, superintendent of Fort Delaware, being sworn, says as follows:

Question by the court. Have you been employed in the construction of this work? if so, in what capacity, and for how long a period?

Answer. I have been employed as superintendent of Fort Delaware since March, 1818, to the present time.

Question by the court. What officers of the corps of engineers have been in the superintendence of the work during the period you have been at Fort Delaware; and what officers have acted as assistants during the same period?

Answer. Captain (now Major) Babcock has been the superintendent of Fort Delaware during the whole of the time that I have been here, with the exception of two or three months last winter, when Captain De Russey was the superintendent. Major Babcock was absent at this time. Lieutenant Brewerton was the first assistant; Captain Dumas was also an assistant to Major Babcock for a short time in 1823.

Question by the court. Has the construction, so far as it has progressed, been directed exclusively under the superintendence of Major Babcock; and, if not, what part thereof has been constructed under Captain De Russey?

Answer. Principally or all the mechanical work has been constructed under the superintendence of Major Babcock. Nothing but laboring work was done under the superintendence of Captain De Russey.

Question by the court. How often, in general, was the progress of the work inspected by Major Babcock, and how often by his assistants?

Answer. In general, I believe Captain (now Major) Babcock inspected the work every other day, as nearly as I can recollect. Lieutenant Brewerton, when assistant, was in the island, I believe every day, when the weather would permit. Captain Dumas, when assistant, was, the first part of the time, here generally every day; the last month that Captain Dumas was an assistant to Major Babcock I am positive he was here only once; the preceding month he was here, perhaps, four times.

Question by the court. Where did Major Babcock and his assistants reside during the progress of the work?

Answer. At New Castle; a distance, as it is called, of about five miles.

Question by the court. By whom were the details of the masonry laid out?

Answer. I do not know.

Question by the court. What was the condition of the work when your service at it commenced?

Answer. I think the work was laid out, and some piles under one of the bastions were driven.

Question by the court. Who had the direction of the piling then; and did it devolve on you after you became established as superintendent?

Answer. James Maxwell had the direction of the piling; it did not devolve on me to direct it. I called the rolls, and saw that the men were at work.

Question by the court. Did you, as superintendent, have any control over the masons' work; and, if you did, of what nature, and how did you exercise it?

Answer. I had no control over the masons' work.

Question by Major Babcock. Was the superintending engineer (Major Babcock) active and zealous in the discharge of his duties?

Answer. I believe he was.

Question by Major Babcock. Was he at the Pea Patch in all kinds of weather?

Answer. I believe he was.

Question by Major Babcock. Was it difficult to preserve the stakes after they were planted, while piling, and why?

Answer. It was. In passing the pile machine, the stakes which designated the angles of the work had to be removed. The state of the embankment was such, that the island was frequently overflowed, which, with the timber that was floating over the island, was another cause for the removal of the stakes.

Question by Major Babcock. Did you observe the superintending engineer (Major Babcock) level the work all round with a spirit level?

Answer. I did.

Question by Major Babcock. Did the superintending engineer (Major Babcock) pay particular attention to economy and the preservation of materials?

Answer. I thought so.

Question by Major Babcock. Were the workmen of all kinds paid regularly?

Answer. They were.

Question by Major Babcock. Was I confined to my bed by sickness, from the fore part of September until the winter of 1823?

Answer. I cannot remember the precise time, but you were confined for a long time.

Question by Major Babcock. Was it during my sickness that the visits of Captain Dumas at Fort Delaware were so unfrequent?

Answer. Yes.

Question by the court. When the stakes were removed to admit of the passage of the piling-machine, as stated in the answer to a previous question, under whose direction, by whom, when, and how were they replaced?

Answer. They were replaced by Captain Babcock, on his next visit to the island, by measurement from the centre of the work with a line.

Question by Major Babcock. Had I any official duties to perform at New Castle which made it necessary to reside there?

Answer. I believe you had.

Question by the court. What were those duties, and how did they make it necessary that Major Babcock should be established at New Castle?

Answer. Some of the duties that required Major Babcock to reside there I am not competent to judge of; but among those that made his residence there necessary were the employment of men and the purchase of materials.

Question by the court. In one of your answers you say you observed Major Babcock level the work all round with a spirit level. What was the state of the work when this was done, and how often, if more than once, was it done?

Answer. I recollect of his levelling the first tier of embrasures; I also recollect of his levelling the second tier of embrasures; I assisted at both of those operations.

ELI GARRISON, a witness, being duly sworn, answers as follows, to wit:

Question by the court. Have you been employed in the construction of this work? if so, in what capacity, and for how long a period?

Answer. I have been employed in the construction of Fort Delaware, as a wharf builder and in pile-driving, more than three years, from the commencement of the work.

Question by the court. Do you know by whom the trace of Fort Delaware was laid out upon the ground? and, if so, by whom, and when?

Answer. It was laid out by Major Babcock; but I do not recollect in what year.

Question by the court. What officer of engineers superintended the work during the period you were employed at Fort Delaware; and what officer acted as assistant during the same period?

Answer. Major Babcock was the superintendent: I do not recollect of any officer being there as assistant.

Question by the court. How often, in general, was the work of pile-driving and wharfing inspected by Major Babcock?

Answer. To the best of my knowledge, the first year he came down here from New Castle from three to five times a week; the other years from three to four times a week.

Question by the court. Where did Major Babcock reside during the progress of the pile-driving and wharfing?

Answer. I believe at New Castle.

Question by the court. Who had the personal superintendence and direction of the wharfing and pile-driving?

Answer. James Maxwell had the superintendence and direction of the pile-driving until his death; it then devolved on me. The wharfing was directed by William Murphy and myself.

Question by the court. In what manner were the piles driven?

Answer. They were driven with a ram weighing 16 hundredweight. Its greatest fall was thirty-three feet. The piles under the front wall were in five rows, three feet from centre to centre, lengthwise with the wall. In the second and fourth rows a pile was driven into each interval. The piles under the piers were driven in the same manner as those under the wall. I am more certain of a pile having been driven into the intervals under the piers than under the wall. The piles were from eight to thirteen inches in diameter, and from twenty-five to thirty-three feet long. When we left off driving, they would go from one quarter of an inch to one inch and a half each blow.

Question by the court. At what height, with respect to low water mark, were the piles cut off to receive the grillage; and how was the grillage formed, and how attached to the heads of the piles?

Answer. I do not remember at what height the piles were cut off. The grillage was formed by first laying a timber lengthwise with the wall, and on each row of piles; these timbers were secured, in many instances, to the piles, by one and a quarter or one and a half inch treenails; cross pieces were then laid, corresponding with the transverse rows of piles: these timbers were not secured to the pieces below; the lower timbers were flattened on two sides, and the transverse ones on one side; the spaces between the timbers were filled with mud.

Question by the court. By whom were the details of the masonry laid out?

Answer. By Major Babcock.

Question by Major Babcock. What was done with the heads of the piles that were cut off?

Answer. They were put into the mud between the timbers which formed the grillage.

Question by Major Babcock. Was the superintending engineer (Major Babcock) active and zealous in the discharge of his duties?

Answer. I thought he was.

Question by Major Babcock. Did he lay out every part of the fort in person?

Answer. I believe he did.

Question by Major Babcock. Was he at the Pea Patch in all kinds of weather?

Answer. When I was there, he was.

Question by Major Babcock. Was a great proportion of the piling done under my own eye?

Answer. Yes.

Question by Major Babcock. Was the fort laid out by me repeatedly and carefully.

Answer. It was repeatedly, and, to the best of my knowledge, carefully: I helped you to measure often.

Question by Major Babcock. Was it difficult to preserve the stakes that designated the angles of the work after they were planted, while piling; and why?

Answer. It was very difficult. They had to be taken up to move the pile machine. In drawing the piles to the work, the stakes were frequently misplaced.

Question by Major Babcock. Did you observe the superintending engineer (Major Babcock) level the work all round with a spirit level?

Answer. Yes, frequently.

Question by Major Babcock. Did the superintending engineer (Major Babcock) pay particular attention to economy and the preservation of materials?

Answer. I thought he did, as much so as any public officer I ever knew.

Question by Major Babcock. Were the workmen of all kinds paid regularly?

Answer. They were, as far as I know.

Question by the court. When the stakes were removed to admit of the passage of the piling-machine, under whose direction, by whom, when, and how were they replaced?

Answer. They were replaced by Major Babcock, as soon as possible, by a resurvey.

WILLIAM MURPHY, a witness, being duly sworn, answers as follows:

Question by the court. Have you been employed in the construction of this work? if so, in what capacity, and for how long a period?

Answer. I was employed at Fort Delaware, in laying the grillage, about two months.

Question by the court. At what height, with respect to low water mark, were the piles cut off to receive the grillage; and how was the grillage formed, and how attached to the heads of the piles?

Answer. The piles were cut off on a level with low water mark. The second and fourth rows of piles under the front wall had an additional pile between each of the piles corresponding with those in the other rows. Those under the piers were placed, I think, in the same manner. A timber was laid lengthwise on each of the rows of piles, and, in some instances, these timbers were fastened to the piles with treenails. Across these longitudinal timbers, transverse ones were laid over the cross rows of piles; some of these were fastened to the lower timbers by treenails, at the commencement of the work; but this practice was afterwards abandoned, as it was thought to be useless. The lower timbers were flattened on two sides, and the upper ones on the lower side. The spaces between the lower timbers were filled with the heads which were cut from the piles; these were laid parallel with the

timbers, as were the heads of the piles which were cut off, and placed between the upper timbers. Where we could not get the whole head of the pile into the spaces between the timbers, they were split and wedged in, and then the vacant space was filled in with mud.

Question by Major Babcock. Was the superintending engineer (Major Babcock) active and zealous in the discharge of his duties?

Answer. I thought he was very much so.

Question by Major Babcock. Did he lay out every part of the fort in person?

Answer. I believe he did, for I know of no other person who could do it.

Question by Major Babcock. Was he at the Pea Patch in all kinds of weather?

Answer. He was, unless it stormed too hard for any body to turn out.

Question by Major Babcock. Was a great proportion of piling done under my own eye?

Answer. I believe it was.

Question by Major Babcock. Was the fort laid out by me repeatedly and carefully?

Answer. It was.

Question by Major Babcock. Was it difficult to preserve the stakes after they were planted, while piling; and why?

Answer. I cannot say positively.

Question by Major Babcock. Did you observe the superintending engineer (Major Babcock) level the work all round with a spirit level?

Answer. Yes.

Question by Major Babcock. Were the workmen of all kinds paid regularly?

Answer. Yes.

Benjamin Kline, a witness, being duly sworn, answers as follows:

Question by the court. Have you been employed in the construction of this work; if so, in what capacity, and for how long a period?

Answer. I have been employed at Fort Delaware, as a mason, from May, 1819, to the present date, whenever there was any masonry to be done.

Question by the court. Has the construction, so far as it has progressed, been directed exclusively under the superintendence of Major Babcock; and, if not, which part thereof has been constructed under Captain De Russey?

Answer. All the masonry has been done under the direction of Major Babcock.

Question by the court. What were the instructions under which you commenced and carried on the masonry of the foundations? Was your work laid out by Major Babcock, or any other officer of engineers; and, if not, by whom was it laid out; if by yourself, how?

Answer. The instructions which I received were, that I should strictly adhere to the plan, which was a sketch furnished to me by Major Babcock. The angles of the work were laid out by Major Babcock, personally. The thickness of the foundation was laid out by myself, from a plan furnished to me by Major Babcock.

Question by the court. What were the sizes, generally, of the stone used in the foundations; and how were they laid, and particularly those next to the grillage?

Answer. The stone is of the ordinary size which is generally used in foundations of large walls. They were laid flat on the grillage. Those above the first course were laid in mortar, the largest surface down. The first course being the largest stone that was used in the foundation, the stone entered beyond the wall above the offset, from one foot to one foot six inches. Some of them entered two feet. The stone which was used in the foundations were generally about twice the size of those used in the wall above the foundations, and it was generally of a stronger quality than that used in the superstructure.

Question by the court. As the masonry of the fort progressed, certain changes were necessary in the dimensions, and certain small parts were to be laid out, such as embrasures, tongue-holes, recesses, offsets, stairs, &c.; now, who personally laid out, directed, and inspected these changes and details?

Answer. Those which were not laid out by Major Babcock were laid out by myself, under his direction and superintendence, with the exception of a part of the embrasures and tongue-holes in the third tier, which were laid out by Lieutenant Brewerton, in face No. 5 of the plan.

Question by the court. How, and by whom, was the measurement made for payment to the mason; and how were the limits of a preceding measurement ascertained?

Answer. The measurements were make by Major Babcock and myself until Lieutenant Brewerton came on; then the measurements were made by him and myself. The limits of a preceding measurement were generally ascertained by reference to some general level of the work, such as tongue-holes, soles of embrasures, cordons, &c., of which memorandums were kept.

Question by the court. How often, in general, was the progress of the work inspected by Major Babcock; and how often by his assistants?

Answer. The work was inspected almost daily by Major Babcock, particularly the first two seasons; and from three to five times a week the remainder of the time. Lieutenant Brewerton was here from three to five times a week, while he was an assistant to Major Babcock. Captain Dumas, while an assistant, was here two or three times a week, except at one period, when he was not here more than once or twice in two or three weeks; and this was at the time that Major Babcock was sick.

Question by the court. How are the deviations from the line, from the plumb, and from the level, observable in many parts of the fort, to be accounted for?

Answer. I think solely by the inequality of weight on the foundation. I did not observe any deviation in the line or plumb until the wall was raised some distance above the first tier of embrasures.

Question by the court. How do you account for the differences of thickness and of height observed in the parapet wall?

Answer. I think the differences in the thickness were caused by the difficulty of keeping a line stretched in windy weather. The differences in the height, I think, are caused by measuring from former levels, which had been deranged by the settling of the work more than I was aware of. These levels, including the coping, were generally established by myself. The first levels were established by Major Babcock.

Question by the court. How, and by whom, were the stones for the wall inspected and received; and how was it with bricks and lime?

Answer. The stones were generally received by Mr. Park, and measured by myself in the pile. At other times the vessels were measured, and the quantity receipted for by Mr. Park. The bricks, I believe, were always counted and receipted for by Mr. Park. The lime was also received by Mr. Park.

Question by Major Babcock. Was I in the habit of inspecting all the materials that arrived?

Answer. Yes.

Question by Major Babcock. How many general levels were made by me of the work?

Answer. I recollect that there were three, and they were made with a spirit level.

Question by Major Babcock. At what time did Lieutenant Brewerton join me as an assistant; and what was the progress of the work at the time he did join?

Answer. It was after many of the great arches were turned.

Question by Major Babcock. What has been the general quality of the materials used in the construction of the work?

Answer. The quality of the materials is good, particularly the lime and sand.

The court was adjourned to meet again to-morrow morning at nine o'clock.

FORT DELAWARE, *June* 11, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten and Captain John L. Smith, members; Lieutenant George Blaney, recorder.

PETER KLINE, a witness, being duly sworn, says as follows:

Question by the court. Have you been employed in the construction of this work; if so, in what capacity, and for how long a period?

Answer. I have been employed in the construction of Fort Delaware, as a contractor for the masonry, from the commencement of the masons' work until the present time.

Question by the court. What were the instructions under which you commenced and carried on the masonry of the foundations? Was your work laid out by Major Babcock, or any other officer of engineers; and, if not, by whom was it laid out? if by yourself, how?

Answer. I was required to superintend the masons' work, the work was laid out by Major Babcock and by Benjamin Kline.

Question by the court. What were the sizes, generally, of the stones used in the foundations; and how were they laid, particularly those next to the grillage?

Answer. There was a large quantity of stone collected when the work was first commenced, and from these the largest were selected for the foundation. They were laid, according to my judgment, in the best manner. The stones were from two and a half to three and a half feet in length.

Question by the court. As the masonry of the fort progressed, certain changes were necessary in the dimensions, and certain small parts were to be laid out, such as embrasures, tongue-holes, recesses, offsets, stairs, &c. Now, who personally laid out, directed, and inspected these details?

Answer. Major Babcock and Benjamin Kline directed these changes.

Question by the court. How, and by whom, was the measurement made for payment to the mason; and how were the limits of a preceding measurement ascertained?

Answer. I do not know; Major Babcock and Benjamin Kline attended to these things.

Question by the court. How are the deviations from the line, from the plumb, and from the level, observable in many parts of the fort, to be accounted for?

Answer. I should suppose that they were caused by the inequality of weight on the foundations.

Question by the court. How do you account for the difference in thickness and in height observed in the parapet wall?

Answer. I cannot tell, unless it was caused by the wind being so heavy as to prevent us from keeping our lines stretched; the deviations from the level are occasioned by the settling of the wall.

Question by the court. How often, in general, was the progress of the work inspected by Major Babcock, and how often by his assistants?

Answer. Major Babcock inspected the work, during its progress, from four to six times a week; and Captain Dumas, in the beginning, was here two or three times a week; but, during the illness of Major Babcock, he was not here more than once or twice in a month; Lieutenant Brewerton was here very often.

Question by the court. You say that Major Babcock inspected the work, at short intervals of time; will you tell the court, if you can, whether it was the major's practice, at his visits, to examine minutely every part of the work which was going on, and whether he ever caused any that was badly or incorrectly laid to be taken down and altered?

Answer. It was his practice to inspect the work minutely, and whenever he discovered any that was badly done he caused it to be taken down.

Question by Major Babcock. What was the quality of the materials used in the construction of the work?

Answer. Very good, particularly the lime and sand.

Question by Major Babcock. Was I in the habit of inspecting all the materials that were received?

Answer. Yes.

Question by the court. Was the stone of the best quality that could have been obtained?

Answer. Yes.

Captain DE RUSSEY, of the corps of engineers, a witness, being duly sworn:

Question by the court. Have you at any period had the superintendency of this work? if so, state to the court when, and for what length of time.

Answer. I was instructed to relieve Major Babcock, in October last, in consequence of his sickness. I arrived here, I believe, on the 5th of November last, and took the command on the 8th, and continued in the command until the 15th or 16th of December.

Question by the court. While you were in the superintendence of this work, did you observe any want of conformity to the plans in the part then executed; any want of proper solidity, precision, or symmetry; any want of proper execution in the workmanship, or any important defects in the system of accountability or superintendence by overseers? If so, please to state what you know to the court.

Answer. The first part of the question, relating to the work being constructed in conformity with the plan, I cannot answer, as I had no plan of the work, until within a day or two before I left here, when I received a ground-plan from Captain Dumas, which was a copy, as I believed, from the original. In regard to proper solidity in the construction of the work, I discovered that it had settled and cracked considerably. In regard to precision and symmetry in the construction, I discovered many instances where they had not been adhered to, such as the want of level and straightness of the faces. In regard to the execution of the work, it appeared to me to be bad, as the stone masonry appeared to be laid in indifferent mortar, and large joints. Many of the stones were set with their faces or beds vertically. It appeared to me that proper care was not taken to put large stones at the angles.

The brick masonry of the arches over the embrasures, those springing from the piers dividing the embrasures, were made with joints larger than ought to have been permitted. The wood-work at that time put up was generally composed of indifferent materials, and the workmanship was bad. The present platform was a part of the wood-work referred to above, as were also the uprights or joists which were to support the roof. As relates to the accountability, I know nothing; and in regard to the superintendence by overseers, I did not discover any want of zeal or defect in the one who was here at that time.

Question by the court. Are the uprights for the support of the roof, of which you have spoken, standing in the present roof?

Answer. Those put up in the interior wall have, it appears, all been taken down and removed; those on the faces of the work still remain; but they have been altered, by being sawed off, and by having an additional piece put against them to strengthen them.

Question by the court. You speak of the walls being, in some cases, out of line and out of level. Did you observe any instances of deviation from the plumb, in the walls or piers; and, if so, were there many instances of such deviations; and were these, in any instances, considerable? How do you account for them?

Answer. The deviation from plumb was evident, by taking the range of the faces. In some places it was considerable. I account for these deviations, first, from the foundation giving way; and, secondly, from the want of due attention in the workmanship of the masonry.

Question by the court. Were the uprights which you say were placed on the interior of the wall for the support of the roof, and which were afterwards removed, adequate, in your opinion, to the object for which they were placed there? and if not, why?

Answer. They were not adequate, because they were too small, and too far apart for their size. Those on the face of the work had been pieced, which weakened them materially.

Question by the court. You have stated your inability to answer to the question respecting accountability. Is it to be understood therefrom that the means of ascertaining the mode adopted for procuring materials and workmanship, and for applying them in the work, and the mode of settling for them, were not accessible to you? If it is not, will you answer to these points? Will you also state why you were not put in possession of the plans of Fort Delaware on the transfer of the command to you?

Answer. When I arrived at New Castle, I found Major Babcock ill, and it was on that account I supposed he did not turn over to me the papers relative to the accountability. I, at any rate, received none. The only papers which I did receive from Major Babcock were the consolidated returns of the condition of the work, and the orders from the Engineer Department requiring those returns. I applied to Major Babcock for the plans of the work; he told me he supposed they were in possession of Captain Dumas. I inquired of Captain Dumas for them, and he told me they were not in his possession. The ground-plan, which I afterwards received from Captain Dumas, had evidently been in possession of Major Babcock. Captain Dumas denied that he had any plans, when I made the inquiry of him respecting them.

Benjamin Bartram, a witness, being duly sworn, answers as follows:

Question by the court. Have you been employed in the construction of this work; if so, in what capacity, and for how long a period?

Answer. I came here on the 11th March, and I have continued as superintendent for Major Babcock, in carpentry, until the present time.

Question by the court. What was the condition of the work when your service at it commenced?

Answer. The arches were all turned, except one over the gateway; the upper platforms were commenced and nearly finished; there were some uprights and plates placed for the roof, which were removed, because I supposed them to be too light.

Question by the court. In measuring the upper platform and the parapet walls, to determine the dimensions necessary for the roof timbers, did you observe any variation in the dimensions of the different parts of the fort, or any deviations from the plumb, from the line, or from the level; and, if so, were these considerable?

Answer. There is a variation from one inch to six or seven inches in the level of the girders for the roof. There is a little variation in the level of the platforms. These variations are not greater than is usual in large works of this kind.

Question by the court. Who decided as to the plan of the roof?

Answer. Major Babcock.

Question by Major Babcock. What is the quality of the materials used in the platforms?

Answer. The quality of the sleepers is of the first kind. The planking is merchantable, but sufficiently good.

Question by the court. Is there any spruce in the upper platform; if so, is spruce as strong or as durable as pine?

Answer. There is spruce in the upper platform; it is as strong, but not so durable as pine.

Lewis Ford, being duly sworn as a witness, answers as follows:

Question by the court. Have you been employed in the construction of this work; if so, in what capacity, and for how long a period?

Answer. I have been employed here as a carpenter since the 11th of March last.

Question by the court. What was the condition of the work when your service at it commenced?

Answer. The upper platforms were nearly finished, excepting over the gate; there were some few posts put up for the roof, but they have been taken down, as they were considered to be too low.

Question by the court. In measuring the upper platform and the parapet walls, to determine the dimensions necessary for the roof timbers, did you observe any variation in the dimensions of the different parts of the fort, or any deviations from the plumb, from the line, or from the level; and, if so, were these considerable?

Answer. In measuring the width of the platforms, there is a variation in the length of the girders of from two to eleven inches. I observed very slight deviations from the level of the coping.

Question by Major Babcock. What is the quality of the materials used in the platform?

Answer. There are some of the materials of a good quality, and some that are not as good.

Auley Parks was again called as a witness, and examined on his oath of yesterday.

Question by the court. How and by whom were the stones for the wall inspected and received; and how was it with bricks and lime?

Answer. I was the receiver of the stone, brick, and lime, from the time that I commenced duty here; Major Babcock was the inspector. I counted every brick personally; the stone was piled for perching as close as it could be without breaking, and then measured; the vessels that brought the stone were marked to ascertain the number of perches which they contained. A vessel thus marked would run perhaps a whole season; but if it were discovered that they did not bring the quantity which they said they had, the vessel was repeatedly remeasured, and again marked.

Captain JOHN L. SMITH, of the corps of engineers, being duly sworn as a witness, answers as follows:

Question by the court. You have been, as one of the members of this court of inquiry, under the orders constituting the court, making a minute examination and a measurement of Fort Delaware: will you please to state whether you have observed any want of conformity to the plans in the part executed; any want of proper solidity, precision, or symmetry; any want of proper execution in the workmanship; any important defects in the system of accountability and superintendence by overseers; or any evidences of want of skill, or of proper attention, or of both, on the part of Major Babcock; and, if want of skill and proper attention, in what instance?

Answer. I understood from Major Babcock that the work had been laid out by establishing a centre, and from that radii for the capitals of the bastions; as the ditch was full, and as it was impracticable for me to determine the length of the fronts, I resorted to the mode pursued by Major Babcock in laying out the work, for testing the correctness of the trace. To determine the directions of the capitals of the bastions, I placed a stake at the centre of their respective gorges, which were of unequal lengths, and another stake at the centre of the doors of the magazines, respectively, and assumed as the centre of the fort the point at which the convergent lines drawn from these stakes met. In measuring these lines from the centre, so ascertained, to the doors of the magazines, I found them all of different lengths, the greatest difference being seventeen inches. In ranging the faces of the interior of the curtains, there was a deviation in all of them, as to the points they intersected on the faces of the works ranging with them, respectively, and in one instance it amounted to several feet. Lines measured from the angles of the flank to the opposite angles of the shoulder were of different lengths in the same front, and in the different fronts; the differences in the same fronts did not exceed between three and four inches. There was a difference in the batten of the slopes all round the work, between the different parts of the same faces, and they generally differed from the plan. There was a difference in almost every part of the work measured, of the height of the wall, from the base of the superstructure to the top of the first slope.

The court adjourned to meet again to-morrow morning at 9 o'clock.

FORT DELAWARE, *June* 12, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten and Captain John L. Smith, members; Lieutenant George Blaney, recorder.

Captain SMITH continued his evidence as follows, to wit: The dimensions of the embrasures of the lower tier differed, generally, with respect to each other, and to those laid down in the plan. In the second and upper tiers of embrasures the thickness of the wall only was measured, and the same differences occurred with respect to them. The depth of the foundations having been ascertained to be five feet, instead of seven, as laid down in the plan with which I was furnished by Major Babcock. In the absence of the court, a communication stating this circumstance was made to the Engineer Department, accompanied by a suggestion that it might be desirable to the court to receive any information on the subject that might be in the possession of the department. A copy of this communication having been transmitted to Major Babcock, he, in a few days after, informed me that the plans I had received from him were not those originally prepared for the work, but had been made after the foundations had been finished, and the walls of the superstructure had been raised as high as the embrasures of the lower tier. He further informed me that he had not then in his possession the original plan, but had a copy of it, from which he had taken a sketch, which he produced. This sketch was transmitted to the Engineer Department, containing a statement of the particulars just given.

There is evidently a want of proper solidity in the walls and arches of this fort. Large fissures are discovered to have been repaired in both. The precautions adopted to prevent the extension of these injuries may possibly have been effectual, as there is no evidence of recent enlargement of the fissures to which they relate. Whether this is because they have been very lately repaired or not, I am not able to say; but there are many evidences of recent injury about the embrasures. That there has been a want of precision and symmetry, and also of proper execution of the workmanship, will have been understood from what has been already stated in relation to the conformity of the work to the plans. In addition thereto, the extreme roughness of the manner in which the masonry has been executed, the apparently total disregard of some of the most essential requisites of strength and symmetry in masonry, such as laying the stones upon their beds, having headers in the facing, and joints as small as practicable, may also be stated. My time was fully occupied in making the admeasurements, and collecting the data upon which the foregoing statement has been founded. The notes of the admeasurements having been submitted to the court, may be referred to for more minute information touching the objects to which they relate. I therefore had not an opportunity of examining the system of accountability and superintendence by overseers. With respect to any evidences of want of skill, or of proper attention, or of both, on the part of Major Babcock, I would suggest to the court, if an opinion given by me at this stage of the investigation would not contravene the intention of that part of the order constituting the court, which requires the court "to report the result of their investigation, with their opinion thereon."

The court was cleared for the purpose of taking into consideration the suggestions of Capt. Smith relative to giving his opinion with respect to the "skill and proper attention on the part of Major Babcock," and decided that he be excused from answering to those points of the question.

The court having gone through all the evidence at hand, it adjourned to the works, and was occupied in measuring and inspecting until 6 o'clock, P. M., when it was adjourned, to meet again on Monday next, the 14th inst., at 10 o'clock, A. M.

FORT DELAWARE, *June* 14, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten and Capt. J. L. Smith, members; Lieutenant George Blaney, recorder.

The court adjourned to the works, for the purpose of continuing the measurements and inspections which were commenced at the last session, and was engaged in these duties until 6 o'clock, P. M., when it was adjourned, to meet at New Castle to morrow morning at 10 o'clock.

NEW CASTLE, DELAWARE, *June* 15, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten and Captain J. L. Smith, members; Lieutenant George Blaney, recorder.

The court was engaged until 2 clock P. M. in examining the minutes of the measurements made at Fort Delaware, by the court, on the 12th and 14th instant.

The court was adjourned to meet again to-morrow morning at 9 o'clock.

NEW CASTLE, DELAWARE, *June* 16, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel J. G. Totten and Captain J. L. Smith, members; Lieutenant George Blaney, recorder.

Several original plans of Fort Delaware, which were in the possession of Colonel Totten, having been received from New York, the court proceeded to the examination of

Lieutenant Colonel JOSEPH G. TOTTEN, of the corps of engineers, who, being duly sworn, says as follows:

In 1815, under orders from General Swift, I made plans for the defence of the Pea Patch, of which these, Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9 1st, 9 2nd, 10, and 11, are either originals or copies; most of them, I perceive, were made by myself. These plans were furnished to Major Babcock, who located the work on the island according to these plans, as I then presumed, and who would progress with the work according to these plans, as I supposed, because I was informed by General Swift, then chief engineer, that they had been approved of by the department. In 1819 I visited the Pea Patch, in company with General Bernard. The fort had then progressed to about the height of the embrasures; and I then observed that the fort was not placed upon the island in the manner, as to the direction of the faces, as it was upon the original plan. The difference being this, that a capital of a bastion pointed up the island, instead of a perpendicular to the exterior line, as on the original plan. I do not recollect having noticed at that visit any other deviation from the original project. The board of engineers, after this visit, being engaged in the study of the defences for this part of the country, took the subject of the details of the fort on the Pea Patch into consideration. The result of their deliberations was, that the earthen parapet, originally comtemplated, might be dispensed with; and, as the substitution of a parapet of masonry would leave a different *terre-plein* over the great arches, the gallery piers might also be dispensed with. The board also determined that it would be better to have passages of communication from casemate to casemate, through the piers in the second tier, than to build them solid, as at first proposed. Some other alterations from the original plans were also thought proper. As the lower tier was in part finished, it was determined that the work should be carried on, according to the original plans, to the height of the floor of the second tier. New plans were necessary for the work above the first tier, which are Nos. 1 2nd, 2 2nd, 3 2nd, 4 2nd, 5 2nd, 6 2nd, 8 2nd, 10 2nd, and 11 2nd, and are those which were furnished by the board of engineers to govern the superintending engineer in the completion of the work.

In the year 1822, I think, the board were directed by the Engineer Department to examine Fort Delaware, and report on the most suitable means for guarding against the injurious effects from the subsidence which had been observed in the walls and piers; and the board recommended that *buttresses* should be built against the ends of the piers most in danger from this subsidence. I think the board also recommended that the lower arches, over the passages of communication, from casemate to casemate, should be taken down. These recommendations of the board account for certain alterations which have been made in the plans. There are also other alterations in both sets of these plans, which have no relation to the changes proposed by the board of engineers. In No. 3 of the first set, the masonry commenced, according to the original plan, at the level of low water. The plan is altered so as to make it commence at the height of the thickness of the grillage above the level of low water. Another alteration has been made, which reduces the thickness of the masonry of the foundation of the scarp one foot. In Nos. 3 2nd and 11 2nd, some of the figures, indicating the interior opening of the embrasures, have been altered from five feet to five feet two inches; and some of those indicating the width of the throat have been altered from one foot nine inches to one foot ten inches. In No. 11 2nd, that part of the great arch which was to have been built within the scarp wall has been erased; and, in the same place, a timber platform for the third tier and uprights and rafters of a roof have been added. In No. 3 1st, a reversed arch is drawn under the passage of communication, which was not contemplated when the drawing was made. This deviation from the original plan was, however, sanctioned by the board of engineers, and adopted in their drawings Nos. 6 2nd, 10 2nd, and 11 2nd. With the exception of these alterations, both sets of the plans are now, I believe, as they were originally made.

Question by Major Babcock. Were the plans of the island, on which the work was originally located, correct?

Answer. I am induced to think they were not correct, as to the outline of the island; but the principle on which the work was located was this: that an entire front should be faced up the island, which, being then unconnected with the defence of the channels, could be appropriated to stores and quarters. The change in the location of the fort makes it necessary to take a face from two fronts, thereby complicating the details of the work, and separating both the quarters and the batteries. As to the command over the channels, owing to the equalization of fire, it is the same in both cases.

The court was adjourned to meet again to-morrow afternoon at 4 o'clock, for the purpose of enabling the members to visit the quarries at Chester, from which the stone for Fort Delaware was obtained.

NEW CASTLE, *June* 17, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel Joseph G. Totten and Captain John L. Smith, members; Lieutenant George Blaney, recorder.

Lieutenant Colonel TOTTEN, of the corps of engineers, made the following remarks, in addition to his testimony of yesterday:

At the time I made the plans for Fort Delaware, I did not know, accurately, the nature of the ground on which it was to be founded; and, though I presumed that piling and grillage would be necessary, yet, as a careful examination might show either that grillage alone would be sufficient, or grillage supported by comparatively few piles, I did not include the expense of piling and grillage in my estimate; and, in conversations with Major Babcock, before the commencement of the work, I stated that, owing to this uncertainty as to the nature of the ground, the manner of securing the foundation should be left to the discretion of the superintending engineer, and that I was by no means desirous that my plan of piling and grillage should be implicitly followed.

The court having gone through all other evidence, proceeded to enter upon the record of the result of their personal measurements and inspections of Fort Delaware, as follows, to wit:

Deviations from the plan.

The top of the grillage, instead of being on the level of low water, as required by the plans, is twenty-one inches above it.

The foundation walls are 5.20 feet high, and 12.20 feet broad at the bottom, as shown by Major Babcock's plan, (marked A.) In the original plans they are laid down at seven feet high, and thirteen feet broad. The difference in the breadth, of $\frac{80}{100}$ of a foot, is taken from the interior of the foundation wall.

The arches over the embrasures spring from the cheeks; in the plans they spring from the straight lines drawn from the extremities of the chord of the arch on the exterior to the extremities of the chord in the interior. The

arches of the lower recesses do not enter the wall over the embrasures; in the plans, they are continued through that wall to within a foot of the exterior face.

The great arches do not enter the scarp wall, and they were required by the plans to extend through it to within a foot of the exterior, in all the faces except Nos. 16 and 25.

The soles of the embrasures are composed of brick placed vertically, instead of being placed corresponding to the radii of a circle, as required by the plans. Other deviations are noticed under the head of "differences in the work, and variations from the plans."

Differences in the work, and variations from the plans.

In the upper platform, width varying from 19′ 4½″ to 21′ 3½″; should be 21′ 4″: difference from ½″ to 23″.

In the upper platform over the quarters, width varying from 23′ ½″ to 23′ 7″; should be 23′ 4″: difference from ½″ to 6½″.

Parapet differs in its height, above the platform, 6 inches in a single face, and from ¼″ to 6″ in the other parts of the work. As much as 8″ difference was observed in the breadths of the recesses of the embrasures of the upper tier; and the positions of those embrasures, in those recesses, vary, in relation to each other, from ½″ to 6″.

In casemates that should be rectangular, a difference of as much as 9″, arising from the want of parallelism of the piers, was observed.

The flank casemates, which should be alike, differ as much as one foot in their width next the wall.

The horizontal dimensions of the embrasures vary from ¼″ to 5″; the vertical dimensions of the same from ¼″ to 4″.

To ascertain if the intrados of the great arches were level, measurements were made of their distances from the offsets from the wall for supporting the platform of the second tier, to determine their interior height, and from the offsets of the piers for receiving the girders, to determine their exterior height; and the result was the discovery of differences in the height above the plane of the platform of the second tier, between the apex of the interior and that of the exterior thereof, in some of them as great as one foot.

The exterior offset at the top of the foundation varies from 3¼ to 18″; it should be 12″. The distances from the soles of the tongue-holes to those of the embrasures vary from ¼″ to 4″ from those laid down in the plans.

The lower exterior talus varies from 2″ to 3¾″ greater than the plans require, making the greatest difference 5¾″. In one face, the difference between the extremities was 4¼″. The greatest variation from the plan in the whole talus is 8¾″.

The greatest difference in the thickness of wall, measured in the soles of the embrasures of the lower tier, is 3¾″, and on the second tier 3¼″, and on the third tier 9″.

The height from the top of the foundation to the soles of the embrasures of the second tier varies in the embrasures for guns from 14′ 6″ to 15′, and in those for carronades from 14′ to 14′ 8″.

Deviations from the trace, and obvious consequences of the irregularities above detailed.

They are also to be found in parts of the work not otherwise particularly irregular. In one of these, the interior face of a curtain, a line ranged in one direction will fall upon the centre of an embrasure, and, ranged in the opposite direction, will fall upon the pier of the recess of the corresponding embrasure, and distant from its centre between 5 and 6 feet.

The sides of the piers bounding the passages of communication between the casemates, generally, are not plumb by several inches; and most of them, which should be in the same plane, deviate from it some inches. These piers were required by the plans to be built of hard stones running entirely through them. They are built, generally, of stones of a better quality than those ordinarily used in other parts of the work; but these stones seldom run through them, and many of them are soft and friable, and many are laid on their edges instead of their beds.

The court adjourned to meet to-morrow morning at 8 o'clock.

NEW CASTLE, DELAWARE, *June* 18, 1824.

The court met, pursuant to adjournment: Present, Lieutenant Colonel C. Gratiot, corps of engineers, president; Lieutenant Colonel Joseph G. Totten and Captain John L. Smith, members; Lieutenant George Blaney, recorder.

Continuation of the results of the measurements and inspections, made by the court, of Fort Delaware.

Of precision, regularity, and symmetry.

The scarp walls and the piers are crooked, and deviating in their direction; the cheeks of the embrasures are winding and out of plumb; the fort is not correctly laid out; the proper levels and dimensions are not observed; the embrasures vary in dimensions, as also in their location with respect to the piers; and the mortar-joints of the brick arches are not uniform in size.

Of workmanship.

The foundation and scarp stone masonry is defective in solidity, in consequence of a partial disregard to crossing the mortar-joints to produce the necessary bond, and also to the smallness, generally, of the stone used; and, in many instances, especially at the offsets of the piers intended to support the platforms, stones of a friable character are laid on their edges, without being tied in the wall. In filling up the openings in the piers, occasioned by the removal of the arches of communication in the lower tier, small stones, not tied in the pier, were used, and not laid plumb; small stones, generally, have been used in forming the *skew-backs*. The levels, generally, terminate with small stones not tied in the wall; there is an apparent inattention to the plumb, the line, and the level. The brick masonry of the casemates and embrasures deviates from the plumb and the level; the thickness of the mortar laid in the joints was, in some, more than half an inch.

The planks of the upper platform are of pitch and spruce pine, sawed through the thickness of the log, having many bad rents and knots, and are laid without the previous operation of jointing.

It appears, in the evidence of the master mason, that the stone used in the construction of Fort Delaware was the best that could be procured in the neighborhood. The court, to be satisfied on that subject, was adjourned to the quarries from which the stone was drawn. The result of the investigation is, that harder and larger stones could have been procured by paying a higher price for them.

The paper marked A a was submitted by Major Babcock, and read to the court.

There being no further evidence before the court, the court was cleared; and the whole of the proceedings being read over to it by the recorder, the court, from the testimony adduced, and the result of their own personal measurements and inspections, pronounced the following opinion:

The court is of opinion that, in the construction of Fort Delaware, there have been several deviations from the plans.

That the grillage being raised above, instead of being kept below low water mark, as required by the plans, will, without the precaution of keeping water in the ditch constantly above the top of the timbers, decay, and the durability of the work be consequently diminished.

That the reduction of the thickness of the inner half of the foundation wall, about one foot, has tended to affect injuriously the stability of the walls, by diminishing the breadth of bearing on the piles generally, and by making this diminution altogether on one side of the centre of gravity.

That the embrasure arches being sustained by cheeks, instead of the mass of masonry behind them, as directed by the plans, a slight injury to the cheeks will produce the fall of the arches.

That the soles of the embrasures, not being made "reversed arches," as required, are liable to be displaced by the concussion of firing. That, in consequence of the arches of the lower recesses not being continued through the scarp wall to within a foot of the exterior surface, as required by the plans, the pressure upon the embrasure arches is too great; and the separation of the embrasures, which it is of much consequence to provide for, will be attended with danger to the superincumbent masonry.

That, by not carrying the great arches nearly through the scarp wall, as required by the plans, on the fronts exposed to be battered by vessels, too great a weight is sustained by the embrasures of both the lower tiers; and the danger of the wall, attending a cannonading or a separation of the embrasures, is increased.

And that the other unauthorized deviations from the plans observed by the court, either in the trace or in the construction of the work, are attended by effects more or less prejudical to the strength, symmetry, or usefulness of the work.

The court is also of opinion, from the testimony, and from the effects of partial subsidences in the walls and piers, visible in many parts of the work, that proper care was not taken to drive the piles to a due degree of resistance; and that, in having the grillage above the level of the water, proper attention was not paid to the durability of the work.

The court is also of opinion that there are in the work many instances of want of precision, regularity, and symmetry: in this, that the scarp walls are in many places crooked, and deviating in their directions; that the cheeks of the embrasures are often winding and out of plumb; that the embrasures vary in their dimensions, and also their situation, with respect to the piers; that the embrasures are not situated alike, as to the tongue-holes, thereby making it necessary to fit the gun carriages, individually, to the embrasures; that the mortar-joints of the brick arches over the embrasures and recesses are not uniform in size; that the coping is sometimes flush with the wall, and sometimes projects unequally; that the proper levels and dimensions have not been observed; and that the trace of the work is not correctly laid out.

The court is also of opinion that, in the general use of small stones in the foundation and scarp walls; in the frequent use of stones of a very friable nature, placed on their edges instead of their beds; in the occasional inattention to the bond, in laying the stones; in filling the openings left by removing the arches of communication in the lower tier with small stones, not tied into the piers, and laid generally out of plumb; in placing occasionally small stones for skew-backs; in levelling, generally, the offsets for supporting the timbers of the second platform with small stones; and in the apparent inattention to the plumb, the line, and the level, there has been a disregard of certain essential conditions of solidity and good workmanship.

And the court is also of opinion, from the testimony, that there has been no want of personal attention to the progress of the work of Fort Delaware, on the part of Major Babcock; but that, on the contrary, his personal inspections, during his illness, were as frequent as could be necessary. The court, however, from the statements of witnesses, and from their own inspections and measurements, have been compelled to come to the opinion that there is a want of conformity to the plans; a want of proper preparations of the foundations; a want of due attention to precision, regularity, and symmetry; and want of proper regard to solidity and good workmanship: and, as there is abundant evidence that there was no deficiency as to attention on the part of Major Babcock, the superintending engineer, they are forced into the opinion that the defects in the construction of Fort Delaware are the results of want of skill and judgment. As respects the preparations of the foundations, though the court is of opinion that there is a want of skill and judgment in the manner of making those preparations, yet as it is in evidence, in an original letter from Major Babcock to the chief engineer, dated October 1, 1818, and marked C, that the superintendent, Major Babcock, requested an inspection of those preparations previous to commencing the masonry, the court is of opinion that this request diminishes his responsibility as to the consequences of the errors in that part of the construction.

Appended to this record is a statement (marked D) by Major Babcock of the expense necessary to complete Fort Delaware, and of the means of effecting it, including the materials and funds on hand.

The court adjourned *sine die*.

C. GRATIOT,
Lieut. Col. of Engineers, President of the Court of Inquiry.

GEORGE BLANEY,
Lieut. Corps of Engineers, Recorder.

A a.

Mr. President, and Gentlemen of the Court:

The testimony before you is so ample, that it seems hardly necessary for me to say any thing on the subject. I will, however, make a few remarks by way of explanation. The board of engineers have been candid and liberal enough to say (in substance) that the deviations from the plan are inconsiderable, and not calculated to be injurious: I can add, that they are in a great measure involuntary, as respects the first alteration from the original plan, which I had entirely forgotten, it being a number of years since it was made. I will account for it thus: Colonel Totten had advised me not to place the piles nearer to each other than three feet from centre to centre; the width of the wall, therefore, was too great for five rows, and much more small for six. I therefore determined to make it for five rows; and finding, by experience, that it would be very difficult to lay stone at the level of low water, I made the tops of the piles as nearly as possible of that height, and added the grillage, deducting the same height of masonry, and, of course, preserving the original level of the embrasures. At that time no specific regulations were made, or instructions given, respecting the mode of carrying on the work; and I did what I thought was right, and what I believed Colonel Totten himself would have done had he been present, without, however, entertaining the least idea of innovation or essential change in any part of the plan. In the same spirit, I made a large quantity of wharfing; the necessity of the case required it, and I had no superior to consult with. After the foundation was made, I reported the fact to the chief engineer, and requested that it might be inspected; my communication was not noticed. If the gorges of embrasures of the second tier are one inch too wide, it is what I by no means intended; the linings of the faces of the work were laid out with the utmost care by myself, assisted by the

master mason; and it was not until this season that I could discover the slightest want of justness in them; in the face where it occurs, it might be attributed to the subsidence of the wall. The same remark will apply to the level. It must also be remembered that the last part of the work was done while I was very ill in my bed, and, of course, cannot be accountable for. Deeming it a matter of impossibility to cover the casemates just made with mud, and at the same time permit them to dry, I proposed to the Engineer Department to cover the whole work with a roof, which was agreed to. A wooden platform was laid, and I trust will be found the best—at least until the arches have time to dry thoroughly, which I am confident they never could under any other circumstances. If it should be thought proper to fill the spaces between the arches hereafter, it may be easily done, either with dry mud or sand. Another advantage of the roofing is, the supply of water for drinking, and the preservation of gun carriages. As respects the outward appearance of the wall, I will say I studied strength and economy; the inside of the wall is as good as the outside; and I assure you, gentlemen, that some of the most respectable mechanics in Philadelphia have pronounced the work to be very good. I considered, and do consider, that it is stronger than if the outside had been of a larger and handsomer stone: the difference in the cost is enormous; in fact, it would afford me pleasure to see a rigid comparison instituted between Fort Delaware and any other work in the country, as relates to expense. As to the arches, I defy the critics; no precaution was wanting to make them as solid as the material will admit of; the mortar used, I assert, with confidence, was of the best kind, and I believe the board of engineers will bear me out in the assertion. I beg leave to repeat that, in general, the idea of change or innovation never entered my head; wherever it has occurred, it has been involuntary, or in a manner forced on me by the necessity of the case, (at least in my opinion.) In conclusion, I have to express my thanks to the court for the patience and candor exhibited by them in the course of this investigation, and I feel happy in the belief that Fort Delaware will be found quite capable of fulfilling its original destination.

S. BABCOCK.

JUNE 17, 1824.

The United States vs. *Major S. Babcock.*

Charges preferred against Major Samuel Babcock, of the corps of engineers, in pursuance to instructions from the War Department, viz:

FIRST CHARGE—*Disobedience of orders.*

Specification. In this, that the said Major Samuel Babcock having, on or about the 15th of May, 1815, been assigned to the superintendency of the works to be constructed on the Pea Patch island, in the river Delaware, and having been furnished, by competent authority, on or about the 1st day of October, 1815, with plans for the construction of the aforesaid works, did, in such construction, carried on till the 20th of August, 1824, or thereabouts, unnecessarily depart from their provisions in the undermentioned instances, viz:

1st. The top of the grillage, instead of being on the level of low water, as required by the plans, is 21 inches above it.

2d. The foundation walls are 5.20 feet high, and 12.20 feet broad at the bottom, as shown by Major Babcock's plan, (marked A.) In the original plans they are laid down at 7 feet high, and 13 feet broad; the difference in the breadth, of $\frac{80}{100}$ of a foot, is taken from the interior of the foundation wall.

3d. The arches over the embrasures spring from the cheeks. In the plans they spring from straight lines drawn from the extremities of the chord on the arch on the exterior, to the extremities of the chord in the interior. The arches of the lower recesses do not enter the wall over the embrasures. In the plans they are continued through that wall to within a foot of the exterior face.

4th. The great arches do not enter the scarp wall; and they were required by the plans to extend through it, to within a foot of the exterior, in all the faces except Nos. 16 and 25.

5th. The soles of the embrasures are composed of brick placed vertically, instead of being placed corresponding to the radii of a circle, as required by the plans.

6th. In the upper platform, width varying from 19′ 4½″ to 21′ 3½′; should be 21′ 4″: differences from ½″ to 23″.

7th. In the upper platform, over the quarters, width varying from 23′ ½″ to 23′ 7″; should be 23′ 4″: differences from ½″ to 6½″.

8th. Parapet differs in its height, above the platform, 6 inches in a single face; and from ¼″ to 6″ in the other parts of the work. As much as 8″ was observed in the breadth of the recesses of the embrasures of the upper tier; and the positions of those embrasures of the upper tier, and the positions of those embrasures in those recesses, vary, in relation to each other, in most of them from ½″ to 6″.

9th. In casemates that should be rectangular, a difference of as much as 9″, arising from the want of parallelism of the piers, was observed.

10th. The flank casemates, which should be alike, differ as much as one foot in their width next the wall.

11th. The horizontal dimensions of the embrasures vary from ¼″ to 5″; the vertical dimensions of the same, from ¼″ to 4″.

12th. To ascertain if the intrados of the great arches were level, measurements were made of their distances from the offsets from the wall for supporting the platform of the second tier, to determine their interior height; and, from the offsets of the piers for receiving the girders, to determine their exterior height; and the result was the discovery of differences in the height, above the plane of the platform of the second tier, between the apex of the interior and that of the exterior thereof, in some of them as great as one foot.

13th. The exterior offset, at the top of the foundation, varies from 3¼″ to 18″. It should be 12″. The differences from the soles of the tongue-holes to those of the embrasures vary from ¼″ to 4″ from those laid down in the plans.

14th. The lower exterior talus varies from 2″ less, to 3¾ greater, than the plans require: making the greatest difference 5¾. In one face, the difference between the extremities was 4¼. The greatest variation from the plan in the whole talus is 8¾″.

15th. The greatest difference in the thickness of wall, measured on the soles of the embrasures of the lower tier, is 3¾″, and on the second tier 3¼″, and on the third tier 9″.

16th. The height from the top of the foundation to the soles of the embrasures of the second tier varies, in the embrasures for guns, from 14′ 6″ to 15′; and in those for carronades, from 14′ to 14′ 8″.

17th. Deviations from the trace are obvious consequences of the irregularities above detailed. They are also to be found in parts of the work not particularly irregular. In one of these, the interior face of a curtain, a line ranged in one direction will fall upon the centre of an embrasure, and ranged in the opposite direction will fall upon the pier of the recess of the corresponding embrasure, and distant from its centre five or six feet.

18th. The sides of the piers bounding the passages of communication between the casemates, generally, are not plumb by several inches, and most of them, which should be in the same plane, deviate from it some inches. These piers were required by the plans to be built of hard stones running entirely through them. They were built, generally, of stones of a better quality than those ordinarily used in other parts of the work; but those stones seldom run through them, and many of them are soft and friable, and many are laid on their edges instead of their beds.

SECOND CHARGE—*Neglect of duty.*

Specification 1. In this, that the said Major Samuel Babcock, while superintending the construction of the works carried on at the Pea Patch island, in the river Delaware, till the 20th of August, 1824, or thereabouts, neglected to apprize the proper department of his non-conformity, as set forth in the specification of the preceding charge, to the plans furnished the said Major S. Babcock, by the said department, for the construction of the abovementioned works, except in the single instance of a letter to General Joseph Swift, dated the 1st of October, 1818.

Specification 2. In this, that the said Major S. Babcock, while, as aforesaid, superintending the construction of the works erected on the Pea Patch island, in the river Delaware, did transmit erroneous and irreconcilable statements of the sums necessary to the completion of said works, under the following dates, viz:

The 11th of November, 1822.

The 26th of October, 1821.

The 25th of November, 1822, in reply to a letter from the Engineer Department of the 19th preceding.

The 22d of January, 1824.

The 29th of January, 1824, in reply to a letter from the Engineer Department of the 24th preceding.

The 17th of February, 1824.

Estimate affixed to proceedings of court of inquiry, (marked D,) and presented on or about the 18th of June, 1824.

THIRD CHARGE—*Incapacity.*

Specification 1. In this, that the said Major S. Babcock, while in the aforesaid superintendency of the works carried on at the Pea Patch island, in the river Delaware, did, then and there, as set forth in the specification of the first charge, depart from the provisions of a plan furnished by the Engineer Department, for the guidance of the said Major S. Babcock in the construction of the abovementioned works, in an absurd and incapable manner.

Specification 2. In this, that the said Major S. Babcock, while in the aforesaid superintendency of the works constructed, as aforesaid, on the Pea Patch island, in the river Delaware, did transmit several statements, professing to anticipate all the necessary expenses to the construction of those works, but, nevertheless, erroneous and inconsistent, to the number and under the date enumerated in specification second of the second charge.

Specification 3. In this, that the said Major S. Babcock, while superintending the construction of the works carried on at the Pea Patch island, in the river Delaware, till the 20th of August, 1824, or thereabouts, did, generally, during that period, give the closest personal attention to the aforesaid construction, and yet did permit, in its workmanship, the introduction of numerous faults, as in the following instances, viz:

1st. In the piles intended to support the foundation.

2d. In the position of the wood-work or grillage which surmounts the piles, and supports the masonry of the foundation aforesaid.

3d. In the selection of stones for said foundation, and in the location, without headers or binders, of those introduced in it.

4th. In the want of uniformity between embrasures intended to be of the same dimensions.

5th. In the want of equal distances between said embrasures and the tongue-holes.

6th. In the want of the necessary thickness in the interior offset of the foundation wall.

7th. In depending upon the cheeks for the support of the embrasure arches, instead of the mass of masonry behind them.

8th. In omitting to make the soles of the embrasures reversed arches.

9th. In not carrying the arches of the lower recesses through the scarp wall, to within a foot of the exterior surface.

10th. In not carrying the great arches nearly through the scarp wall.

11th. In the crookedness of the scarp walls in many cases.

12th. In the irregular direction and winding of the embrasures.

13th. In the want of uniformity in the mortar-joints of the brick arches, over the embrasures and recesses.

14th. In the copings being occasionally flush with the wall, and sometimes projecting unequally.

15th. In the non-observance of proper levels and dimensions, and in the incorrectness of the works traced.

16th. In the general use of small stones in the foundation and scarp walls; in the frequent use of stones of a very friable character, placed on their edges instead of their beds; in the occasional inattention to the bond in laying the stones; in filling the openings left by removing the arches of communication in the lower tier with small stones not tied into the piers, and laid generally out of plumb; in placing occasionally small stones for skew-backs; in generally levelling the offsets for supporting the timbers of the second platform with small stones; in the obvious inattention to the plumb, the line, and the level.

17th. The planks of the upper platform are of pitch and spruce pine, sawed through the thickness of the log, having many bad rents and knots, and are laid without the previous operation of jointing.

FOURTH CHARGE—*Conduct unworthy an officer and gentleman.*

Specification 1. In this, that the said Major S. Babcock having, on or about the 15th of May, 1815, been assigned to the superintendency of the works to be constructed on the Pea Patch island, in the river Delaware, and having, on or about the 1st of October, 1815, been furnished with plans for the construction of those works, did, without the knowledge or the consent of the authority furnishing such plans, introduce several alterations in their delineative parts, both numerical and architectural, for the purpose of adapting them to his irregular execution of their original provisions, as set forth at large in the specification under charge the first.

Specification 2. In this, that, on or about the 9th of June, 1824, at Fort Delaware, Captain Smith, of the corps of engineers, having offered to a court of inquiry there assembled, for the investigation of certain of the acts of the said Major S. Babcock, a statement exhibiting a want of correspondence between the foundations of Fort Delaware and the provisions of a plan descriptive of those foundations, the said Major S. Babcock did then and there deny this statement, and pointed out to the attention of the aforesaid court of inquiry certain arithmetical figures introduced on said plan, apparently in harmony with its architectural parts, but indicative of different dimensions when tested by the scale referring to them.

Specification 3. In this, that the said Major S. Babcock did, on the 7th of June, 1824, or thereabouts, at Fort Delaware, furnish Captain Smith, of the corps of engineers, with a drawing, purporting to be a true copy of so much of a more extensive drawing as relates to the foundations of Fort Delaware aforesaid; and did inform the said Captain Smith that the plans he (Major S. Babcock) had handed over to him, were not copies of the original plans agreeably to which Fort Delaware had been built, but were plans which had been prepared, and furnished him (the said Major S. Babcock) after the foundation had been finished; whereas, the aforesaid pretended copy was incorrect, and the aforesaid statement unfounded in fact, and both made under the knowledge that the original plans were mislaid.

By order of the War Department.

J. L. SMITH, *Capt. of Engineers.*

Proceedings of a general court-martial, held at New Castle, in the State of Delaware, in virtue of the following order:

ORDERS—No. 61.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *August* 10, 1824.

A general court-martial, to consist of seven members, (a greater number cannot be detailed without injury to the service,) will assemble at New Castle, Delaware, or at Fort Delaware, as the president of the court may determine, on the 25th of the present month, or as soon thereafter as practicable, for the trial of Major S. Babcock and Captain H. Dumas, both of the corps of engineers, and such prisoners as may be brought before it.

The following officers will compose the court: Colonel S. B. Archer, inspector general, president; members, Lieutenant Colonel Roger Jones, 3d artillery; Lieutenant Colonel Charles Gratiot, engineers; Major T. Stockton, 3d artillery; Major A. C. W. Fanning, 2d artillery; Captain W. Wade, 4th artillery; Captain F. Ansart, 3d artillery; and Captain George Blaney, engineers, and Lieutenant G. W. Gardiner, 2d artillery, supernumeraries; Lieutenant R. L. Armstrong, 2d artillery, is appointed judge advocate to the court.

By order of Major General Brown.

S. COOPER, *Aid-de-camp.*

AUGUST 25, 1824.

The court met, pursuant to the preceding order: Present, Colonel Archer, president; members, Lieutenant Colonel Jones, Captain Wade, Lieutenant Colonel Gratiot, Major Fanning, Captain Ansart; supernumerary, Captain George Blaney.

In consequence of the judge advocate's absence, the court adjourned till 10 o'clock, A. M., on the ensuing day.

AUGUST 26, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; members, Lieutenant Colonel Jones, Captain Wade, Lieutenant Colonel Gratiot, Major Fanning, Captain Ansart; supernumeraries, Captain George Blaney, Lieutenant G. W. Gardiner; Lieutenant R. L. Armstrong, special judge advocate.

Major Stockton being absent, Captain Blaney was admitted a member of the court.

The accused, Major S. Babcock, on being asked if he had objections to any member of the court, as above constituted, objected to Lieutenant Colonel Gratiot and Captain Blaney, on the ground of their having been, the first a member, and the second the recorder, of the court of inquiry convened to investigate and to pass an opinion on certain parts of his conduct, now become matters of accusation against him.

In support of that part of the preceding objection which related to him, Lieutenant Colonel Gratiot confessed himself under the bias of previously expressed opinions upon the acts in question.

Captain Blaney also stated, in further disqualification of himself, that he had formed and expressed an opinion upon the principal points at issue.

The court, at this stage of the trial, and under a full sense of the novelty of the proceeding, directed the administration of the oath, in usage, and were accordingly sworn.

The court cleared: resumed.

The court decide that the foregoing objections to Lieutenant Colonel Gratiot and Captain George Blaney are good and justifiable, and do sustain them.

The court then being no longer complete, and taking into consideration the improbability of their being enabled to meet at an earlier date, adjourned until 10 A. M. on the 1st day of the ensuing month.

SEPTEMBER 1, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Lieutenant Colonel Jones, Major Fanning, Captain Wade, Major Stockton, Major Kearney, Captain Ansart, members; Major Hook, Lieutenant G. W. Gardiner, and Captain Belton, supernumeraries; Lieutenant R. L. Armstrong, special judge advocate. Major Kearney, Major Hook, and Captain Belton, having been added to the detail of the court, and by the following order, were duly sworn, and unobjected to by the accused. Major Stockton was also sworn at this point of the trial, the accused interposing no objections.

ORDERS—No. 67.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *August* 28, 1824.

Major James Kearney, topographical engineer, is detailed as a member, and Major J. H. Hook, of the 4th infantry, and Captain F. S. Belton, of the 2d artillery, are detailed as supernumerary members of the general court-martial now sitting at New Castle, Delaware, and of which Colonel Archer is president.

This detail is made with a view to fill the vacancies occasioned by the objections made to Lieutenant Colonel Gratiot and Captain G. Blaney, both of whom were originally upon the court.

By command of Major General Brown.

S. COOPER, *Aid-de-camp.*

A question here arose upon the propriety of accepting Major Hook as a member of the court, preferably to the senior member, junior to him. Captain Belton standing in the same relation to one of the members, his case was included in the above proposition.

The court cleared: resumed. The court decide that their existing organization shall remain unchanged.

Major Hook then presented the following appeal, which Captain Belton desired might be considered as equally expressive of his opinions and wishes.

"Major Hook, believing the privileges of his rank assailed by the foregoing decision of the court, requests he may be excused from attending as a supernumerary member."

The court cleared: resumed. The court refuse their assent to the motion, on the principle of its inexpediency.

The subsequent paper was then offered to the consideration of the court:

"Major Babcock begs leave to state to the court, that he wishes to avail himself of professional advice and assistance. He requests the Honorable Louis McLane and George Reed, Jun., Esq. may be considered as his counsel."

Assented to by the court, under the usual restriction.

The judge advocate having then stated to the court that he found a modification of the articles of charge against Major S. Babcock absolutely essential, and that certain dates, indispensable to an advantageous performance of this measure, could be borrowed, with safety, only from documents in the Engineer Office at Washington, the court adjourned, to meet again at 10 A. M. on the Saturday ensuing, at Wilmington, a neighboring place, to which the president of the court had, during the late recess, been authorized to hold its sessions.

WILMINGTON, *September* 4, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Lieutenant Colonel Jones, Major Fanning, Captain Wade, Major Stockton, Major Kearney, Captain Ansart, members; Major Hook, Captain Belton, supernumeraries; R. L. Armstrong, special judge advocate.

ORDERS—No. 68.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *September* 2, 1824.

Major J. H. Hook, supernumerary member of the general court-martial of which Colonel Archer is president, is detailed as a member of the same, in the place of Colonel Roger Jones, who is relieved from the detail.

By order of Major General Brown.

S. COOPER, *Aid-de-camp.*

In compliance with the preceding order, Lieutenant Colonel Jones was relieved, and Major Hook received as a member of the court.

The judge advocate having then stated to the court that the very recent arrival of the prosecutor with the necessary dates made a further adjournment of twenty-four hours very essential to consult with him upon the measures preliminary to the trial, an adjournment was ordered till 10 A. M. on Monday morning; Sunday being the intervening day.

SEPTEMBER 6, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, Captain Ansart, members; Captain Belton, supernumerary; R. L. Armstrong, special judge advocate.

The court then proceeded to the trial of Major Samuel Babcock, arraigned on the following charges and specifications: (Vide articles of charge in appendix.)

To which the accused pleaded—

First. "Not guilty."

Second. "The said Major S. Babcock, referring himself to the several inspections of the work carried on at the Pea Patch, under the authority of the War Department, from the month of August, 1819, to the month of May, 1823, inclusive, to so much and all such parts of the first, second, third, and fourth charges, and the specifications under each, as relate to acts or offences as are alleged or shall appear to have been committed by him more than two years before the issuing the order for his trial, pleads the provisions of the eighty-eighth article of the rules and articles by which the armies of the United States are directed to be governed, by an act of Congress, entitled 'An act for establishing rules and articles for the government of the armies of the United States,' passed on the 20th of April, 1816, and denies his liability to be tried for any such offences."

A letter, admitted by the accused to be authentic, was here produced, and read in testimony on the part of the prosecution. (See appendix, paper marked B.)

J. L. SMITH, captain of the corps of engineers, and witness for the prosecution, being duly sworn, says:

Specification under first charge.

Question by judge advocate. On or about what period did Major Babcock's agency in the construction of Fort Delaware terminate?

Answer. About the 20th of August, 1824.

Specification first under second charge.

Question by judge advocate. Where are you stationed?

Answer. At Washington, in the bureau of the Engineer Department, as assistant to the chief engineer. I have been there upwards of five years.

Question by judge advocate. Has Major Babcock, *for the last two years*,* apprized the department of any departures, in his construction of the works at the Pea Patch, from the provisions of a plan furnished for his guidance in the erection of the works?

Answer. He has not.

Third specification, fourth charge.

Judge advocate. State to the court what you know of the occurrences set forth in the specification.

Witness. On the 7th of June Major Babcock called on me at Fort Delaware, and, in referring to a communication of mine to the Engineer Department of the 3d of June, a copy of which I had furnished him with, informed me that the plans I had received from him were not the original plans, but had been prepared by the board of engineers after the foundation of Fort Delaware had been completed, and that they differed from those originally conceived. He then presented me with a sketch of the foundations of Fort Delaware, which he represented as taken from a copy of the original plan made by himself. He added that his original plan was not then in his possession, but that he would vouch for the accuracy of the copy, and that of the sketch from it. On this representation, and to counteract the effect of my letter of the 3d of June, I suggested to Major Babcock that I would transmit that sketch to the Engineer Department. He expressed himself satisfied with this arrangement, and I

* *Note by the judge advocate.*—This question, as originally put, extended to the whole period of Captain Smith's testimony. It is altered, under a decision of the court, recorded in the subsequent pages.

accordingly addressed to that department a letter, which I permitted Major Babcock to inspect before committing it to mail, and with which he expressed himself satisfied.

The court cleared. The court resumed.

On a resolution of the court, it was "*Ordered*, That, whenever, in the course of testimony, a paper or drawing is referred to, it shall, if within reach, be immediately produced."

In obedience to this rule of the court, several papers containing the delineation of certain plans, referred to in the progress of his testimony by the witness, were laid before them by the prosecution. For the clear apprehension of the court, they were designated as follows:

(Vide appendix, one sketch marked A, nine sketches from 1 to 11, exclusive of 7 and 9.)

The subsequent objection from the accused was then offered to the court.

"The point of the charge is the non-conformity of the sketch furnished with the copy of the original plans. The objection is, that this non-conformity cannot be proved by parol, where the paper is accessible to the prosecution."*

The court cleared. The court resumed.

The court acquiesced in the preceding objection.

Witness in continuation. On or about the 15th of June, 1824, the original plans were received by the court of inquiry from Brooklyn, in consequence of an application made for them a few days before. Those plans are now before this court.

(See appendix, papers marked 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, referred to in testimony as "original plans." Their edges are bound with green silk, by which they are easily distinguishable from those wearing the same numerical designations.)

The court adjourned to meet again at 10 A. M. on the ensuing day.

SEPTEMBER 7.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, and Captain Ansart, members; Captain Belton, supernumerary; R. L. Armstrong, special judge advocate.

The proceedings of the previous day having been read over, the judge advocate submitted the following proposition:

"By a decision of the court, taken at some period of yesterday's session, it was virtually determined that parol evidence should not be taken when determinative of the contents of any paper not produced and accessible to the offering party. For the sake of consistency, I would propose that this rule be applied to all oral testimony already received, and such parts of it expunged from the record as shall be found to fall within it."

The court cleared. The court resumed.

The court confirm the preceding objection, and order it carried into execution.

A member of the court "proposes the propriety of taking from the record so much of the evidence under the first specification of the second charge as shall be found to relate to events of more than two years' occurrence."

Whereupon, the judge advocate observed, "that the task which Major Babcock had been assigned to was in the nature of a trust, the violation of which could not warrantably be matter of gratuitous supposition on the part of the Engineer Department, to which alone, and the Executive, he was liable for his loose performance of it. That this department had been provided with no information, till recently, of the variations set forth in the specification of the first charge, and could, necessarily, still less be apprized of Major Babcock's culpability in making no report to them; all of which, it is contended, goes to bring the fact in question under the reservation of the statute limiting the period open to the investigation of offences."

To which the accused averred, in reply: That the 88th article was imperative, and comprehended all offences, of whatever character they may be. All official duties are in the nature of a trust; and the neglect or violation of the trust or confidence reposed constitutes the offence.

The exceptions or reservations in the article are specific: the provision applies, except the accused have absented himself, or there be some other manifest impediment by which he is not amenable to justice. If he is at all times amenable to justice, the article is imperative.

It may be true that the department cannot gratuitously presume a breach of duty; but it is equally their province to see that the duty of an officer has been performed, as it is his to perform it.

There is no proof before the court that the defendant was remiss in this particular; and the fair presumption, at all events, is, that the offence, if any, was not considered as forming a sufficient ground of charge, within the period prescribed, by the 88th article.

It is not the duty of an officer to furnish official information of his own neglect; it is the duty of the department to seek it; and if it fail to do so within the time prescribed by law, and the officer shall have been amenable to justice, he cannot be tried afterwards.

The accused considers the 88th article as applying as well to neglect as to breach of duty. If he had failed to apprize the department of any variation charged, in the first three years, he could not be tried for that neglect after *five years* had elapsed. He can be tried only for any neglect arising within two years before the order for trial.

The difference may be very material, as if inspections had been made within the first three years, and after the variations had been made, if any, he would have a right to suppose that those inspections had given the necessary information. The case might be difficult in the succeeding years, if even variations had been made, and no inspection thereof, though it is believed such is not the character of this case.

The court cleared. The court resumed.

The court decide that, before proceeding to the decision of the proposition before them, evidence may be given in confirmation, or otherwise, of the foregoing statements.

Captain J. L. Smith, witness for prosecution, in continuation.

Question by judge advocate. You state yourself to have been in the Engineer Office, at Washington, upwards of five years. Has that office been apprized, during that period, of any of the instances of improper construction attributed to Major Babcock, in the specification under the first charge?

Answer. Of none, except in the case of that explained by his letter to General Swift of the 1st October, 1818.

A letter (marked C) admitted by prosecution to be authentic, was here produced on the part of the accused. [Vide appendix.]

Witness cross-examined by accused.

Question. Are there any letters of the accused in the War Department, received in the month of October, 1818, and March, 1819; or have you any knowledge of the receipt of such, soliciting an inspection of the work carried on at the Pea Patch?

*This objection induced, on the ensuing day, an order of the court, in virtue of which Captain Smith's testimony was curtailed of some unimportant parts.

The judge advocate objected to this question in the following words: "Oral testimony, declarative of the contents of a paper accessible to the party in search of it, cannot be admitted. This position is incontrovertible, and is in harmony with the rules of evidence, the resolutions of this court, and the principles of justice."

In support of the question, the accused replied: "The principle of the question is, that the written papers inquired about are in the possession of the prosecution, and that the originals, or copies, have been called for and not produced. Parol evidence of their contents, therefore, may be given, because it is the best adducible evidence."

The judge advocate explained: "The prosecution is erroneously held to be in possession of those papers. The letter of October, 1818, has been extended to the accused, and is before the court in his behalf, (marked C.) The second letter, that of March, 1819, has been called for from the adjutant general's office, on the suggestion of the accused, and will, doubtlessly, be transmitted in the regular course of mail. It is respectfully submitted to the court, whether this document may be consistently considered as mislaid or in possession of the prosecution."

The court cleared. The court resumed.

The court decide that the question shall be put.

Question put. Answer. I have not.

Cross-examination continued.

Were there inspections of the said work, under the authority of the War Department, in the year 1819, after the month of March, and the subsequent years of 1820, 1821, 1822, and 1823?

Answer. I am not informed upon the subject.

Question. If such inspections were so made, were any, and how many, reports made thereon to the War Department, and filed there?

Answer. There are no such reports.

Question. Did the Secretary of War, Colonel Armistead, General McComb, General Bernard, and Colonel Totten, visit and inspect said works, in 1819, '20, '21, and '22; and did Colonel Gratiot inspect the said works in 1823?

Answer. In the year 1822 I saw an order requiring the board of engineers, then consisting of Colonel Totten and General Bernard, to repair to the Pea Patch, for the purpose of determining on the best means of checking the progress of some cracks discoverable in the large arches. There was a report of their fulfilment of the order made by the board of engineers, which I also saw.

Question by court. Had the department any other means within its control than the reports of Major Babcock, by which to ascertain his deviations from the plans?

Answer. None.

Question by court. Had the department any intimation, official or unofficial, of such deviations within two years after they occurred?

Answer. The department never knew the date of their occurrence.

Question by court. Was Major Babcock held by the department to follow the plans he had received in his construction of Fort Delaware?

Answer. Yes.

Question by court. In what manner was Major Babcock held to obey the plans furnished him; by special instructions, or otherwise?

Answer. By inference, as a matter of right, and also by special instructions.

Question by the court. Were any other instructions relating to the plans furnished Major Babcock other than the letters from General Swift, given in evidence yesterday?

Answer. None that I know certainly of.

Question by the court. By whom were the special instructions given; and were they in writing or verbal? if the former, are copies on file in the department?

Answer. The special instructions were given by the chief engineer; they are to be found in the correspondence of the department.

Question by the court. At what time did the department first hear of deviations from the plans furnished to Major Babcock?

Answer. In December, 1823.

Question by the court. Was Major Babcock, at any time during the two years preceding his arrest, beyond the jurisdiction of the War Department?

Answer. He was not.

Question by the court. Are you acquainted with any manifest impediment which has sheltered Major Babcock from trial, for failure in reporting alleged deviations, on his part, from the plan of construction for Fort Delaware?

Answer. There was no knowledge of any such deviations till December, 1823.

Question by the court. Was an inspection of Fort Delaware instituted by order of the War Department at any period anterior to the two years immediately preceding the arrest of Major Babcock?

Answer. Not to my knowledge.

Question by the court. Was the Engineer Department enabled to institute an inspection of the works at the Pea Patch, at any period prior to the month of May, 1824?

Answer. Not without permitting other and more important business, perhaps, to remain unfinished, which those officers performed who had previously been assigned to the task of inspection; no other officers, competent to the duty, could have been so employed.

Question by the court. What are the regulations of the Engineer Department respecting inspections of fortresses under construction?

Answer. They provide for an inspection of works when finished.

Question. Is it not customary for the chief engineer to pay visits of inspection to works under progression?

Answer. It has been done, but is not customary.

Question by the court. When was the board of engineers organized?

Answer. In 1816.

Question by the court. Was it by law, or by regulation of the War Department?

Answer. By order of the President.

THREE O'CLOCK P. M.

The court adjourned to meet at 10 A. M. on the ensuing morning.

SEPTEMBER 8, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, Captain Ansart, members; Captain Belton and Lieutenant Gardiner, supernumeraries; R. L. Armstrong, special judge advocate.

A document, marked C, (see appendix,) was offered on the part of the accused, and objected to by the judge advocate, in the following terms:

"The paper presented to the court is the copy of a letter whose inaccessibility to the accused is not established: for this reason I am compelled to oppose its reception. The almost total unimportance of this document might warrant the omission of any objection, were it not for opening a door, by such facility, to other and greater irregularities."

The court cleared. The court resumed.

The court decide the paper in question shall be received.

An original letter from Colonel Totten, offered on the part of the accused.

Objected to by the judge advocate, as follows:

"The letter offered is wholly irrelevant to the matter under examination."

To which the accused replied as follows:

"The point before the court is as to the knowledge of the Engineer and War Departments of certain deviations by Major Babcock in constructing the works at the Pea Patch.

"The letter offered goes to show not only that a knowledge of such deviations existed in 1816, but that they were specially authorized by a principal officer of the Engineer Department."

The court cleared. The court resumed.

The court decide the letter shall not be received.

The evidence offered under the proposition submitted on the 7th by a member having terminated, it was determined to take the sense of the court upon the proposition, viz:

"It is proposed to take from the record so much of the evidence under the first specification of the second charge as shall be found to relate to events of more than two years' occurrence."

The court cleared. The court resumed.

The court acquiesce in the above proposal.

The judge advocate then requested the court to adjourn to the works at the Pea Patch, for the purpose of receiving, from their own inspection, the evidence of the improper construction assumed in the specification of the first charge.

The court cleared.

On motion of a member, it was

"*Ordered*, That the articles of charge against Major Babcock be submitted to examination, and all objectionable matter ruled out."

Whereupon, the judge advocate presented the following statement:

"Mr. President, and gentlemen of the court: However ill I may succeed in the task, I cannot, in common propriety, permit this resolution to go into operation without the endeavor, at least, of protecting you from objectionable measures.

"The leading accusation against Major Babcock is a disobedience of orders, the specific testimony of which is laid in the construction of work dissimilar in many of its parts from that furnished him as his model. This is exhibited at large by the assumption of certain facts set forth in eighteen subdivisions, some of which, as they must have occurred more than two years ago, have given rise to doubts upon the consistency of their admission in matters of charge with the provisions of the statute of limitation. That statute, gentlemen of the court, is familiar to you all; it contains a reservation, under which I claim room for the case in point. The departures from the previously settled plan of construction, enumerated in the subordinate parts of the specification, were not discoverable on easy terms, but required the advantage of time, and the exercise of a peculiar sort of knowledge; nor was it till the month of December, 1823, that the Engineer Department received information of them, through a member of the corps. That intelligence was early followed with the examination of the work by a board of engineers; the examination itself, by a court of inquiry; and that court, by the convention of this. The impediment made manifest here consists, then, in the secrecy which hung over the offence, and must certainly be allowed to present as powerful an obstacle as well could be interposed between culpability and its investigation. If this be resisted, it must be on the ground that the department was in possession of means adequate to a speedier discovery, and kept them unemployed. Those means must savor a little of the magical, which could enable them to discover the stumbling of an agent, removed at a distance from the spot where their obligations kept them: the reputation of the thing may be flattering, but if it must become the measure of their performance, is by no means a desirable distinction. Let us remember that the residuary departments of the army are provided with inspectors, but that a supervisor of fortifications is yet a desideratum in the engineer corps.

"The preceding development of facts would alone be sufficient to authorize your examination of all the points involved in the specification under view; but there are others, the single consideration of which would, in my apprehension, equally insure it. Were the question before you upon the admission of testimony, bearing on any act of brief disobedience, your measures would be perfectly free from hesitation; but the difficulty peculiar to this case arises, it seems, from the more than usual extent of the offence, portions of which were in progress several years past. But, gentlemen of the court, all of its dimensions that sketch beyond the line of limitation are strictly connected with those that fall within it, and, in common with them, go to constitute an act designated as malconstruction."

The articles of charge were then read to the court, in order of succession, and the following portions of them ruled out:

The specification under the 1st charge.

The 1st specification under the 2d charge.

That part of the 2d specification of the same charge which avers a statement under date of the 26th of October, 1821.

The 1st specification of the 3d charge.

The 3d specification of the 3d charge, as far down and inclusive of the 7th subordinate division; when, it being 3 P. M.,

The court adjourned till 10 A. M. on the ensuing morning.

SEPTEMBER 9, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, and Captain Ansart, members; Captain Belton and Lieutenant Gardiner, supernumeraries; R. L. Armstrong, special judge advocate.

The court cleared.

The examination of the charges continued.

Ruled out: The residuary part of the 3d specification of the 3d charge.

The 1st specification of the 4th charge.

Two members of the court requested that their votes upon the measure of ruling out might appear upon the record. Decided in the negative.

The court resumed.

The subsequent documents were then produced in evidence, on the part of the prosecution; the admission of the accused, as to their authenticity, having previously been received. They are principally estimates of the sums necessary for the construction of the works at the Pea Patch, and are introduced in illustration of the 2d specification of the 2d charge. (See Appendix.)

Document No. 3—F.
No. 4—G.
No. 6—H.
No. 7—J.
No. 9—K.
No. 10—L.
————D, dated the 18th of June, 1824.

The court cleared.

A member of the court proposed to strike out the 3d charge. Assented to by the court. The court resumed.

Examination of Captain J. L. Smith, continued.

Specification 2d of the 4th charge.—On or about the 9th of June, 1824, upon the reassembling of the court of inquiry upon Major Babcock, at Fort Delaware, I stated to the court that, during its recess, I had discovered, in the depths of the foundation of the fort, a difference between the actual construction and the plans furnished me by Major Babcock, it being about five feet in the former, and being laid down at seven feet in the latter; and that I had communicated the fact to the chief engineer. Whereupon, Major Babcock, who was present, asserted that there was no such difference, and, to prove his assertion, referred to figures in pencil, on one of the plans he had furnished me, (No. 11, second series, already in court—vide appendix,) which indicated dimensions in correspondence with those of the actual construction. This statement of Major Babcock's being directly opposite to mine, it was manifest that one or the other of them must be false. The court, however, had not the means of determining which; but, on the next day, a case of drawing instruments having been provided, the lines of the drawing indicating the foundation were tested by the scale applicable to them, and were found to be not in correspondence with the figures in pencil, but conformable to the statement I had made to the court the day before. This plan was furnished me as a member of the court of inquiry on an application which I made to Major Babcock to that effect, in consequence of knowing orders to that effect to have been addressed to him from the chief engineer.

Cross-examined by accused.

Question. By whom were the plans relating to Fort Delaware originally prepared, and when?

Answer. The first series was prepared in the summer of 1815. The second series, I do not know when.

Question. By whom were they furnished to Major Babcock, and at what time?

Answer. I have seen a letter from Major Babcock acknowledging the receipt of plans from Colonel Totten, (first series.)

Question. At the time they were furnished, were they accompanied by any special instructions, and from whom?

Answer. I do not know that they were.

Question. Did the War Department or the Engineer Department apply to Major Babcock, previously to the court of inquiry, for the original plans?

Answer. Not that I know of.

Question. Do you know, of your own knowledge, by whom any alterations in the delineative parts of the plans, either numerical or architectural, were made, and when so made?

Answer. I do not know.

Question. When did you first see the said plans after their completion?

Answer. In 1815 I first saw a part of the *first series*. The second series, not till I received them from Major Babcock, on or about the 21st of May last.

Question. Are the said plans in the same condition now, in their delineative and architectural parts, as they were when you first saw them?

Answer. All that I have any distinct recollection of are.

Question. Have you read or met with, on file in the Engineer Department or War Department, any special instructions to Major Babcock relating to the works at Fort Delaware?

Answer. I have.

Question. By whom were such instructions written or signed?

Answer. By Colonel Armistead, General Macomb, and myself.

Question. When were they dated?

Answer. I cannot tell.

Question. By whom was the complaint against Major Babcock originally made, and when, particularly?

Answer. There was no complaint made.

Question. Do the architectural figures in pencil upon No. 11 denote the dimensions of the architectural parts of the foundation of Fort Delaware?

Answer. The sum of the three dimensions denoted by the figures corresponds with the whole depth of the foundation in the actual construction, or nearly so.

Question. Are the said dimensions of the said parts also denoted by figures in ink in the original plans?

Answer. I do not know.

Question. Do the figures in ink and pencil differ numerically?

Answer. There are no figures in ink in any of the plans furnished me by Major Babcock over the lines relating to the foundation.

Question. Was the second series furnished Major Babcock in 1819, or at what other period?

Answer. I do not know.

Question. Was the foundation of Fort Delaware completed before the second series of plans was furnished Major Babcock?

Answer. I do not know.

Question. In what manner was the statement exhibitory of a want of a correspondence, referred to in the second specification of the fourth charge, made up?

Answer. From actual observation, and measurement of both the plans and the construction.

Question. Were both series of the plans furnished Major Babcock before the court of inquiry, and accessible to your inspection?

Answer. I have already stated that they were.

Question. Do the arithmetical figures referred to correspond with the delineations apparent upon the face of the first series of the plans?

Answer. In such of them as have been altered they do.

Question. Is the actual construction of Fort Delaware delineated upon the first series of plans furnished Major Babcock?

Answer. I believe it is.

Question by the court. You have stated that the court of inquiry received plans (first series) from Brooklyn. How did they get out of the possession of Major Babcock, and how long had they been out of his possession?

Answer. I do not know.

The evidence on the part of the prosecution having closed, and the accused not being prepared to go immediately into examination of exculpatory testimony, the court adjourned till 10 A. M. on the ensuing day.

SEPTEMBER 10, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, Captain Ansart, members; Captain Belton and Lieutenant Gardiner, supernumeraries; R. L. Armstrong, special judge advocate.

The following affidavit was then read to the court, the accused having been previously sworn to the truth of it:

SAMUEL BABCOCK, being sworn, in due form of law, saith: That Colonel Joseph G. Totten and Lieutenant Henry Brewerton are material witnesses for him, for his vindication against the charges with which he is accused. He further saith, that all letters or instructions which may be on file in the Engineer Department, or War Department, written to or furnished the accused, by either of the said Departments, relating to the construction of the works at Fort Delaware, and particularly such letters or instructions as are signed by Colonel Walker K. Armistead, General Alexander Macomb, or Captain J. L. Smith, are necessary to his vindication against the charges with which he is accused.

The court cleared. The court resumed.

The court decide that they will not delay their proceedings for the objects prayed for in the above affidavit.

The testimony on the part of the accused having been heard, the accused requested the indulgence of the court for one day, to prepare his final defence; which was accordingly granted.

The court adjourned to meet again on the 11th instant, at 10 A. M.

N. B. Previously to this adjournment, the letter marked M (see appendix) was introduced, on the part of the accused, the prosecution consenting to receive it as authentic.

SEPTEMBER 11, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, Captain Ansart, members; Captain Belton and Lieutenant Gardiner, supernumeraries; R. L. Armstrong, special judge advocate.

The accused then being asked if he were ready to proceed, offered the following defence. (See appendix.)

The court cleared.

A proposition was then made by *a member of the court*, to lay before the supervising authority their reasons for ruling out those portions of the articles of charge before them, which, in the preceding pages, are recorded to be so ruled out.

It was decided in the negative.

Three members of the court requested that their votes upon this proposition might appear upon the record.

It was decided in the negative.

The whole of the proceedings then having been read over to the court by the judge advocate, they commenced their deliberations on the matter before them, and pursued them till 3 P. M., when

The court adjourned till 10 A. M. on Monday, the 13th instant.

SEPTEMBER 13, 1824.

The court met, pursuant to adjournment: Present, Colonel Archer, president; Major Stockton, Major Kearney, Captain Wade, Major Fanning, Major Hook, Captain Ansart, members; Lieutenant Gardiner, supernumerary; R. L. Armstrong, special judge advocate.

The court, then, after due deliberation on the testimony adduced, find the accused, Major Samuel Babcock, to have committed the facts set forth in the 2d specification of the 2d charge, with the exception of the word "irreconcilable," but attach no criminality to them.

The court further find the said accused not guilty of the 2d charge, to wit: neglect of duty.

The court further find the facts in the specification 2d of the 4th charge, but attach no criminality to them.

The court further find the said accused not guilty of the 3d specification of the same charge.

The court further find the said accused not guilty of the 4th charge, viz: conduct unworthy an officer and a gentleman, and do acquit him.

The court adjourned, *sine die*.

S. B. ARCHER, *Inspector General, and President of the court.*
R. L. ARMSTRONG, *Special Judge Advocate.*

APPENDIX.

Major Babcock's defence.

Mr. President, and Gentlemen of the Court:

The court having, on the application of the prisoner for process for his witnesses, and for time to obtain them and certain other written testimony, informed the accused that they deemed it useless for him to produce such witnesses and testimony, it only remains briefly to state the grounds of defence on which the prisoner relies. The court, in entering upon this subject, may, without impropriety, be reminded that the original causes of complaint, with a very important exception, the supposed existence of which induced the organization of the court of inquiry, are no longer before the court, having been expunged or abandoned by the prosecution. The charge the court are now asked to try the accused upon is a matter arising entirely at the time and upon the occasion of the inquiry, and then was the subject-matter of conversation or argument between the accused and the witness. But though

the charges, and numerous specifications under them, have from day to day, as the trial progressed, dwindled away, till reduced in number to almost nothing, yet, in the bearing and import of the fourth charge, and the specifications under it, which yet remain upon the records of this court, the accused cannot but feel the deepest interest. Willing as he is, without an allegation or a witness, to submit his capacity, his education, his improvement of the opportunities he has enjoyed, and the measure of his successful acquirements and skill, to the candor and judgment of his intelligent brethren, he cannot but feel the most intense and anxious solicitude when his personal honor is involved by an imputation of intentional falsehood and deceit. In meeting this charge, the accused relied with confidence upon the testimony of the witnesses whose names he furnished to the court. They would have proved him innocent of any shadow of concealment. The court, from what is already before them, have decided that it was useless in the prisoner to obtain further testimony; and the accused rejoices in this plain indication that this upright tribunal see no evidence, on the part of the prosecution, of force sufficient to oblige the accused to answer so foul a charge. A brief view of the facts in evidence will indicate how little foundation there exists for the accusation. The accused submits that a true view of his duties, and consequent responsibilities, in the construction of Fort Delaware, can only be derived from the orders and instructions given to him by those whose orders and instructions it was his duty to obey. One letter of this description has been produced by the prosecution. It is dated New York, May 15, 1815, and written by Gen. Swift to the accused, and contains the following remarkable words: "You will not construct any works that do not, on examining the plans, meet your approbation, unless you receive written orders to construct a particular work from the Secretary of War, the commanding general or myself." It would be difficult to select words or adopt language expressive of a wider range of opinion and discretion, or to be guilty of greater injustice than making a crime of the exercise of such discretion. Certainly, every candid mind will at once perceive the general discretion in such expressions.

In the year 1816 Colonel Totten handed the accused certain plans, but not accompanied by any special or particular instructions; and, coupling those plans with the letter of General Swift, just now referred to, the accused did presume that he was to judge of the plans, and not to construct the work unless the plans met his approbation. That such was the view taken by Colonel Totten of the control and discretion with which the accused was invested, it is in proof before the court that Colonel Totten addressed to the accused a letter, dated April 22, 1816, in which the very change in the foundation which has been the great cause of complaint is directly proposed and directed, or advised. If the letter be viewed in the light of an order, unquestionably Colonel Totten had a right to give it, and the duty of obedience follows of course; if as advice, then the accused was considered as having a right, under his discretionary power, to receive and adopt it as scientific advice. But not only so: Colonel Totten cites, in support of his opinion, great names in science; and, for acting under the authority of such names, it would be preposterous indeed to censure the accused, or credit as probable, that he could for a moment intend to conceal that he had so acted, instead of taking credit to himself for adopting the improvement. From this letter of Colonel Totten arose what are called the alterations on the plans. They were now made to delineate the real construction of the work, according to the improvement suggested. If the accused was right, under the direction of Colonel Totten, or in the exercise of his own discretion, in changing the plan of the foundation, no possible blame can attach to him for making such variations on the plans, which fairly exposed what he had done. Still less can it be supposed that he intended concealment of such variation, when it is proved by the prosecution that the figures indicating the change were put on the plans, on which were left, untouched, the lines and figures delineating the plan from which he varied.

The direct evidence of the entire absence of any design of concealment does not stop here. It is proved by a letter lying on the table of the court, that, in October, 1818, when the foundation was progressing, an inspection of the works was solicited by the accused; and in March, 1819, as appears by another letter, also before the court, when the foundation was completed, and the masonry about to be commenced, a similar request for inspection was anxiously repeated. Neither request was attended to; and it would be hard indeed on the accused, when years had elapsed, and the subject-matter of the charge, Col. Totten's letter, and the reason for the variation, were but indistinctly remembered, amidst the mass of much later details in relation to the work, (which were enough to occupy, almost to the exclusion of circumstances of so old a date, the mind of any man, how extensive soever his capacity,) to constitute an offence out of the variation; and, more than all, to attribute a designed concealment to acts, in the progress of which inspections were requested; and all this founded on a conversation more than six years after the act, in which, if any misstatement was made, a very small stretch of charity might admit it to arise from any other than the vile motive imputed by the charge. Instead of concealment, the accuser avers that he made every effort to expose his work, believing, as he has always done, that there was no ground of censure in it. He has mentioned, in proof of this, the inspections solicited. He would refer himself, further, to the visits of the officers of the Engineer Department, high in rank and scientific acquirements, which were so frequently made. To attribute such visits to mere idle passing curiosity, or to assert that they could be productive of no information to the department, is a reflection on the character and intelligence of these officers. The accused, to rebut this notion of concealment, refers with confidence to the evidence in the case of his having given to Colonel Totten the most direct information of the variation. In August, 1819, the foundation being then completed, the accused returned the plans to Colonel Totten, having marked on the alleged variations, indicating the then actual construction, according to Colonel Totten's own instruction and advice. The object of so returning the plans was, and could only be, to enable Colonel Totten in the further plans to adapt the work yet to be erected to the variation made in the actual construction. In consequence of returning the old plans, for the reasons stated, a new series was prepared, and, in October, 1819, furnished to the accused by Colonel Totten. The foundation was now complete; its construction was according to Colonel Totten's own plan; it was marked as made on the plans returned to Colonel Totten; those plans were, for two months at least, in that gentleman's hands. With the whole matter of the foundation then fresh on his mind, he must have observed that his own variation in the foundation was adopted; and most unquestionably the accused was justified in believing that he had done what was right, and that every part of his conduct was open, known, and approved. The court will please to recollect that all parts of the new series but the foundation were figured. This could only be accounted for by attributing the omission to the fact of that part being complete; and, therefore, that no necessity existed for indicating any dimensions as to it. The accused was fully impressed with the belief that, as he had laid down and pointed out the actual construction upon the original plans, and as the new series was made out from them, the foundation in the new series was according to actual construction. A contrary supposition could never have entered his mind; and, more especially as this part of the work was finished, he had withdrawn his attention from it, and there were additionally no figures placed upon it, by which his notice might have been drawn. In fact, there is no alteration of the plan; all its lines remained unobliterated, undefaced. There are added delineations to exhibit the actual construction of the work. These delineations are true to the fact, and, put where they are, and forwarded to Colonel Totten, as they are proved to have been, prove, beyond all doubt, that the accused himself furnished the best and most direct information of the change which had been made in the construction of the foundation. It was an illustration, not a deception. The figures which have been spoken of, on

the part of the prosecution, as indicative of being used for the purpose of deception, were not made by the accused, or by his direction, but by Lieutenant Brewerton, (whom the accused was desirous to bring forward as a witness, but whose attendance the court thinks useless,) and made by that gentleman for a calculation of his own. Whatever, then, the witness for the prosecution may have understood the accused to say, it is evident that the whole amount of the case before the court is, that it is one of mistake and misapprehension of words and arguments used in conversation, rather than of falsehood, deception, and fraud. The accused was not understood; he may not have had the whole subject present to his mind, and might have been himself mistaken at the moment, or explained himself so imperfectly as to be mistaken by others. The whole history of the case, the very nature of the facts developed to this court, forbid the presumption of an intention to deceive and conceal. It might with great fairness be added, by way of argument, to show the improbability and unreasonableness of such a course of conduct as is imputed to the accused, what supposable motive could the accused have to act as he is charged with acting by the prosecution? Was it his intention to vary the construction in a pecuniary light, or to diminish his duties and labor in any way? How could it benefit him? What motive could have prompted him to follow Colonel Totten's plan, other than respect for authority and his own zeal for the service? When adopted, what was there in his conduct which could excite such apprehension and alarm as to suggest to him the necessity of concealment? If such, however, was his determination, was it reasonable, in furtherance of his designed concealment, that the accused called for two inspections, and gave into Colonel Totten's hands the best evidence of what he had altered? Concealment and deception cannot be predicated of conduct such as the accused has shown his to be, unless he be also supposed destitute, in a very uncommon degree, of that common sense which is the common property of men. Upon the whole, Colonel Totten's letter was as much a part of the plans as any other paper; and the accused trusts that, in adopting it, the court will consider his conduct correct. This plan of Colonel Totten's the figures truly represent; and it inevitably follows, as a consequence, that there was no deception, nor could there be any intention to deceive.

As to inaccurate estimates of intended work, the accused cannot pretend to throw any other light on that subject than will be brought to its consideration by this intelligent court. An error in judgment, as to existing facts, is not of very seldom occurrence; but calculations as to what is yet to happen, where the data are necessarily uncertain, are still more generally wide of the mark, because such calculations are, of course, hypothetical, and liable to disturbance from causes which could not be foreseen. A greater part of the time the whole burden of this great work rested upon the accused. At another, domestic calamity and severe illness afflicted him. But it surely cannot be necessary to enter, on such a subject, into further details. Nicety of calculation, as to expense, could hardly have been expected in a work of such magnitude, liable to so many circumstances occurring that it was impossible to anticipate.

The case of the accused is now before this honorable court. He respectfully submits it, so far as he is interested, to their candor and their honor, firmly relying on both, and trusting, by their exercise, to a speedy restoration to that character and standing which have never been sullied by any intentional departure from the path of truth and duty.

SAMUEL BABCOCK, *Major Engineers.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *November* 19, 1822.

The attention of the department has been for some days exclusively engaged in the preparation of a report and a general estimate for the War Department, and therefore could not be earlier given to the consideration of the estimate, report, and drawing that accompanied your letter of the 11th instant.

The estimate being for the completion of Fort Delaware is greater than that submitted by you last year for the accomplishment of the same object, notwithstanding that funds have been applied to the fulfilment of the latter to the extent of about one-third of its amount. It is hoped you will be able to explain the apparent discrepancy in a satisfactory manner. Indeed, your omission to furnish such an explanation with the estimate is rather surprising, considering that you are possessed of minute information respecting the opposition of Congress to the estimate of last year, and the difficulty of overcoming it.

You will make your explanation in the tabular form, with remarks; the table to exhibit the estimated quantity and cost of each item, of which the estimate of last year was constituted; the same details with respect to disbursements of this year, up to the end of last month, and also with respect to the balances resulting from the deduction of the latter from the former. These balances will show the quantity and cost of the items of which your estimate for this year should have been constituted, and, being compared with the quantity and cost of the items constituting your estimate to be explained, will show exactly and in detail the differences between them. The explanation of those differences is what is now required. Another point, with respect to your estimate, which requires explanation, is, the precise period of time at which its operation was contemplated to be commenced, and whether it was considered to be a dependant of the existing appropriation, or was predicated upon the application to its fulfilment of the portion thereof which has not yet been advanced to you, or of that advanced, but remaining in your hands unexpended, or both.

It is thought, from a transient examination of your report and drawing, that they afford the information expected from them.

I have the honor to be, sir, very respectfully, your obedient servant,

By order: J. L. SMITH, *Capt. Corps of Engineers.*

Major BABCOCK, *Corps of Engineers, New Castle, Delaware.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *January* 24, 1824.

I have received your letter of the 22d instant, covering a table, exhibiting the number and position of the permanent fortifications within the district of Delaware, showing the state of the work, agreeably to a resolution of Congress of the United States of March, 1823; and, upon examining that report, it is with inexpressible mortification I find, notwithstanding your estimate for completing the work at Fort Delaware, and the assurance you gave me while I last visited you at New Castle, that the sums appropriated were sufficient to complete the fort, and that there would be a surplus of at least $10,000, that we now find that a further sum of $20,539 69 will be necessary to complete the works. On the assurance which you gave me that the appropriation was more than sufficient, I reported to the Secretary that Fort Delaware would be completed with the appropriations already made. On this the Secretary reported the state of that fort to the President, who made to the nation a similar exposé of the situation of Fort Delaware. Under these circumstances, it will be out of the question to think of asking for further appropriations for Fort Delaware.

You will, as early as practicable, make a detailed report to this department of the causes which gave rise to this difference, in order that the department may be enabled to judge of the course proper to be pursued.

I am, sir, respectfully, your most obedient servant,

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

To Major BABCOCK, *Corps of Engineers, New Castle, Delaware.*

B.

SIR: NEW YORK, *May* 15, 1815.

You will repair to Philadelphia, and report yourself to the commanding general of district No. 4, as engineer for the district. You will examine the Pea Patch, and the channels adjacent, and construct a plan for a permanent work to be erected on that site, and report to me the plan, with an estimate of cost, as soon as may be.

You will not construct any works that do not, on examining the plans, meet your approbation, unless you receive written orders to construct a particular work from the Secretary of War, the commanding general, or myself.

Lieutenant J. Craig will join you for duty—an amiable, industrious, and intelligent youth from the academy.

You will examine minutely Fort Mifflin, and report to me its situation, with such repairs and alterations as may be requisite to place the work in a *permanent state of defence*. Are any other works on the Delaware required? Is Fort Mifflin too large or too small; and is it of the requisite form?

Your respectful, humble servant, J. G. SWIFT, *Brigadier General.*

Capt. BABCOCK, *United States Engineers.*

C.

SIR: NEW CASTLE, *October* 1, 1818.

I have the honor to report to you that the work at the Pea Patch continues to progress as when I wrote last. Some of the grillage is received, and a number of men are employed in cutting off the heads of the piles at the level of low water, and laying the grillage, which is fastened with wooden pins. The foundation, as it is, seems to me sufficient; but it would be very agreeable to have it inspected by the board of fortifications before we commence with masonry, which will be early in the spring; every arrangement will have been previously made. The natural level of the ground of the work is fifteen inches below high water mark. I have used the earth taken from the piling, to raise it rather above high water. The number of men employed, of all kinds, is seventy.

With great respect, I am, sir, your obedient servant,

S. BABCOCK, *Captain Engineers.*

Brig. Gen. J. G. SWIFT, *Chief Engineer U. S.*

D.

Statement showing the nature, quantities, and cost of the several kinds of materials and workmanship, &c. necessary to complete Fort Delaware; also, of the quantities and value of the materials on hand, and the amount of funds, after defraying the expenses of the work, up to the 1st of June, including the balance of the last appropriation not yet drawn from the Treasury.

MATERIALS.

78,600	feet 3 inch plank, for 2d tier of platforms, at 22 cents,	$1,729 20
137,850	feet scantling, for sleepers, at 22 cents,	3,032 70
*16,000	feet boards,	400 00
*40,000	shingles, at 20 cents,	800 00
4,500	lbs. spikes,	360 00
4,000	lbs. nails,	320 00
*130	pairs hinges, for shutters,	97 50
*1,600	laths, for shingling,	128 00
32,000	feet scantling, for a gallery,	800 00
5,000	feet 1¼ inch plank,	125 00
*300	lbs. sheet lead,	24 00
*80	leaden spouts,	40 00
*80	tin leaders,	768 00
350	bushels lime, at 35 cents,	122 50
70	tons sand,	35 00
*Stuff	for gate, 1,000 feet,	30 00
*Stuff	for bridge, 7,000 feet,	175 00
Stuff	for bridge, 300 lbs. spikes,	24 00
Painters'	work,	1,000 00
*Plastering,		200 00
Smiths'	work, including screw bolts for girders,	1,000 00
*Carpenters'	work of roofing,	2,000 00
Carpenters'	work of galleries, casemates, 2d tier, platforms, magazines, &c.,	5,000 00
*Carpenters'	work for bridge,	200 00
*Carpenters'	work for gate,	100 00
		$20,610 90

MATERIALS ON HAND, JUNE 5, 1824.

Pine plank, 3 inch, 67,500 feet, at 22 cents,	$1,485 00
Pine scantling, 46,800 feet, at 22 cents,	1,029 60
Pine boards, 5,000 feet, at 20 cents,	100 00
Cedar shingles, 36,000 feet, at 20 cents,	720 00
Laths, 800, at 8 cents,	64 00
Coal, 10 bushels, at 40 cents,	4 00
Roman cement, 43 casks, at $9,	387 00
Cutting stone, 350 feet, at 25 cents,	87 50
Flagging stone, 900 feet, at 20 cents,	180 00
Rough stone, 60 perches, at 5 cents,	300 00
	$4,357 10

S. BABCOCK, *Major Engineers.*

Amount due carpenters and laborers for May,		$938 79
Do. masons, for cut stone,		2,000 00
Do. masons, for laying bricks,		240 00
Do. masons, for laying stone,		307 50
Do. for lumber, for gutters of roof of fort,		692 00
Do. for boards,		250 00
Do. for bricks,		256 00
Do. for sand,		71 00
Do. for iron and coals,		183 28
Do. for forage,		20 80
Do. for stationary,		5 00
Do. for nails, &c.,		365 50
Do. for oil and paint,		36 89
Do. for painting and glazing,		40 00
Do. for glass,		24 00
Do. for plasterer's work,		200 00
		$6,130 76

Amount of funds,	$6,588 77
Amount pledged,	6,130 76
Balance,	$458 01

Since the last estimate was made it has been found necessary to enlarge the plan of the roof, to make it more perfect; and a number of items have been thought of which did not present themselves before. The carpenters' work also proves, by experience, to be much more expensive than was anticipated.

The items marked with stars are most necessary.

S. BABCOCK, *Major Engineers.*

E.

SIR: NEW CASTLE, *March* 20, 1819.

I have the honor to transmit to you the copy of a contract for lumber. I take this opportunity to state that the foundation of the work at the Pea Patch is nearly completed; and that, as soon as the weather permits, we shall commence with the mason work, previously to which I hope the board of fortifications will visit the island and inspect the work as far as it is done.

With great respect, sir, your obedient servant,

S. BABCOCK, *Captain Engineers.*

To Col. W. K. ARMISTEAD, *Chief of Corps of Engineers.*

No. 3—F.

SIR: NEW CASTLE, *October* 26, 1821.

Herewith you will receive an estimate of the amount of funds necessary to complete Fort Delaware; also, an estimate of the least amount necessary to carry on the work with advantage the season next ensuing.

With great respect, I am, sir, your obedient servant,

S. BABCOCK, *Major Engineers.*

P. S. I have the honor to acknowledge the receipt of your order of the 22d instant.

Maj. Gen. MACOMB, *Chief Engineer.*

Estimate of the smallest amount of funds necessary to prosecute the work at Fort Delaware with advantage during the year 1821.

5,000 perches of pier stone, at 65 cents per perch,	$3,250 00
4,460 bushels of lime, at 33 cents per bushel,	1,471 80
820,000 bricks, at $8 per thousand,	6,560 00
1,000 tons of sand, at 50 cents per ton,	500 00
1,000 perches of range stone, at $2 50 per perch,	2,500 00
200 casks of Roman cement, at $9 per cask,	1,800 00
Lumber, nails, &c.,	1,000 00
Contingencies,	1,000 00
Resetting centres,	750 00
Labor, eight months, at $400 per month,	3,200 00
Laying 1,000 perches of range stone, at $1 50 per perch,	1,500 00
Laying 820,000 bricks, at $3 per thousand,	2,460 00
Cutting 20,000 feet of stone, at 25 cents per foot,	5,000 00
500 perches of building stone, at $1 per perch,	500 00
Laying ditto, at 75 cents per perch,	375 00
	$31,866 80

Estimate of the amount of funds necessary to complete Fort Delaware.

MATERIALS.

10,000 perches of pier stone to protect and preserve the northwest part of the island,	$6,500 00
For Fort Delaware, 5,000 perches of building stone, at $1 per perch,	5,000 00
1,000 perches of range stone, at $2 50 per perch,	2,500 00
820,000 bricks, at $8 per thousand,	6,560 00
8,460 bushels of lime, at 33 cents per bushel,	2,791 80
2,000 tons of sand, at 50 cents per ton,	1,000 00
200 casks of Roman cement, at $9 per cask,	1,800 00
3,000 tons of gravel, to level parade, at $1 per ton,	3,000 00
Iron railing, upper platform, 90,000 pounds, at 10 cents per pound,	9,000 00
Copper hinges, bolts, nails, &c. for 5 magazines, at $25 each,	125 00
	$38,276 80

WORKMANSHIP.

Laying 5,000 perches of building stone, at 75 cents per perch,	$3,750 00
Laying 1,000 perches of range stone, at $1 50 per perch,	1,500 00
Laying 820,000 bricks, at $3 per thousand,	2,460 00
Resetting centres, 5 sets, at $150 per set,	750 00
Carpenters' work.—Working girders, joists, floor, and balustrade of second tier,	3,730 00
Working girders, joists, floor, and balustrade of upper tier,	2,745 00
Of five magazines,	225 00
Gateway and bridge,	110 00
Embrasure shutters, 146, at $1 50,	217 00
Windows of men's barracks,	49 50
Labor, 8 months, at $400, $3,200; cutting of 62,500 feet of stone, at 25 cents, $15,622 50,	18,822 50
	$34,359 00

QUARTERS.

Two buildings for officers' quarters, 45 by 20 feet, and 2 stories high.

Foundation, piling, grillage, and plank,	$582 00
Walls—600 perches of stone, at $1 per perch,	600 00
600 bushels of lime, at 33 cents per bushel,	198 00
Lumber for officers' quarters, each, at $575,	1,150 00
Laying 600 perches of stone, at 75 cents per perch,	450 00
Plastering and materials, each, at $160,	320 00
Painting, glazing, &c.,	170 00
Ironmongery—locks, hinges, screws, nails, &c.,	194 00
Work and materials of two privies,	100 00
Contingencies,	1,500 00
	$5,264 00

Materials,	$38,276 80	
Workmanship,	34,359 00	
Quarters, &c.,	5,264 00	
Aggregate,		$77,899 80

No. 4—G.

SIR: NEW CASTLE, *November* 11, 1822.

Herewith you will receive my report of the present state of Fort Delaware, and an estimate of the probable expense of completing the same, accompanied with a plan and sections.

With great respect, I am, sir, your obedient servant,

S. BABCOCK, *Major Engineers.*

Maj. Gen. ALEX. MACOMB, *Chief Engineer.*

REPORT.

In obedience to your order, I have the honor to report on the present state of Fort Delaware.

During the present year 2,273 perches of stone have been laid in wall; five casemate arches, and two magazine arches, have been turned; eight buttresses have been made. Thinking it necessary not to delay the application of a remedy to those arches whose piers seemed insufficient, I had completed the buttresses above mentioned before the plan of the board of engineers arrived. With all deference to the superior professional skill of the board, I cannot but think that the plan, already partly carried into effect, is the most eligible. Experience proves that every mass of fresh masonry, however well made, unless every stone composing it is cut with a chisel, will settle within itself, more or less. Supposing the foundations to be perfect, therefore, the interior stone trusses or braces, prescribed by the board, would loosen themselves from the body of the pier by the settling, and thereby act merely as a weight, and consequently become useless; besides, the attempt to cut out portions of the piers now existing, in order to admit the stone truss, could only be made at the imminent risk of destroying the whole pier, and, of course, the series of arches comprising a face, (the stones being flinty, of irregular shape;) and the cutting out of a part of *one* would, in effect, be to undermine the pier. Further, the expense of cutting the stone alone of one buttress and its corresponding pier, according to the plan of the board, would amount to $331. Now, the taking down and rebuilding of one of the arches would cost as follows:

Taking down and cleaning 43,000 bricks, at $1 per 1,000,	$43 00
Relaying ditto, at $3 per thousand,	129 00
130 bushels lime, at 35 cents per bushel,	45 50
20 tons sand, at 50 cents per ton,	10 00
Waste of bricks 3,000, at $8 per 1,000,	24 00
	$251 50

Therefore, it would be cheaper to take down the arches in fault, enlarge their piers, and rebuild them. That this plan would be effectual cannot be doubted, when we take into view the arches contiguous, which, with a foundation precisely similar, are perfect: the difference between them is, that the one have larger piers than the others. The buttresses already made, however, appear to fulfil their destination; and I strongly hope that when they are inspected, it will be decided that those to be erected be made in the same manner.

There remain to be done, to complete the work, sixteen buttresses, seventeen casemated arches, the wall to be raised to its full height, two buildings for officers' quarters, platforms, railings, galleries, bridge, cisterns, gravelling parade, &c. &c. By covering the casemates with some *clean* and *hard* substance, and by the addition of gutters, a copious supply of pure water may be obtained for the use of the garrison. I would recommend to lay slates in water-proof cement. The original plan contemplated filling up between the arches with earth; this, from its tendency to keep the arches continually damp, as well as for the reason above stated, I think would be better omitted, at least in time of peace.

I beg leave to add, on the subject of cracks in the arches, that, in the profile sent me by the Engineer Department last summer, the crack is represented as extending quite *through* the arch, and as *widest* at the top. This is

a great mistake. The fact is, no crack or flaw of any kind was ever discovered on the superior surface of the arches. Those which exist are widest at *bottom*, and appear not to be deep.

It is deemed advisable to secure the upper part of the island, which has never been embanked, by a sea-wall of pier stone, thrown in in such a manner as to give a sufficient slope to insure solidity. This has been tried on a small scale, and found to answer. Its only expense is the cost of the stone. A tract of from eight to ten acres would be gained and secured. I have every reason to be satisfied with the wharfing made to secure the island from the surf. Each tide deposites a quantity of mud in its rear, which, in a year or two, will give a number of acres of soil in addition. On the subject of cultivation, permit me to add, that, during the present season, there has been raised a sufficiency of oats and hay to keep the public cattle until the next harvest.

The plan and profiles herewith will, I believe, give very correct ideas of the present state of the work.

All which is respectfully submitted:

S. BABCOCK, *Major Engineers.*

Maj. Gen. ALEX. MACOMB, *Chief Engineer U. S.*

Estimate of materials, labor, and workmanship to complete Fort Delaware, and to secure the island against the winds and tides.

2,512 perches of building stone, at $1 per perch,	$2,512
1,186 perches of range stone, at $2 per perch,	2,372
260,000 bricks, at $8 per thousand,	2,080
9,000 bushels of lime, at 35 cents per bushel,	3,150
1,000 tons of sand, at 50 cents per ton,	500
300 casks of water-proof cement, at $9 per ton,	2,700
3,000 tons of gravel for parade, at $1 per ton,	3,000
90,000 pounds cast iron railing, (upper platform,) at 10 cents per pound,	9,000
Copper hinges, bolts, nails, &c., for magazines,	100
Laying 5,942 perches of building stone, at 75 cents per perch,	4,456
Laying 1,380 perches of range stone,	2,070
Laying 705,000 bricks, at $3 per thousand,	2,115
Cuttting 50,000 superficial feet of stone, at 25 cents per foot,	12,500
Carpenters' work, lower platforms, laying platforms, making galleries and railing, including trussing girders,	3,730
upper platforms, laying platforms, making galleries and railing, including trussing girders,	2,745
of five magazines, $45 each,	225
Gateway and bridge,	110
Embrasure shutters,	217
Embrasure windows,	50
Resetting centres,	600
Two buildings for officers' quarters, each 45 by 20 feet, and two stories; foundation, piling, and grillage,	582
Walls—600 perches of stone, at $1 per perch,	600
600 bushels of lime, at 35 cents per bushel,	210
Lumber for officers' quarters,	1,150
Carpenters' work,	2,100
Masons' work—Laying 600 perches of stone, at 75 cents per perch,	450
Plastering,	320
Painting and glazing,	170
Ironmongery—Locks, bolts, screws, nails, hinges, &c.,	194
Two privies,	100
Labor of ten men ten months,	2,500
71,500 feet of plank, for platforms, at $20,	1,430
189,700 feet of scantling, for platforms, at $17,	3,224
177 piles, at $3,	531
37,280 slates, (and laying slates,) for covering arches and buildings,	4,473
To finish and put in order the well,	100
Four cisterns, at $75 each,	300
Plumber's bill for gutters, &c., materials and workmanship,	500
For sea-walls 9,000 perches pier stone, at 75 cents,	6,750
For repairing wharfing,	100
Contingencies,	1,500
Total amount,	$81,516

No. 6—H.

SIR: NEW CASTLE, *November* 25, 1822.

The unexpected magnitude of the estimate presented to complete Fort Delaware is accounted for as follows: first, by the addition to the plan during the present year of 30 buttresses; by the insertion, by mistake, of the items *foundation*, *walls*, *lime*, and *mason work of quarters*, the same being included in some of the preceding items; by addition of plank and scantling slate, to finish well, cisterns, plumber's bill, and repairs of wharfing, which were omitted in the former estimate. The work being kept a year longer in hand for want of adequate funds, the expense for labor and contingencies is necessarily increased. The same may be said of carpentry and smithery, as well as the additional expense of covering in the work from the weather, which consumes a great deal of scantling and boards. The particular mode of securing the casemates from wet has not yet been decided on. I am of opinion, however, that they can be preserved from dampness by a covering of water-proof cement, without slate. I have therefore made an addition to that item; and a platform of wood over it may be payed and caulked in the same manner as a ship's deck; as it has a slope of six inches, the rain water might be conveyed by gutters to the cisterns. As to balance, my last quarter's accounts, and last requisition for funds, show how that is. The estimate commences with the next year, supposing that the balance of this year, not received, will be expended as has been proposed, as agreed to. I send you a *new* estimate, in which I have suppressed certain items which are not essentially necessary for the work, viz: gravel for parade, iron railing, (which may very well be replaced with a wooden one, vastly cheaper,) slates, pier stone for sea-wall, &c., as you will see by comparing the two estimates; by which means, in spite of the additions, the amount may be kept within bounds, and without injury to the work. As to the minimum estimate, I have no alteration to make. In adding up the items of last year's estimate, I find the amount is greater than it should be: whether this arises from some mistake in copying, or by an error in adding the original, you will be able to judge.

With great respect, I am, sir, your obedient servant,

S. BABCOCK, *Major Engineers.*

Maj. Gen. MACOMB, *Chief Engineer U. S.*

No. 7—J.

SIR: NEW CASTLE, *January* 22, 1824.

I have the honor to transmit to you, herewith, a table, &c., agreeably to your order of July last: a report (or memoir) I am at work upon, and shall complete as soon as I receive from Captain De Russey an abstract of payments by him made last November. I had believed that I had furnished him with sufficient data on which to found the report called for: I regret, extremely, that it was not found so. The furlough asked by me last fall was the first I have enjoyed for thirteen years, it being *solely* for the recovery of my health. I calculated I had nothing else to attend to. This circumstance will, I hope, constitute a claim on your indulgence, should any thing be found wanting in *form*.

With great respect, sir, your obedient servant,

S. BABCOCK, *Major Engineers.*

Maj. Gen. ALEX. MACOMB, *Chief of Engineer Corps.*

Table exhibiting the number and position of the permanent fortifications within the district of Delaware, showing the state of the work, agreeably to a resolution of the Congress of the United States of March, 1823.

Name or designation of the fortification.	Position.		Period.		Magnitude.	Cost of works erecting.		Armament.														Garrison.	
								Cost		Cannon.						Mortars.			Howitzers.				
	What frontier.	What State.	When begun.	When to be finished.	Indicated by the length of the line along the crest of the parapet.	Of construction up to 30th September, 1823.	Contemplated for completion.	Of furnishing complete for a war establishment.	Of furnishing for a peace establishment.	Thirty-two pounders.	Twenty-four pounders.	Eighteen pounders.	Twelve pounders.	Nine pounders.	Six pounders.	Thirteen inch.	Ten inch.	Eight inch.	Ten inch.	Eight inch.	Five and half inch.	Requisite for war.	Requisite for peace.
Fort Delaware.	Delaware Bay.	Delaware,	1817	1824	1,899 feet,	*$369,472 97	$30,875 82	$150,000	$15,000	70	70	84	-	-	-	5	5	-	2	2	-	1,500 men.	100 men.

* In the cost of construction is included the cost of wharfing, to a large extent, to secure the Pea Peach from the action of the waves; and, as the same hands were employed on the fortifications and embankments, the different items are inseparably connected, and it is impossible to say with exactness the amount of wharfing and embanking. I estimate it at not less than $50,000.

S. BABCOCK, *Major Engineers.*

No 9—K.

SIR: NEW CASTLE, *January* 29, 1824.

Your letter of the 24th is received. I find you have misunderstood my meaning in the table I had the honor to transmit to you. As regards the sum required to finish Fort Delaware, the calculation was made from the 30th *September*, 1823, and not from the present time; that sum, in fact, being the unexpended balance of the appropriation at that time; consequently, what has been expended since is to be deducted, to find the sum required from the present time. It has been a long time since I have been able to see the work; but I am preparing an estimate. I suspect there must have been some waste last fall, in consequence of the want of good superintendence; but I never calculated that any further appropriation would be found necessary, although I know that is the opinion of Captain De Russey.

With great respect, I am, sir, your obedient servant,

S. BABCOCK, *Major Engineers.*

To Maj. Gen. ALEXANDER MACOMB, *Chief Engineer.*

No. 10—L.

SIR: NEW CASTLE, *February* 17, 1824.

Herewith you will receive an estimate of the cost of finishing Fort Delaware from the present date. The reasons why it exceeds the amount of funds not drawn, together with the balance on hand, are as follows:

1st. When the estimate was made in 1822, the plan of roofing was not adopted, and, of course, not included therein. This has or will cost about $7,000; a much greater sum than was calculated on at first, although I employed to assist me in making it a very able mechanic of Philadelphia.

2d. The destruction of embankments last April, which could not have been foreseen.

3d. When the estimate was made, there was a fair prospect of obtaining stone for coping from this neighborhood: we were disapointed; and, being obliged to procure them from New England, the cost was greatly enhanced.

4th. The cost of the pier stone, to secure the breaches made by the April gale.

5th. The unprecedented sickness of the last season, which rendered even those who were not attacked with it only the half of themselves, from apprehension and discouragement.

As to the carpenters' work, I confess I have been deceived. It is the most difficult thing in the world to estimate; even among the carpenters themselves, it is a sort of guess-work. The fact is, Fort Delaware, from its peculiar situation, is liable to many expenses which are not to be foreseen, particularly as the cost of wharfing and embanking have already been blended with the work itself. While I am on the subject of embankments, permit me to recommend that an appropriation be made for the *particular purpose* of securing the island. What has been done, I did on my own responsibility out of the fortifications' fund: it was a case of necessity; but to make a permanent establishment of it, would require at least $20,000.

In conclusion, I have only to add, that my best faculties of mind and body have been employed to *make* Fort Delaware and its appendages what they should be.

With great respect, I am, &c.

SAML. BABCOCK, *Major Engineers.*

To Maj. Gen. MACOMB, *Chief Engineer U. S.*

Estimate of the amount of funds required to complete Fort Delaware.

Carpenters' work of two buildings for officers' quarters,		$1,900 00
Platform of second tier,		3,000 00
Upper tier and weather-boarding,		650 00
Framing roof and shingling,		1,675 00

Unexpended balance,		12,752 00
Difference,		$9,755 75

FEBRUARY 17, 1824.

M.

SIR: TROY, *April* 22, 1816.

When I was at West Point, a few days ago, I examined Bellidore's work very attentively, to determine the manner in which he generally secured his foundation. There was no instance in which he placed the piles more than three feet from centre to centre. I found, too, that in the detail he gives of the great sluices, &c., about which he writes, and some of which were constructed by the greatest engineers, (Vauban and others,) there was no case of their being nearer. I considered this information might be useful to you. I beg leave to offer the sketch below, as one that shows an arrangement of piles and grillage, that will be sufficient, according to the practice stated above.

[*Here, in the original, is a diagram of the plan.*]

The whole work of the piers, from the piles to the finishing at top, must be kept separate from that of the exterior walls.

The piles may be sawed off at low water mark, but all the spaces between the "crossing and length timbers" must be filled in, either with masonry, well laid in clay, or, if the mud be very hard, mud-rammed, and very much compacted, so that the "length timbers" and planks may be separated by it, as well as the wood work beneath them. Mud must be rammed on the outside, too, of the piles and exterior walls. The outside courses of piles should be left six inches higher than the others; so that the ends of the "crossing timbers" being "spotted," they can be secured to those piles by pins, thus:

[*Here, in the original, is a diagram of the plan.*]

The dots show where the mud should be rammed to exclude the air from, and to support the wood work of the foundation; and, indeed, if all the earth, to the level of the parade, be thus rammed, the object will the more certainly be accomplished.

I should be very glad to hear from you, of your progress, and projects, and difficulties, and of the expense.

I am, in great haste, yours,

JOS. G. TOTTEN.

Capt. SAMUEL BABCOCK, *Engineer.*

ORDERS.—No. 70.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *September* 22, 1824.

By direction of the Secretary of War, the general court-martial, of which Colonel Archer, inspector general, is president, convened by general order of the 10th of August, 1824, at New Castle and at Wilmington, Delaware, for the trial of Major S. Babcock, of the corps of engineers, is dissolved; Major Babcock is released from arrest, and will repair to Old Point Comfort, and report himself to Lieutenant Colonel Charles Gratiot, of the corps of engineers, for duty as an assistant.

Communicated by order of Major General Brown.

SAMUEL COOPER, *Aid-de-camp.*

18th CONGRESS.] No. 265. [2d SESSION.

MILITIA RETURNS.

COMMUNICATED TO THE SENATE, JANUARY 31, 1825.

SIR: DEPARTMENT OF WAR, *January* 29, 1825.

I transmit, herewith, an abstract of the general annual returns of the militia by States and Territories, together with an abstract of the annual returns of arms and accoutrements, prepared in conformity with the act of Congress of March 2, 1803.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

The PRESIDENT OF THE SENATE U. S.

SIR: ADJUTANT GENERAL'S OFFICE, WASHINGTON, *January* 28, 1825.

I have the honor of handing you, herewith, an abstract of the general annual returns of the militia by States and Territories, together with an abstract of the annual returns of arms and accoutrements, prepared in conformity with the act of Congress of March 2, 1803.

It will be seen, on an examination of these documents, that the law above mentioned has not been complied with by several of the States for many years; no returns having been received from the States of Delaware, Maryland, and Mississippi, since 1814, and none from the States of South Carolina, Georgia, and Alabama, since 1820.

I have the honor to be, sir, with great respect, your obedient servant,

CHARLES J. NOURSE,
Acting Adjutant General.

To the SECRETARY OF WAR

Abstract of the general annual returns of the militia of the United States, by States and Territories, taken from the latest returns at this office.

ADJUTANT GENERAL'S OFFICE, WASHINGTON, *January* 28, 1825.

CH. J. NOURSE, *Acting Adjutant General.*

* No return of arms, &c. from these States.

NOTE.—This return of arms, &c. taken from returns corresponding in date with those which furnish the strength of the militia.

18th Congress.] No. 266. [2d Session.

PAY OF NON-COMMISSIONED OFFICERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 1, 1825.

Mr. Hamilton, from the Committee on Military Affairs, to whom was referred a resolution of the House of Representatives, instructing them "to inquire into the expediency of making a discrimination between the pay of the first sergeants in the several companies of the army of the United States and the other non-commissioned officers, as well as to the propriety of giving them certain privileges calculated to increase the responsibilities and importance of that grade," reported:

That, after a careful examination of the subject, they are induced to believe that there are sound considerations connected with the *moral force* of the army, which urge the adoption of the proposed discrimination. It is entirely obvious that the great utility of the regular army of the United States, in time of peace, must depend on the nature of its materials—on its adaptation to concentrate science and moral excellence, which, on the immediate exigency of war, may be susceptible of prompt diffusion over an increased and extended numerical organization. To the first of these purposes, the academy at West Point is operating results of the highest and most beneficial character; and, to promote the last, your committee cannot conceive a measure of more salutary tendency than to afford inducements to a better educated and more moral class of our citizens to go into the non-commissioned grades of an army.

In time of peace, when the price of labor usually rises, and when the love of glory, and the peculiar incentives to patriotism which are common in a time of war, have little or no operation, it is impossible to procure, at the present rate of compensation, (except in very rare instances,) men by whose probity, sobriety, zeal, and intelligence, the discipline of the several companies of the army is to be mainly upheld. The value of human labor, like every other commodity, is determined by its price. And the fact will not admit of dispute, that it is possible to obtain, for twelve dollars, a class of men whose time is not to be purchased for nine dollars per month.

In order to give a permanent importance and value to the station of a non-commissioned officer in the army, your committee concur fully in the expediency of exempting him from arbitrary and capricious removal and degradation from his rank, on the exclusive responsibility of a single officer, and without even the intervention of the forms of justice—a measure well calculated, in mortifying the pride, to diminish the usefulness of a soldier.

The whole additional expense in the proposed increase of pay of the sergeants will not exceed twelve or thirteen thousand dollars annually—an amount which, your committee believe, will be saved by a diminution of desertion, the probable result of superinducing a superior efficiency in this grade, whose example and vigilance cannot fail to have a strong operation on this crime, of such alarming increase, and entailing on the service such onerous expense.

Your committee will conclude with a single remark, that it has always appeared a signal mistake in the structure of our army, that, in compensation and organization, the sergeants should be brought down so entirely to a level with the privates of the several companies, producing an equality altogether destructive of discipline and subordination. In the French service, where we are to look for the highest example of military efficiency, a sergeant of a company enjoys a consideration and many privileges calculated to impress him with that self-pride which is the basis of all excellence in the profession of arms. In a word, our true policy is, as our peace establishment in numbers must be *small*, in moral efficiency to make it *powerful*.

In conformity with these views, your committee report a bill increasing the pay of the sergeant major and quartermaster sergeant of each regiment, and first sergeant of each company, from nine dollars per month to twelve, and of the other sergeants to ten dollars; and also exempting those officers from a deprivation of their rank, except by sentence of a regimental, garrison, or company court-martial.

18th Congress.] No. 267. [2d Session.

FORTIFICATIONS ON DAUPHIN ISLAND.

COMMUNICATED TO THE SENATE, FEBRUARY 9, 1825.

Sir: Department of War, *February* 7, 1825.

In pursuance of an act of Congress, passed on the 3d of March, 1823, authorizing me to appoint a suitable person to "ascertain whether there has been any failure on the part of the United States in the fulfilment of the contract for erecting fortifications on Dauphin island; and, if so, to ascertain the amount of damages thus sustained by Richard Harris and Nimrod Farrow, the contractors, by such failure; and also to ascertain whether the said contractors themselves have failed in fulfilling the contract on their part, and the cause of such failure;" Mr. Swann, of Alexandria, was appointed, and, after a laborious investigation of the subject, has furnished to this Department a full report thereon, accompanied with the documents containing the data upon which it was formed.

I have the honor to transmit, herewith, a copy of this report, and a list of the documents that accompanied it, and respectfully to report them to the Senate, and to refer to my report on the same subject to the House of Representatives, in which the act originated, for the documents contained in the list, copies of which could not have been prepared for this report without great delay, on account of their being very voluminous.

I have the honor to be, sir, with the greatest respect, your most obedient servant,

J. C. CALHOUN.

The Hon. the President of the Senate.

List of documents accompanying the report of the commissioner, Thomas Swann, Esq., in the case of Messrs. Harris and Farrow.

1. Robert Green's deposition.
2. B. Alsop's deposition.
3. Eaton's statement verified by Alsop.
4. Dr. A. Salie's deposition.
5. Edward Clarke's deposition.
6. Edward Clarke's supplemental deposition.
7. Seth Belknap's deposition.
8. Joseph T. Dangerfield's deposition.
9. John Ryan's deposition.
10. Richard W. Naylor's deposition.
11. Richard W. Naylor's supplemental deposition.
12. Colonel Fisher's deposition.
13. Israel Ketcham's deposition.
14. Gilbert C. Russell's deposition.
15. Extract from Captain Gadsden's letters of 20th April and 6th June, 1820.
16. Extracts from Lieutenant Story's letter of 3d April, 1821.
17. General Macomb's letter of 9th January, 1824, referred to in E. Clarke's supplemental deposition
18. Estimate by the board of engineers, referred to in E. Clarke's supplemental deposition.

(No number 19.)

20. Case of Eckford and Brown.
21. Additional depositions of Colonels Russell and Fisher.
22. Colonel Justus Post's deposition.
23. Colonel Fisher's supplemental deposition.
24. Benjamin Baden's deposition.
25. Affidavit of Major William Henry.
26. Depositions of John Cohagen and Richard Staunton.

Memorial of N. Farrow (printed pamphlet, March 22, 1824,) for himself and Richard Harris.

Extract from President's message of 3d December, 1821, and sundry references to public documents, state papers, &c.

Statement of the claim of Farrow & Harris against the United States, $465,301 07, exclusive of damages, &c.

April 1, 1824. N. Farrow remarks to Mr. Swann on his case.

April 10, 1824. General Macomb encloses to Mr. Swann a copy of the Engineer Department's report upon the case of Harris & Farrow, dated June 7, 1822, with documents accompanying, marked from A to K, (three marked F.)

April 24, 1824. Estimates of what would have been the probable cost of executing the earth work and masonry for the fort at Dauphin Island, (memoranda for Mr. Swann.)

September 15, 1824. William Crawford promises to furnish Mr. Swann with testimony.

Copy of estimate by the board of engineers of the cost of the fort projected for Dauphin Island.

January 18, 1825. General Macomb encloses to Mr. Swann an extract from the analysis of prices prepared by General Bernard.

February 3, 1825. N. Farrow encloses to the Secretary of War a copy of a letter from W. Jones to Mr. Swann, in regard to the business of the commission.

REPORT.

The undersigned commissioner, having been appointed by the honorable the Secretary of War to ascertain whether there has been any failure on the part of the United States in the fulfilment of the contract for erecting fortifications on Dauphin Island; and, if so, to ascertain and report to Congress the amount of damages thus sustained by Richard Harris and Nimrod Farrow, the contractors, by such failure; and also to ascertain and report whether the said contractors themselves have failed in fulfilling the contract on their part, and the cause of such failure, respectfully reports:

That the contract under which this fortification was to have been erected was entered into on the 17th of July, 1818; and, according to the terms of it, the work was to have been commenced by the 1st of December in that year, and to have been finished by the 1st of December, 1821.

That, in pursuance of this contract, the contractors, in the fall of 1818, engaged a number of white laborers, and made considerable preparations for the commencement of the work, and proceeded to Dauphin Island, some time previous to the month of December in that year.

That, upon their arrival at that place, they found no one on the part of the Government to designate the spot upon which the fortification was to be erected; and, for want of this designation, the work was not commenced until some time in the month of January following.

That, from the period of its commencement to the time of the abandonment of the work, on the part of the Government, in the spring of 1821, the contractors were industriously and zealously engaged in the prosecution of it; and, from the preparations which they had made, confident expectations were entertained by several of the witnesses that the work would be completed within the period prescribed by the terms of the contract. Without deciding whether this could be effected within this period of time, the commissioner is of opinion that, as the contractors had until the 1st of December, 1821, to perform the work, they could not be chargeable with any failure to perform it before the expiration of that period; and that, as the Government had abandoned the work before that time, they had, by so doing, broken the contract, and become chargeable to the contractors for such damages as they had sustained in consequence of it.

In estimating these damages, the commissioner deemed it proper to inquire, in the first place, how far the Government had committed themselves to the contractors, in their expenditures upon this fortification.

It has been insisted, on the part of the contractors, that the Government had committed themselves to the extent of the estimate of the board of engineers; and that, according to this estimate, the cost of this fortification would have amounted to $694,000; and most of the witnesses have made their estimate of the profits which would be realized by the contractors upon this basis.

By referring to this estimate, it will be seen, that in the addition of the number of cubical yards of brick masonry, which the estimate supposed would be contained in a part of the work, there was a mistake of 10,000 yards; that is to say, instead of 39,999 yards, which the addition purported to contain, there were only 29,999. So that

if the Government had been bound to the extent of the estimate, that estimate, according to its real amount, would have been $584,000, instead of $694,000. But the commissioner proceeded to inquire whether the Government was bound to this extent.

By a reference to the contract, it will be seen that, although the whole benefit of it was given to Richard Harris, the Government only bound themselves to construct thirty thousand cubical yards of masonry, and to excavate and remove 100,000 cubical yards of earth. Every thing beyond this seemed to the commissioner to be left to the discretion of the Government; and therefore, that, if they should decide to vary the plan, or to abandon it altogether, the contractors could have no further claim upon them than to the extent to which they were bound; believing, however, that if the Government, through their agent, had given to the contractors reason to believe that $694,000 or $584,000 would be expended upon this fortification, and that they had, in consequence of this belief, incurred expenses which would not have taken place if such belief had not been entertained, the Government ought, in justice, to make good the damage which might have been thus sustained. The commissioner proceeded to inquire whether the contractors had incurred any expense or made any preparations towards the fulfilment of this contract, which they would not have incurred if such belief had not been entertained. The commissioner has not been able to perceive that any additional expense has been incurred on this account. It has seemed to him that the preparations made by the contractors, and the expenses incurred by them, were such as were necessary the fulfilment of the written contract, and not beyond the necessity of that state of the case. He has accordingly felt himself bound to adopt the written stipulation of the Government as the basis upon which his estimate of damages was to be made; and upon this principle, the earth and brick work of this contract, for which the Government would be accountable, would have amounted to $413,800. (See note 1.)

As to the carpentry, and other items of work, designated in the contract, no amount was mentioned. It was, it is presumed, to depend upon the circumstances of the case; and as they formed but an inconsiderable part of the contract, no estimates have been submitted to the commissioner of the profits which would have resulted from them.

After having settled this principle, the commissioner determined to ascertain, as correctly as he could, the expense which would attend the finishing of this work on the part of the contractors; and if the amount should be less than that fixed by the contract, to deduct that amount from the sum contracted to be paid, and to award to the contractors the balance.

The testimony unites in proving that, at the time of the abandonment of the contract, on the part of the Government, every thing was in complete preparation for the successful prosecution of the work; in the language of one of the witnesses, "a very sufficient outfit of tools, implements, laborers, and mechanics, to have completed the work within the stipulated time, with a large stock of provisions and materials of all kinds, including materials of bricks, lime, timber, iron, &c., &c., and a sufficient number of vessels to transport the same to Dauphin Island." Upon this state of things several of the witnesses have expressed their opinions, and have declared that the course pursued by the contractors, of substituting slaves for hired white men, was judicious; and that with the slaves which they had purchased, and had engaged for the prosecution of the work, they would not only have been able to have performed it within the period prescribed by the contract, but with very great profit to themselves.

For the purpose of showing the correctness of these opinions, they made estimates, in various ways, of the expenses which would have attended the finishing of the contract, and of the profits which would have resulted to the contractors. These estimates appeared to the commissioner to be too vague to afford a ground whereon to found an award, and were, moreover, incorrect in many respects (See note A.) The mode, also, adopted by the witnesses, for ascertaining the expense of completing the work, seemed to him to present difficulties not easy to be surmounted, and not to be so well calculated to attain the ends of justice, as that of estimating the materials and labor at the fair prices prevailing at the time the contract was abandoned. He accordingly determined to make his estimate upon the latter principle, and he proceeded to ascertain, in this way, the expense which would attend the finishing the earth and brick work of this contract.

And first, as to the earth work: The contract allowed to the contractors eighty-three cents and eight-tenths of a cent for every cubic yard of earth that should be excavated and removed according to the terms of the contract.

In the estimate made by the board of engineers, it was supposed that eight cubic yards of excavation would be a fair day's work for a common laborer; and that to pass the earth through the various stages of operation, such as transportation, depositing within the area of the work, re-excavation, re-transportation, forming, ramming, &c., would require labor equal to seven times that of excavation, and exclusive thereof.

From the testimony laid before the commissioner, it appeared that a laborer could excavate more than eight cubic yards in a day; but how much more did not appear entirely to his satisfaction. Giving due weight to this testimony, and considering the climate in which the work was to be performed, and taking one day with another, throughout the year, the commissioner was of opinion that twelve cubic yards would be a full allowance for a day's labor. Whether the other portions of earth work would be equal to seven times that of excavating, the commissioner has not, by the testimony, been certainly informed; but, as it must have been so understood by the contracting parties at the time of the contract, the commissioner has thought it fair to yield to their estimate; and he has accordingly adopted the opinion thus agreed upon by the contracting parties, that the other stages of operation of the earth work were equal to seven times that of excavation, and exclusive thereof.

It was supposed by the board of engineers that a day's labor of a common laboring man would be worth one dollar and twenty-five cents. It is very evident that provisions, clothing, and all the necessaries of life, had fallen in their value, between the year 1818, when the contract was entered into, and the year 1821, when it was abandoned, and that the price of labor had fallen in the same ratio; but how much it had fallen, and how precisely to rate it in the year 1821, was a matter of some difficulty. (See note B.)

Upon a due and careful consideration of this part of the case, the commissioner was of opinion that a deduction of one-third, from the price at which the labor was estimated by the board of engineers, would place this item at its fair and reasonable value; and he therefore accordingly determined that, in making his estimate of the value of labor, he would deduct from the estimate of the board of engineers one third, and settle its value according to that rule.

The contractors being provided with the necessary tools and implements for the completion of the work, the commissioner did not deem it proper to add any thing to the expense on this account.

Upon these grounds, the commissioner was of opinion that the excavation and removal of each cubic yard of earth, according to the intent and meaning of the contract, would have been attended with an expense to the contractors of fifty-six cents; and he therefore decides that the earth work of this contract, that is to say, one hundred thousand cubic yards, according to the prices prevailing in 1821, might have been performed for $56,000.

Brick masonry.

The next subject of inquiry was that of brick masonry.

The contract allowed to the contractors eleven dollars for every cubic yard of brick masonry.

In making an estimate of this work the commissioner proceeded, in the first place, to ascertain the number of

bricks which would be contained in a cubic yard of brick masonry; then the value of the bricks; next, the value of the mortar; lastly, the expense of laying the bricks.

The contract does not designate the size of the bricks; but, as those designated by the board of engineers, and those worked in the walls, were 9, 4½, and 2¼ inches, it is presumed that they indicated the proper dimensions of the bricks to be used in the fulfilment of the contract, and, accordingly, this size has been adopted in the estimate made by the commissioner.

It is perfectly clear that, in bricks of this dimension, there would be contained in a cubic yard, without the mortar, five hundred and twelve. The space occupied by the mortar would, of course, reduce this number, it was believed, to four hundred and nine; but, taking into consideration the waste and loss which would be produced by taking the bricks from the kilns, transporting them from thence to the walls of the fortification, and in laying them, the commissioner has supposed that four hundred and fifty would be a fair allowance for a cubic yard of brick masonry, and he has accordingly adopted that number for the cubic yard.

The value of the bricks.

In looking into the testimony upon this part of the case, the commissioner perceived that different opinions had been entertained by the witnesses of the expense which would have attended the furnishing of the bricks on the part of the contractors; and it was not without some trouble and difficulty that he was enabled to satisfy himself upon this head. Upon consideration, he was of opinion that, with the preparations which the contractors had made, and the advantages they possessed at the time the contract was abandoned, they might have been furnished at Dauphin Island at an expense of ten dollars a thousand. (See note C.) According to this estimate, the number of bricks in a cubic yard, that is to say, four hundred and fifty, would cost $4 50.

Mortar.

As the value of the mortar in a cubic yard of brick masonry depended mainly upon the value of lime contained within it, the commissioner deemed it necessary to ascertain, as correctly as he could, the value of that item. The witnesses again differed in their opinions as to the expense which would have attended the making of this article. (See note D.) The commissioner has thought it proper to fix the value at ten cents per bushel; and, according to this estimate, and taking into consideration the sand, water, and labor necessary in preparing the mortar, he was of opinion that the mortar in a cubic yard of brick masonry might have been furnished by the contractors at an expense of 48 cents.

The expense of laying the bricks.

In deciding upon this part of the case, the commissioner inquired, in the first place, how many bricks a good bricklayer would lay in a day; and he was of opinion that twelve hundred bricks would be a full day's work for a good workman in the climate of Dauphin Island. (See note D.) And in the settlement of the expense of laying the bricks, he has adopted this number for the day's labor, and estimated the value of the day's labor at two dollars; that is to say, one-third less than the estimate of the board of engineers. The other portions of labor incident to the work were reduced in the same proportion; and upon these principles the expense which would have attended the laying a cubic yard of brick masonry would have been $1 11.

According to the rates thus adopted, a cubic yard of brick masonry would have been attended with the following expense to the contractors, viz:

Bricks, - - - - - - - -	$4 50
Mortar, - - - - - - - -	48
Laying, - - - - - - - -	1 11
	$6 09

And for thirty thousand cubic yards, the amount for which the Government became responsible is $182,700.

The commissioner is therefore of opinion that the earth work and brick masonry of this contract, with the preparations and advantages which the contractors possessed at the time of the abandonment of the work on the part of the Government, might have been performed by the contractors at the expense before stated; that is to say,

The earth work, at an expense of - - - - -	$56,000 00
And the brick masonry, at - - - - - -	182,700 00
Making, together, -	238,700 00
But as work and materials had been furnished by the contractors to the Government, at the time of the abandonment of the work, to the amount of $48,899 15, this sum should be deducted from the above amount, - - - - - -	48,899 15
	$189,800 85

Leaving the sum of one hundred and eighty-nine thousand eight hundred dollars and eighty-five cents as the correct amount of the expense which would have attended the finishing of the earth work and brick masonry of this contract.

The commissioner was at some loss to make an estimate of the injury which the contractors sustained by the sudden and unexpected abandonment of the works on the part of the Government. He was satisfied that some portions of the work were in such a state at the time of the abandonment as not to admit of their being received and accounted for by the Government; such as bricks upon the yards, and timber, and other materials in an unfinished state. It has been proved by some of the witnesses that there were upwards of two millions of bricks moulded and upon the yards at this period, and that they were lost in consequence of the abandonment of the works. The commissioner has not felt himself satisfied that a loss to this extent did take place; but if it did, much of it must have arisen from great negligence on the part of the contractors, or their agents.

The commissioner, however, has deemed it just to award some compensation for this loss, as also for so much of the timber and other materials as were in progress at this time. The commissioner has fixed on $8,000 as a compensation for these losses.

In consequence of the failure of the agent of the Government to designate the spot on which the fortification was to be erected, it appears that about seventy-five laborers and mechanics, sent by the contractors to Dauphin Island, and landed there on the 22d of November, 1818, remained there in a state of idleness from that time until the 22d of January following; and that it was not till this last period that the site of the fortification was designated.

It has seemed to the commissioner that it would be just and reasonable that a compensation should be made to the contractors for this loss of their labor; and he has estimated the value of this labor at the contract price from the 1st of December, the time fixed for the commencement of the work, until the 22d of January following; and he has decided to allow for it the sum of $4,000.

The commissioner has not considered it as coming within the province of his duty to take into consideration the injuries and distresses which the contractors have suffered by imprisonment or otherwise, in consequence of suits instituted against them on account of their engagements in this work. They have no doubt been great; but it is believed they are not chargeable on the Government. It will be recollected that, in the whole progress of the work, the Government was in advance to the contractors; and, at the time of the abandonment of the contract, those advances amounted to upwards of one hundred thousand dollars beyond the work actually performed.

Upon the whole, the commissioner has thought it proper to settle the account between the United States and the contractors as follows:

The United States to Harris and Farrow.

DR.

To work done and materials furnished up to the period of the abandonment of the contract, -	$48,899 15
To balance which would be due to the contractors upon the completion of so much of the work as the Government had bound themselves to perform, - - - -	364,900 85
To damages and injuries sustained by the sudden and unexpected abandonment of the work, -	8,000 00
To damages arising from the failure of the Government to designate in due time the spot upon which the works were to be erected, - - - - -	4,000 00
	$425,800 00

CR.

By cash received from the United States at different times, - -	$162,251 37	
By the expense which would have attended the fulfilment of so much of the work as the Government bound themselves to perform, - - -	189,800 85	
		$352,052 22
By balance due the contractors, - - - - -		72,747 78
		$424,800 00

The commissioner does therefore award and decide that the United States do withdraw and dismiss the suit which they have instituted against Nimrod Farrow and his securities for the moneys advanced by the United States to the contractors; and that the United States do give up to the said contractors all liens and securities which they may hold upon the property, real or personal, of the said contractors; and that the United States pay to the said contractors the sum of $72,747 78.

THOMAS SWANN.

NOTE 1.

Lest the commissioner should have been mistaken in his construction of the contract, and that Congress may have it in their power to correct this error, he has deemed it proper to state the additional sum which he should have awarded to the contractors, in case the Government had been bound to the extent of the estimate of the board of engineers.

This estimate supposed that 117,284 cubical yards of earth would have been excavated and removed. The additional profits, then, which the contractors, in the event of their being entitled to the benefit of the estimate, would have been upon 17,284 cubical yards. The commissioner having decided that this work might have been performed by the contractors at an expense of 56 cents the cubical yard, the profit upon each cubical yard would have been 27.8 cents, and upon 17,284 yards would have been - -	$4,794 96
The additional masonry, exclusive of arches, would have been 1,910 cubical yards; and as the profit given by the commissioner upon the masonry was $4 91 upon each cubical yard, the profit upon 1,910 yards would have amounted to - - - - -	9,378 10
That portion of masonry which consisted of arches would have amounted to 3,642 cubical yards; and as this work would have been attended with more expense and less profit to the contractors, the commissioner would have rated the profit upon this part of the work at $3 87 the cubical yard, and producing, upon 6,642 yards, a profit of - - - -	14,094 54
The carpentry, and other portions of the work designated in the contract, were, according to the estimate, of small amount, and the commissioner has not supposed that the profit upon them could have exceeded - - - - - - -	5,000 00

The commissioner then states that, if the Government should be considered liable to make good to the contractors such profits as they might have realized upon the whole work designated in the estimate of the board of engineers, he should have awarded to the contractors the following additional sums, viz:

For earth work, - - - - - - -	$4,794 96
For masonry, exclusive of arches, - - - - -	9,378 10
For masonry of arches, - - - - - -	14,094 54
For carpentry, &c., - - - - - -	5,000 00
Making, together, the sum of - - - -	$33,267 50

THOS. SWANN.

JANUARY 27, 1825.

NOTES.

(A) It has been already stated that the witnesses have formed their estimates of profits upon the idea that $694,000 was to have been expended upon this fortification; and, of consequence, must have supposed that work to this amount was to have been performed.

The witnesses whose testimony relates to this part of the case are:

1st. Robert Green. This witness was a carpenter of experience, and gave it as his opinion that the whole cost of the work ought not to have exceeded $350,000. Upon what data he made his estimates, or how he came to this conclusion, he does not state. He supposed the contractors had lost $30,000 or $40,000 by white laborers; but how a loss to this extent could have taken place, the commissioner has not been able to perceive. But, even supposing that the loss should have occurred, what other losses did the contractors sustain? The evidence is clear that they kept constantly employed, during the first year of the work, from one hundred and fifty to two hundred laborers, and that much was done during this period. The brick yards were made a work of great expense; houses built, clay prepared, and every preparation for the successful prosecution of the work. In the second year, the white laborers were changed for black; and General Starke, with upwards of two hundred slaves, was most judiciously and zealously engaged in the prosecution of the work. If $40,000 were lost by the employment of white laborers, there seems to be no reason to suppose that the contractors had sustained any farther loss; and in all other respects the work appears to have been as judiciously and industriously prosecuted as it could have been under any management. It will be seen, by a reference to the testimony of Edward Clarke, that the actual expense of the contractors up to the time of General Starke's taking the management, was $285,000; and, by a reference to the testimony of R. W. Naylor, it will be seen that the actual expense of General Starke, during the period of his management, amounted to $70,000, exclusive, it is presumed, of the value of the slave labor under his direction; so that the actual expense upon the work, up to the period at which it was abandoned, amounted to $355,000. If from this is deducted $40,000, the supposed loss upon white laborers, the fair expense of the work up to that period would have amounted to $315,000. Can it then be supposed that the residue of this work could have been performed for $35,000? The work done and the materials furnished, up to this period, amounted to only $48,899 15; leaving to be done, as must have been supposed by the witness, $645,000, and upwards. Could this have been performed at an expense of $35,000? It is apparent that the witness was mistaken in supposing that it could.

2d. Roswell Alsop. The opinion expressed by this witness, that the contractors would clear 2 or $300,000 by this contract, will be found to be entirely erroneous.

3d. Dr. Anderson Salie. This witness went out as a physician in the fall of 1818, and remained there until the month of May, 1820. He states that, from the commencement of the work in January, 1819, to the month of May, 1820, there never were less than from one hundred and fifty to two hundred laborers, including mechanics and brick makers, actively and judiciously employed in the prosecution of the work. The first year was mainly spent in preparing brick yards, erecting the necessary houses, digging clay, &c., and collecting a good supply of provisions, to insure a rapid progress of the business in the next.

It appears, then, from the testimony of the witness, that, in the course of this year, every thing was prepared for the successful prosecution of the works, and, consequently, that it must have passed into the hands of General Starke under the most favorable circumstances.

The witness thinks the contractor would have made $250,000. In this opinion, he will be found to be mistaken.

4th. Edward Clarke. This witness was the agent of the contractors, and attended to the expenditure of the money. He states that the contractors had expended upon this work, before General Starke took the management of it, $285,000. He was of opinion that, if the work had been conducted throughout with slave labor, the contractors might have performed the contract for one-half the sum contracted to be paid; that is to say, for the sum of $347,000. He makes his calculations to show the correctness of this opinion. He supposes that two hundred laboring slaves, fifty white seamen and laborers for transporting materials, &c., and six superior masons, with a chief carpenter, mason, and four overseers, would have completed this work in three years.

Let us inquire into the correctness of this opinion.

It is proper to remark that Colonel Clarke's calculations were made upon the idea that work to the amount of $694,000 was to be performed, and that 45,538 cubical yards of brick masonry were to constitute a part of this work.

Let us take the item of bricks in this quantity of brick masonry, and ascertain the labor which it would have taken to have furnished the bricks alone.

Allowing four hundred and fifty bricks for each cubical yard, the whole number of bricks which would have been required would have been upwards of 20,000,000. By referring to the testimony of Colonel Russell, it will be seen that he supposed that 100,000 bricks were as many as a good workman would make in a year, or rather during that period of the year when bricks could be made. But let it be granted that he could make 150,000 a year: at this rate it would require about fifty brick makers to complete the work of brick-making in three years. To these fifty brick makers must be added one hundred and fifty laborers, that is to say, two men and a boy to each brick maker, making an aggregate of two hundred. This is not all. Supposing that the wood for burning the bricks should be cut and hauled during the winter, and that each brick maker, with his three laborers, should have burnt his 150,000 bricks, still an additional force of labor would have been necessary to have transported them from the place where they were made to Dauphin Island, a distance of about twenty miles. What this force ought to have been, the commissioner knows not; but it seems to have been supposed by Colonel Clarke that it would have taken fifty. So that it would seem that, in the item of bricks alone, (giving to the contractors the benefit of those extensive and costly brick yards and ample preparations which they had made for the prosecution of the work,) it would have required a force of nearly two hundred and fifty laborers to have made the bricks within the period of three years.

A little attention to the other portions of the work, such as the brick masonry and the excavation and removal of the earth, would produce nearly the same results.

It cannot be forgotten, that, from the commencement of the work to the time of its abandonment, (a period of about two years and four months,) there were never less than from one hundred and fifty to two hundred laborers, with the necessary mechanics, &c., constantly and industriously engaged in the prosecution of the work; and for sixteen months of this time this force was under the judicious management of General Starke; and yet, during all this time, the work done and materials furnished amounted only to $48,899 15.

5th. R. W. Naylor. This witness states that the expenditure, up to the period when General Starke took the management, amounted to at least $241,839, and the expense under General Starke to $70,000; and he thinks that the work might have been completed for $65,794. In this he is evidently mistaken.

6th. Colonel George Fisher. This witness gives it as his opinion that the contractors would have made a profit of $300,000, and that the work might have been finished for $64,000.

It is believed that Colonel Fisher is mistaken in both these opinions. It has already been shown that the contractors had expended, up to the period when General Starke took the management, $285,000, and while General Starke had the management, $70,000; making an aggregate of $355,000. If to this is added the hire of two hundred slaves during the period that General Starke had the management, that is to say, for sixteen months, at $150 each a year, it would make the expense, up to the period of abandonment, $395,000. How, then, was this profit of $300,000 to be realized?

The other opinion expressed by Colonel Fisher, that the work might have been completed for $64,000, is believed also to be erroneous.

He supposes that three hundred slaves, with thirty white men, as principal mechanics, overseers, &c., would have finished the work by the 1st of December, 1821; that is to say, in about eight months after the work was abandoned. Colonel Fisher then estimates the value of this work, and the materials which might be necessary for it, and makes them amount to $64,000.

The error in this opinion will be found to be in the estimate of the time which it would have taken this force of labor to have completed the work. The remarks made upon the testimony of Colonel Clarke will show the error; and it will be seen, by reference to the testimony of Colonel Russell, that General Starke and himself were under different impressions from those of Colonel Fisher in relation to this matter.

7th. Israel Ketchum. This witness also thought that a profit of at least $300,000 would have been made by the contractors. This opinion has been shown to be incorrect.

8th. Colonel Gilbert Russell. This witness testifies to the good character, great industry, and judicious management of General Starke. He describes the state of preparation for completing the work; and, upon a full view and experimental knowledge of the expenditures necessary in such a work, he thought that the expense of completing it could not be as great as the expense which had been incurred on perhaps little more than half the amount. He believed that the work might have been completed in eighteen months from the time it was abandoned by Congress, without employing any more hands than might be advantageously kept at work.

At the time that Colonel Russell had a view of this work, there were 200 slaves engaged in it, besides masons, carpenters, and others. General Starke intended to increase the number of slaves to one hundred more, being no doubt satisfied that they could be employed to advantage; and he expressed his intention of completing the work in the summer or autumn of 1822.

It would seem to have been the opinion of both these gentlemen that it would have required about eighteen months to have completed the contract; but whether upon the labor then employed, or upon that which was intended to be added, does not certainly appear. It is reasonable to suppose that it was upon the increased force that this expectation was indulged; and it will, it is believed, be found, upon a minute examination of the various items of labor of which this work was to be composed, that even this increased force could not have completed the contract within the time contemplated by these gentlemen.

Upon the whole, upon looking through the testimony in relation to the estimate of damages, and carefully considering it, the commissioner has not been able to perceive any safe ground upon which he could rest his award.

(B.) As the item of labor had a material bearing upon every part of the contract, the commissioner found it necessary to obtain all the information touching its value which the witnesses could furnish. In referring to the testimony, he found that its value had been variously rated. Colonel Fisher, in his last deposition, in his estimate of the value of lime, rates the value of a laboring man at forty cents a day; and yet, in the same deposition, he states that a laboring slave would hire for from $10 to $12 a month; that the expense of a white laborer for one year would be $300 to $350, while that of a slave would not be more than from $150 to $175.

If this would have been the price of a hired slave by the year, the commissioner cannot perceive how he could be hired by the day for forty cents.

Colonel Russell, in his last deposition, states, since the year 1818, and since the fall in the price of cotton, a field negro in Alabama would not be worth more than $100 a year, and consequently not worth a dollar a day.

Perhaps Colonel Fisher rated the labor at forty cents a day in consequence of the fall in the price of cotton.

But both these gentlemen agree that a good male laboring slave in 1821 would have been worth in that country $600. Russell thinks $650. If this be true, could the owner have afforded to hire him for less than $150 a year? If the duration of his life is estimated at seven years, which, in that climate, it is believed would be a full allowance, the owner would hardly afford to hire him for less than this sum; and if so, it may well be questioned whether it would not have been more profitable to the contractors to have hired by the day at eighty-four cents, or even a dollar, than by the year at $150. Taking into consideration the lassitude and sickness which attend the climate of that country, with the losses which might arise from bad weather and other causes, the commissioner is inclined to prefer the daily hiring, and he believes that he has done full justice to the contractors in deducting one-third from the estimate of the board of engineers.

(C.) By a reference to the estimate of the board of engineers, it will be seen that they rated bricks at fourteen dollars a thousand. It has been estimated by the contractors, and stated by some of the witnesses, that, at the time this contract was entered into, it was not known that clay fit for making bricks could be found convenient to Dauphin Island, and that an opinion was entertained that the contractors would be under the necessity of making their bricks in some of the eastern States, and of transporting them by water from thence to Dauphin Island; and that it was in consequence of this impression that they were rated at fourteen dollars a thousand. Whether this impression was really entertained by the board of engineers, and what influence it had in fixing the value of this article, the commissioner knows not; but he thinks it probable that some consideration of this kind had an influence upon this part of the estimate. It is true, that the contractors found clay suitable for bricks in the vicinity of Dauphin Island; but before they could use it for that purpose, the contractors had to prepare brick yards at a very great expense.

Some of the witnesses have stated that the first year was devoted to the making of brick yards, erecting houses, digging clay, &c.; and Colonel Russell has stated that the making of these yards was attended with very great expense—not less than sixty thousand dollars. If this was the case, it would certainly have a most serious bearing upon the expense of brick making, and would, perhaps, justify the idea that, in the state in which the work was undertaken, they could not have been made and delivered at Dauphin Island for less than fourteen dollars a thousand. The commissioner is ready to believe that the agents of the Government would have been willing to have allowed to the contractors a full, and even liberal price, for their work and materials; but, in making their estimates, it is fair to presume, and the commissioner feels himself bound to presume, that regard was had to the reasonable and just value of the article; and the commissioner cannot but suppose that the contracting parties considered fourteen dollars a thousand the fair and reasonable value of the article at the time the contract was entered into. But, although this may have been considered a fair price for bricks before the yards were prepared, it does not follow that the commissioner ought to adopt it as the rule for his government in his estimate of the expense of finishing the contract.

At the time that the contract was abandoned the brick yards had been completely finished; the prices of labor and provisions had fallen; and boats had been provided, at a great expense, for the transportation of the bricks from the yards where they were made to Dauphin Island. The duty of the commissioner is to ascertain, as correctly as he can, what would have been the expense to the contractors of furnishing these bricks at Dauphin Island in the year the contract was abandoned.

Colonel Fisher, in his testimony, has stated that bricks might have been furnished at Dauphin Island, at this period, at $7 50 the thousand. Abraham Dodd has stated that they were worth at this time $9 a thousand. Colonel Russell states that they might have been made at the brick yards for $5 60 a thousand; and that the expense of transporting them from thence to Dauphin Island, a distance of about twenty miles, would not have been more than $2 50; making the value at Dauphin Island $8 10.

Major William Henry states that the expense of transportation in 1818 and 1819 could not have been less than from four to five dollars a thousand.

Colonel Russell, in his last deposition, says, that after the fall in the price of labor, they might have been made even at a less expense; and he entered into a calculation to show the great profit which the brick maker would realize at $5 60 the thousand.

The commissioner followed Colonel Russell in his course of calculation, but came to a different result; and, after a careful consideration of the various expenses necessarily incident to the work, he did not see that bricks could be made and furnished at the yards where they were made at a less price than $7 a thousand; and if to this be added the expense of transportation, which it is believed would not be less than $3 a thousand, bricks could not have been furnished at Dauphin Island in the year 1821, with the preparations and advantages which the contractors then possessed, at a less expense than $10 a thousand; and so the commissioner has felt it his duty to decide.

(D.) It will be seen, by a reference to this testimony, that the witnesses have varied in their opinions as to the value of lime: some having valued it at three cents the bushel, some at five, some at six, and some of them at ten cents. It has been a matter of regret that there should have been no fixed price for this article, and that its value should have depended upon the opinions of the witnesses, founded upon estimates made by them of the expense which would attend the making of it. The commissioner was not satisfied with the opinions thus given to him, and took measures to get further information on this point; but, having failed to obtain it, he proceeded to analyze, as well as he could, the expense which would attend the making of this article; and, according to the best judgment he could form, it would have exceeded ten cents the bushel. But, as none of the witnesses have gone beyond this in their estimates of its value, the commissioner has deemed it his duty to yield to the testimony, and to rate the price at ten cents the bushel.

(E.) The expense of laying the bricks appears to have been ascertained by the board of engineers by fixing a value upon the daily labor of the bricklayer, and estimating the number of bricks which he could lay in a day. In this estimate it was supposed that in a healthy climate he could lay a thousand, but that, in the climate of Dauphin Island, eight hundred would be a fair day's labor; and the day's labor of a good workman was valued at three dollars. In investigating the testimony upon this part of the case, the commissioner perceived that the witnesses again varied in their opinions as to the number of bricks which a good workman would lay in the walls of a fortification in a day; some of them supposing that twelve hundred would be a fair day's work, others fifteen hundred, and others again from fifteen hundred to three thousand. Colonel Justus Post, in his deposition, states, that in laying bricks for barracks and other dwelling houses, one thousand a day, one day with another, was considered in such a climate as that of New York as a fair day's work. What difference there may be between the labor upon the walls of barracks and dwelling houses and those of a fortification, the commissioner knows not; it is supposed that a bricklayer would lay more in the walls of a fortification. But it must be remarked, that in the case under consideration they were to be laid under the superintendence of the agent of the United States, and with great care; and, moreover, that the climate in which the work was to be performed produces a lassitude, which lessens the ability of the laborer to perform his work. Upon this question, however, the commissioner does not consider himself at liberty to disregard altogether the opinions of the contracting parties at the time that this contract was entered into.

At this period this matter was carefully considered. It was well understood that the climate would have an effect upon the labor of the workmen, and the usual day's labor of the bricklayer was reduced from one thousand to eight hundred, in consideration of the effect the climate would have. It is not to be supposed that the agents on the part of the Government would have been so uninformed upon this species of labor as to agree to allow the laying of eight hundred bricks for a day's labor when three thousand could have been laid; nor can it be supposed that the contractors themselves would have imposed so far upon the Government as to fix upon this amount when they knew that three thousand could be laid. The commissioner cannot but believe that this contract was entered into with good faith, and that in so far as it stated the quantum of labor which it was competent for a workman to perform in a day, it is entitled to great weight. It is a matter that does not depend upon the prices of the necessaries of life, or upon the rise or fall of labor. What a laboring man could have performed in 1818 might have been performed in 1821; and if the laying of eight hundred bricks was considered by the contracting parties as a fair day's work in 1818, so it ought to be considered in 1821. The commissioner has felt the full force of this evidence arising out of the contract; and yet, when a mass of testimony is presented to him giving a different view of the case, he has not considered himself at liberty to disregard it. Among this testimony will be found, in addition to the testimony of Colonel Post, the deposition of John Cohegan and Richard Staunton, both experienced bricklayers, and long engaged in the building of fortifications. They both state, that in a healthy climate like that of Fort Washington, fifteen hundred bricks, one day with another, would be a great day's work for the best workman; taking this, as it is believed, to be a full estimate for the best workman in a healthy climate, and making from this a fair deduction on account of the climate at Dauphin Island, the commissioner has thought that twelve hundred would be as far as he could go for the day's labor of a good bricklayer, and he has accordingly determined to adopt that for the day's labor.

18th Congress.] No. 268. [2d Session.

OPERATIONS OF THE ARMORIES FOR THE YEAR 1824.

COMMUNICATED TO THE SENATE, FEBRUARY 14, 1825.

SIR: DEPARTMENT OF WAR, *February* 12, 1825.

In pursuance of an act concerning arsenals and armories, passed the 2d of April, 1794, I have the honor to transmit, herewith, a statement of the expenditures at the national armories, and of the arms, &c. made therein, during the year 1824.

I have the honor to be, your obedient servant,

J. C. CALHOUN.

The Hon. SPEAKER *of the House of Representatives.*

Statement of the expenditures at the National Armories, and of the arms, &c. made therein, during the year 1824.

	EXPENDITURES.				
	For land, buildings, canals, repairs, and other permanent improvements.	For the manufacture of muskets.	For the manufacture of patent rifles.	For miscellaneous expenses, not embraced in the foregoing.	Total amount expended.
Springfield, Massachusetts,	$21,909 75	$163,942 37	-	$1,215 92	$187,068 04
Harper's Ferry, Virginia,	16,271 96	157,671 09	$21,654 89	592 00	196,189 94
Total, -	$38,181 71	$321,613 46	$21,654 89	$1,807 92	$383,257 98

	ARMS, &c. MADE.											
	Muskets complete.	Extra bayonets.	Extra ramrods.	Screw drivers.	Wipers.	Ball screws.	Spring vices.	Arm chests.	Patent rifles.	Rifle bullet moulds.	Rifle wipers.	Rifle screw drivers.	Rifle flasks and belts.
Springfield, Massachusetts,	14,000	-	-	14,000	15,100	1,400	1,400	861					
Harper's Ferry, Virginia,	10,559	3,050	6,879	5,922	7,173	-	-	212	1,000	1,000	1,000	1,000	1,000

ORDNANCE DEPARTMENT, *February* 12, 1825.

G. BOMFORD, *Lieutenant Colonel on ordnance service.*

18th Congress.] No. 269. [2d Session.

FORT WASHINGTON.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 17, 1825.

Mr. HAMILTON made the following report:

The Committee on Military Affairs, to whom was referred a resolution reported by the Committee of Ways and Means, instructing them to inquire into the expediency of authorizing the purchase of additional land for the site of Fort Washington, beg leave to report:

That they have obtained from the Department of War a variety of documents on this subject, which they have annexed. And although, in common with every other person who may become acquainted with the facts, they regret that so extraordinary a mistake should have been committed as that the Government should originally not even have purchased land enough for the dimensions of the fort, or secured an extension of the limits and boun-

daries of their purchase to the river, yet, circumstanced as the United States now are, after having expended a vast sum on Fort Washington, (which completely commands the passage of the river, and, in this point of view, is a valuable fortress,) your committee think, for the reasons which are set forth in the several communications from the Department of War, that the Government ought not to hesitate to make the purchase of the additional land out of the purchase money, of which it will be perceived that a debt due by a late paymaster general is to be deducted.

With a general reference (for a full explanation of this subject) to the documents herewith submitted, your committee report a bill.

SIR: DEPARTMENT OF WAR, *February* 2, 1825.

I have the honor to acknowledge the receipt of your letter of the 31st of last month, informing me that "the Committee on Military Affairs have under consideration a resolution moved by the chairman of the Committee of Ways and Means, instructing them to inquire into the expediency of purchasing additional land, in the vicinity of Fort Washington, for the more complete extension and security of that work;" and that "some of the committee, in considering the subject, are under the impression that the work is so perfectly useless that the best mode of getting rid of the difficulty would be to abandon it entirely, and that it is altogether unnecessary to expend another dollar on a fortress not worth holding in time of war, and altogether untenable from a land attack;" and requesting to be furnished with a detailed statement of the advantages, if any, of retaining Fort Washington as a permanent fortification; and whether these advantages would now counterbalance the expense which would be incurred to render it secure and efficient: in reply thereto, I submit the accompanying report of the chief engineer, which furnishes the information required by your letter.

I have the honor to be, sir, very respectfully, your obedient servant,

J. C. CALHOUN.

The Hon. J. HAMILTON, Jr., *Chairman of the Committee on Military Affairs.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *February* 2, 1825.

In obedience to your orders, I have the honor to state the advantages of retaining Fort Washington as a permanent fortification. The position of Fort Washington is exceedingly strong, and the work is built of the most durable materials, and executed in the best manner. Its batteries command completely the channel of the river Potomac, and cover the District of Columbia (including the national capital) from an attack by water. Fort Washington is only assailable on the land side, where it is very strong, being defended by high walls and a deep ravine. It is so well situated, that it cannot be taken unless invested and regularly besieged; and, even then, it may be considered competent to hold out until relieved by the forces of the country. It is true that there are hills in its rear that are somewhat higher than the work itself; but they are so far off, and the defilement of the work is so perfect, that they can present no serious obstacles to the defence of the place.

It may be proper to remark, that the selection of the site was made in 1806, before the constitution of the board of engineers. If the selection was now open, it is believed that a position further down the river (say Cedar Point) would be chosen, not because the position itself is stronger on the land side, or that it more completely commands the river, but simply because it presents to the enemy the point of attack at a greater distance; and, even as to this point, Fort Washington being retained, and completely commanding the river, will enable the Government, by temporary works at the lower point, at a small cost, to prevent an enemy from passing that position, as he would have no adequate inducement to run the slightest hazard, when knowing that the batteries at Fort Washington would put it out of his power to inflict on us any serious injury.

Respectfully submitted.

ALEX. MACOMB, *Major General, Chief Engineer.*

To the Hon. J. C. CALHOUN, *Secretary of War.*

DEAR SIR: WASHINGTON, *February* 11, 1825.

In order to meet your views, and those of the Government, in regard to the purchase of additional land near Fort Washington, you may extend the amount of land wanted to thirty-five acres, which will embrace all the hills in the rear of the fort, and nearly six acres more than are included in the award of the referees.

With sentiments of the highest esteem, &c. &c.

WILLIAM DUDLEY DIGGES.

Hon. JAMES HAMILTON, *Chairman of the Military Committee.*

DEAR SIR: FORT WASHINGTON, *January* 31, 1825.

Your letter informing me that the Committee on Military Affairs have under consideration the expediency of purchasing an additional quantity of land for this post has given great satisfaction to all the officers here, as a hope now exists that the great inconvenience to which we all are now subjected, in consequence of the location of a tavern and a grog shop immediately under the walls of the fort, will shortly be effectually remedied. The existence of this nuisance has hitherto defeated the most zealous efforts of the officers to keep the men; and, until it be removed, it will be vain for us to expect to maintain that discipline and subordination which is all-important in a military life. Independent of this evil, which can only be removed by extending the jurisdiction of the United States, the great want of command to which some of the batteries of the work are now subject is a defect which will render them almost useless. One of the faces of the ravelin is completely commanded by a mound of earth which stands on your land, and will be inefficient until the mound be removed. To these reasons, urging the necessity of enlarging the site of Fort Washington, let me add the facts, that part of the fort is built on your land, and the glacis of the ravelin remains entirely unfinished, in consequence of a similar location; besides, we have no ground for gardens, which are essentially necessary for the health and comfort of both officers and men.

I am, very respectfully, &c. &c.

W. K. ARMISTEAD, *Colonel of artillery.*

WM. DUDLEY DIGGES, Esq., *at Washington.*

SIR: ENGINEER DEPARTMENT, *April* 29, 1824.

In pursuance of your orders to furnish the information requisite to enable the Committee on Military Affairs in the House of Representatives to fulfil the objects of a resolution of the House, instructing it to "inquire into the expediency of authorizing the purchase of an additional quantity of land for the enlargement of the site of Fort Washington, and for completing the title in the United States to a part of that on which the said fort is now erected," I have the honor to present herewith copies of my letters to Dr. Peake, of Alexandria, dated the 1st and 10th of February, 1823—the first appointing him a referee on the part of the United States to determine the value of the land wanted, respecting which the owner and the Government could not agree; the second authorizing him, in the event of his disagreeing with the other referee, to join with him in the selection of a third person to act as umpire; together with copies of two letters from you—the first to Mr. Digges, dated the 3d of February, 1823, in answer to objections raised by him to the latter part of the first letter from this department to Dr. Peake; the second dated the 22d of February, 1823, to the chairman of the Committee of Ways and Means of the House of Representatives, setting forth the objects for which the additional land was wanted, and enclosing the award of the arbitration, and other documents, and a copy of the survey of Fort Washington and the lands contiguous, on which the additional land wanted is designated. No copies of the papers relating to the award were retained in this office. Should they be required, they may be obtained, no doubt, from the chairman of the Committee of Ways and Means, to whom they were transmitted as has been stated.

Respectfully submitted.

ALEXANDER MACOMB, *Major General, Chief Engineer.*

Hon. J. C. CALHOUN, *Secretary of War.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *February* 1, 1823.

A negotiation for the purchase of land lying contiguous to the site of Fort Washington, and deemed to be requisite for the enlargement thereof, has been pending some time past between Mr. Dudley Digges, the owner of the land, and the War Department; and there appearing little probability of its being brought to a conclusion, it has been mutually agreed upon by the parties to submit the matter to a reference. In pursuance thereof, under the direction of the Secretary of War, I caused inquiries to be made to ascertain if a person properly qualified and willing to act as referee on the part of the War Department could be found in this neighborhood, and you were accordingly designated. I have, therefore, to ask the favor of you, if I have rightly understood that you have consented to act, to meet the other referee at Fort Washington on Monday next. A boat will be in readiness at an early hour on Monday morning, at the wharf at the foot of King street, in Alexandria, and will there await your convenience. Captain Maurice, of the corps of engineers, has been instructed to prepare and lay before the referees a plan of the site of Fort Washington, and the lands contiguous, and on it to designate the portion of the latter contemplated by the negotiation in question. I have directed him also to furnish to them any papers containing information on the subject that may be in his possession, and to attend there in person, to afford them any verbal explanation or other facilities they may require. He will explain to the referees that their award will be binding on the War Department, should Congress, by granting an appropriation to carry it into effect, signify their sanction of it, and not otherwise.

It is the understanding of the parties that the valuation is to be regulated by the intrinsic value of the property, without reference to the damages which the estate of Mr. Digges has been alleged to have sustained in consequence of the erection of the work, as such damages have been covered by the price already paid to Mr. Digges for the site; or without reference to any alleged understanding between Mr. Digges and the War Department as to the price which should be given, should the latter desire to purchase more lands than were originally obtained, as the reference has been agreed upon only on the above conditions.

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

Dr. PEAKE, *Collector, &c., Alexandria.*

SIR: ENGINEER DEPARTMENT, WASHINGTON, *February* 10, 1823.

In the letter which I did myself the honor to address to you on the 1st instant, requesting you to act as a referee on the part of the Government to determine the value of certain property belonging to Mr. Digges, which it was desirable to obtain to complete the site at Fort Washington, mention was not made of leaving the matter submitted, in the event of a disagreement between you and the referee on the part of Mr. Digges, to the decision of an umpire; but that being the intention of the War Department, I have to request that you and the other referee select a third person to act in that capacity, and that you will communicate his decision upon the subject as soon as may suit your convenience.

I am, &c.,

ALEX. MACOMB, *Maj. Gen., Chief Engineer.*

Dr. H. PEAKE.

WASHINGTON, *February* 14, 1823.

William D. Digges having chosen Philip Stuart, and the War Department Humphrey Peake, referees to ascertain the intrinsic value of twenty-eight acres three rods and twenty-six perches of land, which was found necessary to be added to the site at Fort Washington, a plat of which is hereto annexed, the said Stuart and Peake did, on the third day of this month, view the grounds; but, after mature consideration and interchange of views and opinions, found themselves unable to agree: whereupon they proceeded to appoint an umpire, and have chosen Thomas G. Addison, who, having this day met them in conference, agrees with the referee on the part of Mr. Digges, and affixes the intrinsic value of the said lands at $29,600. It is to be understood that this valuation embraces the entire property in the grounds described in the annexed plat, without any reservation of fisheries or other rights to Mr. Digges, as was at first contemplated by the War Department.

PHILIP STUART,
HUMPHREY PEAKE,
THOMAS G. ADDISON.

I hereby agree that the line of the contemplated purchase may run from the cedar marked A, in the same course to the river marked A, and then with the river and Piscataway creek to a ——— marked B, and then with a course about north, 34½ east, to B C.

WILLIAM DUDLEY DIGGES.

Witness: I. ROBERDEAU.

SIR: WASHINGTON, *November*, 1824.

As trustees of the estate of William Dudley Digges, we take the liberty of making the following representation to you, with respect to the serious damages sustained by that estate from encroachments which have been and continue to be made upon it by persons acting under the authority of your Department at Fort Washington, and to claim the redress to which it is justly and obviously entitled. After a reference had been agreed to by yourself and Mr. Digges, with the approbation of his trustees, and with the view to a purchase by the Government, to arbitrators of high and unimpeachable characters and judgment, to decide upon the value of the property on which the encroachments referred to had been and continue to be made, with a mutual understanding that their award should be obligatory upon the latter, and conditionally binding upon the Department of War, we flattered ourselves with the hope that Congress would have been induced, long before this time, to have authorized the award which was given in by them to have been carried into effect; and we forbore, therefore, to trouble you with complaints or remonstrances concerning the encroachments in question. We would be wanting in our duty, however, if we were any longer to remain silent upon this subject, considering the manifold and enormous trespasses which are stated to us to have been and continue to be committed. For a proof of which, we are told that we need only refer to the official reports of the officers of the fort to your Department, by which it abundantly appears that a considerable portion of the outer walls of the fort is erected upon the land of Mr. Digges; that most of the houses for the accommodation and residence of the officers of the garrison, and very many of the establishments belonging to the works, are also built upon his land; and that those houses and establishments occupy or are spread over a space of more than twenty acres, entirely and exclusively, as is just stated, his property; for all of which he has never received any compensation whatever. And it is an obvious and notorious fact, as we are informed, that most of the recent operations at the fort towards a completion of the works have been attended with a continued additional trespass.

Under these circumstances, we now respectfully call upon the Department of War to exert its powerful influence with Congress, at an early day in its next session, to procure the necessary authority for carrying the award of the arbitrators into effect, (that award being actually predicated, as is so expressed, upon the intrinsic value of the property, nearly thirty acres of land, and four valuable fisheries, worth an annual rent of $800, for which sum they had, in fact, been let for several successive years immediately antecedent,) or that it will adopt prompt and effectual measures for awarding and making a just and suitable indemnification for the injuries complained of; and we cannot but flatter ourselves with the expectation that such steps will accordingly be taken by your Department towards obtaining this legislative confirmation of that award, or that an equitable adjustment and satisfaction of the well-founded claims of Mr. Digges, thus again brought to the notice of the Government, will not be delayed; those claims having been already, in part, exhibited by him in his letters to you of the 4th of February, 1823, and 11th of February, 1824.

The great importance of the interest which is the subject of this communication, involving the question of unavoidable and alarming sacrifices of other property of Mr. Digges to a large amount, will prove a sufficient apology, we trust, for the liberty we take in making it; and we conclude with the expression of our full reliance upon the seasonable and liberal interposition of such measures on your part as may at once avert these sacrifices and fulfil the claims of justice.

We have the honor to be, with the highest respect, &c.

DANIEL CARROLL, *of Duddington.*
DANIEL BRENT.

JOHN C. CALHOUN, *Secretary of War.*

18th CONGRESS.] **No. 270.** [2d SESSION.

Arsenal, Baltimore,	Maryland,	Baltimore,	Captain N. Baden.
Arsenal, Greenleaf's Pt.,	District of Columbia,	Washington,	Lieutenant W. H. Bell.

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line.

The head-quarters of the general-in-chief is in the District of Columbia.

The head-quarters of the commanding general of the western department is at Louisville, Kentucky; and the head-quarters of the commanding general of the eastern department is at Governor's Island, New York.

Cadets, acting as supernumerary officers in the army, by brevet commissions, will be promoted successively to vacancies which may occur in the lowest grade of the arm to which they may be attached, conformably to the rank held by each on the merit-roll when recommended for promotion.

Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

CHARLES J. NOURSE, *Acting Adjutant General.*
